The dragon must now roll for surprise since it is encountering the party for the first time. The party is immune to surprise, since it was fighting the beast previously. All damage suffered by the dragon remains, since these actions were caused by the group and not the beast.

The material component is an etched silver arrow bent into a circle. The arrow must be no more than 3 inches long and worth no less than 500 gp. The arrow is destroyed in the casting.

**Seclusion (Alteration)**
Sphere: Numbers
Range: Touch
Components: V, S, M
Duration: 3d12 rounds+4 rounds/level
Casting Time: 6
Area of Effect: One creature
Saving Throw: Neg.

This spell encloses one individual in an extradimensional space. Creatures to be affected must be of size M or smaller. The space can contain only one creature, regardless of size. The priest may use the spell on himself or any creature he touches. Unwilling targets are allowed a saving throw vs. spell to avoid the entrapment.

While inside the space, the enclosed character is invisible and totally undetectable by any form of scrying. Powerful magic such as *contact other plane* will indicate that the character is "elsewhere," but will give no more information.

The creature within the extradimensional space can see and hear everything that occurs around him. However, he cannot cast spells, and no action of his can affect anyone or anything in the "real world."

While occupied, the extradimensional space is totally immobile. If the caster chooses to occupy the space, he can pass in and out of the space at will. Other creatures can leave or reenter the space only if the caster allows it. To an outside observer, an enclosed character who exits the space simply appears from nowhere.

If the space is occupied when the spell terminates, the occupant is immediately ejected back into the real world and suffers 1d6 hit points of damage in the process.

Any time the extradimensional space is empty, or when the occupant is someone other than the priest, the space follows the priest around. Thus, the priest may *seclude* a comrade in the extradimensional space, walk past some guards into a building, then release the comrade.

If any other form of extradimensional space (such as a *bag of holding* ) is taken into the space created by seclusion, both spaces are ruptured and all contents are expelled onto the Astral plane. *Extradimensional manipulation* can temporarily prevent this.

The material components are a tiny crystal box of the finest workmanship (worth at least 1,500 gp) and a gem of at least 250 gp value. The gem is consumed in the casting; the box is not.

**Skip Day (Invocation/Evocation)**
Sphere: Time
Range: 0
Components: V, S
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: 10-foot radius
Saving Throw: Neg.

When this spell is cast, all persons and intelligent creatures within 10 feet of the caster are instantly transported 24 hours into the future. Creatures outside the area of effect will believe that the affected characters have disappeared. Unwilling creatures can attempt a saving throw vs. spell to resist the effect of *skip day*.

No time passes for creatures affected by *skip day*; they are in the exact condition that they were in before the spell was cast. They are fatigued, have recovered no hit points, and carry the same spells. Wizards must wait for actual time to pass before they can memorize spells.

The affected creatures remain in the same location as they were before *skip day* was cast. Their immediate environment is likely to have changed; for instance, fires have burned out, enemies who were attacking have departed, and weather has changed for better or worse.

Although *skip day* is a possible substitute for *teleporting* out of a dangerous situation, it is not without risk; characters could reappear in a situation more threatening than the one they left behind (for instance, a forest fire may have started or a pack of hungry wolves may have arrived).

**Sol's Searing Orb (Invocation)**
Sphere: Sun
Range: 30 yards
Components: V, S, M
Duration: Instantaneous
Casting Time: 6
Area of Effect: One gem
Saving Throw: Special

This spell must be cast upon a topaz. When the spell is complete, the stone glows with an inner light. The gem must be immediately thrown at an opponent, for it quickly becomes too hot to hold. (The acts of casting and throwing occur in the same round.) It is not possible for the priest to give the stone to another character to throw.

The stone can be hurled up to 30 yards. The priest must roll normally to hit; he gains a +3 bonus to his attack roll and suffers no penalty for nonweapon proficiency. In addition, the glowing gem is considered a +3 weapon for determining whether a creature can be struck (creatures hit only by magical weapons, for example). There is no damage bonus, however.

When it hits, the gem bursts with a brilliant, searing flash that causes 6d6 points of fire damage to the target and blinds him for 1d6 rounds. The victim is allowed a saving throw vs. spell. If successful, only half damage is sustained and the target is not blinded. Undead creatures suffer 12d6 points of damage and are blinded for 2d6 rounds (if applicable) if their save is failed. They receive 6d6 points of damage and are blinded for 1d6 rounds if the save is successful.

If the gem misses its target, it explodes immediately, causing 3d6 points of damage (or 6d6 against undead) to all creatures within a 3' radius. It blinds them for 1d3 rounds (1d6 rounds vs. undead). All victims are allowed a saving throw vs. spell, with success indicating half damage and no blindness. The DM should use the rules for grenade-like missiles found in the *Dungeon Master Guide* for determining where the stone hits.

The material component is a topaz gemstone worth at least 500 gp.

**Spiritual Wrath (Invocation)**
Sphere: Combat
Range: 300 yards
Components: V, S
Duration: Instantaneous
Casting Time: 1 turn
Area of Effect: Special
Saving Throw: 1/2

This powerful cooperative spell is rarely invoked since it requires the concerted effort of six or more high-level priests. The casting effort severely weakens the priests, discouraging casual use of this spell.

To cast the spell, six or more priests must be within a 15-foot radius. Each priest must cast *spiritual wrath* at the same time. Before beginning the spell, the priests must decide upon the area of effect. The spell causes 10d6+1d6 points of damage per priest casting the spell. (The minimum damage, therefore, is 16d6.) Creatures within the area of effect are allowed a saving throw vs. spell to reduce the damage to half.

The spell strikes as a great wave of force that descends from the sky. Small objects must save vs. crushing blow. Structures suffer damage as if hit by a heavy catapult (2d12). The force of this spell often raises a great cloud of dirt and dust, obscuring the area for 1d4+1 rounds.

The spell's area of effect is determined by the number of casters. Each priest contributes 10 feet to the radius of the spell. Six casters would create a spell with a radius of 60 feet. No more than twelve casters can cooperate to cast this spell (maximum of

22d6 damage and a 120-foot radius area of effect). This converts to an 8-inch circle in the BATTLESYSTEM™ rules ground scale.

The spell is difficult to cast, physically taxing the spellcasters so much that each caster suffers 3d10 points of damage from the effort. There is no saving throw allowed to avoid this damage.

# Seventh-Level Spells

**Age Dragon (Alteration)**
Sphere: Time
Range: 30 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 1 round
Area of Effect: One dragon
Saving Throw: Neg.

This spell allows the caster to cause any dragon to temporarily gain or lose one age level per five levels of the caster. For instance, a 14th-level caster could cause a dragon to gain or lose two age levels; a mature adult dragon could be temporarily transformed into a young adult dragon or into a very old dragon. A dragon's age cannot be reduced below hatchling or increased beyond great wyrm.

Unwilling dragons are allowed a saving throw vs. spells with a -4 penalty to avoid the effect.

A dragon affected by *age dragon* temporarily acquires the armor class, hit points, spell abilities, combat modifiers, size, and other attributes of his new age level. The dragon retains his memories and personality. At the end of the spell's duration, the dragon returns to his normal age level.

If the dragon suffered damage while experiencing his modified age, these hit points remain lost when he resumes his normal age. If the dragon loses more hit points at his modified age than he has at his actual age, he dies when the spell expires. For example, a young adult bronze dragon with 110 hit points is aged to a mature adult with 120 hit points. The dragon suffers 115 hit points in combat. Unless the dragon is healed of 6 points of damage before the spell expires, the dragon dies at the end of the spell since his damage is greater than his actual hit points.

If a dragon is killed while under the effect of *age dragon*, he is dead at the end of the spell's duration.

The material component is a handful of dirt taken from a dragon's footprint.

**Breath of Life (Necromantic) Reversible**
Sphere: Necromantic
Range: 0
Components: V, S, M
Duration: 1 hour/level

Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

This powerful spell enables the caster to cure many persons (even an entire community) who are afflicted with a nonmagical disease. The priest need not touch or even see the diseased people for the spell to be effective, although recipients must be within the area of effect.

This spell does not cure all diseases in the community at one time; the caster must specifically state which disease is to be eliminated (black plague or yellow fever, for example) with each casting of the spell.

When the spell is cast, the priest exhales a sweet-smelling breath. This forms into a breeze that radiates outward, forming a circle that expands in a 50-yard radius per hour. During this time, the caster must remain at the center of the area of effect. For example, after 12 hours, the *breath of life* would cover a circle 1200 yards in diameter (600-yard radius). The breath is of a magical nature rather than a physical nature; therefore, it is unaffected by prevailing winds.

The breeze blows through the community, instantly eliminating the specified disease from all afflicted citizens. The *breath of life* spell does not destroy parasitic monsters (such as green slime, rot grubs, and others), nor does it cure lycanthropy or other magical afflictions. The spell does not prevent recurrence of a disease if the recipients are again exposed.

The material components are the priest's holy symbol and a cone of incense that has been blessed by the highest priest of the character's religion.

The *breath of death*, which produces a foul-smelling wind, is the reverse of this spell. Victims who fail a saving throw vs. death magic are afflicted with a nonmagical, fatal disease. To determine the results of this spell, the DM should roll saving throws for major NPCs in the area of effect. The effect on the rest of the community can be calculated as a percentage, based on the saving throw.

Infected creatures do not heal hit points until the disease is cured. The disease is fatal within 1d6 weeks (the duration varies from person to person).

The material components are the priest's holy symbol and a handful of dust taken from a mummy's corpse.

**Divine Inspiration (Divination)**
Sphere: Thought, Divination
Range: 0
Components: V, S, M
Duration: Instantaneous
Casting Time: 5
Area of Effect: The caster
Saving Throw: None

This spell is a more powerful version of the *genius* spell. The priest's player may ask the DM one question about the current situation or about events that will occur within the next five rounds. Questions about the future must relate to external events, such as "Will

the guards respond to the sentry's yell?" Questions cannot refer to the outcome of combat, such as "Will we win the battle?" The priest's player is allowed to use this spell to ask the DM for advice. In this case, the spell is the equivalent of asking the gods, "Okay, how do we get out of this one?"

Like the *genius* spell, the DM must be careful in adjudicating this spell. The answer to the question is always relevant and correct, although not necessarily complete. The answer can also be cryptic, in the form of a riddle or rhyme, depending on the DM's assessment of the situation and how potentially unbalancing the answer might be. In general, the answer will be a short phrase of no more than eight to ten words.

The material component is a gem of at least 500 gp value. This spell can be cast only once in any 24-hour period.

**Hovering Road (Conjuration/Summoning)**
Sphere: Travelers
Range: 0
Components: V, S, M
Duration: 1 turn/level
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

This spell enables the caster to create a magical 10-foot-wide road extending 10 feet in front of him. The caster can create an unbroken road for the duration of the spell, creating a 10-foot area ahead of him as long as he continues to move forward.

The road is approximately one foot thick and hovers in the air. It has the texture and color of black granite. Characters and creatures can move on the *hovering road* at their normal movement rate, ignoring the effects of surrounding terrain.

The *hovering road* must originate from a solid surface. Once anchored, the caster controls the contour of the road, causing it to rise and fall as he wishes. The road can thus be used to traverse rivers (if the road is anchored on the shore), swamps, and similarly hostile terrain. The caster can cause the *hovering road* to rise over a jungle or cross a chasm.

The road has AC 0. It is impervious to non-magical weapons. If the road suffers 100 points of damage (from magical weapons or other magical forces), it dissipates in a black mist; all those on the road fall to the ground below.

Unless the road is destroyed, the entire *hovering road* remains intact from beginning to end for the duration of the spell, even if the caster is killed or incapacitated. At the end of the spell's duration, the entire road dissipates.

The material components are a chunk of black marble and a loop of gold wire.

**Illusory Fortification (Illusion/Phantasm)**
Sphere: War
Range: 240 yards
Components: V, S, M
Duration: Special
Casting Time: 10 turns

Area of Effect: Special
Saving Throw: None

The ritual required to cast this spell is time-consuming and extremely complex. As its name implies, *illusory fortification* creates an illusion of a wall of heavy stonework up to 30 feet tall and 160 yards long, topped with crenellations. The illusory wall can be of any color and apparent age, potentially allowing the caster to match the false wall with the real walls of an existing castle. The illusory wall must be continuous (it cannot form two or more shorter walls), but it can follow any corners or bends that the caster desires.

In addition to the wall, the spell creates the illusion of constant movement among the crenellations, as if defending troops were moving atop the wall. The formation of the crenellations makes it impossible for a distant observer to determine exactly how many and what types of defenders are present on the *illusory fortification*.

The illusory wall remains in existence for 2d12 hours unless the spell is terminated earlier.

The spell has one very significant limitation: it is strictly two-dimensional and is visible from only one side (the side that the caster deems to be the "outside"). When viewed from the outside, the wall appears real; when viewed from the end, from above, or from the "inside," the wall is totally invisible except for a faint outline of the shape of the wall. This means that friendly troops, concealed from enemy view by the illusory wall, can see their opponents clearly. The wall is most effective if friendly troops are informed of the wall's presence and are careful not to walk through the illusion. Such an occurrence does not end the spell, but it will probably advise the enemy of the nature of the wall.

Spells cast at the wall and shots fired at the *illusory fortification* by siege engines appear to strike the wall and inflict normal damage. In reality, the missiles or spells pass through the illusion, possibly striking troops or real fortifications beyond. Such "hits" do not disturb the illusion.

As soon as an enemy unit moves within 10 yards of the *illusory fortification*, the spell terminates and the wall vanishes.

There are two ways in which the spell can be terminated before it expires. First, the priest can terminate the spell at any time. Second, if a friendly unit makes an attack, whether melee or missile combat, through the illusory wall from the "inside" to the "outside," the spell terminates instantly.

Once the *illusory fortification* has been created, the priest does not need to concentrate on the wall. The spell remains in effect even if the casting priest is killed in the interim.

The material components are the priest's holy symbol, a handful of stones, powdered mortar, and a gem worth at least 3,000 gp. All components except the holy symbol are consumed in the casting.

**Mind Tracker (Divination)**
Sphere: Divination
Range: Special
Components: V, S, M
Duration: Special

Casting Time: 1 turn/3
Area of Effect: One creature
Saving Throw: Special

The mind tracker is a magically-created creature which exists only on the Ethereal plane. It is called into existence when the first portion of this spell is cast.

When seen (which is seldom), the mind tracker has an indistinct body. It seems to be a near-solid coalescence of the vaporous atmosphere of the Ethereal plane itself. It is a roughly elliptical body with three or more limbs protruding at seemingly random locations. The number and size of these appendages shifts slowly, however, as new ones appear from the mist and old ones disappear. The body of the creature averages 2 feet across and 3 feet long, though this, too, tends to vary from minute to minute. The mind tracker has no discernible eyes, ears, nose, or other organs. It cannot be engaged in combat; if attacked, it simply disappears, to reappear after the danger has passed, or somewhere else entirely if its quarry has moved on.

The ceremony which creates the mind tracker takes one turn to perform. Its material components are a whiff of the Ethereal plane's atmosphere and the brain of a lizard.

Once the tracker is manifested, it must be assigned a quarry within one hour. If no quarry is designated, the tracker dissipates and the spell is wasted.

To assign a quarry to the tracker, the priest must have the quarry within his sight. This includes magical sight such as true seeing, but not remote sighting devices such as crystal balls. With the quarry in sight, the priest mouths the final phrases of the spell. From that point on, the mind tracker is mentally tethered to the victim. It follows its quarry (staying always in the Ethereal plane) wherever it goes. It constantly relays information about the subject to the priest: what it is doing, where it is. The priest does not actually see an image of the quarry, he receives `reports' from the mind tracker. These reports contain only such information as the tracker can gather by looking. It cannot identify people the quarry is talking to, but can describe them in great detail. Nor can it hear anything the quarry or anyone else says, or read writing, but it recognizes and can report the fact that speaking or reading is happening.

While the tracker is dogging its quarry, its presence can be felt as an eery, creepy sensation of being watched. If the victim makes an initial save vs. paralyzation, each of the following stages lasts three hours instead of two. For the first two hours, the quarry has a general feeling of ill ease. In the third and fourth hours, the victim is distracted and nervous, and suffers a -1 penalty on all saving throws. In the fifth and sixth hours, the victim is convinced someone or something is following him and suffers a -3 penalty on saving throws and a -2 (or -10%) penalty on all other dice rolls. After six hours the victim is near his breaking point. He is unable to concentrate to cast spells or use any of his class's special abilities. All die rolls have a -5 (or -25%) penalty. After eight hours, he must make a saving throw vs. paralyzation. If he fails, he collapses, fevered and delirious. This state persists until the tracker ceases to exist.

The mind tracker continues to exist for as long as the priest remains conscious of its input. If the priest is knocked out or falls asleep, or simply dismisses his creation, the tracker dissipates.

**Shadow Engines (Illusion/Phantasm)**

Sphere: War
Range: 240 yards
Components: V, S, M
Duration: 8 turns
Casting Time: 3 turns
Area of Effect: 180-yard x 180-yard square
Saving Throw: None

This spell creates the illusion of as many as four siege engines. The casting priest may choose from ballistae, siege towers, catapults, rams, or any combination thereof. Like the creatures created by the spell *shadow monsters*, these illusory engines have at least a tenuous reality and can inflict damage on enemies.

*Shadow engines* are accompanied by illusory crews of the appropriate number and race. The engines can move at a rate of 20 yards per turn and are unaffected by terrain considerations. (The caster can choose to slow them when passing through rough terrain to aid the illusion of reality.)

*Shadow engines* cannot carry real troops. They can be fired at the same rate as real engines of the appropriate type, but a hit causes only one-half the damage normal for that type of engine (round fractions down).

A *shadow engine* remains in existence until the spell duration expires, until an enemy unit approaches within 10 yards, or until it suffers damage from an enemy missile attack. When any of these conditions occur, the engine vanishes. If a single spell has created multiple engines, only the engine struck vanishes; the others remain.

The crew associated with a *shadow engine* must remain with that engine; it cannot move more than 5 yards away from the engine itself.

*Shadow engines* can move independently of other engines created by the spell as long as they remain within the area of effect and remain within 240 yards of the caster. The caster must maintain concentration to control the *shadow engines*. He cannot cast any other spells, and he is limited to a movement rate of 6. If the caster is struck for damage, the *shadow engines* vanish.

The material component is a finely detailed miniature model of a siege engine (of any type), which is consumed during the casting.

**Spacewarp (Alteration)**
Sphere: Numbers
Range: 50 yards
Components: V, S, M
Duration: 1 round/level
Casting Time: 7
Area of Effect: 50-foot-diameter sphere
Saving Throw: None

According to one view of the universe, what we perceive as gravity is actually a localized warping of the fabric of space-time. The *spacewarp* spell creates a temporary but very intense warping in a limited area.

When the priest casts this spell, he selects a specific point to be the center of effect.

This point may be anywhere within 50 yards of the caster, including in midair.

When the spell is completed, this center of effect gains a gravity field equal to the force felt at the surface of the earth. In other words, gravity is centered at this point; everything within 50 feet of this center that is not attached to something immovable will fall toward the selected point.

This localized gravity affects only loose objects and creatures capable of movement (i.e., not trees, whose roots are buried in the ground). It does not affect the ground itself--soil, plants, desert sand, lake water, etc. are immune to the effect.

An object falling toward the center of gravity gains speed exactly as it would if it were falling toward the ground. When the object reaches the center, it instantly ceases its movement. If objects are already at the center, newly arriving objects will slam into them, causing normal falling damage (1d6 per 10 feet) to the newly arriving objects. Objects previously at the center must save vs. paralyzation or suffer half that amount of damage.

Consider the following example. An orc is 10 feet away from the center of effect when the spell is cast. He falls 10 feet to the center and stops. His companion, a bandit, is 30 feet from the center. It takes him longer to fall to the center, so the orc is already there when he arrives, and the two characters collide forcefully. The bandit suffers 3d6 hit points of damage--the falling damage associated with a 30-foot fall. The orc must save vs. paralyzation or suffer half that amount.

Other things are caught in the effect as well. The bandit's horse was 50 feet away from the center of effect, so it arrives at the center after the orc and the bandit. It falls 50 feet, suffering 5d6 points of damage, and potentially inflicting half that amount on both the orc and the bandit.

The center of effect can be anywhere within 50 yards of the priest. Possibly one of the most destructive uses of this spell is to cast it directly on an enemy creature. Everyone and everything within 50 feet of that creature falls toward him and strikes him, inflicting damage.

When the spell terminates, gravity returns to normal. If the spell has lifted any characters or objects off the ground, they immediately fall back to the ground, suffering the appropriate amount of falling damage.

The material components are a lodestone and a sphere of obsidian, both of which are consumed in the casting.

**Spirit of Power (Summoning, Invocation)**
Sphere: Summoning
Range: 0
Components: V, S, M
Duration: 1 hour
Casting Time: 3 turns
Area of Effect: The casters
Saving Throw: None

This cooperative spell is rarely used or spoken of, since its requirements are strict and the outcome is uncertain. The spell must be cast by six priests of the same faith. All six must touch hands at the time of casting. At the completion of the spell, the priests fall into a trance. The life essences of the priests leave their bodies and merge at a point

within 10 feet of the casters. The spirits of the priests meld together to form the avatar of the priests' deity.

In this manner, the six characters become a single being with all the powers and abilities allowed to that avatar. The only stipulation is that the priests' deity cannot have created all avatars allowed to it at that moment. If this has happened, the spell fails and the priests are drained as described below.

If the spell succeeds, the priests have completely given their wills over to their deity, essentially forming the vessel into which it funnels power. In becoming the avatar, the priests retain the ability to make most of their own decisions. (The six must work in harmony or allow one of their number to decide all actions.) However, the deity can assume direct control of the avatar at any time it desires--the avatar is, after all, an earthly manifestation of the deity.

Although the spell has a duration of one hour, the deity is not obliged to release the priests at that time. If the priests are not released at the end of the spell's duration, they instantly die. A deity can choose to sacrifice its priests in order to maintain its avatar on the Prime Material plane. Such a cruel and unjust action is almost never undertaken by good deities or those that have any respect for life, free will, or mercy. For dark and sinister gods, the question is much more uncertain. If a deity chooses to maintain the avatar longer than one hour, control of the avatar instantly and permanently passes to the DM. (Clearly, a DM should seldom if ever exercise this power.)

While the priests are formed into the avatar, their bodies remain in a death like trance. The priests have no idea what might be happening to their real bodies (unless the avatar can observe them). Any damage to a priest's body requires an instant system shock roll. If successful, the damage is recorded normally, but the damage does not take effect until the spell ends (at which point the priest will almost certainly die). If the system shock roll is failed, the character instantly dies and the spell ends. Characters who die in this manner cannot be raised, resurrected, or reincarnated. They have been taken to the ultimate reward (or punishment) for the service they have rendered. If the bodies are moved from their positions, the spell ends.

Even if the deity releases the priests, they are left severely drained. All spells memorized are lost until the priest can rest and perform his prayers once again. The physical drain leaves each priest with only 1 hit point upon awakening, regardless of the number of hit points the character had when the spell was cast. Since damage suffered during the spell takes effect instantly, any priest who is hurt dies immediately (although quick action by others might save him).

Each priest who survives the spell will be bound by a quest (a duty that must be completed in exchange for calling upon their god).

The material component is an offering appropriate to the deity. The DM determines the exact nature of this offering.

**Tentacle Walls (Enchantment)**
Sphere: Wards
Range: Touch
Components: V, S, M
Duration: Special
Casting Time: 1 round

Area of Effect: 50-foot cube
Saving Throw: None

*Tentacle walls* enables the caster to enchant a single room whose volume is less than or equal to the area of effect. The spell activates 1d4 rounds after any creature other than the caster enters the room. The intruder must be larger than a normal rat; that is, it must be larger than one-half cubic foot or weigh more than three pounds.

When the spell is activated, six black, leathery tentacles sprout inside the room; the tentacles are evenly divided among the room's surfaces (for instance, if the room is a cube, one tentacle sprouts from the floor, one sprouts from the ceiling, and one sprouts from each of the four walls).

The whip-like tentacles grow to the length of the room and swing wildly. Each round, a tentacle has a 30% chance of striking a random creature in the room, inflicting 1d6 points of damage (save vs. spell for half damage). Each tentacle has AC 0 and 25 hit points. When a tentacle is reduced to 0 hit points, it disappears in a puff of black smoke.

If all creatures are killed or withdraw from the room, the surviving tentacles withdraw, disappearing into the walls. If the spell is activated again, six tentacles reappear; new tentacles are created to replace any destroyed previously. As long as one tentacle survives an encounter, the tentacles will continue to be replaced. Only when all six tentacles are destroyed is the spell permanently negated.

The material component is the dried tentacle of an octopus.

**Timelessness (Alteration)**
Sphere: Numbers
Range: Touch
Components: V, S, M
Duration: 1 day/level
Casting Time: 7
Area of Effect: One creature
Saving Throw: Neg.

This spell totally stops the flow of time for a single individual. All signs of life stop and the subject is incapable of any movement or thought. While the spell is in effect, the subject is totally immovable and cannot be affected by any physical or magical forces. Weapons simply bounce off the subject as they would bounce off the hardest stone. Spells, including *dispel magic*, are totally incapable of affecting the subject in any way. The subject does not age.

Aside from the fact that the subject remains visible, frozen in place like a statue, he is effectively no longer part of the universe. (DMs may rule that the most powerful of magics, such as *wishe*s, and creatures of demigod or higher status can affect the subject.)

When the priest casts the spell, he or she states the duration for which the spell will remain in effect (the maximum is one full day per level of the caster). Once the spell is cast, this duration cannot be changed; the priest cannot terminate the spell before the stated time has elapsed.

If the subject is unwilling to be affected by the spell, the priest must touch the victim for the spell to take effect; the subject receives a normal saving throw to resist the effects.

A willing subject need not make a saving throw.

The priest may cast this spell on himself if desired. This spell can provide a powerful defensive maneuver; while the spell is in effect, the subject is totally invulnerable. *Timelessness* is also an effective form of long-term imprisonment, as long as the priest is around to cast the spell again at the appropriate time.

This is an exceptionally powerful spell. Casting it puts a significant strain on the priest. Each time he casts *timelessness*, the priest must make a system shock roll. If the priest fails this throw, he or she permanently loses 1 point of Constitution.

The material components are a gem worth at least 1,000 gp and a small cylinder of obsidian. Both are crushed during the casting.

**Uncontrolled Weather (Conjuration/Summoning)**

Sphere: Chaos
Range: 0
Components: V, S
Duration: 1 turn/level
Casting Time: 1 turn
Area of Effect: 4d4 square miles
Saving Throw: None

This spell allows the caster to summon weather that is either appropriate or inappropriate to the climate and season of the region. The summoned effects are always dramatic--cool breezes or light fog will not appear. Instead, torrential floods will assault a desert, a heat wave will rage in polar wastelands, and tornadoes and hurricanes will rip across gentle landscapes. A blizzard might spring up in summer or a tornado might materialize in the winter.

The spellcaster has no influence over the weather pattern that emerges. He cannot control the area of effect or the duration of the weather.

Four turns after the spell is cast, the trend of the weather will become apparent--a sudden chill, gust of wind, overcast sky, etc. The uncontrolled weather arrives on the fifth turn. Once the weather has arrived, it cannot be dispelled. If the spell is canceled by the caster before the beginning of the fifth turn, the weather slowly reverts to its original condition.

The effects of the spell are the decision of the DM. The effects should be grand and impressive. Following are suggested effects of the weather.

*Torrential Rain/Blizzard:* Visibility is reduced to 100 yards or less; travel is nearly impossible due to water or heavy snow on the ground.

*Storm/Hurricanes:* All flying creatures are driven from the skies; trees are uprooted; roofs are torn off; ships are endangered.

*Heat Wave*: Intense heat immediately causes ice bridges to melt; avalanches of snow and ice roll down mountains.

The DM determines the area of effect randomly. The maximum duration of the spell is one turn per level of the caster; however, the DM may cancel the effect after a shorter time.

# Quest Spells

The quest spells that follow are designed to be used only in extraordinary circumstances as determined by the DM. Players and the DM should read the explanatory notes about quest spells in the introduction to this book before entering these spells into play.

**Abundance (Alteration)**
Sphere: Creation, Plant
Range: 0
Duration: Permanent
Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

By casting an *abundance* spell, the priest quickens the ripening of a harvest or the growth of woodland. Fields of crops in the affected area will grow, ripen, and be ready for harvest in a single day. Seed must be sown any time before the casting of the spell.

An area of woodland will grow as if it had grown for 25 years in one day plus five years per day for another three days. There must be soil capable of supporting the woodland for the growth to remain healthy.

The priest must stand anywhere within the area to be affected. The priest designates the exact size and shape of the area in the casting.

The area of effect is 10 square miles for ripening a harvest and 25 square miles for woodland growth. This spell does not create effects such as entanglement or enlargement of the flora within the area of effect.

**Animal Horde (Conjuration/Summoning)**
Sphere: Animal, Summoning
Range: 0
Duration: 1 day
Casting Time: 1 turn
Area of Effect: 10-mile radius
Saving Throw: None

This potent spell summons a number of animals to the priest. For each level of the priest, a number of animals totaling 10 hit dice appear.

The Power who grants the spell enables the priest to know exactly what types and numbers of animals are within the area of effect. The priest may specify the numbers of animals he wants; for instance, a 16th-level priest could summon 60 HD of wolves, 40 HD of bears, and 60 HD of wolverines. The animals will begin arriving in one round and will be assembled at the priest's location at the end of three turns.

The animals will not fight among each other even if they are natural enemies. Monsters (dragons, gorgons, hell hounds, etc.) cannot be summoned with this spell.

The summoned animals will aid the priest in any means of which they are capable. They will enter battle, protect the priest and his companions, or perform a specified

mission until the priest dismisses them or the spell expires. During this time, the priest can automatically communicate with his animals.

At the end of the spell, the animals instinctively return to their lairs. For the first three turns after the spell expires, the animals will not attack the caster, his companions, or other summoned animals. After this time, the animals will behave normally.

**Circle of Sunmotes (Alteration, Invocation/Evocation, Necromancy)**
Sphere: Sun
Range: 200 yards
Duration: 3 turns
Casting Time: 1 round
Area of Effect: 60-foot-radius hemisphere
Saving Throw: None

By casting *circle of sunmotes*, the priest creates a hemispherical shell filled with sparkling, glowing motes of bright sunlight. A one-foot radius globe of sunlight appears at the height of the caster's head in the exact center of the circle.

Creatures within the area of effect who are friendly to the cleric experience the glowing motes as warm, invigorating, inspiring, and healing. They are healed for 1d6 hit points, gain the benefit of an *aid* spell for 1 turn after the *circle of sunmotes* is created, gain +1 bonuses to all attack and damage rolls, and gain a +2 bonus to morale.

Enemies of the priest experience the same sunmotes as blinding, burning, and damaging. They must save versus spell or be blinded for 1 turn after the sunmotes are created. Each enemy is struck by a small fiery mote causing 1d4+1 points of damage (no saving throw is allowed, but creatures with magical fire resistance suffer only half damage), and suffers a -2 penalty to morale.

Companions of the cleric who step within 10 feet of the glowing miniature sun at the center of the effect are healed of 1d8+2 hit points. This affects each creature only once during the spell's duration.

Enemies of the priest who come within 10 feet of the minisun are burned for 1d8+2 points of fire damage. No saving throw is allowed, but creatures possessing magical resistance against fire suffer only half damage.

Companions of the priest who are outside the area of effect view enemies within the circle as if they are affected by golden *faerie fire*. Creatures affected by the *faerie fire* suffer a -2 penalty to armor class from attacks by creatures outside the circle.

Enemies of the priest outside the circle view the priest's allies as if obscured by a blinding light and suffer a -2 penalty to missile attacks against them.

**Conformance (Conjuration/Summoning, Invocation)**
Sphere: Law
Range: 0
Duration: 6 turns
Casting Time: 1 round
Area of Effect: 80-foot-diameter sphere
Saving Throw: None

The *conformance* spell has a simple principle with a profound effect: probable events always manifest.

In game terms, this means that events with a probability of 51% or better always occur. Thus, if a saving throw of 9 is required to avoid an effect, no roll is necessary; the save is automatically successful. If a warrior must roll 10 or better to hit an enemy, he automatically hits.

Conversely, improbable actions (those with less than a 50% chance) always fail. If a warrior must roll 12 or better to hit an enemy, he automatically fails. If a thief's chance to hide in shadows is 49%, he automatically fails.

There are two conditions that affect this spell. First, a *prayer* spell is continuously operative in the area of effect, shifting the balance of combat probabilities toward the favor of the priest who casts this spell and his companions. Second, probabilities of exactly 50% always shift in favor of the spellcasting priest. For example, if a roll of 11 or better is needed to save against a spell effect, this is a 50% chance for success. In such cases, the priest and his friends always make the save and enemies always fail.

This spell is particularly potent if *bless* and *chant* spells are cast in the area of effect.

**Elemental Swarm (Conjuration/Summoning)**
Sphere: Elemental, Summoning
Range: 240 yards
Duration: 6 turns
Casting Time: 3 turns
Area of Effect: Special
Saving Throw: None

This spell enables the caster to open a portal to one elemental plane of his choice (as appropriate for his patron Power). He can then summon elementals from that plane.

After the first turn of casting, 3d3 elementals of 12HD each appear; after the second turn, 2d3 elementals of 16HD each appear; after the third turn, 1d3 elementals of 20HD each appear. Each elemental has at least 5 hit points per hit die. The elementals remain for six turns from the time they first appear.

These elementals will obey the priest explicitly and cannot be turned against the caster. The priest does not need to concentrate to maintain control over the elementals. They cannot be dismissed with spells such as *dismissal*; the elementals remain for the duration of the spell.

**Etherwalk (Alteration)**
Sphere: Astral, Travelers
Range: Special
Duration: Special
Casting Time: 5 rounds
Area of Effect: Special
Saving Throw: Neg.

By casting this spell, the priest transports himself and as many as 50 followers (who must join hands at the time of casting) to the Border Ethereal. Unwilling creatures are

allowed a saving throw at a -4 penalty to avoid transportation.

The spell then allows the priest and his party to make as many as three round-trip journeys to and from the Inner Planes. It then allows them to return to the Prime Material plane.

Travel rates in the Ethereal plane are at four times normal speed. Travel times for locating or searching along curtains are all at the minimum time possible. Encounters with monsters occur at one-fifth the normal frequency. The priest and his party are not affected by the ether cyclone.

The spell expires when the priest and his party return to the Border Ethereal from an inner plane for the third time. They are then instantly transported to the Prime Material plane.

**Fear Contagion (Abjuration)**
Sphere: Charm, War
Range: 240 yards
Duration: Special
Casting Time: 1 round
Area of Effect: Special
Saving Throw: Special

A priest casting *fear contagion* selects a single creature to be the focus of the spell. The creature is affected by magical fear and receives no saving throw to avoid the effect. All creatures within 10 yards of the target creature must make a saving throw versus spell with a -4 penalty; failure indicates that they are also affected by fear.

If BATTLESYSTEM™ rules are used, the spell forces the affected unit to make a Morale Check at a -6 penalty. If this roll fails, the unit automatically routs.

Creatures affected by fear will flee in a direction away from the spellcaster for as long as they are able to run (refer to Chapter 14 of the *Player's Handbook* for rules). Such creatures will then spend one full turn cowering after being forced to rest. During this time, affected creatures suffer -4 penalties to attack rolls, and all dexterity bonuses are negated.

When using BATTLESYSTEM rules, fear-struck creatures are permitted rally tests with a -3 penalty and must engage in rout movement until they rally. However, a rally test is not permitted until two turns of rout movement have been completed.

As creatures run in fear, their fear is contagious. Any creature that comes within 10 yards of a creature affected by this spell must make a saving throw (no penalties) or be forced to flee from the spellcaster. In BATTLESYSTEM™ rules, creatures make a standard Morale Check with a -3 penalty.

Creatures affected by fear no longer cause fear in others after they have passed one mile from the original center of the spell effect.

**Health Blessing (Necromancy)**
Sphere: Healing, Necromantic
Range: 100 yards
Duration: 1 day/level
Casting Time: 1 round

Area of Effect: 50 creatures
Saving Throw: None

*Health blessing* provides a number of human, demi-human, or humanoid creatures with protection against ill health; it also enables subjects to heal others.

Recipients of a *health blessing* are immune to nonmagical disease, gain a +4 bonus to saving throws versus poison and death magic, and can cast *cure light wounds* on themselves once per day for the duration of the spell. In addition, a recipient of *health blessing* can heal one other creature per day as a paladin does by laying hands. The healing conferred is 1 hit point per level or hit die of the healer.

**Highway (Alteration, Evocation)**
Sphere: Travelers
Range: 0
Duration: 1 day
Casting Time: 1 turn
Area of Effect: 1,000 square yards
Saving Throw: None

The *highway* spell creates a shimmering plane of force that acts as a magical conveyor for the priest. By standing at the forward edge of the 10 x 100 yard plane, the priest and as many followers as can fit onto the square can travel as outlined below.

The *highway* travels 30 miles per hour (MV 88) over all terrains. The priest sets the height of the *highway* in a range from 1 foot to 100 yards above ground level. The highway moves as the priest wills; if the priest wishes to fix a destination in his mind, the *highway* will take the shortest route to that destination until the priest changes the course in his mind.

The *highway* cannot be used offensively. It will automatically travel over or around obstacles such as buildings and large creatures. It protects creatures traveling on it from adverse effects of the elements (ice, rain, gales, etc.). The *highway* can hover in place, but hovering can be achieved only at a height of 12 inches above ground level.

When the spell expires or the destination is reached, the highway gently lowers the priest and his party to the ground. The priest may order the *highway* to drop off creatures and collect others at intermediate destinations, although the priest who cast the spell must remain on the *highway* or it will disappear.

**Imago Interrogation (Divination, Enchantment/Charm)**
Sphere: Astral, Divination, Time
Range: 0
Duration: Special
Casting Time: 1 turn
Area of Effect: The caster
Saving Throw: None

The imago is a mental image--a form of mental magical body. After casting this spell (requiring 1 turn), the caster falls asleep. After 1d6 turns of sleep, the imago of the priest

begins to travel. The imago is not subject to any forms of attack and has no effective attacks.

The imago may travel to as many as four different locations separated by any distance, even across the planes and/or backward in time. At these locations, the imago may interrogate the imagos of as many as 10 other sentient creatures (other than Powers), compelling them to reply truthfully to its questions. A maximum of 40 questions may be asked during the spell duration.

Asking one question and listening to the reply takes 4 rounds of time in the caster's world. Each planar/time jump lasts 3 turns in that world.

Imago communications are telepathic. The questions must be able to be answered in a sentence of reasonable length, or the interrogated creature becomes confused and cannot answer.

The imagos of interrogated creatures will have no recollection of their interrogations. As a result, history cannot be changed through backward time travel using this spell.

**Implosion/Inversion (Invocation)**
Sphere: Numbers, Combat
Range: 120 yards
Duration: Special
Casting Time: 1 round
Area of Effect: One or more creatures
Saving Throw: Neg.

By use of this spectacular spell, the priest rearranges the extradimensional and spatial geometries of the molecules of one or more creatures. The result is that the rearrangement of the target creature causes it to implode (collapse inward upon itself) or invert (its insides become its outsides and vice versa).

The result is usually inversion, unless the target would not be adversely affected by this process (e.g., a slime, ooze, golem, elemental, etc.). In this case, implosion takes place. In either case, the effect kills/destroys the target instantaneously unless it makes a successful saving throw versus death magic at a -4 penalty.

The priest can affect one creature per round with this spell. After each round, the priest must make a Constitution check. If this fails, the priest is overwhelmed with the effort of sustaining the spell, at which time the spell terminates, leaving the priest fatigued (the equivalent of being stunned) for 1d4 rounds. The maximum possible duration of the spell is 3 turns.

**Interdiction (Abjuration)**
Sphere: Chaos, Law, Wards
Range: 240 yards
Duration: 1 day
Casting Time: 2 turns
Area of Effect: 200-foot cube/level
Saving Throw: Special

This powerful spell affects all enemies of the spellcasting priest who enter the area of

effect. The spell inflicts a -2 penalty on saving throws, a -1 penalty to armor class, and a -1 penalty to attack and damage rolls. Creatures friendly to the cleric gain corresponding bonuses--+2 to saving throws, +1 to attack and damage rolls, and a bonus of 1 to AC. Additional effects are possible, depending on the Power granting the spell; effects must correspond (or at least not conflict) with the spheres the priest normally uses. Multiple effects are possible.

The variation for the Sphere of Wards requires that each hostile creature entering the area of effect make a saving throw vs. spells with a -4 penalty or suffer 4d6 points of damage. An affected creature must then flee the area; it is unable to return. The creature must make a second saving throw vs. spell with a -4 penalty as it leaves the area or be blinded until magically cured.

The variation for the sphere of Law requires that a hostile creature make a saving throw every time it wishes to change an action. Thus, if a creature wishes to stop running and draw a weapon, a successful save is needed or the creature continues to run. Actions that cannot be continued (e.g., firing an arrow if the archer has no more arrows) are repeated as empty automatisms. In addition, creatures hostile to the priest automatically fail saving throws against Enchantment/Charm spells cast by the priest.

The variation for the Sphere of Chaos requires that hostile creatures make saving throws vs. spells at -4 or be affected by *confusion* (as per the spell). Affected creatures have a 5% chance per round of suddenly being attacked by a *phantasmal killer*.

All creatures who enter the area of effect are subject to the effects of the spell. All effects except blindness cease 3 rounds after an affected creature leaves the area. Creatures reentering the area of effect must make new saving throws.

**Mindnet (Divination, Enchantment/Charm)**
Sphere: Thought
Range: 0
Duration: 12 turns
Casting Time: Special
Area of Effect: Special
Saving Throw: Special

The priest casting a *mindnet* spell establishes a telepathic link with as many as 10 other creatures who may be separated from each other by as much as 10 miles. Thus, a chain of creatures 100 miles long could be established.

The Power granting this spell has the final word on the individuals who may be included in the spell. Most commonly, the spell will be cast to include individuals familiar to the caster. However, depending on the purpose of the spell, the Power may allow a stranger known to the caster only by name to be included in the *mindnet*.

Unwilling creatures must make a saving throw at a -4 penalty to avoid being included in the mindnet.
Casting the spell requires one round per two creatures in the *mindnet*. The spell's duration begins after all affected creatures have been linked. Characters of any class may take part in this linkage, benefiting from several effects.

First, each member of the *mindnet* benefits from Intelligence, Wisdom, and Dexterity bonuses. The bonuses are equal to the bonuses held by the member of the *mindnet* with

the highest ability score. For example, if five creatures in a *mindnet* have Wisdom scores of 15, 15, 16, 17, and 18, each creature would make saving throws, ability checks, and the like as if he had a Wisdom score of 18. Bonus spells are not gained due to enhanced Wisdom, however.

Second, spells may be pooled among the spellcasters within the *mindnet*. Any priest may use a spell memorized by another priest with two conditions: the priest who has memorized the spell must allow its use; and a priest "borrowing" a spell may use only spells of levels he could normally cast. Such borrowing still causes the spell to be lost from the mind of the caster who memorized it. A caster may not borrow spells outside his normal class restrictions. Priests and wizards within a *mindnet* cannot mix their priestly and wizardly spells, nor can a specialist borrow a spell from an opposition school.

Third, each member of the *mindnet* is in constant mental communication. Each member knows what is happening at the locations of all other members.

Finally, twice per turn, the priest casting this spell can instantly teleport any person linked by the *mindnet* to any other person who is also a part of the spell. This massive effort results in a +4 penalty to any Constitution checks made by the priest.

The priest casting the spell cannot perform any other actions while the *mindnet* exists; if he does, the spell is canceled. The priest must make a Constitution check at the end of each turn in order to sustain the spell. A failed check cancels the *mindnet*. The spell can last a maximum of 12 turns.

**Planar Quest (Alteration)**
Sphere: Astral
Range: Touch
Duration: Special
Casting Time: 5 rounds
Area of Effect: Special
Saving Throw: Neg.

By joining hands with as many as 12 companions and casting this spell, the priest transports his party to any other plane of existence. The priest and his party may arrive at a specific location in a plane (if one is known) or at an unknown destination. Travel time to the destination, whether known or unknown, will always be at the minimum possible. In an inner plane, a friendly guide will always be available to the priest. Hostile encounters occur at one-fifth normal frequency.

Unwilling creatures are allowed a saving throw at a -4 penalty to avoid being transported.

In the inner planes, the party is magically protected in any means necessary for survival. The party does not need to eat, drink, or rest if conditions make these activities impossible. Party members are immune to fire in the elemental plane of fire, and similar immunities are granted by the Power in other planes as necessary. The party can move through any terrain (including the elemental plane of Earth) at its normal movement rate.

In the outer planes, similar immunities apply. The priest is also granted a *power compass* (described in *Manual of the Plane*). Hostile encounters in an outer plane occur only half as often as normal.

The duration of this spell is decided by the Power who grants it. Normally, it is

sufficient to allow the priest and his party to undertake the quest that the Power has set forth. When the quest has been completed successfully or has failed beyond recovery, the priest and his party are returned to the Prime Material plane.

**Preservation (Abjuration)**
Sphere: Wards
Range: 480 yards
Duration: Special
Casting Time: 1 turn
Area of Effect: One structure
Saving Throw: None

This spell creates a powerful set of protective wards that operate on a single fortified building, temple complex, tower, or similar structure. These wards protect the physical integrity of the structure and prevent magical access.

A building protected by *preservation* suffers only 25% of normal structural damage from sources such as siege engines, earthquakes (both natural and magical), and powerful weather-affecting spells. Spells which directly affect the physical integrity of the structure (e.g., *passwall, stone shape, transmute rock to mud*) simply fail when cast on the protected building.

Preservation creates a permanent *protection from evil* spell on the affected building. Every surface of the building benefits from the effects of the spell.

Magical spells allowing access to the building fail. Thus, creatures attempting to *teleport* or *fly* into the building are stopped. Birds and creatures with natural flight may enter the building normally.

If the building is a temple (or other consecrated building) dedicated to the Power that granted the spell, all priests inside it gain the benefit of a *sanctuary* spell for the duration of the *preservation*.

The *preservation* spell expires if the building is destroyed or after 60 days have passed.

**Revelation (Divination)**
Sphere: Divination
Range: Special
Duration: 1 day
Casting Time: 1 turn
Area of Effect: Special
Saving Throw: None

The *revelation* spell grants the priest extraordinary divination powers. He gains the following abilities that are effective to a range of 240 yards.

- The priest gains *true seeing* as per the 5th-level priest spell.
- The priest can see and identify all priest spell effects in the area (assume a line of sight in a 60 arc).
- The priest is instantly aware of any creature's attempt to lie to him.
- The priest can communicate with animals, creatures, and monsters of all types. He

can communicate with any number of creatures, but may converse with only one at a time.

•The priest can communicate telepathically with humanoids.

•The priest may use a suitable item as a *crystal ball* once per hour, as per the magical item described in the DMG (including range). He gains a +20% bonus to all rolls to determine success.

**Reversion (Alteration, Invocation)**
Sphere: Time
Range: 0
Duration: Instantaneous
Casting Time: 1
Area of Effect: 10-foot-radius sphere
Saving Throw: None

By casting this spell, the priest reverses certain recent events in the area of effect. The spell affects only creatures friendly to the priest. The magic takes effect immediately after the spell is completed rather than at the end of the round.

All damage suffered by the priest's allies during the previous turn is undone. This includes energy drains, poison, and all special attack forms unless these resulted in instantaneous death. Death from cumulative physical damage is undone, however. Any creature brought back to life by the *reversion* spell is not required to make a resurrection survival roll.

Any spells cast by the priest's allies during the previous turn are restored and may be used again. This does not apply to magical or spell-like effects from magical items or scrolls. Material components consumed in spellcasting during this time are also restored.

The *reversion* spell affects only creatures and characters. Equipment and magical items are not affected.

Casting this spell ages the priest one year.

**Robe of Healing (Enchantment, Necromancy)**
Sphere: Healing
Range: Touch
Duration: 1 hour
Casting Time: 1 round
Area of Effect: One robe
Saving Throw: None

This spell enchants the priest's robe or cloak, enabling him to walk among wounded creatures and heal them. By touching the robe, a wounded creature is cured of 1d4+4 hit points. As many creatures as can physically touch the robe within the spell duration can be healed. A reasonable maximum is 20 creatures per round, allowing a total of 1,200 creatures to be healed. A creature can be affected only once per week by the *robe of healing*.

**Siege Wall (Alteration, Invocation)**

Sphere: Creation, Guardian
Range: 480 yards
Duration: Special
Casting Time: 1 turn
Area of Effect: One building
Saving Throw: None

A *siege wall* uses magical energy to fortify all external areas of a fortified building, such as walls, battlements, drawbridges, and gates. External surfaces to be protected must be contiguous.

The protective effects of the *siege wall* are compatible with BATTLESYSTEM™ rules (see Chapter 7). Creatures assaulting the protected building have their movement rates reduced by half when trying to scale the exterior surfaces (scaling ladders, etc.). Attackers suffer a -2 penalty to damage rolls for missile fire.

Damage or AD caused by war machines is reduced by 2 die levels (if normal damage is 1d12, 1d8 is rolled instead; if damage is 1d10, 1d6 is rolled; ballista has AD8). Damage caused by crushing engines is rolled at -2 to the damage roll or ADs. Hits or hit points of crushing engines are reduced by half.

All enemies attacking a building protected by *siege wall* who enter an enclosed wall space are out of command unless they are in the line of sight of their commander, regardless of his control diameter.

All exterior areas of the fortification have their hit points or Hits doubled (see *Hits of Building Features* in BATTLESYSTEM™ rules).

The siege wall expires if the building is destroyed; it lasts a maximum of 24 hours.

**Shooting Stars (Conjuration, Invocation)**
Sphere: Combat, Sun, Weather
Range: 120 yards
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: 40-yard radius
Saving Throw: ½

A priest casting *shooting stars* creates a violent turbulence in the air above the area of effect, from which a number of fiery-orange, electrically-charged miniature fireballs erupt and shower onto the ground. Within the area of effect, all creatures suffer 6d10 points of combined fire and electrical damage. A successful saving throw at a -4 penalty indicates half damage.

In addition, four large shooting stars materialize within the area of effect. The priest can individually target these at specific creatures. If creatures are not specified, the targets are randomly selected. Each shooting star causes 48 points of damage on impact (no saving throw is allowed). Any creature within 10 feet of impact suffers 24 points of fire damage (half-damage if a saving throw at -4 is successful).

**Sphere of Security (Abjuration)**
Sphere: Protection

Range: 0
Duration: 6 turns
Casting Time: Special
Area of Effect: 10-foot-radius sphere
Saving Throw: None

*Sphere of security* protects the priest who casts the spell and his companions within the area of effect. Enemy creatures within the area are unaffected.

The sphere grants affected creatures a +2 bonus to armor class, a +2 bonus to all saving throws vs. magic, and 50% magic resistance. Casting this portion of the spell requires 1 round.

In addition, the priest can specify as many as four additional specific protection effects from the List of Protection Scrolls in Appendix 3 of the DMG. Each additional protection lengthens casting time by 1 round. The priest may create one effect per 5 levels of his experience, to a maximum of four effects.

**Spiral of Degeneration (Enchantment/Charm, Invocation)**
Sphere: Chaos, Thought
Range: 0
Duration: 6 turns
Casting Time: 1 round
Area of Effect: 50-foot-diameter sphere
Saving Throw: Special

This potent spell affects all creatures hostile to the priest within the area of effect. The Power granting the spell causes the spell's effects to manifest in one of two ways: the Chaos variation or the Thought variation.

In the Chaos variation, the fabric of reality is altered to change events. Magical items dysfunction because the fabric of magical reality is changed.

In the Thought variation, the thoughts of the victims of the spell are distorted and altered so that they find themselves unable to function coherently and effectively. Magical items dysfunction because the thoughts of their users are warped to either convince them that the items cannot function or block thought so that proper commands cannot be given.

The effects on the victims of the spell are the same for both variations. Each round, there is a 50% chance that a degeneration effect will occur in the area of effect. When this occurs, two events take place. First, spellcasters lose one spell from each level of spell currently memorized (e.g., a spellcaster who has memorized three spells each from levels 1 through 3 loses one spell from each level for a total of three). Lost spells may be regained normally through rest and memorization.

Second, magical items are affected in the following ways:

- Weapons and armor lose one level of enchantment (a *sword +3* becomes a *sword +2*, etc.).
- Magical items that carry charges (wands, rods, staves, etc.) are drained of 1d10 charges.
- Magical items without pluses or charges must make a saving throw versus spell

(using the saving throw of their owner) or become nonmagical.

- Potions lose all magic and scrolls lose one randomly determined spell.
- Permanent magical items (swords, boots, armor, etc.) temporarily lose all effects until the spell expires or until the items leave the area of effect and for 1d10 rounds thereafter.

Single-use and charged items are permanently affected by this spell. A potion destroyed by this spell remains useless even after the spell ends.

Within the area of effect, magical communication is impossible due to thought blocks and chaotic effects. No communication magic (*ESP, sending*, etc.) will function; any spellcaster trying to cast such a spell will be stunned for 1 round per level of the spell he attempts to cast. A *reverse* of the tongues spell operates continuously in the area of effect. Telepathic communication (e.g., with a familiar) is also impossible.

In the Chaos variation of the spell, the center of the area of effect moves 10' per round. The direction is randomly determined using 1d8 roll and compass points (1N, 2NE, 3E, 4SE, 5S, 6SW, 7W, 8NW). The radius of the spell effect will never exclude the priest who cast the spell; re-roll any result that leads to this occurrence.

**Stalker (Conjuration/Summoning)**
Sphere: Creation, Guardian, Plant
Range: 30 yards
Duration: Special
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

A priest casting this spell conjures 1d4+2 plant creatures which have statistics identical to shambling mounds of 11HD. These creatures will aid the caster in combat or battle, perform a specific mission, or serve as bodyguards. The creatures remain with the priest for seven days unless he dismisses them. If the *stalkers* are summoned only for guard duty, however, the duration of the spell is seven months. In this case, the *stalkers* can only be ordered to guard a specific site or location.

The *stalkers* gain resistance to fire as per shambling mounds only if the terrain is suitable (marshy, close to a body of water, etc.)

**Storm of Vengeance (Evocation)**
Sphere: Elemental, War, Weather
Range: 400 yards
Duration: 1 turn
Casting Time: 1 turn
Area of Effect: 120-yard radius circle
Saving Throw: Special

This spell requires the priest to concentrate and cast the spell for the full duration of the spell. The casting time and duration are simultaneous; both activities occur in the same turn.

In the first round of casting, the priest summons an enormous black storm cloud over the area of effect. Lightning and crashing claps of thunder appear within the storm; creatures in the area of effect must make a saving throw or be deafened for 1d4 turns.

On the second round, acid rains down in the area, inflicting 1d4+1 points of damage. No saving throw is allowed.

On the third round, the caster calls six lightning bolts down from the cloud. Each is directed at a target by the priest (all may be directed at a single target or they may be directed at six separate targets). Each lightning bolt strike causes 8d8 points of damage (a successful saving throw indicates half damage).

On the fourth round, hailstones rain down in the area, causing 3d10 points of damage (no saving throw).

On the fifth through tenth (and final) rounds, violent rain and wind gusts reduce visibility to five feet. Movement is reduced 75%. Missile fire and spellcasting from within the area of effect are impossible.

The sequence of effects ceases immediately if the priest is disrupted from spellcasting during the 1 turn duration of the spell. The priest may opt to cancel the effects at any time.

**Transformation (Alteration, Enchantment, Illusion)**
Sphere: Numbers
Range: 0
Duration: 3 turns
Casting Time: 1 round
Area of Effect: 100-yard-radius sphere
Saving Throw: None

The *transformation* spell allows the priest to alter extradimensional and relative geometries within the area of effect. This enables the priest and his companions to use extradimensional links to facilitate rapid movement as follows.

All allies of the priest are able to blink (as per the 3rd-level wizard spell) once per round, with the ability to select the direction of movement.

As many as 10 creatures (designated by the priest at the time of spellcasting) can use the *teleport without error spell*. They may teleport anywhere within the area of effect of the *transformation* spell once during the duration of the spell.

As many as 10 creatures (specified by the priest at the time of spellcasting) gain abilities as if wearing *boots of striding and springing* for the spell duration.

At any time during the spell, the priest and as many as 10 other creatures can be affected as per a *shadow walk* spell. Creatures to be affected must stand in a circle and touch hands. As soon as the priest who cast the *transformation* spell leaves the area of effect via the *shadow walk*, all other effects of the *transformation* are canceled.

**Undead Plague (Necromancy)**
Sphere: Necromantic
Range: 1 mile
Duration: Special
Casting Time: 2 rounds

Area of Effect: 100-yard square/level
Saving Throw: None

By means of this potent spell, the priest summons many ranks of skeletons to do his bidding. The skeletons are formed from any and all humanoid bones within the area of effect. The number of skeletons depends on the terrain in the area of effect; a battlesite or graveyard will yield 10 skeletons per 100 square yards; a long-inhabited area will yield three skeletons per 100 square yards; and wilderness will yield one skeleton per 100 square yards.

The spell's maximum area of effect is 10,000 square yards. Thus, no more than 1,000 skeletons can be summoned by this spell.

The skeletons created by this spell are turned as zombies and remain in existence until destroyed or willed out of existence by the priest who created them.

**Warband Quest (Enchantment/Charm)**
Sphere: Charm, War
Range: 240 yards
Duration: Special
Casting Time: 1 round
Area of Effect: 200 creatures
Saving Throw: Neg.

A priest may cast *warband quest* on any group of 200 creatures who are capable of understanding his commands. The creatures are then affected in a manner similar to the 5th-level priest spell, quest. Unwilling creatures are allowed a saving throw with a -4 penalty to avoid the effects.

The specified quest must be related to the reason that the Power granted this spell (perhaps a quest to slay or overcome a specified enemy).

*Warband quest* gives subjects of the spell a bonus of 2 hp per level of the caster (maximum 20 hp). Subjects also gain the effects of a *prayer* spell and have Morale of 18 while on the quest. These benefits last for the duration of the spell; the spell ends when the specified task is completed. A creature who abandons the quest is subject to the wrath of his deity.

**Ward Matrix (Invocation/Evocation)**
Sphere: Wards
Range: Special
Duration: 60 days
Casting Time: 6 turns
Area of Effect: Special
Saving Throw: None

The *ward matrix* spell links as many as six locations within the Prime Material plane. Only locations that have a functioning Wards spell may be linked. *Ward matrix* conjoins the different Wards spells so that each linked site gains the protection of all other wards in the network.

From the place where the *ward matrix* is cast, magical connections spread to the other designated sites. These can be seen with a *true seeing* or similar spell as tendrils of magical energy running through the air just above ground level. The connections target their destinations and move toward them at a rate of 40 miles per turn. They can evade barriers such as *anti-magic shells* by moving above or around them. When the connections reach their destinations, they multiply and spread to connect all other locations in the network; this secondary linkage is established at a rate of 20 miles per turn.

The conjoining of Wards lasts for 60 days unless a linked area is destroyed or a Wards spell is dispelled. Any location that is destroyed or has its Wards spell dispelled is removed from the matrix; other connections remain intact for the duration.

**Wolf Spirits (Conjuration/Summoning, Invocation)**
Sphere: Animal, Guardian, Summoning
Range: 30 yards
Duration: Special
Casting Time: 2 turns
Area of Effect: Special
Saving Throw: None

The priest casting this spell calls upon the "spirits" of wolves (or another animal, if appropriate). The notion of wolf spirits is akin to the Wild Hunt of Celtic mythology: a pack of enormous magical wolves led by a human master who range Celtic lands seeking to destroy evil. The *wolf spirits* spell summons 2d4+2 such entities to serve the priest as master.

*Wolf spirits'* statistics are as follows: AC -4; MV 36 Fl 36 (B); HD 5+5; #AT 1; Dmg 3d6; AL N; SZ M; ML 20; THAC0 14. They are immune to all forms of mind control, illusions, gases, paralyzation, and spells which affect only corporeal creatures. They cannot be harmed by weapons of less than +2 enchantment.

*Wolf spirits* can be instructed to perform a service in the manner of the *animal summoning* spells. In this variation in the Animal and Summoning spheres, the spell does not expire until the spirits have performed their commanded service, to a maximum duration of 14 days. In the Guardian variation of this spell, the spirits can only be commanded to keep watch over an area or creature. The spell lasts 100 days for this type of service.

# CHAPTER 4: MAGIC ITEM TABLES

### Table 4: POTIONS AND OILS

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-4 | Aroma of Dreams | 300 |
| 5-6 | Curdled Death | 750 |

| | | |
|---|---|---|
| 7-12 | Murdock's Insect Ward | 200 |
| 13 | Oils of Elemental Plane Invulnerability | 5,000 |
| 14-15 | Oil of Preservation | 750 |
| 16-17 | Potion of Elemental Control | 600 |
| 18-20 | Starella's Aphrodisiac | 250 |

## Table 5: RINGS

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-3 | Affliction | -- |
| 4-6 | Armoring (W) | 2,000 |
| 7-8 | Bureaucratic Wizardry (W) | -- |
| 9-11 | Elemental Metamorphosis | 3,000 |
| 12-14 | Fortitude | 1,000 |
| 15-17 | Randomness (P) | -- |
| 18-20 | Resistance (W) | 1,000 |

## Table 6: RODS, STAVES, WANDS

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-4 | Rod of Distortion | 5,000 |
| 5-6 | Staff of the Elements (W) | 10,000 |
| 7-12 | Wand of Corridors | 4,000 |
| 13-14 | Wand of Element Transmogrification | 2,000 |
| 15-17 | Wand of Misplaced Objects | 2,000 |
| 18-20 | Wand of Prime Material Pocket | 5,000 |

## Table 7: MISCELLANEOUS MAGIC: Books, Librams, Manuals, Tomes

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-7 | Manual of Dogmatic Methods | -- |
| 8-16 | Tome of Mystical Equations (P) | 1,000 |
| 17-20 | Trimia's Catalogue of Outer Plane Artifacts (W) | 12,000 |

## Table 8: MISCELLANEOUS MAGIC: Jewels, Jewelry, Phylacteries

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-2 | Amulet of Extension (W) | 1,000 |
| 3-4 | Amulet of Far Reaching (W) | 1,000 |
| 5-6 | Amulet of Leadership | 5,000 |
| 7 | Amulet of Magic Resistance | 5,000 |
| 8 | Amulet of Metaspell Influence (W) | 3,000 |
| 9-10 | Amulet of Perpetual Youth | 2,000 |
| 11 | Brooch of Number Numbing | 4,000 |
| 12 | Gem of Retaliation | 2,000 |
| 13-14 | Medallion of Spell Exchange (W) | 3,000 |
| 15-16 | Necklace of Memory Enhancement | 1,000 |

| | | |
|---|---|---|
| 17-18 | Scarab of Uncertainty | 1,000 |
| 19-20 | Talisman of Memorization (W) | 1,000 |

### Table 9: MISCELLANEOUS MAGIC: Bracers, Gloves, Hats, Robes

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-4 | Bracers of Brandishing | 3,000 |
| 5-8 | Fur of Warmth | 5,000 |
| 9-12 | Reglar's Gloves of Freedom | 3,000 |
| 13-16 | Robe of Repetition (P,W) | 6,000 |
| 17-20 | School Cap (W) | 2,000 |

### Table 10: MISCELLANEOUS MAGIC: Bags, Bottles, Pouches, Containers

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-3 | Bag of Bones (P) | 3,000 |
| 4-8 | Flatbox | 5,000 |
| 9-13 | Jar of Preserving | 500 |
| 14-15 | Nefradina's Identifier (W) | 1,000 |
| 16 | Tenser's Portmanteau of Frugality (W) | 6,000 |
| 17-20 | Thought Bottle | 1,000 |

### Table 11: MISCELLANEOUS MAGIC: Candles, Dusts, Ointments, Stones

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-3 | Candle of Propitiousness | 750 |
| 4-5 | Dust of Mind Dulling | 1,000 |
| 6-7 | Powder of the Black Veil | 1,000 |
| 8-9 | Powder of Coagulation | 500 |
| 10-11 | Powder of the Hero's Heart | 750 |
| 12-13 | Powder of Magic Detection | 1,000 |
| 14-15 | Puchezma's Powder of Edible Objects | 1,000 |
| 16-19 | Salves of Far Seeing | 1,000 |
| 20 | Warp Marble | 5,000 |

### Table 12: MISCELLANEOUS MAGIC: Household Items, Tools, Musical Instruments

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Crucible of Melting (W) | 1,000 |
| 2-3 | Everbountiful Soup Kettle | 1,000 |
| 4 | Forge of Metal Protection | 10,000 |
| 5 | Glass of Preserved Words | 2,000 |
| 6 | Horn of Valor | 5,000 |
| 7 | Hourglass of Fire and Ice (W) | 2,000 |
| 8 | Lens of Speed Reading | 500 |
| 9-10 | Lorloveim's Obsidian Mortar and Pestle | 500 |

| | | |
|---|---|---|
| 11 | Mirror of Retention | 1,200 |
| 12 | Mirror of Simple Order | -- |
| 13 | Mordom's Cauldron of Air | 3,000 |
| 14 | Philosopher's Egg (W) | 1,000 |
| 15 | Pick of Earth Parting | 5,000 |
| 16-17 | Skie's Locks and Bolts | 1,000 |
| 18-19 | Tapestry of Disease Warding | 2,000 |
| 20 | Zwann's Watering Can (P) | 1,000 |

**Table 13: MISCELLANEOUS MAGIC: The Weird Stuff**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Air Spores | 500 |
| 2 | Bell's Palette of Identity | 1,000 |
| 3 | Claw of Magic Stealing (W) | 3,500 |
| 4 | Contracts of Nepthas | 1,000 |
| 5 | Crystal Parrot | 1,500 |
| 6 | Dimensional Mine | -- |
| 7 | Disintegration Chamber | 5,000 |
| 8 | Elemental Compass | 10,000 |
| 9 | Globe of Purification (P) | 500 |
| 10 | Globe of Serenity (P) | 500 |
| 11 | Law's Banner (Wr) | 5,000 |
| 12 | Liquid Road | 500 |
| 13 | Mist Tent | 2,000 |
| 14 | Mouse Cart | 3,500 |
| 15 | Portable Canoe | 2,000 |
| 16 | Prism of Light Splitting | 1,500 |
| 17 | Quill of Law | 7,000 |
| 18 | Saddle of Flying | 4,000 |
| 19 | Teleportation Chamber | 10,000 |
| 20 | Time Bomb | 1,000 |

Items followed by a letter in parentheses are usable only by specific classes: P Priest, W Wizard, Wr Warrior.

# MAGIC ITEMS

## Aromatic Oils

Aromatic oils are a special type of magical oil. Like perfumes, their power comes from the scent released. All aromatic oils are inert until worn by a living creature. Once applied, the aromatic oil gradually begins to react, and after 1d4 rounds have passed, the scent's stated effect begins. In all cases, the creature wearing the aromatic oil is not

affected, but other creatures (both friends and foes) within a 5-foot radius of the wearer are subject to its effects. Note that only those creatures with a sense of smell can be affected by a magical fragrance.

These precious perfumes are commonly found in tiny stoppered vials made of glass, clay, metal, or wood. Only a small amount is required per use. Each vial contains enough aromatic oil for 1d10+10 applications.

**Aroma of Dreams:** All creatures who come within 5' of the wearer of this oil are put to sleep. Potential victims are allowed a saving throw vs. spell. If successful, the victim suffers no effect and may remain near the wearer without need of further saving throws. If the roll is failed, the creature slumps to the ground, the victim of a magical slumber that lasts 1d4+4 rounds.

When an application of the oil is worn, the scent is potent for 3d4 rounds. After this time, the perfume evaporates and another dose must be applied if the wearer wishes to renew the effect.

**Curdled Death:** Perhaps the most powerful of all aromatic oils, the smell of *curdled death* has the ability to slay all living creatures of 3 or fewer Hit Dice or experience levels who come within 5' of the wearer. Magical, undead, and extraplanar creatures are immune to this oil, as are all creatures of 4 or more Hit Dice or experience levels.

Upon smelling the oil, potential victims are allowed a saving throw vs. spell. If successful, a creature suffers no effect and may remain near the wearer without need of further saving throws. Those who fail the save drop dead in their tracks.

When a dose is worn, it remains potent enough to kill creatures for 1d3 rounds. After this time, the fragrance evaporates and another dose must be applied if the wearer wishes to renew the effect.

**Murdock's Insect Ward:** This fragrance is a boon to travelers, since it repels insectoid creatures (both normal and monstrous) that come within 5 feet of the wearer of this fragrance. Insectoid monsters with Intelligence scores of 5 or more are allowed a saving throw vs. spell. If successful, they suffer no effects and may remain near the wearer without need of further saving throws. If the save is failed, the creature cannot approach within 5 feet of the wearer. (Note that this still may be close enough to cause harm.) One dose is effective for 1d3+1 hours.

**Starella's Aphrodisiac:** Any creature of a similar race and opposite sex who approaches within 5 feet of the wearer becomes thoroughly enamored with the wearer as if under the effect of a powerful charm. Potential victims are allowed a saving throw vs. spell. If the roll is successful, the victim suffers no effects and may remain near the wearer without need of further saving throws.

If the save is failed, the creature is charmed as long as he or she remains within 5' of the wearer (as long as the aphrodisiac is still potent) plus 2d4 turns outside that area. An affected creature regards the wearer as a trusted friend, ally, and romantic interest to be heeded and protected. The charmed individual does not behave as if he were a mindless automaton, but any word or action of the wearer is viewed in the most favorable way. This attitude does not extend to others, and it is possible for the person so enamored to be overcome by jealousy, viewing all others (especially other victims) as potential rivals.

When a dose of *Starella's aphrodisiac* is worn, it remains potent for 3d4 turns. After

this time, the perfume evaporates and another dose must be applied if the wearer wishes to renew the effect.

# Potions

**Potion of Elemental Control:** When this potion is consumed, the imbiber can influence one or two elementals in a manner similar to a *charm monster* spell. The elementals must be within 60 feet of the imbiber and are allowed a saving throw vs. petrification to avoid the effect. If only one elemental is influenced, it is subject to a -4 penalty on its save. If two are influenced, their saving throws gain a +2 bonus because the effect of the potion is weakened.

If either elemental is controlled by another wizard, it gains a +2 bonus to its saving throw. Note that if the elemental was summoned by the 5th-level *conjure elemental* spell, the summoner has a 50% chance of dispelling the creature. Control lasts for 5d6 rounds.

The type of elemental subject to a particular potion is randomly determined.

| D4 Roll | Elemental Type |
|---|---|
| 1 | Air |
| 2 | Earth |
| 3 | Fire |
| 4 | Water |

**Oil of Elemental Plane Invulnerability:** These precious oils provide total invulnerability against the elemental forces on one inner plane, as well as offering the same protection as the oil of *elemental invulnerability*. Any character covered in the oil suffers no ill effects from the harsh environments of the elemental, para-elemental, and quasi-elemental planes. Attacks by elemental creatures are effective, but with a -1 penalty per die of damage.

A flask of oil contains enough oil to coat one man-sized creature six times or six individuals once. An application is effective for 24 hours.

The protection the oil offers is determined randomly with two die rolls. First, 1d4 is rolled to select a table below: 1=Table A, 2=Table B, 3=Table C, 4=Table D. Second, 1d4 is rolled on that table.

**Table A**

| D4 Roll | Plane |
|---|---|
| 1 | Air |
| 2 | Water |
| 3 | Earth |
| 4 | Fire |

**Table B**

| D4 Roll | Plane |
|---|---|
| 1 | Smoke |
| 2 | Ice |
| 3 | Ooze |
| 4 | Magma |

**Table C**

| D4 Roll | Plane |
|---|---|
| 1 | Lightning |
| 2 | Steam |
| 3 | Radiance |
| 4 | Minerals |

**Table D**

| D4 Roll | Plane |
|---|---|
| 1 | Vacuum |
| 2 | Salt |
| 3 | Ash |
| 4 | Dust |

Anyone covered in the oil can see, breathe, and move in the respective plane without difficulty. Just as a character can move through flames or water without difficulty when covered in the proper oil, a character doused in the oil of earth can pass through the stone of the elemental plane of Earth as if it were air.

**Oil of Preservation:** Any nonliving, non-magical object may be coated with a layer of *oil of preservation*. If every surface of the object is covered, it will suffer no ill effects from the passage of time. Thus, wood will not rot, metal will not rust, and masonry will not crumble. The oil provides protection from both natural and magical aging.

One flask of *oil of preservation* will protect 1 cubic foot of surface area. The effects of the oil wear off after one century, at which time normal aging resumes.

# Powders

Magical powders are usually stored in small paper packets, cloth pouches, or hollow blow tubes made of glass, wood, metal, or bone. A packet or pouch can be shaken out to cover the area all around the user to a radius of 5 feet. This action lasts an entire round. Note that powders used in this manner can affect the user.

Alternatively, powder in a tube can be blown outward in a ten-foot-long cone shape that is one foot wide at the apex and five feet wide at the end. Used in this manner, the powder has no chance of affecting the user (unless it rebounds on him due to wind or similar circumstances).

Powders may also be blown from the user's hand, but can only affect a single individual within five feet of the user.

**Powder of the Black Veil:** This sooty, black powder causes temporary magical blindness to all those in the area of effect. If a creature's saving throw is successful, he suffers no effects. If the roll fails, the creature is blinded and suffers a -4 penalty to attack rolls, a -4 penalty to Armor Class, and a +2 penalty to initiative rolls. Blindness persists each round until the victim succeeds at a saving throw vs. spell, at which time the effect is instantly negated. An entire packet or blow tube must be used for each application.

**Powder of Coagulation:** When placed on an open wound, a pinch of this yellow powder stops all bleeding and heals 1d6 hit points of damage. Each pouch or packet contains 4d4 pinches. A blow tube contains one use, but stops bleeding and heals 1d4 hit points for all creatures in the area of effect.

**Powder of the Hero's Heart:** When used, this dull red powder instills bravery in all creatures within the area of effect (both friends and enemies). It grants such creatures a morale bonus of +2 and negates the effects of magical fear. The effect lasts for 5d4 rounds. An entire packet, pouch, or blow tube must be used for each application.

**Powder of Magic Detection**: Under close inspection, this ordinary-looking powder can be seen for what it truly is--an extremely fine powder of minute, crystalline granules.

When this powder contacts a magical object, the crystals spark and flash with a rainbow of colors. This effect does not reveal the nature or intensity of the enchantment--only that the item is magical.

A small pinch of powder is needed for each use, no matter how large or small the object. Each packet contains 1d10+10 pinches. Powder that is placed on a nonmagical item yields no effect and cannot be reused.

# Rings

**Ring of Affliction:** When an *identify* spell is used on this cursed ring, it will appear to be a *ring of resistance*. The ring will function as such until the wearer makes a saving throw to any school in opposition to the school represented by the ring. The school of magic represented can be determined by rolling 1d8 on the table below.

| D8 Roll | Represented School |
|---|---|
| 1 | Abjuration |
| 2 | Alteration |
| 3 | Conjuration/Summoning |
| 4 | Enchantment/Charm |
| 5 | Illusion/Phantasm |
| 6 | Invocation/Evocation |
| 7 | Lesser/Greater Divination |
| 8 | Necromancy |

The first time the wearer of a *ring of affliction* makes a saving throw against any school in opposition to the school of the ring worn, the *ring of affliction's* true properties are revealed. The ring causes the wearer to suffer a -2 penalty on all saving throws vs. spells of the ring's opposing school or schools. Once this power is activated, the beneficial effects of the ring no longer operate. Once the curse has been activated, the wearer can remove the ring only through a *remove curse* spell.

**Ring of Armoring:** A wizard wearing this ring gains an additional +1 bonus to any AC bonus he receives from casting a spell upon himself. Thus, an armor spell grants the wizard AC 5 instead of AC 6, and a *shield* spell grants the wizard AC 1 versus hand-hurled missiles instead of AC 2. Restrictions that apply to a spell (for example, *armor* does not affect a character already wearing armor) are in no way altered through use of this ring.

**Ring of Bureaucratic Wizardry:** This cursed ring is indistinguishable from a *ring of wizardry*, but has one important difference. When a wizard casts any spell while wearing the ring, a sheaf of papers and a quill pen suddenly appear in his hand. The papers are forms that must be filled out in triplicate explaining the effects of the spell, why the wizard wishes to cast it, whether it is for business or pleasure, and so on. The forms must be filled out before the effects of the spell will occur. The higher the level of the spell cast, the more complicated the forms become. Filling out the forms requires one round per level of spell.

As soon as the papers are filled out, the forms and the pen disappear and the spell effects occur as the spellcaster desired.

The ring cannot be removed willingly. *Remove curse* or a similar spell must be cast upon the wearer in order to remove the ring.

**Ring of Elemental Metamorphosis:** There are four types of these rings, each corresponding to one of the four elements. When one of these rings is discovered, the type is determined randomly.

| D4 Roll | Element |
|---|---|
| 1 | Air |
| 2 | Earth |
| 3 | Fire |
| 4 | Water |

Each of these rings has the power to *polymorph* the wearer into an elemental of the appropriate type. When the transformation occurs, the subject's equipment is absorbed into his new form. The affected character retains his mental abilities, but cannot cast spells.

Characters who are not accustomed to the new form suffer a -2 penalty on attack rolls until they successfully strike an opponent in two consecutive combat rounds. After this occurs, it is assumed they have mastered their new shape.

The *polymorphed* character acquires the form and physical abilities of the appropriate elemental. This includes Armor Class (but the character is subject to attacks by weapons of less than +2 enchantment), movement rates, and attack routines (including special attacks). Hit points and saving throws are identical to those for the character's natural form.

Additionally, the character is immune to damage from exposure to the element he has become, and may move and breathe freely within the natural element. Thus, a character metamorphosed into a fire elemental could swim in a pool of non-magical lava without risk of injury, but the same character could be damaged by magical fire, such as that from a *fireball* spell.

The ring may be used once per day for 1d4+1 turns, at which time the character reverts to his normal form. The wearer can end the metamorphosis at any time. When returning to his own form, the wearer regains 1d12 hit points.

If a successful *dispel magic* spell is cast upon the subject at any time while he is transformed, he is forced back into his normal form and must succeed at a system shock roll or die. The wearer returns to his own form when slain or when the effect is dispelled, but no hit points are restored in these cases.

**Ring of Fortitude:** When worn, the *ring of fortitude* grants the wearer a bonus of +4 to one randomly selected ability score (roll 1d12: 1-6=Dexterity, 7-11=Wisdom, 12=Constitution) **for the purposes of spell resolution only**. It does not affect ability checks or other aspects of ability scores, except those as a direct result of spells or spell-like abilities.

For example, a character with a natural Constitution of 14 would have an enhanced score of 18 while wearing such a ring. He does not gain any extra hit points from wearing

it, but his system shock for resolving the *polymorph other spell* is increased to 99%. With the Constitution-enhancing ring, the bonuses even apply to the *raise dead* and *resurrection* spells. All effects are lost when the wearer removes the ring.

**Ring of Randomness**: When an *identify* spell is cast on this cursed clerical ring, it radiates the aura of a beneficial ring to disguise its nature. The DM should roll 1d100 to determine the ring's power.

| D100 Roll | Power |
|---|---|
| 01-25 | *protection from evil* |
| 26-40 | *continual light* |
| 41-60 | *bless* |
| 61-70 | *cure light wounds* |
| 71-80 | *remove fear* |
| 81-90 | *heat metal* |
| 91-100 | *cure blindness or deafness* |

A ring can be used three times per day at the 12th level of ability. Each ring functions normally half the time, providing the indicated power. However, the ring's curse causes the reverse of the desired effect to manifest 50% of the time. The DM should roll secretly each time the ring is used to determine whether the result is the desired effect or the reversed effect. Thus, a person casting *continual light* has a 50% chance of getting either light or darkness.

If the ring is used to cure blindness or deafness, a reversed result yields a special curse. Since *cause blindness* has no effect on a blind character, the ring further distorts the spell effect by shifting to *cause deafness*. Thus, a priest attempting to cast *cure blindness* whose ring indicated a reversed result would cause his victim to become deaf.

In addition, the priest runs the risk of his spells reversing every time he uses a reversible spell (even those cast normally).
The ring can be removed only with a successfully cast *dispel magic* spell.

**Ring of Resistance:** This ring grants a wizard a saving throw bonus identical to the bonus gained by a specialist in a particular school of magic. The magical school affected is randomly determined on the table below by rolling 1d8.

| D8 Roll | Affected School |
|---|---|
| 1 | Abjuration |
| 2 | Alteration |
| 3 | Conjuration/Summoning |
| 4 | Enchantment/Charm |
| 5 | Illusion/Phantasm |
| 6 | Invocation/Evocation |
| 7 | Lesser/Greater Divination |
| 8 | Necromancy |

When required to save against a spell from that school, the wearer gains a +1 bonus to his saving throw. When the wearer casts a spell from that school, his opponent suffers a -1 modifier to all saving

throws. This ring does not allow a wizard to cast spells from a school in opposition to his own.

These modifiers are cumulative with all others, including those in effect for specialization.

# Rod

**Rod of Distortion:** This unpredictable device is capable of affecting the operation of all rods, staves, and wands within a 20-foot radius for a single round. The wielder rolls 1d20. On a roll of 1-15, the *rod of distortion* does not influence other items. On a roll of 16-19, it acts as a *wand of negation* and rods, staves, and wands within 20 feet simply do not function during that round (but are otherwise unaffected). On a roll of 20, the *rod of distortion* completely disrupts the functioning of rods, staves, and wands. This distortion results in the backfiring of these devices, causing maximum damage to their users if the item is used during that round (e.g., a *wand of lightning* will fire a backward-directed bolt striking its user, a *rod of cancellation* will affect one random magical item possessed by its owner, and so on). Items used by the wielder of the rod are unaffected.

This rod cannot be recharged.

# Staff

**Staff of the Elements:** This powerful item appears to be a staff +2. If it is grasped by an elementalist, however, its true powers become evident.

A *staff of the elements* is charged by the life force of an elemental trapped within it. The staff has charges equal to the number of Hit Dice of the elemental multiplied by 2. Thus, a staff holding a 12 HD elemental has 24 charges. Every time two charges are expended, the elemental loses one Hit Die. When all charges are used, the elemental dies and the staff becomes dormant.

If a dormant staff is used to successfully strike an elemental, the creature must immediately attempt a saving throw vs. rods, staves, and wands. If the save is failed, the elemental is absorbed into the staff, thereby recharging the device. If the roll is successful, the creature avoids the effect, but suffers normal damage from the strike of the magical staff (1d6+2).

It is possible to absorb an elemental only if the staff is dormant. Only one elemental may be held in the staff at one time.

The staff holds the following powers that do not drain charges; each may be used once per day even if the staff does not hold an elemental:

- *affect normal fires*
- detect elementals within a 100' radius
- *fool's gold*
- *metamorphose liquids**
- *wall of fog*

An occupied staff has the following powers depending upon the type of elemental trapped within. For example, if a fire elemental is held in the staff, only those powers related to fire are available. Each requires the expenditure of one charge per use:

Air:
- *stinking cloud*
- *wind wall*

Earth:
- *dig*
- *Maximilian's stony grasp**

Fire:
- *fireball*
- *pyrotechnics*

Water:
- *water breathing*
- *watery double**

The following powers drain two charges per use:

Air:
- *cloudkill*
- *solid fog*

Earth:
- *passwall*
- *transmute rock to mud*

Fire:
- *fire shield*
- *wall of fire*

Water:
- *airy water*
- *wall of ice*

The most powerful abilities of the staff drain four charges per use:

Air:
- *airboat**
- *suffocate**

Earth:
- *crystalbrittle*
- *stone to flesh (reversible)*

Fire:
- *Forest's fiery constrictor**
- *Malec-Keth's flame fist**

Water:
- *Abi-Dalzim's horrid wilting**
- *transmute water to dust*

The powers of a *staff of the elements* may be used only by an elementalist. Note that elementalists are restricted against the use of spells and magical items of the element that directly opposes their element of specialty. Thus, an elementalist specializing in water

cannot use the staff's powers if it contains a fire elemental.

Using a *staff of the elements* can be dangerous. Each time a power is used that requires the expenditure of one or more charges, there is a 5% chance that the trapped elemental bursts forth, destroying the staff in the process. A successful *dispel magic* spell cast on the staff automatically releases the creature. An escaped elemental will certainly seek revenge against its tormenter.

Powers marked with an asterisk (*) are new spells found in this book.

# Wands

**Wand of Corridors:** This wand allows its user to clear short corridors through the plane of elemental Earth and the quasi-elemental plane of Minerals. It does not function on any other plane, although it radiates magic. It is especially useful on the plane of minerals since travelers need not contact the sharp edges of the minerals.

One charge clears a 10' x 10' x 50' path. The corridor is completed in 1 turn. The wand has no effect on animals or living creatures. Thus, if the wand clears a path through a space occupied by an earth elemental, the creature is unharmed, but is alerted to persons in the corridor. The wand can be recharged.

**Wand of Element Transmogrification:** This wand changes a quantity of one element into an equal amount of another element (water into fire, earth into air, etc.). The element to be affected must be within 60 feet of the wielder, who merely points the wand at the element and speaks the command word. For every 10 cubic feet (or portion thereof) transformed, one charge is drained from the wand.

The transmogrification is permanent unless a successful *dispel magic* is cast on the element.

Elements created by this wand have special characteristics. Fire requires no fuel to burn. Water never evaporates. Air is absolutely pure, but unless contained, the air mingles with the atmosphere and is lost forever. Earth can appear as soil, sand, clay, or stone, at the wielder's option. It is not possible to create treasure such as valuable metals or gemstones with this wand.

This wand has no effect upon creatures of any kind, except those from the Elemental planes. By changing such creatures into their element of opposition (fire into water, air into earth, etc.), the creature is totally obliterated. Thus, transmuting a water elemental into fire disintegrates it.

A creature attacked by the wand is allowed a saving throw vs. rods, staves, and wands. If the save is failed, the elemental is destroyed. If the save is successful, the creature is not obliterated outright, but suffers 6d6 points of damage and retains its true form.

In attacking an elemental, the number of Hit Dice of the elemental determines the number of charges used: 1 charge for an 8 HD elemental, 2 charges for a 12 HD elemental, and 3 charges for a 16 HD elemental. It is not possible to use this wand to change an elemental into another type of elemental.

The wand may be used once per round. It may be recharged.

**Wand of Misplaced Objects:** This wand emits a multitude of golden orbs that rush

toward a target creature. The orbs surround the victim and swirl around him wildly for 1 round. During this time the victim is confused and can take no action.

At the end of the round, the orbs vanish and the victim is free to act. He discovers, however, that all objects on his person have been moved. Some items are inconveniently located, while others are nowhere to be seen. A warrior might find his magical ring on one of his toes, his sword in his pants, his gold pieces in the sheath of his sword, and his breastplate on his head. The more possessions a victim owns, the more confused the situation becomes. The DM is encouraged to be devious.

Because of the chaotic placement of items, the victim suffers several penalties. Movement is reduced by half. Armor class of characters wearing armor is reduced by 2, since pieces are not worn properly. Attack rolls made by the victim are made at a -2 penalty. These penalties are eliminated if the victim devotes 2-5 rounds (1d4+1) to rearranging his gear.

A character requiring an item carried in a backpack, pouch, pocket, or other container must spend 2-12 (2d6) rounds searching for the item. This penalty is canceled if 3 turns are spent unpacking and repacking all gear.

The DM must define the locations of objects any time a character reaches for them or if they impair motion or sight. When deciding locations of objects, the DM should state the obvious effects of impaired sight and movement immediately, such as boots worn on hands or a cloak over the face.

Items held within a *bag of holding*, *Heward's handy haversack*, or other magical containers are unaffected. However, the containers themselves are subject to relocation.

The wand uses one charge per attack. It may be recharged.

**Wand of Prime Material Pocket:** This wand allows a spherical pocket to be created in any plane. The conditions within the pocket are similar to the environment of the wielder's Prime Material plane. The pocket typically contains ground, air, and a controlled temperature. The lower third of the sphere is usually occupied by land and water, while the upper portion of the sphere is usually occupied by atmosphere.

The surface of the pocket is semipermeable, allowing creatures to exit and enter the sphere, but keeps the elemental conditions of the pocket completely separate from the elemental plane.

One charge creates a sphere 10' in diameter. If the wielder wishes, multiple charges can be used to create larger spheres. Thus, a 30'-diameter sphere could be created using three charges.

The conditions inside the pocket are of the wielder's choosing, although they must be similar to an area that naturally exists on the Prime Material plane. The pocket cannot contain buildings or man-made items.

The pocket lasts 1d6+6 hours on any plane other than the plane of Fire, on which the pocket will last 1d6 hours. The wielder may choose to use the wand before the pocket dissipates to extend the life of the existing pocket. The pocket can be destroyed through the use of a *dispel magic* spell. The wand is not rechargeable.

## Miscellaneous Magic

**Air Spores:** Rumors indicate that the famed wizard Mordom created these odd,

pollenlike spores. Only a few mages know how to make them today. *Air spores* that still exist are usually sequestered as specimens of study in the labs of powerful wizards.

When *air spores* are ingested by a creature, the spores work their way into the creature's lungs. There they grow, reproduce, and die. While living out their lives, they create oxygen that the host body can use to breathe when deprived of oxygen from the environment. The spore colony can live for 2d4 days.

In a normal environment, the spores hinder the character's normal respiration, causing all Constitution checks to be made with a -4 penalty. Fortunately, 12 hours of breathing in a normal environment for each day the spores were used will clear the lungs of the colony.

**Amulet of Extension:** When desired by the caster, this amulet can be used to increase the duration of 1st- and 2nd-level spells by 50%, and the duration of 3rd- and 4th-level spells by 25%. Fractions of one-half and above are rounded up (e.g., a spell with duration of 1 round extended to 1 ½ rounds is rounded to 2 rounds). Fractions less than onehalf are rounded down (e.g., a spell with 1 round duration extended to 1 rounds is rounded down to 1 round and thus gains no benefit from the amulet).

The amulet has no effect on spells with instantaneous or permanent durations. A maximum of 1d10+4 spell levels can be affected by the amulet each day. Each amulet has its own individual limit, secretly determined when it is found. If this limit is exceeded on any given day, the amulet shatters and is destroyed permanently.

**Amulet of Far Reaching:** When willed by the caster, this amulet increases the range of 1st-level spells by 30%, 2nd-level spells by 20%, and 3rd-and 4th-level spells by 10%. Fractions of one-half and greater are rounded up; all others are rounded down.

The amulet affects only range and does not alter a spell's area of effect. The amulet cannot affect spells with ranges of 0 or touch.

A maximum of 1d10+4 spell levels can be affected by the amulet each day. Each amulet has its own individual limit, secretly determined when it is found.

**Amulet of Leadership:** This pendant or brooch bestows a character of any level the ability of a 9th-level fighter to attract men-at-arms. The amulet does not attract additional men-at-arms to a fighter who has already gained his followers.

A fighter normally gains troops at 9th level because his name is so well known that he attracts the loyalty of other warriors. The amulet works in much the same way. When a stranger meets a character wearing the amulet, the stranger perceives the character to be a leader who is destined for greatness, regardless of the character's class. Just as the reputation of a 9th-level fighter spreads, so the reputation of the person wearing the amulet spreads. Roll on Table 16 of the *Player's Handbook* to determine the followers.

If the amulet is lost or destroyed, the followers immediately lose faith in their leader. They gradually depart or desert. Once this occurs, the character's reputation is sullied such that he can never benefit from the amulet again. A fighter can, however, gain followers normally upon reaching 9th level.

**Amulet of Magic Resistance:** This powerful amulet grants the wearer a degree of magic resistance ranging from 5% to 30%. The level of magic resistance is determined when the

amulet is found by rolling 1d6 and multiplying the result by 5. Any time the amulet is worn and a spell is cast at the wearer, the wearer is allowed a percentile roll to avoid the full effects of the spell.

Only 50% of all such amulets confer magic resistance against all spells. The remaining 50% extend magic resistance only to spells of 1st through 6th levels. Such amulets have no effect on spells more powerful than these. The DM should secretly determine this information when the ring is discovered.

All such amulets, regardless of the degree of resistance conferred, are delicate magical structures. If the wearer rolls for magic resistance at any time and the roll is 95-00, this fragile item has been disrupted and the amulet shatters into useless scrap.

**Amulet of Metaspell Influence:** This amulet does not appear to have any magical function (although it radiates magic if detected) until it is worn by someone using one of the *dilation, far-reaching*, or *extension* spells. When such a spell is cast, the amulet adds 50% to the functional effect of the spell. For example, if *extension I* is used to increase the duration of a 3rd-level spell by 50%, the wearer of this amulet can add one-half (50%) to that effect size, raising it to a 75% extension effect.

**Amulet of Perpetual Youth:** This amulet glows continuously with a faint, blue light. The wearer has temporary immunity to the effects of both natural and magical aging; the amulet grows older instead of the wearer. As the amulet ages, it gradually becomes dimmer. The amulet can absorb 5-30 (5d6) years of aging, at which time its light dims completely, its magic is negated, and the wearer resumes aging at his normal rate.

**Bag of Bones:** This item, usable only by priests, is a small, ordinary-looking leather pouch that contains a number of tiny bones. When these bones are scattered over a 40 by 20 yard area and the word of command is spoken, a unit of skeletons immediately springs from the ground. This unit comprises eight BATTLESYSTEM™ rules figures of skeletons (80 skeletons) armed with swords. (The statistics for this unit are: AD 6, AR 8, Hits 1, ML n/a, MV 12". Hits from piercing and slashing weapons are reduced by half.)

The unit unconditionally obeys the combat orders of the priest, never checking morale. The unit fights until totally destroyed or until the sun sets (at which time the remaining skeletons crumble into dust). Two out of three (1-66 on 1d100) of these bags are "one-shot" magical items: once the bones are used, they are gone forever. One out of three (67-100 on 1d100) bags magically replenishes itself every sunset if the bones have been used.

A *bag of bones* will work only on a battlefield in the full heat of battle. (For the purposes of this definition, a "battlefield" is a place where units are in conflict and where *at least* 100 individuals per side are involved.) The unit will never split up, and will obey no orders other than to enter combat.

Certain war deities may frown upon the use of undead or conjured troops, believing them to be unworthy and cowardly. Priests worshipping these deities may suffer divine consequences if they choose to use a *bag of bones*.

**Bell's Palette of Identity:** This device offers protection against *polymorph* spells and other magical effects that change a person's physical appearance.

The item is an artist's palette covered with bright, mystical paints. To use the item, a person must paint a self-portrait. The painting does not need to be created with any expertise, but the painter must believe that the portrait is accurate.

Any time a character carries his self-portrait on his person, the portrait suffers the effects of unsuccessful saving throws for him when *massmorph, polymorph other, polymorph any object*, or *seeming* spells are cast on him. The portrait also suffers the effects if a character steps in front of a *mirror of simple order*.

The character's saving throw is made normally. If successful, the spell simply fails. If the saving throw is unsuccessful, the portrait is altered, reflecting the effect of the spell, but the character is unharmed. Once the portrait suffers these effects, it no longer can offer protection for the person it represents.

A person on the plane of Hades carrying a picture made from *Bell's palette of identity* is protected from the effects of fading on this plane. It is the picture that slowly fades to grey while the person retains all of his color. After two weeks in Hades, a character makes a saving throw against being trapped in Hades. If the saving throw is unsuccessful, the portrait becomes useless to the person who painted it.

There is always a risk that some denizen of Hades will discover a baneful use for a discarded painting. Travelers are wise not to leave such personal effects behind on this plane.

A single *Bell's palette of identity* can be used to paint 2-5 portraits.

**Bracers of Brandishing:** These unpredictable and bewildering items appear similar to other magical bracers, but their magic is revealed only when the character wearing them uses a charged rod, staff, or wand. When a charge is expended from such an item, the *bracers of brandishing* alter the charge expenditure and the local balance of magical forces in a chaotic manner. The drain on the charged rod, staff, or wand is actually in the range of 5 charges to -4 (i.e., the item is recharged). The number of charges used is 1d10-5 (with negative results indicating that charges are restored). If an item is reduced below zero charges by a drain, it crumbles into dust immediately.

Items that are not normally rechargeable can be recharged through the chaotic operation of these items except for the *rod of absorption*.

**Brooch of Number Numbing:** This silver or golden brooch (15% are set with jewels) is used to fasten a cloak or a cape. It magically clouds the mind of anyone conversing with the wearer of the brooch, with the confusion applying only to numbers.

The brooch must be in plain sight to have any effect. Anyone conversing with someone wearing the brooch is allowed a saving throw vs. spell to avoid the effects.

If the save is failed, the victim falls under the brooch's special enchantment. The victim forgets the relative value of numbers. He cannot remember if five is greater than three or if tens are smaller than hundreds. Further, the victim does not recognize his inability to remember the values of numbers. While under the influence of the brooch, the victim thinks that all numbers are pretty much the same. He will accept any claim pertaining to numbers and accept almost any financial deal set before him.

The victim remembers the relative values of coins (that gold pieces are worth more than silver pieces), but not their exact conversions. Thus, the victim is unable to remember whether two silver pieces or 100 silver pieces are equal to one gold piece.

The enchantment lasts only as long as the wearer is present and for 2d6 rounds thereafter. Once the effect wears off, the victim regains his normal understanding of numbers. Furthermore, he remembers exactly what he did and said while under the influence of the brooch, although he may not be aware of the cause.

**Candle of Propitiousness:** This candle enhances attacks against a particular enemy within a defined area. The user lights the candle while speaking the exact name of a single foe. If the exact name is not known, the user must precisely identify the foe; saying, "the evil warrior" isn't precise enough, but stating, "the evil warrior who rules the village of Fair Meadows and carries a golden shield" is sufficient.

All characters who remain within a 50-foot-radius of the lighted candle receive a +2 bonus to all attack rolls made against the stated foe, regardless of whether the foe is within 50 feet of the candle. Characters who venture outside the area of effect lose the bonus. When the stated foe is within the area of effect, he suffers a -1 penalty to all his attack rolls.

There can be no interposing surfaces such as walls or doors between the *candle of propitiousness* and characters whom it affects. The stated foe is not allowed a saving throw to resist the effects of the candle.

The *candle of propitiousness* burns for up to one hour. If it is moved after it has been lit, its magic is immediately and permanently negated. Likewise, if its flame is extinguished, its magic immediately ends. Any magical or natural force capable of extinguishing a normal flame, such as a *gust of wind* or a splash of water, can extinguish a *candle of propitiousness*.

A *candle of propitiousness* can be lit and used only once.

**Claw of Magic Stealing:** This peculiar item is usually fashioned in the form of a miniature silver hand or claw. An attempt to identify it will suggest that it is an item capable of casting the 2nd-level wizard spell *spectral hand* three times per day. The claw can indeed do this, but this is only its secondary function.

The claw's real purpose is to steal spells from other spellcasters. If the victim of the *spectral hand* spell is a wizard, he must make a saving throw versus spell. Failure to make this save means that a randomly selected spell is drained from his memory and its energy is transferred to the claw's owner. The owner of the claw may then use this magical energy to "power" a memorized spell of his own, provided it is of the same or lower level. Such a spell may be cast without being lost from the mind of the wizard possessing the claw.

The *claw of magic stealing* does not store magical energy in any way; either the owner of the claw uses the energy to "power" a spell on the next round, or the energy dissipates and is lost.

**Contracts of Nepthas:** These magical contracts are written in black ink on golden-brown vellum. The contracts are usually found in ivory tubes, each tube containing 1d6 contracts. The contracts are blank and can be filled in by the user. The contracts will radiate magic if detected, but carry no overt signs of their special nature.

The *contract of Nepthas* automatically places an enchantment upon any persons who sign it in order to insure that both parties hold to the agreement. Anyone who has signed a

*contract of Nepthas* and breaks the contract is struck deaf, blind, and dumb. The effects of the punishment last until they are removed with a *remove curse*.

A person who is both deaf and blind suffers a -8 penalty to his attack rolls and his opponents gain a +8 bonus to their attack rolls. He loses all bonuses for Dexterity and suffers -2 penalties to saving throws versus spells, petrification/polymorph, and rod, staff, or wand.

A contract involves two parties agreeing on a set of conditions. The conditions are usually very specific, but if they are not, they might be perverted in the same way that a *wish* spell might be misinterpreted. If a group of adventurers signs a contract with a king stating that they will slay a dragon in the Northern Hills by the eve of the new moon, slaying any dragon will fulfill the contract, although the king may have had a specific dragon in mind. If the king agrees to pay the adventurers upon the completion of the task, the king had better have the money when the party returns.

Contracts signed by persons under the influence of *charm* and similar spells are null and void. A forged contract is also void. If any person who signs a contract dies before its completion, that person's obligation is ended. Note, however, that if a group of adventurers signs a contract and one of their members dies, the survivors are still bound to the contract.

A deadline for both parties' responsibilities must be stated in the contract in order for it to be activated.

**Crucible of Melting:** A crucible is a small bowl, usually made of fired clay or porcelain, used for heating substances to extreme temperatures. The bowl is usually placed on a furnace. The *crucible of melting*, however, requires no furnace. It melts any metals placed within it when the command word is spoken. It takes one turn to bring the crucible to a sufficient temperature to melt metals placed within it. It has no effect on substances other than metals.

The average *crucible of melting* can hold up to one cubic foot of material. Note that magical items are allowed an item saving throw vs. magical fire to avoid destruction. *Crucibles of melting* are most often found (when found at all) in the laboratories of wizards, particularly enchanters who specialize in the construction of magical devices.

Whenever a *crucible of melting* is used, there is a 5% chance of a mishap resulting in an explosion that inflicts 3d10 points of damage to all creatures within 10 feet. A save vs. rod, staff, or wand is allowed, with success indicating half damage. The crucible is allowed an item saving throw vs. disintegration. If it fails, it is destroyed; otherwise, it is unharmed and may be used again.

Half of all crucibles remain hot for 3 turns. The rest remain hot until a command word is spoken to cancel the heat.

**Crystal Parrot:** This is a 12-inch-high statue of a parrot made of clear crystal that is useful in the detection of trespassers. The *crystal parrot* is typically placed high on a bookcase, shelf, or a similar location that gives the parrot an unobstructed view of the area it is to oversee.

To activate the parrot, the user speaks the command word, causing a soft red glow to appear behind the parrot's eyes. Unless the crystal parrot is destroyed, it remains active for 30 days. The user may also choose to deactivate it with a second command word, at

which time the red glow in its eyes disappears. Once deactivated, it cannot be activated again until 30 additional days have passed.

The active *crystal parrot* "sees" everything in a 180-degree arc in front of it, to a distance of 50 feet. The *crystal parrot* can see no better than a normal parrot; that is, its vision can be obscured by normal or magical darkness, or by physical barriers.

The user must instruct the parrot as to what types of intruders it is to observe. The user may be specific ("Watch for a 7-foot human male with a bald head and a red coat") or general ("Watch for all humanoid and animal intruders").

At the time an intruder enters the parrot's field of vision, the user will hear a telepathic report about all intruders matching the description. The telepathic reports will be general in nature, seldom more than brief phrases ("Man with red coat enters" or "Two rats enter"). If the user was not specific as to what types of intruders to watch for, the *crystal parrot* will report only the number and type of intruders (such as "one woman enters" or "a dozen orcs enter"). The *crystal parrot* will not report the actions of intruders, merely their presence; it tells the user when the intruders enter and leave, but nothing else.

The telepathic reports can be transmitted over an unlimited distance, but cannot be communicated into other planes of existence. The telepathy is one-way; the user cannot communicate with the *crystal parrot*.

The *crystal parrot* has AC 3. It shatters and becomes permanently useless if it suffers 12 points of damage. The user is instantly aware of the parrot's destruction.

**Dimensional Mine:** This nasty device can take the form of any small item, but most often appears as a small figure carved of jet or other black stone, similar to a *figurine of wondrous power*. As soon as the mine is taken into an extradimensional space, such as that created by a *rope trick, extradimensional pocket*, or a *bag of holding,* it ruptures that space. Everything in the space, including the mine itself, is spewed into the Astral plane and is lost unless someone can retrieve it. If the extradimensional space was created by a magical item, such as a bag of holding, that item is destroyed.

**Disintegration Chamber:** These frightful devices range in size from a 1'x 1'x 1' box to a 10'x 10'x 10' room. They are always made of iron, with the interior walls covered with mirrored tiles. They are used to cause matter to vanish, as per the 6th-level *disintegrate* spell.

The amount of material to be affected is limited only by the size of the chamber. Each use drains the device of one charge. *Disintegration chambers* generally have 81-100 charges (1d20+80) and may be recharged.

The material to be obliterated is placed inside the chamber, the door is closed, and the activation button is depressed. The interior of the chamber and its doomed contents then begin to glow with a sickly green light, and the material vanishes, leaving only fine dust. Creatures and objects that successfully save vs. spell are not affected, but must attempt another saving throw every time the chamber is reactivated.

The size of any given chamber can be determined from the table below.

| D6 Roll | Size |
|---|---|
| 1 | 1' cube |

| | |
|---|---|
| 2 | 2'x 2'x 3' box |
| 3 | 3'x 3'x 6' box |
| 4 | 3' x 5' x 6' box |
| 5 | 5'x 5'x 10' box |
| 6 | 10' x 10' x 10' box |

In the larger sizes, these devices are most often installed permanently and cannot be carried away as part of treasure, unless arrangements are made to transport a small room or shack.

**Dust of Mind Dulling:** This harmless-looking dust is the bane of spellcasters. One pinch of this dust can be flung up to 30 feet from the user and will scatter to fill a 5-foot-radius sphere.

All spellcasters within the area must make a saving throw versus spell or find their minds dulled and their wits slowed. All casting times less than 1 round are increased by 2 as the wizards hesitate, trying to remember the procedures. Spells which normally require 1 round to cast now require 1 full round plus a casting time of 5 on the following round; spells which normally have a casting time of 2 rounds or longer now require 50% longer than normal to cast. The dust persists in the area for 1 turn unless somehow removed (e.g., a *gust of wind* spell). Those affected by the dust are impaired in their spellcasting for 1d4+1 turns thereafter.

**Elemental Compass:** This device aids travelers seeking the elemental planes of Fire, Air, Water, or Earth. The compass, a small urn carved of stone and containing hollow pockets, works only in the Ethereal plane, an inner plane, or the Prime Material plane.

To make the compass work, a representative sample of material from the plane sought must be placed in the urn and the lid sealed. Thus, to find the elemental plane of Fire, a small, burning fire must be place in the urn. Once sealed, the fire will burn until the lid is opened (just as water will not evaporate from the urn as long as the lid is sealed).

When used on an inner plane or the Ethereal plane, the urn glows yellow when the characters are heading in the direction of a portal of the elemental plane they seek. On an inner plane, the compass leads to the para- or quasi-elemental planar border that exists between planes. In the Ethereal plane, the urn leads to the Ethereal curtain of the desired plane. There are no range restrictions on the inner or Ethereal planes.

On the Prime Material plane, the compass glows when the characters are headed for elemental vortices of the correct element, provided the vortex is within range. The range on the Prime Material plane is 300 miles.

**Everbountiful Soup Kettle:** When this two-gallon metal kettle is filled with water, the liquid is transformed into steaming, nutritious vegetable soup. One full kettle is sufficient to provide a single meal for up to six normal appetites. No ingredients are required for the soup, nor is heat necessary. Any nonmagical, nonpoisonous liquid can be used in place of water. The *everbountiful soup kettle* can be used once per day.

**Flatbox:** A practical example of hypergeometry and hypermathematics, the *flatbox* appears to be a wooden box about 3' long, 2' wide, and two inches deep. It weighs eight

pounds. The top of the box is a hinged lid.

When the lid is opened, the interior of the box is filled with impenetrable darkness. This darkness cannot be dispelled by any form of magic; it is a characteristic of the hypergeometrical topography of the box.

Although from the outside the *flatbox* appears to be only two inches deep, it actually has the internal volume of a box six feet deep. (Thus, it has a volume of 36 cubic feet.) The maximum weight that can be loaded into a *flatbox* is 500 pounds. No matter how much of its volume is filled, the *flatbox* still weighs only eight pounds.

Since the inside of the box is completely dark, the only way to retrieve a specific item is to feel around within the box. Finding an object this way takes 1d4 rounds.

There is a significant danger associated with the flatbox. If it is taken into an extradimensional space (such as within a *portable hole*), if it is *teleported*, *gated*, or transported via *dimensional folding* or any analogous method, or if it ever suffers 15 hit points of damage, the *flatbox* explodes violently. This explosion destroys all contents of the box and inflicts 4d10 hit points of damage on any creature within 20 feet (save vs. spell for half damage).

**Forge of Metal Protection:** The first of these heavy (1,000 lb.) forges was created an unknown number of centuries ago. Because of the specific magical properties involved, it is believed that a wizard, assisted by a number of dwarves (all of whom were interested in planar research), constructed the device. Although the secret of the construction has since spread, the forge is an extremely rare magical item.

The forge is a furnace made up of enchanted rocks held together with a network of steel rods. When metal armor and weapons are placed within the furnace and heated to glowing red, the armor becomes immune to the effects of heat on the inner planes. All metal items tempered in this manner suffer no ill effects from heat on any of the inner planes, but suffer the effects of heat normally on the Prime Material plane.

The effect of the magical protection lasts 12 to 30 days (2d10+10). Magical armor or weapons that are placed in the forge take on the protection from heat, but temporarily lose their other magical properties. Thus, a *sword* +2 placed in the forge will not melt on the plane of Fire, but it ceases to functions as a *sword* +2 until the enchantment wears off. A weapon with an ego retains its ego, but loses all of its other magical properties.

**Fur of Warmth**: These large, white furs (5' by 8') are reportedly taken from the skins of creatures native to the para-elemental plane of Ice. A person wearing the fur still feels cold in a cold environment (such as the para-elemental plane of ice), but does not suffer damage from exposure.

Anyone wrapped in the fur is immune to the natural effects of cold, including the environments of the inner planes. Anyone wearing the fur takes half-damage from coldbased attacks. The wearer need not be covered completely by the fur to receive the enchanted protection; the fur must simply be draped over him like a cape. If the fur is cut into more than one piece, it loses its magical property.

If the fur is worn in pleasant or hot weather, it affects the wearer as any other large fur would.

**Gem of Retaliation:** The holder of this gem gains a special protection against Evocation

spells directed at him. The owner of the gem gains a +4 bonus to any saving throw made against such a spell, and also acquires a base save of 18 (but not the +4 bonus) against any Evocation spell which normally does not allow a saving throw (such as *ice storm*). All standard modifiers (*ring of protection*, Dexterity, etc.) apply.

Additionally, if the saving throw is successful, the incoming spell is converted into outgoing *magic missiles*. The number of missiles is equal to one-half the level of the spell negated, rounding fractions up. The *magic missiles* then streak back to strike the person or creature who cast the spell at the owner of the gem. Maximum range for this strike is 160 yards.

Spell-like effects created from magical items are not affected by the *gem of retaliation* (thus, a *wand of magic missiles* will function normally against someone using this gem).

An individual holding a *gem of retaliation* who comes under attack by an area spell (*fireball, ice storm*, etc.) gains the advantages as described above. Other persons in the area of effect suffer all effects normally. Even if the gem's owner saves successfully, the area-effect Evocation is *not* transformed into *magic missiles* as described previously.

**Glass of Preserved Words:** This magical magnifying glass has a band of silver around the lens and an ivory handle. The glass has the ability to make illegible written words readable. Words that were carved into stone but worn away through time, inked letters blurred due to moisture, messages clouded by magic, and magical and normal writings all become clear when read through the glass.

The actual words remain illegible; they are not altered in any way. Only a character looking at them through the glass can read them clearly.

The glass does not protect the reader from any harmful effects as a result of a cursed scroll or trapped writings, nor does it make cryptically worded or coded messages understandable.

**Globe of Purification:** These enchanted glass spheres, 6 inches in diameter, contain the swirling blue-grey essence of a *cloud of purification* spell. When the globe is broken, the cloud billows forth, acting exactly as if the spell had been cast by a 12th-level priest. These devices are often given to a city's sanitation crews, who descend upon the streets and sewers during the wee hours of the morning.

**Globe of Serenity:** These glass orbs look very much like crystal balls. However, a *globe of serenity* emits a continuous, inaudible tone that affects all living creatures within 50 feet who fail a saving throw vs. spell. While in the area of effect, affected creatures feel the utmost serenity and self-control. Strong emotions such as joy, love, and hatred are totally subdued.

Creatures affected by the globe gain a +3 saving throw bonus to resist spells and special attacks that affect emotions (such as *charm*, *fear*, or *emotion*). At the same time, they suffer a -2 to all Intelligence checks, the spark of insight also repressed.

The globe also affects morale, raising the spirits of some while quelling the fires of fanaticism in others. All affected creatures have morale of 10, regardless of their training or skill. If a morale check is called for and failed, the affected creature does not rout or flee, but stays in place, taking no action until rallied.

*Globes of serenity* are best suited for lawful communities where open displays of emotion are frowned upon. Although crime and violence would be greatly reduced in these communities, citizens would also lack a sense of spirit. The people would go about their daily routines like emotionless automatons.

**Horn of Valor:** This golden horn is indistinguishable from any other magical horn until it is sounded. When sounded, each unit hearing it who is allied with or loyal to the character sounding the horn gains the following benefits. First, the unit gains a +2 bonus to its morale for 1d4 BATTLESYSTEM™ rules turns. Second, any routed friendly unit who hears it immediately makes a rally check with a bonus of 2 to its morale (for that check only). (This check is made when the horn is sounded--during the magic phase--rather than in the rally phase. If this additional check is failed, the unit is entitled to a second check in the rally phase, as normal.)

Enemy units who hear the horn are also affected: they suffer a -1 penalty to morale for 1d2 BATTLESYSTEM rules turns.

Under normal conditions, the sound of the horn can be heard at a range of 24". Unusual conditions, such as a raging storm, can decrease this range, but the horn can *always* be heard at a range of 9" (unless the character blowing the horn is within an area of magical *silence*, of course).

The horn of valor can be sounded only once per BATTLESYSTEM Rules turn, and no more than three times in any 12 hour period. If blown a fourth time within this period, it becomes totally nonmagical for 1d6 days, and any effects remaining from earlier soundings immediately terminate. Effects from multiple soundings are not cumulative. (Instantaneous effects such as the automatic rally check for friendly units take place each time the horn is sounded.)

**Hourglass of Fire and Ice:** This small, wooden-framed hourglass looks quite ordinary, but radiates invocation/evocation magic if detected. Half these hourglasses contain red sand and half contain blue sand.

An hourglass containing red sand in the lower portion enables a spellcaster to cast fire-based spells with increased potency: +1 per die of damage. Further, victims suffer a -1 penalty to all saves against such spells, and even saving throws against illusions of fire are made at -1.

When the hourglass is tilted, the red sand flows slowly through the aperture, turning blue as it does so. The hourglass takes 6 turns to fill with blue sand. When the hourglass has filled with blue sand, all cold-based spells cast by the owner of the hourglass have +1 per die of damage. Victims also suffer a -1 penalty to saving throws against cold-based spells, including saves against illusions of cold.

The hourglass may be inverted to re-create the red sand, with a corresponding flip in the effects after 6 turns.

The hourglass may be inverted up to three times per day. However, with every inversion of the hourglass there is a 1% chance that it will break, spilling its sands and losing its magic forever.

**Jar of Preserving:** This piece of magical glassware is able to hold up to one cubic foot of material. The round jar is equipped with a glass lid that screws into place.

Any animal or vegetable matter placed in a *jar of preserving* enters a form of suspended animation. A rosebud never wilts, for example, and a small animal never ages and does not require food, water, or air. Spell components placed in the jar never lose potency.

**Law's Banner:** This blazing red standard has the magical ability to raise the morale of troops when held at the front of a lawful army. The banner inspires any soldier in the army who is within a quarter-mile of the banner and can see the flag. Troops inspired in this manner receive a +2 modifier to their base morale as per BATTLESYSTEM™ rules. In order for an army to be considered lawful, at least 90% of the troops must be of lawful alignment and no more than 1% can be chaotic.

If the banner falls, the effects are lost immediately. If the banner is raised within 1 turn, the effect returns. If the banner is not raised within 1 turn, the inspired troops become filled with dread, feeling that the battle has clearly gone against their cause. The same troops now suffer a -2 morale penalty for the duration of the battle. The standard may be raised any number of times, but will improve or impair morale only once per day.

**Lens of Speed Reading:** While looking through this lens, the user can read any book, document, or other written material at three times his normal speed with full comprehension. When used in conjunction with *read magic*, the *lens of speed reading* enables the user to quickly scan scrolls and magical tomes to learn their contents, but it has no effect on the time required to cast spells. The lens will not decipher codes, improve illegible writing, or allow magic to be read without the proper spells.

**Liquid Road:** When sprinkled on water, swampland, quicksand, or a similar surface, *liquid road* causes the terrain to harden to the density of granite, enabling easy passage. Liquid road is also effective in negating the effects of spells such as *transmute rock to mud*. The *liquid road* stays hard for one hour, after which the terrain returns to its original state. One *flask of liquid* road can harden a 5'x 5' surface (for example, a path 25' long and 1' wide).

**Lorloveim's Obsidian Mortar and Pestle:** This magical tool allows the wielder to grind even the hardest materials into a fine powder. Rocks, metals, and even gemstones of all types may be ground to dust in as little as 1d4 rounds.

Magical items pounded beneath the pestle are allowed a saving throw vs. disintegration. If the save is successful, the enchanted item cannot be destroyed in this fashion. If the saving throw fails, the item is reduced to nonmagical powder.

The obsidian mortar is commonly used by wizards in the preparation of spell components and ingredients for magical items. Neither the mortar nor the pestle is effective without the other.

**Manual of Dogmatic Methods:** This silver-bound book, studded with jewels, appears to be a tome of considerable value. The book is actually cursed, although this is not immediately obvious.

The manual has the power to provide advice on any action that its owner might consider taking. The owner need only open to any page in the book, and there before him

will be a list of actions, most of them ritualistic in nature, to insure the success of any project he undertakes.

The first time the book is used, the owner is suddenly struck with the idea that he now owns a source of information that can give him valuable advice on any matter. It becomes a guide for his whole life. He will not share the book or let anyone take it away from him. If anyone tries to remove it, he will fight to keep the book.

Following the first use of the book, the owner cannot do anything without first checking the book. The information in the manual is completely worthless, but the owner of the book does not realize this. The pages in the manual change constantly, offering its owner an obscure (and usually ridiculous) ritual to perform before doing anything. Thus, if a character is about to go into battle, he might check the book and find several exercises he should undertake to loosen his muscles. If he is going to speak to a duke, he might find instructions for the color of his clothing according to the day of the year and the time of day of the meeting. If he is going to pray to his god for a spell, he might find six pages of cleansing rituals that should be performed first.

The manual's instructions are almost never harmful, but they might delay the owner's actions at a crucial moment.

Whenever a character is in a situation that requires hasty action (for example, he is attacked), the book will delay its owner by 1d8 rounds. If the owner is preparing for a lengthy activity (a long trip, for example), he will be busy for 1d4 days getting ready for the event. The DM should be creative in detailing the tasks the owner must perform before he can comfortably commit himself to his goal.

The compulsion to follow the manual's instructions can be ended with a *remove curse* spell. Following this, the next person to open the book becomes its new owner. If an owner should die, the book becomes the property of the next person to open its cover.

If possible, the DM should hint that the character is actually gaining bonuses for using the book, while allowing the other characters in the group to figure out the effects for themselves.

**Medallion of Spell Exchange:** This medallion allows the spellcaster to exchange one memorized spell of up to 6th level for others of lower levels, rather in the manner of *Mordenkainen's lucubration*. The wizard loses the sacrificed spell and recalls one or more spells from those he had memorized and cast within the past 24 hours. The total levels of these spells must be one less in sum than the spell sacrificed. For example, by sacrificing a 5th-level spell, a wizard could recall one 1st-and one 3rd-level spell, two 2nd-level spells, four 1st-level spells, and so on. The medallion can function only once per day. The wizard must have available any spell components required for exchanged spells.

**Mirror of Retention:** This appears to be an ordinary round silver mirror, about 12 inches in diameter. When the *mirror of retention* is hung in a 50 foot 0 50 foot or smaller room and the command word is spoken, the mirror records all events occurring in the room for 24 hours. During this time, the *mirror of retention* appears to be a normal mirror.

When the command word is spoken again, the mirror replays all the events it recorded. The events appear as a series of silent images in the surface of the mirror. By rotating the mirror clockwise, the images can be accelerated, appearing as much as 10

times as fast as they occurred. Rotating the mirror counter-clockwise causes the images to appear in reverse. If the mirror is held parallel to the floor, the image freezes. Thus, by rotating the mirror and freezing the images, the user can scan for events, review previously viewed images, or freeze selected images for closer study.

When the command word is spoken a third time, the *mirror of retention* is cleared of all images and is ready to record new images for another 24 hours.

**Mirror of Simple Order:** When a character steps in front of this mirror, he sees a strangely distorted image of himself. The reflection moves as he does, but the face reflected in the mirror is the image of an ordinary face. There are eyes, a mouth, and a nose, but all lack character. Although the figure moves as the character does, it is shorter or taller than he is, adjusted in whatever direction approaches the average height of the character's race. Any clothing worn by the character is altered as well. Bright colors will be muted, appearing to be shades of grey. Any ornamental work on armor, weapons, or clothing will be gone.

If the character stands in front of the mirror for more than two rounds, he is instantly *polymorphed* into the image in the mirror. The *polymorphed* character must succeed on a system shock roll to survive the change.

Like the *polymorph other* spell, there is a chance that the subject's personality and mentality change into that of the new form. In this case, each of his ability scores becomes 11 and his hit points become the average for his Hit Dice at his level. He retains his level and class, but is not as exceptional as he might have been. He is bland and boring. The character's alignment changes to lawful neutral, and he becomes interested in little else other than setting order to the world. He passionlessly travels to wipe out chaos wherever he finds it.

All effects of the mirror can be removed through a *dispel magic* spell. Until the effects are removed, however, the character is unaware that any change has occurred.

**Mist Tent:** A *mist tent* is contained in a small glass flask. Removing the stopper causes a stream of white mist to pour from the flask. One round later, the mist shapes itself into the form of a 10'x 12' tent with a single, open flap in the front. The stopper must be replaced in the flask as soon as the *mist tent* takes shape, or the tent will dissipate as described below.

The *mist tent* has the density of a cloud when unoccupied. When one or more characters enter the *mist tent*, the flap can be closed; from the inside, the flap has the density of canvas. From the inside, the walls and ceiling of the *mist tent* appear as opaque white mist, and the floor is transparent. Despite its appearance, the entire *mist tent* has the density of canvas once the flap is closed. When the flap is closed, the following effects occur:

- The *mist tent* and all occupants and items inside become invisible to all creatures outside the tent. A *detect invisibility* spell cast by a creature outside the tent reveals the *mist tent*.
- The *mist tent* rises 10 feet off the ground; it continues to hover in place as long as the flap remains closed. The transparent floor allows occupants of the tent to clearly see the surrounding area. The floor of the *mist tent* can support 1,000 pounds without rupturing.

If the flap is opened, the *mist tent 's* walls, floor, and ceiling instantly become visible to outsiders, appearing as a thin, white mist. Additionally, the *mist tent* slowly descends, landing gently on the ground. If the stopper is removed from the flask, the tent dissipates, returning to the flask in a stream of white mist; if the bottle is not stoppered immediately, the mist will pour from the flask to form the *mist tent* again.

The *mist tent* is unharmed by all types of fire, but does not offer such protection to its occupants. The tent is susceptible to other forms of damage. It provides no more protection to its occupants than a normal canvas tent.

The *mist tent* has AC 10. If the *mist tent* sustains 10 points of damage, it dissipates in a shower of light and is permanently negated. If this occurs while the mist tent is hovering, all occupants plummet to the ground. If the *mist tent* sustains less than 10 points of damage, it can be returned to its flask, then re-released; all damage will be repaired.

**Mordom's Cauldron of Air:** *Mordom's cauldron of air* is a round pot about two feet in diameter, weighing 60 pounds. There are two handles on either side of the pot and a compartment built like a small shelf under the cauldron. The compartment can be filled with wood or coal to heat the cauldron.

Although the device is heavy and bulky, the cauldron is valuable for characters planning an expedition to a place with little or no air. The cauldron functions as an air generator. To operate the device, the cauldron is filled with water and a fire is lit in the compartment. When the water boils, vapor is released. The air from the vapor creates a bubble of breathable air 10 feet in radius centered on the cauldron.

The water must not be allowed to spill out of the cauldron and the fire must be kept burning. As long as these conditions are met, the cauldron will provide air continuously.

The air produced is the same temperature as the surrounding environment. The device needs a minimum of one gallon of water per hour.

**Mouse Cart:** A *mouse cart* resembles a miniature wooden cart with two wooden wheels and a tiny leather harness. When a normal mouse is secured in the harness, the cart expands to the size of a normal cart (roughly 5 square feet). The mouse retains its normal size, but becomes enchanted, acquiring the ability to pull the cart plus 250 pounds of cargo at a movement rate of 12.

As long as the mouse remains in the harness, it is compelled to obey all oral commands from the person who put him in the harness. The mouse will run forward, stop, turn, and obey all similar commands; it will not attack or take any action that a mouse is normally incapable of performing. No other creature attached to the *mouse cart* will activate the device's magical properties. A character or other creature *polymorphed* or otherwise transformed into a mouse can activate the cart's magic.

**Necklace of Memory Enhancement:** The wearer of this brass necklace receives two benefits.

- The wearer is immune to all memory loss, from both natural and magical causes (such as a *forget* spell). The necklace has no effect on a wizard's spell memorization.
- The wearer can recall with absolute clarity any sight or conversation he experienced

or any book he read within the previous seven days. Memories prior to seven days ago are recalled with only normal clarity. The necklace affects only events that occurred while the necklace was worn by the user.

**Nefradina's Identifier:** This highly valued item is a magical test kit used to identify potions, powders, and other alchemical substances. It consists of a wooden box (typically measuring 1'x 1'x 3') containing an assortment of vials, flasks, and beakers in small, padded compartments. Also in the box is a copy of a text called *Nefradina's Codex*. This book instructs the owner on how to use the test kit.

When the owner wishes to identify a potion, powder, oil, perfume, or similar liquid or powdered magical item, he looks up the substance's characteristics (odor, color, consistency, and so on) in the codex and follows the directions given to create a test mixture by combining a number of ingredients found in the kit. He then adds a drop of the test mixture to the substance he wishes to identify. The resulting effects (changes in color, sparks, smoke, bizarre odors, small explosions, and so forth) are looked up in the codex and the substance is identified through a process of elimination.

The DM secretly rolls 1d100 to determine the actual results:

**01-20:** The test kit is missing a vital chemical and can never identify that particular substance.
**21-50**: The user comes to a false conclusion and believes the substance to be something it is not (DM's choice).
**51-100:** The user successfully identifies the substance.

The DM should modify the roll by +2% per level of experience of the character using the test kit. The time required to perform a single test is 1d4+1 turns. A typical kit may be used 1d10+40 times before it becomes useless.

**Philosopher's Egg:** This item is an enchanted retort: a long-necked piece of glassware in which substances are distilled. It is a highly prized addition to a wizard's laboratory, for it has two very important uses.

The first use of the *philosopher's egg* is in the creation of any magical or mundane fluid. The time required to create such a fluid is cut in half through use of the *philosopher's egg*.

The *egg's* second use is as a required component for creating the substance that turns lead into gold--the legendary philosopher's stone. Thus, it is sometimes said by wizards that "the stone hatches from the egg."

**Pick of Earth Parting:** This enchanted pick allows its wielder to cut through elemental earth quickly. The wielder of the pick must have strength of 17 or better. By repeatedly swinging the pick at elemental earth, the wielder can carve out a 10'x 10'x 60' tunnel per round. The pick's magical properties create a smooth, clean surface regardless of the mining skill of the user. All rubble from the excavation magically disappears, leaving a clear passage.

**Portable Canoe:** This ordinary, canvas-covered canoe is capable of comfortably holding

two passengers. The canoe includes two wooden paddles. The *portable canoe* can be folded into a 6-inch-square packet, about an inch thick, weighing just under a pound. With the exception of the paddles, the *portable canoe* must be emptied of all other objects before it can be folded. Folding the canoe requires 5 rounds; unfolding requires 2 rounds.

**Prism of Light Splitting:** This useful device refracts light into the three primary colors of light--red, blue, and green. The user can choose the color of light that is emitted by the prism.

When creating a magical fluid or powder, the wizard casts the *enchant an item* spell. Following this, the wizard may use the *prism of light splitting* to shine a blue, red, or green beam of light on the mixture. The light must shine on the substance for one full day. At the end of this time, the material gains an additional magical property, depending upon the color of the beam employed.

Red: The potion, powder, or aromatic oil is stronger than normal; targets of its effects suffer a -2 saving throw penalty.
Blue: The duration of the magical potion, powder, or fragrance's effect is doubled.
Green: The amount of liquid or powder is doubled; the wizard now has enough for two potions, powders, or aromatic oils.

**Puchezma's Powder of Edible Objects:** An inveterate traveler who was notoriously cheap, Puchezma could never bring himself to spend money on decent provisions or hire a quality chef for his long wilderness excursions. In his efforts to create a seasoning that would make the bland dishes of his second-rate cooks more palatable, Puchezma stumbled on a formula for the *powder of edible objects*.

This powder, which resembles normal salt, causes any normally indigestible material to become edible, nutritious food. The material must be nonliving and nonmagical, and must be in a form the consumer can swallow; for instance, dirt and cotton cloth are acceptable (the diner could chew up and swallow these materials), but large stones and planks of hard wood are not (these objects would have to be broken up into small pieces before they could be swallowed). All poisonous and otherwise harmful properties (such as sharp edges) are negated by the powder. One pinch of *powder of edible objects* is sufficient to treat one cubic foot of material. The powder is normally found in small bags containing 10 to 100 pinches.

**Quill of Law:** This magical pen is used by despots and good rulers alike to ensure that their laws and proclamations are obeyed. Anyone reading a posted proclamation or law that was written with the pen must obey the law, regardless of whether it is a good law.

This effect applies only to persons who actually see the written message. If a person knows about the law but has not read a notice written with the quill, he still has the option to obey or break the law. Once he has read it, however, he must obey it.

The magical effect is limited in that only the three most recent laws written with the quill maintain this power. Laws written prior to the most recent three can still be the law, but citizens are not compelled to obey them.

Creatures with 15 or greater Intelligence and 12 or more Hit Dice or levels are

entitled to a saving throw vs. spell when viewing the proclamation. If the saving throw is successful, the effect is negated and the person is left to his own moral decisions.

**Reglar's Gloves of Freedom:** These gloves appear to be thick, leather, combat gloves. Silvered pearls are sewn along the stitching.

A character under the influence of a *charm* spell or similar enchantment can be freed of the enchantment by shaking hands with the wearer of the gloves. This item frees only characters who are enchanted against their will. Those who have willingly submitted to a charm (such as a *quest*) are not affected by the gloves. The former victim retains all memories of his enchantment.

The gloves do not protect or release the wearer from such spells.

**Robe of Repetition:** This ordinary-looking robe radiates strong alteration magic if magic is detected. The wearer of this robe acquires a unique and powerful augmentation to his magic. After casting a spell, there is a percentage chance that a mnemonic/harmonic effect occurs so that the magical energies liberated in spellcasting are amplified and retained briefly. The wizard is then able to cast the same spell a second time. This must be done on the succeeding round or the bonus spell is lost.

Once the spell has been cast a second time, the energy is completely liberated. There is no possibility of a third casting. In all cases, the spell is lost from the wizard's memory until the wizard memorizes it again.

The chance of a spell being available for a second casting varies according to spell level:

| | |
|---|---|
| 1st Level | 50% |
| 2nd Level | 40% |
| 3rd Level | 30% |
| 4th Level | 20% |
| 5th Level | 10% |

Energy from spells of 6th level and above are not retained within the robe's magical weave. Furthermore, a maximum of 24 spell levels per day can be reused with the benefit of this robe. If the wizard opts not to use a spell which is made available for a second use, this counts toward the maximum limit.

If a wizard removes the robe, spells cast while the robe is off do not count toward the spell limit. For example, if a wizard casts 15 spell levels that count against the robe's daily limit and he then removes the robe, subsequent spells do not count against the robe's limit. If the wizard then puts on the robe during the same day and casts more spells, the robe retains the 15 spell levels that counted against it and all spells cast subsequently also count against the robe.

Only one wizard may use the robe's magic in a single day; if a second wizard puts on the robe, it does not function.

**Saddle of Flying:** This saddle resembles a normal leather saddle with a small, silver buckle near the pommel. When the saddle is secured to a horse or any other nonmagical mount and the silver buckle is fastened, the mount sprouts wings and acquires the ability

to fly at its normal movement rate (Maneuverability Class D). The flying mount can carry its normal encumbrance.

The *saddle of flying* functions for only one hour per day. When the silver buckle is unfastened or the duration expires, the wings disappear and all flying ability is immediately lost, regardless of whether the mount is airborne or on the ground.

**Salves of Far Seeing:** These salves allow a character who puts a drop of the salve into each of his eyes to see as well as he would on a brightly lit day on his Prime Material plane. The proper salve also serves as a protection against blindness on planes where protection is necessary. Several types of salves exist for the different elemental, para-elemental, and quasi-elemental planes. The salves have no effect on normal or magical blindness.

The salves are found in small metal containers made of precious metals. A container contains 4d12 drops of salve. One drop in each eye bestows the magical property for one day. A drop must be placed in every usable eye for the magic to work.

A different salve exists for each of the planes where such a salve is required, and each has a distinct look and feel. The following table lists the planes that limit sight and the color and texture of each respective salve. The salves function only on their respective planes.

| Plane | Color | Texture |
|---|---|---|
| Water | Blue | Smooth |
| Earth | Black | Grainy, Thick |
| Positive | White | Opaque Liquid |
| Negative | Clear | Liquid |
| Smoke | Ashen | Liquid |
| Ice | Bluish-white | Thick |
| Ooze | Gray | Rubbery |
| Magma | Copper | Thick |
| Steam | Gray | Liquid |
| Salt | White | Grainy |
| Radiance | Golden | Smooth |
| Ash | Gray | Grainy |
| Minerals | Silver | Grainy |
| Dust | Black | Dry |

**Scarab of Uncertainty:** This scarab has a specific and potentially powerful effect. If the wearer is within range of a *monster summoning* or similar spell (*invisible stalker, conjure animals*, etc.) when cast by another creature or character, the summoned creatures make a saving throw versus spell the instant they appear. If the summoned creatures fail this saving throw, they mistakenly believe that the wearer of the scarab is the individual who summoned them and will then serve the scarab wearer as best they can, rather than the caster of the spell.

**School Cap:** The wearer of this cap gains a +2 bonus to saving throws against spells of one particular school of magic. In addition, specialists of the designated school do not inflict a -1 penalty on a wearer's saving throws against their specialist spells. The nature

of the *school cap* is determined using a 1d8 roll.

| D8 Roll | Affected School |
|---|---|
| 1 | Abjuration |
| 2 | Conjuration/Summoning |
| 3 | Greater Divination |
| 4 | Enchantment/Charm |
| 5 | Illusion |
| 6 | Invocation/Evocation |
| 7 | Necromancy |
| 8 | Alteration |

Of these caps, 10% are mixed blessings since they have a cursed side-effect: The wearer suffers a -1 penalty to saving throws against spells of the opposition school(s). The curse takes effect the first time the wearer is subjected to a spell from the opposition school(s). Once the curse has been engaged, the cap cannot be removed except through a remove curse spell.

**Skie's Locks and Bolts:** This device looks like a small, ornate lock with a tiny silver key. When the key is turned clockwise, all doors, windows and other portals within 50 feet of the item slam shut and become *wizard locked*. For purposes of opening them, the *wizard locks* are the equivalent of those cast by a 12th-level wizard. The effect lasts until the key is twisted counterclockwise or the device is transported more than 50 feet away.

*Skie's locks and bolts* are sometimes found in the homes of wealthy merchants and secretive wizards.

**Talisman of Memorization:** This talisman allows a wizard to memorize spells in half the normal time (i.e., 5 minutes per spell level). Half of these amulets (1-5 on 1d10) affect memorization of spells only of levels 1-5. The remaining half affect memorization of spells of levels 1-8. Spells of 9th level are never affected by this talisman.

**Tapestry of Disease Warding:** This is a 3-foot-square cotton tapestry bearing the image of a rainbow. When hung in a house or other building (10,000 square feet or less), it protects the occupants from nonmagical diseases. It has no effect on persons already suffering from diseases, but protects healthy characters from contracting contagious diseases ranging from common colds to deadly plagues. The tapestry offers no protection against any disease caused by magic or of a magical nature.

The *tapestry of disease warding* is subject to rips, fire, and other damage that could be sustained by a normal tapestry, although it is allowed a saving throw. Its magic is permanent only as long as it remains intact. The tapestry may be moved to a new location, but has no effect outdoors.

**Teleportation Chamber**: These devices are used to teleport matter (as per the 5th-level *teleport* spell) and vary in size from a 1'x1'x1' box to a 10'x10'x10' room. They are usually made of ornate wood, but can be fashioned of stone or metal. In any case, the interior walls are always covered with mirrored tiles much like *disintegration chambers*. A small, green sphere is fastened to the outside of the chamber near the door, and another

sphere is positioned on an inside wall.

To activate the device, a creature must touch one of the spheres while concentrating on a mental image of the destination. The chance of error is exactly the same as that described in the *Player's Handbook* for casting the 5th-level *teleport* spell, with one exception. If the contents of the chamber are being sent to another teleportation chamber, the chance of a mishap is 0%.

The number of people or objects that may be teleported is limited only by the size of the chamber. The size of any given chamber can be determined from the table below.

| D6 Roll | Chamber Size |
|---|---|
| 1 | 1' cube |
| 2 | 2'x2'x3' box |
| 3 | 3'x3'x6' box |
| 4 | 3'x5'x6' box |
| 5 | 5'x5'x10' box |
| 6 | 10'x10'x10' box |

All travelers and materials in the chamber arrive at the same destination, which is determined by the activator. Distance is not a factor, but interplanar travel is not possible by means of this magical machine. Each use drains the device of one charge. *Teleportation chambers* generally have between 81-100 charges (1d20+80) and may be recharged.

**Tenser's Portmanteau of Frugality:** This moderately large, black leather traveling case contains a bewildering number of small instruments--tweezers, measuring beakers, small ceramic jars, and the like. It can be used to extract the greatest possible benefit from certain single-use magical items by partly diluting or admixing them. All potions, oils, dusts, incenses, glues, solvents, and *Nolzur's marvelous pigments* can be affected by *Tenser's portmanteau*.

For every two potions, applications of dust, or similar substances that are treated by the portmanteau, a third active dose or use can be extracted. Any such item may be affected only once by the power of the portmanteau. Single doses (a single potion, etc.) do not provide sufficient magic for treatment by the portmanteau.

The process of extracting the magic is not a simple task. The work takes 2d6 hours to complete. At the end of this time, the wizard must make an Intelligence check. If successful, the third dose is created. If failed, the third dose fails and only enough remains of the original materials for a single dose of the magical substance.

If *Alamir's fundamental breakdown* is cast during the process, the wizard gains a +2 to his Intelligence check. In this situation, the spell does not consume the magical items on which it is cast.

Each use of the portmanteau consumes some of the special agents required for the process. When discovered, the case holds enough materials to attempt 4d10 duplications.

**Thought Bottle:** This item usually takes the form of a metal flask similar in appearance to an *efreeti bottle*. Bottle and stopper are usually engraved with intricate runes. The bottle can be used to store and protect important memories and thoughts, and is often used by powerful characters as a way of managing their (potentially cluttered) memories.

To use the bottle, a character concentrates on the thought or memory to be stored. He then uncorks the bottle and speaks the word of command. The thought or memory is then transferred from the character's brain into the bottle. All details of the thought or memory are held within the bottle. The caster remembers the general nature of the thought ("Oh, that was my thought on the design of an efreeti-powered steam engine") but need not worry about forget- ting specific details, since these are trapped in the *thought bottle*.

To retrieve a thought, a character uncorks the bottle and speaks another word of command. The thought or memory is then transferred directly into the user's brain.

*Thought bottles* are sometimes used to protect vital information. A messenger carrying vital plans through enemy territory where there is a significant chance of capture and subsequent interrogation might carry all sensitive plans in one or more bottles. The messenger does not know the contents or the command word and therefore cannot reveal the contents of the bottles. Likewise, a spy could gain secret information, transfer it to a thought bottle, then use *forget* or *modify memory* to wipe this information from his mind. After this, regardless of the methods used, the spy is incapable of revealing the sensitive information.

*Thought bottles* are sometimes used as "memory archives," where characters can save memories that are "cluttering up" their minds. (This would be more of a problem for long-lived races such as elves, since the sheer volume of memories recorded over several centuries could be overwhelming.)

Thought bottles will function (in both storage and retrieval) for any intelligent creature.

When discovered, 75% of all *thought bottles* can hold only a single thought or memory. The remaining 25% have a capacity of 2d4 separate thoughts or memories. There is a separate word of command for each "thought slot."

**Time Bomb:** A *time bomb* resembles a small hourglass without sand. To set the bomb, the user removes one base from the hourglass and fills one end with an amount of sand of the user's choice (ranging from one minute's worth of sand to one hour's worth). When the hourglass is set on a flat surface so that the sand begins to trickle from one end to the other, the *time bomb* is activated.

When all the sand has trickled to the bottom of the hourglass, it explodes in a ball of flame equal to a *fireball* spell cast at 5th level, delivering 5d6 points of damage and filling a 20-foot radius. Victims within this area who make a successful saving throw vs. spell suffer only half damage.

If an activated *time bomb* is shattered, tipped over, or otherwise disturbed before it detonates, its magic is permanently negated; it cannot be reactivated. From that time on, however, it can be used as a normal hourglass.

**Tome of Mystical Equations:** This book is indistinguishable from other magical tomes. It contains charts and equations relating to several of the spells belonging to the sphere of Numbers. It can be used as the material component for the spells *personal reading*, *telethaumaturgy*, and *addition*. If it is used in this manner, the casting time for the spell is halved, and any saving throw that the subject of the spell might be entitled to suffers a -2 penalty.

**Trimia's Catalogue of Outer Plane Artifacts:** This magical device is a large book bound in heavy wooden covers that do not reveal the title or nature of the work. Upon opening to the first page, the owner finds the title of the book along with a table of contents listing the various outer planes.

Upon opening the book to the desired page, the owner finds either a blank page (25% chance) or a description of a magical device (75% chance) that provides transportation to that particular plane. Along with the description of the device is a price ranging from 1,000 to 20,000 gp (1d20x 1,000). If the appropriate sum is laid on the open book and a *vanish* spell is subsequently cast on the coins, the transport device shown appears in place of the cash. The page then immediately goes blank and the catalogue disappears, teleported to a random location on the Prime Material plane.

The transport device can deliver characters to the outer planes and can return them to their point of departure on the Prime Material plane. Each transport device brings a person or persons to the upper layer of an outer plane. The point of arrival in the plane is left to the DM and usually changes each time the device is used.

Each device has a command word which is always the name of the plane associated with the device. Unless otherwise noted, anyone touching the device or touching the person who holds the device is transported to the upper plane of the outer plane named.

Each transport device can be used once per day. With each use, there is a 5% chance the device will malfunction, sending the characters to the desired plane, but with the device itself disappearing.

*Nirvana:* The device used to transport to the plane of Nirvana is a small pocket watch, a device of unspeakable rarity. The watch keeps perfect time according to the yearly cycle of the sun and never needs winding. The watch is solid gold and has two long, thin gold chains that run through a metal loop at the top of the watch.

*Arcadia:* Arcadia's transportation device is a palm-sized metal sculpture representing the outlines of geometrical shapes. The largest shape is a six-sided cubic cage made of 12 silver rods. Within this cube is a four-sided pyramid, also made of silver rods. Inside the pyramid is a circle of silver.

*Seven Heavens*: A featureless sphere of gold is used to travel to the Seven Heavens. The sphere is three inches in diameter and would appear to be nothing more than a valuable bauble if not for the golden glow it always radiates. The glow has the properties of a *continual light* spell.

*Twin Paradises*: This device appears to be a featureless cube of silver measuring three inches on a side. If it is carefully examined, four small, nearly invisible buttons will be visible. If the four buttons are pressed in the correct order, the cube splits in half. (The correct order can be determined through the use of *legend lore* and similar spells.) The device will teleport to the Twin Paradises when half the cube is held in each hand and the command word is spoken. The travelers arrive in Dothion, considered the topmost plane. The two halves of the cube must be reassembled before it can once again be used to teleport.

*Elysium:* The device used to reach this plane is a sturdy currach, a primitive vessel made from thick hide stretched over a wood-and-wicker frame. This device functions as a normal ship, with a seaworthiness rating of 95%. If anyone touches the ship's mast and speaks the word Elysium, the boat, its passengers and crew, and all cargo are transported to the Oceanus River in the plane of Amoria.

*Happy Hunting Grounds:* A leaf sculpted of gold is the device used to arrive in the Happy Hunting Grounds. The leaf is about two inches long and is wrought in fine detail.

*Olympus:* The device used to reach the plane of Olympus is a silver chariot. The chariot can comfortably hold four passengers and their gear or eight passengers without equipment. A team of four horses must be attached to the chariot; when the chariot is in motion and the command word is spoken, the horses, chariot, passengers, and gear are transported to Olympus. The chariot arrives in the plane in motion.

*Gladsheim:* The device used to reach Gladsheim is a prism approximately three inches in length. To operate the device, the prism must be used outdoors to create a rainbow on the ground. When the command word is spoken, the rainbow grows out of the ground and rises up into the sky. The rainbow lasts for 1 turn. Anyone who steps onto the rainbow is whisked up the colored path and into the plane of Asgard.

*Limbo:* Limbo is reached through the use of a magical mirror. When a person stands before the mirror, he sees his own image reflected normally. The reflected world behind him, however, is in utter chaos--the bricks from the wall behind him float in the air, flames drift across the room, gold and silver pieces break apart and wander aimlessly. If the command word is spoken as a character looks into the mirror, he is transported to any of the planes of Limbo. The mirror does not travel to Limbo. Another means of returning to the Prime Material plane must be found.

*Pandemonium:* This device is a jar perpetually filled with black pitch. When the pitch is spread on a stone wall and the command word spoken, a portal forms in the wall, leading to a cavern in Pandesmos. The pitch evaporates after 5 rounds and magically reappears in the jar.

*Abyss:* Pazunia, the uppermost layer of the innumerable layers of the Abyss, can be reached through the use of a circular black cloth that looks like a *portable hole*. The cloth is three feet in diameter and can be folded to fit inside a pocket. When the cloth is spread on the ground and the command word is spoken, the cloth becomes a pit that leads to the plane. The cloth exists as a pit for 1 turn, then returns to its state as a piece of cloth. It does not follow travelers to the Abyss.

*Tarterus:* This device is a necklace of dull, reddish pearls. A character who wears the necklace and speaks the command word will be transported (along with anyone touching him) to Othrys, the topmost layer of the plane.

*Hades:* The device used to reach Hades is an iron keelboat. When any character on the boat speaks the command word, the keelboat and all it passengers are transported to the river Styx in Oinos, the uppermost layer of Hades.

*Gehenna:* Characters who wish to travel to Gehenna must gather in a small, enclosed room with this magical urn of silver and bronze. A flame must be lit within the urn using materials that cause a great deal of smoke. When the room is so choked with smoke that breathing is almost impossible, the command word may be spoken. This transports everyone and everything in the room, including the urn, to Khala, the uppermost layer of Gehenna.

*Nine Hells:* The Nine Hells can be reached by using special pieces of blood-red coal. When one of these coals is lit or dropped into a flame, a ball of fire flares out from the coal. It does no damage, but transports all creatures and objects within 20 feet to Avernus. No command word is needed for the effect to take place.

*Acheron:* The device used to reach Aceheron is a two-inch cube of black onyx. The

cube always appears as a puzzle inside a black sack. The puzzle is made up of 43 small pieces, which must be fit together to form the cube. When complete, the command word must be spoken.

Solving the puzzle require an Intelligence check at half a creature's Intelligence score. Each attempt to solve the puzzle requires 1d6 turns. Once the cube has been used to teleport, it falls to pieces. The pieces all reappear in the sack, wherever it might be. To use the device again, the pieces must be reassembled.

**Warp Marble:** This item is a small ( ½-inch diameter) sphere of fine crystal, often appearing with a rich blue or aquamarine hue. Each marble has three words of command associated with it.

The first command triggers the marble to create an extradimensional space large enough to contain a single large-sized creature. When this word is spoken, the closest creature to the marble is instantly transported to and imprisoned within this space. Similar to the seclusion spell, the inhabitant of this space can see and hear events in the "real world," but can do nothing to affect anything outside the prison. Spellcasting and use of psionics are impossible while within the prison. If the prison is already occupied, this first word of command will have no effect.

The second command word releases the occupant of the extradimensional space. The occupant is immediately returned to the "real world," appearing within three feet of the marble (wherever it might be). Note that this word of release can be spoken and will be effective from within the prison. Thus, the possessor of the marble can use it as a sanctuary to escape from harm.

The third word of command sets the marble as a trap. After this word is spoken, the first creature of large size or smaller to touch the marble is immediately imprisoned within the extradimensional space. If the first creature to touch the marble is larger than size L, the magic is not triggered; if a size L or smaller creature subsequently touches the item, the magic takes effect.

Once one creature has been imprisoned, other creatures can touch the marble with no adverse effects. A creature trapped in this method can be freed only through the use of the word of release from outside the marble.

A marble trapped in this manner can be thrown at another creature in an attempt to trap the creature. If an attack roll is successful, the target creature is allowed a saving throw versus spell. Success indicates that the creature suffers no effect. Failure indicates that the creature is trapped in the *warp marble*.

If a marble is taken into an extradimensional space (such as within a *portable hole*), if it is *teleported, gated*, or *transported* via dimensional folding or any analogous method, or if it is shifted to another plane of existence, any occupant of the extradimensional space is immediately expelled into the Astral plane.

**Zwann's Watering Can:** Invented by the noted botanist Salerno Zwann, this otherwise ordinary watering can is activated when the user fills it with two gallons of water and lets it stand undisturbed for 30 days. At the end of that period, the user may sprinkle the water from *Zwann's watering can* over a patch of tilled soil no larger than a 25-foot square. Seeds subsequently planted in this treated soil grow normally, but are permanently immune to disease, drought (the plants never need to be watered again), insects, bad

weather (such as hailstorms and early frost) and all other forms of nonmagical trauma. The plants can be harvested normally by the planter.

Water from *Zwann's watering can* has no effect on already maturing plants. It cannot revive withered, diseased, or insect-infested plants.

The patch of soil retains its effectiveness for one year, after which time it must be watered again for the effect to be renewed.

# Wizard Spells by School

**Boldfaced** spells are described in the *Tome of Magic* rule book. The remainder are found in the AD&D® 2nd Edition *Player's Handbook*.
*Italicized* spells are reversible. The reverse name follows the slash.
An asterisk (*) indicates a Wild Magic spell.

# *Introduction*

*Martia stepped back from the dragon's crimson corpse, withdrawing her blade from its scaly head. As it rasped free, her companions sent up a cheer. The creature that had terrorized their homeland for so many centuries was finally dead*

*Carter, her wizened friend, stepped behind her and poked her on the shoulder. Blood streamed down his forehead from a gash above his hairline. "At long last, Martia, you have fulfilled the promise of your bloodline. It was prophesied that a Wanderline would be the death of old Drahlix and now those predictions have finally come true. You have fulfilled your fate. "*

*Martia smiled widely. It seemed as if the burden of centuries of lost hope had been lifted from her shoulders. Her traditionally grim demeanor vanished as if the clouds parted to let the suit shine down on the Dark Peak. Outside, just such a thing was happening.*

*She wiped her sword clean on the pile of gold the dragon used as a bed and scraped the blood and gore onto the coins-staining them with the creature's dark ichor She looked down at the weapon and read the inscriptions along its flat sides. It was the Sword of Baran, the legendary blade of steel that her great-grandfather had forged and that her great-grandmother had enchanted with spells powerful enough to fell even mighty Drahlix.*

*"Without you, Carter, none of this would have been possible. Before I met you, no one had ever been able to discern the meaning of my birthmark. Had that mystery not been solved, I would never have known of my birthright."*

*" 'Twas nothing, child," littered the old man. "History has always been my passion." He turned away from her brightly shining eyes as if intimidated by the light and intensity he saw there. To cover his embarrassment at her praise, he turned his eyes to the smoke-blackened ceiling of the cathedral, searching for the incredible murals he knew must lay beneath the layers of grime and soot. "I always thought that I would spend my life surrounded by my books, enveloped and sheltered by the legends and tales I collected." He sighed deeply, "I never dreamed it would lead me to such an eventful life."*

*He turned to the young warrior and looked directly into her eyes, steeled by the thoughts of destiny whirling in his head. "It is I who owe you much gratitude. If not for your persistence, your ... stubborn ness, " he smiled, "I would never have dreamed of seeing this day."*

*Martia grinned, flashing her white teeth. "Nonsense, Carter. Surely, it was my own good right arm that drove home the blade that took this foul creature's life, but without the Sword of Baran, my strength would not have been enough. "*

*She hefted the blade for a moment and considered where the prophesies would lead her next. What perils would she yet encounter? Not all of the weapon's fate had been fulfilled-not by half. But that would have to wait for another day.*

*She sheathed the sword in the new scabbard she had crafted according to Carter's demanding specifications. Without his wisdom, her youthful foolhardiness would surely have led her straight into the dragon's maw. But with the knowledge that he bore, she had been able to find the means to victory.*

*She suddenly realized that she had become serious again. This was no time for grimness. A celebration would be brewing in the town, and she was ready to join it. The people who had first mocked her for her foolhardy quest would now be rallying to accept her as their queen.*

*She smiled at the thought of the petty bureaucrats and advisers who fought to stymie her at every path. Now they would bow to her as the champion of the land.*

*"Come, old friend," she said to Carter as she headed for the cathedral's massive doors. "The day is getting late, and we have a realm to rebuild. I will need your wise and learned counsel yet. Tonight, however, let us revel in our victory!"*

The great heroes of fantasy have a well kept secret. This secret should be obvious to anyone who has ever set out on a great undertaking:

*You can't do it alone.*

Tales of heroes are filled with details about stalwart companions who follow them into battle or even greater dangers. In fact, the protagonists of such tales are more often than not a group of heroes-a party of adventurers. Bards spread the tales of glorious deeds around campfires and tavern tables far and wide, but the fact remains that many of these histories omit some of the most vital members of these successful adventuring groups.

What is a forgotten legend without someone to remember it? Or a lost map without a copy? Or an unknown land if the heroes are simply lost in it? And how can a prophecy be fulfilled without a seer to show it? Who builds the siege engines to bring down the castle walls?

These supporting characters are often ignored in many **ADVANCED DUNGEONS & DRAGONS** games, or they are seen as simple plot devices. Often, these supporting characters make appearances only as two-dimensional cardboard cut-outs and paper-thin caricatures. Well, no longer!

*Sages and Specialists* finally brings these secondary personages to the kind of fully realized life that they deserve. Supporting NPCs don't have to be throwaway characters. With the rules and guidelines contained in this book, a Dungeon Master can finally create three-dimensional NPCs that play an integral part in an ongoing campaign.

## *How to use this Book*

*Sages & Specialists is* for Dungeon Masters who want to add an element of realism to their AD&D' campaign. It is divided into two main sections. The first concerns itself with ten different types of specialists (among which there are a sage or two, rest assured) Each type of specialist has its own chapter describing it in some detail. Specialists are intended to be NPCs. To make things easier for the DM, however, the chapters treat each specialist as if it were a player character class.

The second part of the book details how to use these specialists in the game. Players can, with their DM's permission, generate specialists with which they can interact. These NPCs will then grow with the adventurer in level and power if supported by the hero. Otherwise, the hero may return to his old friend after a long absence only to find that the once-helpful specialist is just too "busy" to help the PC.

Alternately, DMs can restrict their players' access to this book. In this way, the characters can never be sure of their associates' levels of experience. However, most of the information contained in this book will not spoil any campaign.

Carefully used, the specialists in this book can add a great deal of realism and depth to your campaign. No longer will a DM be stuck trying to figure out how a certain supporting character's abilities work. Each class description fully details the extent of that specialist's powers.

## *Specialists as NPCS*

Due to the supporting roles of these classes, few players will find it rewarding to run a specialist. Those who thirst for fortune and glory will rarely find themselves satisfied with taking on the role of a historian or a blacksmith. If a player wants to try a character from one of the specialist classes, however, explain to him that these types of characters MR not be as useful or powerful as a regular PC class. After all, a navigator isn't much use in a large city, and a healer will likely feel outclassed by the incredible magical powers of a cleric.

On the other hand, trying out a nontraditional type of character can be fun-if only as a diversion from a regularly played character. A DM could, for instance, allow a player to take on the role of a guide needed by the party, but only if that player is willing to leave his regular player character behind. In the interests of game balance, it is not recommended that a player control the actions of more than one character.

Another alternative is to assign a specialist to a player who infrequently attends the gaming sessions. In such a case, the player takes on the role of a specialist already known to the adventurers, or simply makes up an appropriate one from scratch. When the player in question attends the game, he will run a recurring NPC that the regular Players will recognize.

## *What you Need*

This is an *AD&D* handbook, and it assumes that you have the *Player's Handbook (PHB)* and the *DUNGEON MASTER Guide (DMG).* Other books, like the *Tome of Magic (TOME)* and the MONSTROUS MANUAL'" would certainly be helpful, but are not necessary in order to use this book.

# *The Apothecary*

*Martia walked down the street, stepping carefully to avoid refuse and waste. Soon, she spotted a wooden sign hanging over one door. It was battered and worn, and the paint on the sign, which depicted a glass vial frothing with some greenish liquid, had faded away almost entirely.*

*The storefront was lodged between a couple of residences far away from the city center. One would not simply wander by this place and stop in on impulse, as the shop was sufficiently hidden from the casual eye. Only those with specific business would ever know its exact location.*

*Not that this was a particularly pleasant part of town; in fact, it was definitely not an area that curious travelers would likely frequent. Many of the buildings stood abandoned, and those few remaining ones had their windows chipped or holed by the urchins that Martia saw constantly under everyone's feet.*

*The shop with the sign was different, though. Its windows were glazed, unbroken, and even clean. In fact, it looked like the owner had recently polished the shop's windows to let in what little light dared crawl out of the sky. There were no dark alleys adjacent to it, at least not like those nearby cracks used by thieves and cutpurses. All in all, the shop was clean, solid, and almost ... confident.*

*Martia reminded herself that she was not there to observe the scenery. Steeling her nerve, she stepped forward and opened the door. Unlike most buildings on the block, the door was not locked tight.*

*The inside of the shop was dark, and it took a moment for Martia's eyes to adjust to the gloom. When they did, she saw that she was in a small room, fronted by a short counter behind which was the room's only other doorway. There was a bell on the counter. Throwing caution to the wind, Martia picked it up and rang it. She waited for a moment. Nothing happened. She considered leaving, but decided against it. Martia had gone to a lot of trouble to get this man's address, and she wasn't leaving without talking to him. She leaned over the counter and banged on the door. When no one answered, she banged again.*

*She was still banging when the door swung wide. A time-ravaged face replaced the worn wooden planks of the door. The man before her stood hunched and looked very tired. Large folds of skin hung limply under his eyes. Wisps of white hair clung to his scalp in a half-ring around his head, the top of which was criss-crossed with broken purple veins that were visible through thinly stretched skin.*

*The old man looked up at her with his good eye-the other was milky white-and said, "May I help you, my lady?" Unlike the rest of this ugly man, his voice was smooth and clean. The incongruity startled Martia, but only for a moment.*

*She nodded. "My name is Martia, and I are in need of a potion. "*

*The white eyebrows raised, and the old ones entire head seemed to wrinkle with the effort. "A potion, you say?" He swung the counter up and away and beckoned her to follow him into the room behind him. "Well, young lady, I'd say that you've come to the right place."*

*Martia stepped into the room; her senses reeled from the barrage of sights, sounds, and smells. The room was easily four times as large as the foyer and filled with candles, tables covered with bubbling liquids, and glass bowls and spheres connected with lengths of copper tubing. The shelves were congested with all manner of what Martia presumed were ingredients: dried insects, wings from bats and other creatures, eyeballs from a number of different sources-one looked large enough to have belonged to a giant-herbs, leaves, roots, and other less identifiable things.*

*"Just what is it you're looking for, my dear?"*

*Martia described what it was that she needed.*

*The old man's grin split wide, exposing his straight, white teeth. "Well, you certainly have come to the right place. You certainly have, indeed. "*

An apothecary is a medieval version of a pharmacist. Members of this NPC class devote their lives to the creation of tried and true medicines, and the research and development of new kinds of drugs. They have some small magical ability, but they use it only to supplement their body of knowledge. Apothecaries rarely venture forth from their laboratories to travel in the vastness of the world. Apothecaries make medicines, drugs, poisons-just about anything chemical in nature. They can also identify such compounds and mixtures, making apothecaries indispensable when faced, for instance, with a mysterious potion.

They sell their services to those who have need of their wares, but for the most part, they are more interested in research than profit. However, many apothecaries still search for the secret formula that will transform lead into gold.

Just as with fighters, mages, or any of the other more traditional classes, apothecaries come in many different styles. These range from the village druggist to the shaman herbalist to the legendary alchemist.

**Experience, THAC0 and Hit Dice**

Apothecaries have their own level advancement as shown on Table 1: Apothecary Experience Levels. These studious chemists, do not possess many combat skills, as they spend most of their time researching concoctions. For this reason, they use the wizard's THACO table and saving throw chart.

Apothecaries gain one four-sided Hit Die per level up to the 7th level. After that, they gain a single hit point per level and do not gain any extra hit points from high Constitution scores.

**Table 1: Apothecary Experience Levels**

| Level | XPS | Hit Dice (d4) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 2,500 | 2 |
| 3 | 5,000 | 3 |
| 4 | 10,000 | 4 |
| 5 | 20,000 | 5 |
| 6 | 40,000 | 6 |
| 7 | 60,000 | 7 |
| 8 | 80,000 | 7+1 |
| 9 | 125,000 | 7+2 |
| 10 | 200,000 | 7+3 |
| 11 | 350,000 | 7+4 |
| 12 | 650,000 | 7+5 |
| 13 | 950,000 | 7+6 |
| 14 | 1,250,000 | 7+7 |
| 15 | 1,550,000 | 7+8 |
| 16 | 1,850,000 | 7+9 |
| 17 | 2,150,000 | 7+10 |
| 18 | 2,450,000 | 7+11 |
| 19 | 2,750,000 | 7+12 |
| 20 | 3,050,000 | 7+13 |

| Level | 1st | 2nd | 3rd | 4th | 5th | 6th | 7th | 8th | 9th |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 1 | - | - | - | - | - | - | - | - |
| 2 | 1 | - | - | - | - | - | - | - | - |
| 3 | 2 | - | - | - | - | - | - | - | - |
| 4 | 2 | - | - | - | - | - | - | - | - |
| 5 | 2 | - | - | - | - | - | - | - | - |
| 6 | 3 | - | - | - | - | - | - | - | - |
| 7 | 3 | - | - | - | - | - | - | - | - |
| 8 | 3 | 2 | - | - | - | - | - | - | - |
| 9 | 4 | 3 | 1 | - | - | - | - | - | - |
| 10 | 4 | 3 | 2 | 1 | - | - | - | - | - |
| 11 | 4 | 3 | 3 | 2 | - | - | - | - | - |
| 12 | 4 | 3 | 3 | 2 | 1 | - | - | - | - |
| 13 | 4 | 4 | 3 | 2 | 2 | - | - | - | - |
| 14 | 4 | 4 | 4 | 3 | 3 | - | - | - | - |
| 15 | 4 | 4 | 4 | 4 | 3 | 1 | - | - | - |
| 16 | 5 | 5 | 4 | 4 | 4 | 2 | - | - | - |
| 17 | 5 | 5 | 5 | 4 | 4 | 2 | 1 | - | - |
| 18 | 5 | 5 | 5 | 5 | 4 | 3 | 2 | - | - |
| 19 | 5 | 5 | 5 | 5 | 5 | 4 | 2 | 1 | - |
| 20 | 5 | 5 | 5 | 5 | 5 | 5 | 3 | 2 | - |

***Ability Scores***

Not everyone can become an apothecary. These NPCs must spend long hours sequestered away from others while they work on new chemical concoctions and improve existing formulas. Apothecaries face long Ours of study and need to cultivate the ability to identify and use thousands of different chemical compounds. In addition, the apothecary must devote some of his precious time to the study of magic spells. For this reason, all apothecaries must have a minimum Intelligence score of 12 and a minimum Constitution score of 10. Intelligence is the apothecary's prime requisite.

***Magical Abilities***

In many ways, apothecaries are simply wizards that concentrate their abilities on manufacturing various magical and nonmagical medicines and poisons. They can cast wizard spells, although they gain them at a substantially slower rate than traditional wizards. This is due to the fact that Apothecaries concentrate their efforts on the construction of potions rather than the study of new spells. See Table 2: Apothecary Spell Progression for full details.

In fact, many apothecaries eschew the open we of spell. These ominous wizards believe that magic should only occur under carefully monitored conditions-most often in a laboratory or similarly controlled area.

*Spell Failure*

Apothecaries do not use traveling spell books, nor do they practice casting their spells under combat conditions. For this reason, apothecaries suffer a penalty whenever they try to cast a spell under pressure Whenever the apothecary is in combat or any other pressure situation, there is a chance for his spells to fail. This chance of failure depends upon the apothecary's Intelligence score. The apothecary loses the failed spell from his memory and must study it again before he can make another casting attempt.

**Table 3: Apothecary Spell Failure**

| Intelligence Score | Chance of Spell Failure |
|---|---|
| 1 | 100% |
| 2 | 90% |
| 3 | 80% |
| 4 | 75% |
| 5 | 70% |
| 6 | 65% |
| 7 | 60% |
| 8 | 55% |
| 9 | 50% |
| 10 | 45% |
| 11 | 40% |
| 12 | 35% |
| 13 | 30% |
| 14 | 25% |
| 15 | 20% |
| 16 | 15% |
| 17 | 10% |
| 18 | 5% |
| 19 | 0% |
| 20 | 0% |

***Optional Spell Failure Rule***

The more proficient an apothecary becomes in his chosen field (the higher his level), the less chance he has of miscasting a spell during a high-tension situation. The DM should subtract 2 percentage points from the apothecary's chance of Tell failure for every level of the spellcaster above the third. In this way, a 7th-level apothecary with a Wisdom of 10 would only have a 37% (base chance of 45%)-8 percentage points for the apothecary's level) chance of spell failure.

***Specialization***

Unlike normal wizards, apothecaries can specialize in only the Alteration school of magic. This school lies at the core of an apothecary's work-changing matter from one form into another. The transmuter apothecary possesses the same limitations as transmuter wizards: they must be human or half-elf, have a minimum Dexterity of 15, and cannot cast spells from the opposition schools of Abjuration and Necromancy. In addition, they receive a -15%, penalty to learn spells from other magical schools.

Despite this, the transmuter apothecary receives an additional spell per level from the school of Alteration. In addition, he adds +1 to any saving throws against Alteration spells, and his opponents suffer a -1 penalty to their saving throws against his Alteration spells. These specialists also add +15% to their chance to learn Alteration spells. Finally, transmuter apothecaries automatically learn one Alteration spell (DM's choice) with each new level they reach.

***Permissible Armor and Weapons***

Apothecaries cannot wear any armor. In addition, their limited training in weapons permits them to wield only a dagger, dart, staff, or sling.

Although they are spellcasters, apothecaries concentrate their skills on research rather than on spellcasting, and their individual class awards reflect this preference. Use Table 4: Apothecary Experience Awards to determine how many experience points an apothecary deserves when you hand them out.

**Table 4: Apothecary Experience Rewards**

| Action | Award |
|---|---|
| Concoction used to overcome foe or problem | 1/2 potion's XP |
| Successfully created a concoction | concoction's XP |
| Created new concoction | 2 potion's XP |

***Proficiencies***

An apothecary receives one weapon proficiency slot at 1st level and gets a new one every six levels (at the 6th level, 12th level, and so on). If an apothecary uses a weapon with which he is not proficient, he does so with a -5 penalty

An apothecary also receives four non-weapon proficiency slots at lst level and gains a new
proficiency slot every three levels after that (at the 3rd level, 6th level, and so on). The NPC can choose from the wizard and general proficiencies without any additional slot costs.

***New Proficiencies***

The apothecary's main calling is the concocting of new mixtures. He creates these things through use of the new Concocting proficiency. An apothecary must use one of his 1st level non-weapon proficiency slots to select the Concocting proficiency. Some apothecaries choose to spend nearly all of their slots on this proficiency Note that this proficiency is available to members of the apothecary NPC class only. No other class may choose this non-weapon proficiency.

**Concocting**

This proficiency enables the character to concoct chemical compounds with specific uses-such as medicines and poisons. It also allows the apothecary to identify various materials-including magical consumables (potions, salves, lotions, and so on).

This identification is nonmagical in nature. The apothecary can determine only the general nature of the material (for example, this is a poison, this is a healing potion) and not its strength or duration. The identification process is quite long; it takes the apothecary 1d6 hours to identify nonmagical mixtures and 2d12 hours to identify magical potions and such.

In addition, the materials required for each accurate identification are quite expensive (at least one-tenth of the item's XP value). This is why most apothecaries charge a great deal of money to identify potions and other mixtures.

If the apothecary rolls a 1 when trying to concoct something, he manages to create a
particularly potent brew. A potent concoction has double its normal duration. Alternately, the DM can increase its effectiveness in some other way. However, increasing a potion's strength by more than half is not recommended.

If the apothecary rolls a 20 when concocting something, he critically fails to create his intended mixture. Because of the extremely volatile nature of the apothecary's chemicals, a critical concoction failure can be quite dangerous. When an apothecary makes such a spectacular failure, the DM should roll another 20-sided die and consult the Eureka Table for the results. Smart apothecaries always identify the results of a failed concoction before tossing it out, as some of the most important concoctions have been discovered by mistake.

***Table 5: Eureka! Table***

| Die Roll | Result |
|---|---|
| 1-2 | *Magical Discovery:* Roll once on the potion tables in the DMG |
| 3-4 | *Mundane Discovery*: The apothecary creates a known mixture. |
| *5-9* | *Disappointment:* The concoction is useless. |
| 10-13 | *Holy Smokes!*: A noxious cloud hovers over the Apothecary's house for 1d4 days. |
| 14-16 | *Flash Fire:* The resultant chemical flash blinds the Apothecary for 1d4 days |
| 17 | *Chemical Burn:* The Apothecary takes 1d8 points of damage and loses the use of his hands for 1d6 days. |
| *18-19* | *Minor Explosion:* The Apothecary's lab takes 1,000 gp worth of damage and the apothecary suffers 2d6 points of damage. |
| 20 | *Major Explosion:* The Apothecary takes 4d6 points of damage and his lab is completely destroyed |

If the apothecary rolls a 20 when identifying a particular material, his result will be significantly inaccurate. Sometimes, this means that he identifies a *healing* potion as a poison or vice versa, but it could also man that he identifies a *potion of ESP* as a *potion of red dragon control.* In these cases, the DM should do his absolute best to convince the players that the apothecary correctly identified the material.

To use the Concocting non-weapon proficiency, the apothecary must have a well-appointed lab at his disposal. Additionally, if the apothecary wishes to concoct something, he must have all of the ingredients on hand.

An apothecary must make a proficiency check only when attempting to identify a magical potion or devise a new or particularly complicated concoction (this automatically includes any and all

magical concoctions). Substantially strange or more complicated concoctions may demand a penalty to the proficiency check at the DM's discretion.
The Concocting proficiency costs one slot, is based off of the Intelligence score, and has a check modifier of -2.

***The Apothecary's Laboratory***
Each apothecary starts out with a basic laboratory in his home. This place is filled with all sorts of rare and exotic ingredients, as well as a vast store of more commonly used items. Maintaining this lab (keeping it stocked with ingredients, replacing broken apparatus, and upgrading laboratory equipment) costs 50 gp per month per character level.
If the lab is somehow destroyed, it costs the apothecary 1,000 gp per level to restore the lab to its former glory. If the apothecary does not have enough money on hand to entirely rebuild his sanctum, he may construct a lesser lab, but then he suffers a -1 penalty to any Concoction proficiency checks for each difference in level between himself and the lab.
*For example, Varda, a 2nd level apothecary, damages his lab during an experiment. It will cost him 2,000 gp to restore his lab to 2nd level. Unfortunately, Varda can afford to pay only 1,000 gp towards the restoration of the lab. After the repair, Varcia's lab is only 1st level while he is 2nd level. Thus, he suffers a -1 penalty (his level minus the lab's level) to any Concocting proficiency checks.*
When a transmuter apothecary is away from his lab, he loses the bonus spell that he can memorize with each level. If the lab was destroyed and only partially restored, he can only memorize the extra spells up to the level to which the lab is currently at.
In other words, if a 7th-level transmuter apothecary only had 5,000 gp with which to restore a lab, he would suffer a -2 penalty to all Concocting proficiency checks. Also, he would only be able to memorize his bonus spells for the 1st through 5th levels.

***Making Mundane Concoctions***
Apothecaries can make nonmagical pastes, pills and liquids with interesting effects. To do so, they need to gather all of the appropriate ingredients and bring them to their lab. They then make a check against their Concoction non-weapon proficiency. If they succeed, they end up with a potent concoction. If they fail, they end up with a mess. This mess is usually benign-unless the apothecary rolls a 20 on his Concocting
proficiency check. If this is the case, consult the Eureka table for results.
To create a concoction, the apothecary must Ent have a recipe. These instructions are hoarded and traded among apothecaries like spells among wizards. All apothecaries begin their career with a single recipe of their choice.
New recipes must be given to the apothecary by a colleague, found in another apothecary's recipe book, or discovered through diligent research. It is difficult to wrangle recipes out of other apothecaries, though, as these formulas are the product of many long hours of experimentation. Some apothecaries will sell their secrets to colleagues they trust implicitly. However, personal research is usually cheaperthough it takes more time.
Sometimes, it is possible to find recipes in old apothecary's journals, but these books are extremely rare. An adventuring party might conceivably stumble across one or take it forcibly from an opposing apothecary, but rarely will such books be available in book shops.

***Researching Recipes***
Independently researching a recipe is a time-consuming task. The Common Concoction table given later in this chapter describes the times and costs for researching several recipes, but DMs should familiarize themselves with these guidelines for researching new concoctions.
First, try to determine the concoction's equivalent spell level, if possible. If a particular spell can be cast by both mages and clerics, always use the mage spell. For instance, suppose an apothecary wants to come up with two liquids that glow brightly when mixed together. The DM, judging that As is a reasonable goal, checks for an equivalent spell and discovers that light, a 1st level wizard spell, fits the bill.

*Optional Rule: Research Limitations; Apothecaries cannot research a wipe for with a higher equivalent spell level than their own casting ability. For example, Sirellyn, a 3rd level apothecary,
cannot research a flammable concoction that has similar effects to a *fireball* spell until he reaches 8th level. Such a concoction is simply beyond the realm of his understanding.

Second, the apothecary must spend one week in research per equivalent spell level of the proposed concoction. The cost of such research is 200 gp per week. Following this formula, the glowing liquid in the above example would require 200 gp in materials and one full week to research.
After the apothecary spends his time and money researching, he must make a Concocting proficiency check. If he succeeds, the apothecary successfully discovers the correct recipe. If the apothecary fails, he cannot attempt to research the same recipe until he reaches another level.
An apothecary can learn as many different types of nonmagical recipes as he can afford to research. Many accomplished apothecaries have nonmagical concoctions for almost every contingency
**A Note about Nonmagical Concoctions:**
Nonmagical concoctims, should never be of equal power and duration to a magical potion, or spell. Although these mundane, mixtures may mimic some spell effects (such as the glowing liquid of the example) they should possess no more then a tenth of the power and duration of their magical counterparts

***Cooking up a Concoction***
Once the apothecary has successfully researched a concoction, he can "cook up" a batch any time. Each batch takes 2c16 days to make and costs 1d10x10 gp per equivalent spell level of the concoction.
Once the apothecary finishes the batch, he must check against his Concocting proficiency. If the check succeeds, the apothecary has brewed as many doses of the concoction as he rolled on the check. For example, an apothecary with three slots of the Concocting proficiency and an Intelligence of 15 attempts to make a batch of painkillers. His -2 check modifier and his +2 bonus for extra proficiency slots balance each other out, so he needs to roll a 15 or less to make a successful batch of painkiller. He rolls a 12 and has successfully brewed 12 doses of painkiller.
If the apothecary rolls a 20, he should consult the Eureka table for the results. Any new material created still needs to be identified by the apothecary. Furthermore, he must still research the exact recipe for the unintentional creation. An apothecary receives a +1 bonus to his proficiency check when researching his own accidental creation.

***Making Magical Concoctions***
When apothecaries reach 7th level, they can make magical concoctions. This includes all potions, oils, and other kinds of miscellaneous magical items of a concocted nature, including: *candle of invocation, dust of appearance, dust of disappearance, dust of dryness, dust of illusion, dust of tracelessness, dust of sneezing and choking, incense of meditation, incense of obsession, Keoghtoin's ointment, NoIzur's marvelous pigments, smoke powder, sovereign glue,* and *ultimate solvent.*

Making a magical concoction is just like making a normal one. First the apothecary must research a recipe and successfully brew it. However, researching and concocting magical items is much more expensive, in time and gold, than researching more mundane mixtures.

***Researching Magical Formulas***

In order to research magical formulas, the DM must first determine the item's equivalent spell level. This is equal to the magical item's XP value divided by 100, rounded up. Thus, a *potion of invisibility* (worth 250 XP) is the equivalent of a 3rd-level spell (250 XP-. 100 Xl`=2.5 rounded up to 3).

The research time for magical concoctions is two weeks per equivalent spell level. In addition, this research costs 500 gp per equivalent spell level. Researching a *potion of invisibility,* for instance, would take six weeks and cost 500 gp.

Once the apothecary completes his research, he must make a Concocting proficiency cheek. If it succeeds, the apothecary discovers the correct recipe. If he fails the check, the apothecary cannot attempt to research that particular recipe again until he reaches another level.

An apothecary can have recipes for as many different types of magical items as he likes. However, many of these recipes call for expensive and exotic ingredients, so wary DMs can control any potential abuses of this power.

***Cooking up a Magical Concoctions***

Cooking up a magical concoction is more involved than simply tossing all the ingredients together. It often requires gathering all sorts of strange and exotic bits and pieces to complete the recipe. For more ideas about how to handle this, consult the *DUNCEON MASTERS Option: High-Level Campaigns* book.

Making a batch of a magical concoction requires one full week of uninterrupted work and cost the item's XP value in gold pieces. The price of any rare or exotic ingredients should also be added to the overall cost of brewing.

Once the apothecary finishes the batch, he must check against his Concocting proficiency. If the cheek succeeds, he creates the potion. If the apothecary rolls a 20, however, he must roll on the Eureka Table to determine the results of his critical failure. Because of the highly unstable nature of magic, the apothecary adds +2 to his Eureka Table roll. Thus, it is more dangerous to make a mistake while brewing a magical concoction.

The apothecary must identify any accidental magical or mundane discoveries, and research the material before he can discover the exact formula for it. An apothecary gets a +1 bonus to researching a recipe for something he has accidentally created.

***Mixing Potions***

An apothecary can do a lot to prevent disasters when mixing different magical potions together. In order for the apothecary to bring his expertise to bear on the situation, he must spend at least one day examining the two potions. After this time, the apothecary makes a Concocting proficiency check.

If the apothecary succeeds, the DM should note the result of the roll. When the DM rolls on Table 111: Potion Compatibility in the *DUNGEON MASTER* Guide, he ignores any results less than the apothecary's concocting check result.

If the apothecary fails his concocting check, the DM should roll regularly on the Potion Compatibility table.

For instance, an apothecary with an Intelligence of 16 and one slot of the Concocting proficiency attempts to mix two potions together. After two days of research, he gives it a shot. He needs a 14 or less to succeed at his concocting check. He rolls a 9. This means that the lowest result possible for the compatibility check is a 9.

A clever apothecary will examine newly mixed concoctions before imbibing them. The cautious alchemist can know the results of the miscibility check if he makes a successful Concocting check. If the apothecary fails this check, he cannot try again until next level. If he rolls a 20 on his proficiency check the DM should roll again on the Potion Compatibility table and report the second result instead of the first one.

***Common Concoctions***

The following concoctions are nonmagical in nature and can be manufactured by nearly any qualified apothecary. Each entry fully describes the concoction in question.

**Research Time**: This is how long it takes to research this particular concoction's recipe.

**Research Cost**: This amount is the cost of researching a formula.

**Batch Time**: This is how long it takes to concoct a batch of this material.

**Batch Cost**: This amount represents the total cost of producing a batch of this concoction.

**Price Per Dose**: This is how much the typical apothecary charges for a dose of As concoction.

Note that many apothecaries traditionally come up with snappy names for their products. For instance, Neiglub (the apothecary featured at the end of this chapter) sells a relaxant under the name of Neiglub's Notable Napmaker.

***Aphrodisae***

This is a powder which dissolves in liquid. Less reputable suitors sometimes introduce this concoction into their companions' drinks. An aphrodisiac causes the user to believe that he or she is more attractive and desirable. In effect, the user believes that he or she possesses a Charisma score 3 points higher than the actual score. Of course, no actual Charisma increase takes place; the entire "bonus" is merely in the user's mind. The effect lasts 1d4 hours.

**Research Time**: 9 days
**Research Cost**: 270 gp
**Batch Time**: 9 days
**Batch Cost**: 90 gp
**Price Per Dose**: 9 gp

***Beauty Cream***

This is a thin, fragrant lotion that vanishes once rubbed into the skin. It softens the skin and restores a semblance of youth to the user's face and hands. Anyone who uses this cream gains +1 to their Charisma for an entire day If used every day for 10 days, the beauty cream adds +2 to the user's Charisma. These bonuses apply as long as the user maintains the treatment.

Beauty cream is usually a great source of income for an apothecary, as vain nobles habitually use this concoction. Since the consumer must constantly use the cream in order to enjoy its benefits, the apothecary is sure to have a steady income.

Beauty cream usually comes in tins containing seven doses, although apothecaries sell larger jars to their wealthy patrons.

**Research Time**: 12 days
**Research Cost:** 300 gp
**Batch Time**: 2 days
**Batch Cost**: 10 gp
**Price Per Dose**: 2 gp (or 7 doses for 10 gp)

***Chemical Light***

This concoction consists of two chemicals that, when mixed together, glow with enough light to read by. The two vials are usually swirled into A transparent glass globe, and the resultant mix gives off a sickly

green glow. Those who regularly use these devices purchase a staff with a special attachment on which the glowing globe can be fastened.
The light from this Mixture reaches out 20 feet from the globe and lasts I d4+ I turns. The liquid slowly dinis as it reaches the end of its duration.
**Research Time**: 4 days
**Research Cost**: 160 gp
**Batch Time**: 2 days
**Batch Cost**: 50 gp
**Price Per Dose**: 10 gp
**Price for Special Staff**: 3 gp

***Emetic***
This liquid induces vomiting when ingested. This can be helpful if a character swallows some sort of poison (poison classes G through J). If administered before the poison fully enters the victim's system (usually about half the poison's onset time), the victim in question receives mother saving throw.
The victim suffers 0-2 (1d3-1) hit points of damage for every episode of induced vomiting. However, this method is probably the most effective way (besides magic) to treat victims of ingested poison, as the emetic ensures that the victim's belly is entirely emptied
A bottle of emetic usually contains 2 doses, although it can be purchased in larger amounts.
**Research Time**: 1 week
**Research Cost**: 100 gp
**Batch Time**: 1 day
**Batch Cost**: 10 gp
**Price Per Dose**: 2 gp

***Healing Salve***
This is thick, sticky salve with a petroleum base. It causes wounds to heal at an advanced rate. After applying this material liberally to his wounds, an injured character heals 1 hit point per day, even if he's not resting. Also, the character will heal M4 hit points per day of rest and ld4+2 hit points for each day of complete bed rest. Each dose is enough for a single day. A tin of healing salve usually holds 10 doses.
**Research Time**: 1 week
**Research Cost**: 200 gp
**Batch Time**: 3 days
**Batch Cost**: 50 gp
**Price Per Dose**: 12 gp

***Painkiller***
This superb pill relieves the user of any sort of pain-from the common headache to the agony associated with large gashes from an opponent's knife. Unfortunately, a painkiller does not actually heal the sufferer. It simply allows the user to ignore the effects of the pain itself.
Besides its obvious day-to-day utilization's (healers often use these pills as an anesthetic), painkillers can be of great use to an adventurer. The pill takes one turn to take effect. After that, the user can ignore any effects of pain-including that associated with torture. In addition, a character reduced to 0 hit points or less can remain conscious. When the character hits -10 hit points, though, he dies.
The effects of the pill last ld3+1 hours. Once the painkiller starts to wear off, the user can simply take another pill to extend the benefits another ld3+1 hours. However, prolonged we of a painkiller may result in a permanent constitution loss. If an adventurer uses this pill more than three times in a week, he must make a saving throw versus poison or lose 1d4 constitution points. The adventurer must then make this saving throw every subsequent time he uses a painkiller.
**Research Time**: 13 days
**Research Cost**: 300 gp
**Batch Time**: I week
**Batch Cost**: 100 gp
**Price Per Dose**: 15 gp

***Poison***
Apothecaries can make all kinds of poisons, but only truly evil alchemists manufacture them for sale. A good-aligned apothecary never intentionally concocts poisons of any type, as possession of poisons is a serious crime in most societies. Even neutral or evil apothecaries hesitate to produce such illegal concoctions. In any event, production of poison is definitely an evil action. Good and neutral apothecaries who produce such mixtures are subject to severe penalties-including an alignment change.
As noted in the *DUNGFON MASTER Guide,* poison exists in many different forms, sixteen classes are listed in that book alone. The effects of these poisons are fully described in the *DMG.* The cost, both in time and money, for developing each of these poisons can be found on Table 6: Poison Creation.
Keep in mind that these costs vary greatly according to demand, legality, and numerous other factors. Most of these factors cause the prices to soar.

***Table 6: Poison Creation***

| Poison Class | Research Time (days) | Research Cost (gp) | Batch Time (days) | Batch Cost (gp) | Price Per Dose (gp) |
|---|---|---|---|---|---|
| A | 3 | 50 | 2 | 30 | 10 |
| B | 5 | 80 | 4 | 50 | 25 |
| C | 8 | 125 | 7 | 90 | 40 |
| D | 12 | 200 | 10 | 125 | 75 |
| E | 21 | 400 | 14 | 250 | 200 |
| F | 18 | 340 | 12 | 20 | 150 |
| G | 4 | 60 | 2 | 50 | 20 |
| H | 6 | 75 | 4 | 75 | 25 |
| I | 9 | 120 | 7 | 100 | 50 |
| J | 16 | 350 | 14 | 300 | 200 |
| K | 2 | 25 | 3 | 40 | 20 |
| L | 5 | 45 | 4 | 60 | 30 |
| M | 8 | 75 | 6 | 75 | 50 |
| N | 28 | 1,000 | 28 | 750 | 300 |
| 0 | 3 | 60 | 3 | 40 | 20 |
| P | 3 | 50 | 2 | 35 | 20 |

***Poison Antidotes***
Apothecaries have an old saying, "For every poison, there is an antidote." This is quite true. For this reason, most apothecaries keep sufficient quantities of antidotes close at hand. Antidotes work in one-third (round down) the minimum onset time of the poison they counteract. These antidotes cost (in terms of time and gold) just as much as their respective poison to research and make. However, most apothecaries sell them for half the cost of their corresponding poison.

***Relaxant***
This is a simple medicine that helps the user relax and go to sleep. It generally comes in a pill form that can easily be ground into a water solvent powder. The relaxant puts a user to sleep in 3014 rounds. The user remains asleep for 2d4 hours. An unwilling user receives a saving throw versus poison to avoid falling asleep. However, he must continue to make a saving throw every turn until he falls asleep or the medication expires.

This medicine is considered a poison; priestly spells such as slow poison and *neutralize poison* counteract the effects of a relaxant.

**Research Time**: 6 days
**Research Cost**: 120 gp
**Batch Time**: 1 week
**Batch Cost**: 30 gp

**Price Per Dose**: 6 gp

***Stimulant***

A stimulant is a medicine designed to keep the user awake and alert. The a person may normally need to sleep six to eight hours a day, anyone who ingests this pill can put off the need to sleep for 1d6+6 hours with no ill effects. In fact, the stimulant is so powerful that the user cannot go to sleep.

The user must make a saving throw versus poison every hour he wishes to remain awake after the pill's duration. Failure means that the user falls asleep. However, if a person remains awake for more than 72 hours, he begins to hallucinate. For every hour after 72 that the user remains awake, he suffers a -1 penalty to his Wisdom. Once a person's Wisdom reaches 0, he becomes a raving lunatic. For every hour the user sleeps, he regains one point of Wisdom.

This medication can counteract the effects of a relaxant for as long as the stimulant is still active. The effects of the two drugs balance each other out, so the user can go to sleep if he so desires.

**Research Time**: 8 days
**Research Cost**: 170 gp
**Batch Time**: 5 days
**Batch Cost**: 200 gp
**Price Per Dose**: 10 gp

## *Neiglub*

**Neiglub the Clever, Apothecary to Kings.**
**Male Human Transmuter Apothecary**

***Str***: 9 ***Dex***: 15 ***Con***: 10
***Int***: 17 ***Wis***: 12 ***Cha***: 11

**Armor Class**: 3 (studded leather)
**Level**: 7
**THACO**: 18
**Movement**: 12
**Hit Points**: 20
**Alignment**: Neutral Good
**No. of Attacks**: 1
**Damage/Attack**: By spell or weapon;
**Special Attacks**: opponents save at -1 against Neiglub's Alteration spells.
**Special Weaknesses**: Neiglub's spells have a 21% chance of failing when cast under stress.
**Weapon Proficiencies**: Knife, staff.
**Non-weapon Proficiencies**: Brewing (17), Concocting (18), Modern Languages (dwarvish, 17), Reading/Writing (18).
**Spells**: *Affect normalfircs, cantrip, comprehend languages, wizard mark; alter self, continual light,* and *wizard lock.*
**Equipment**: Aphrodisiac (1 close), emetic (5 doses), healing salve (10 doses), painkiller (4 doses), relaxant (3 doses), stimulant (7 doses), *potion of extra-healing W), potion of invisibility (x2), potion offlying, elixir of health W), potion of speed, ring of protection +2,* knife, staff, and spell components.

Neiglub is a thin man of average height in his middle forties. His hair is gray and thinning, although he wears long mustaches and a goatee to make up for the lack of hair. His eyes are sharp blue and hide a scheming mind.

**Role-playing**: Neiglub fancies himself a bit of a ladies man, although his track record is not very impressive. He is glib and friendly, but opinionated. In addition, he can become abrasive with those who do not agree with him. Despite this, he is an excellent friend. Neiglub may run at the first sign of danger, but he will certainly return at the first opportunity to effect a rescue.

**Combat**: Neiglub is a lover, not a fighter. Given the choice, he always tries to avoid a confrontation. He often tries to buy his foe a drink and then slip him a dose of relaxant. If that's not possible, Neiglub causes a distraction long enough to quaff his *potion of invisibility* and sneak away. If that doesn't work, he drinks his *potion of flying* and takes to the skies.

# *The Appraiser*

*Martia strode stealthily through the streets, her burden hidden carefully beneath her billowing cloak. A movement on a nearby rooftop caught her eye, a shadow briefly silhouetted against the remainder of a waning moon. When she lifted her head for a closer look, it was gone, and she wondered if she had in fact seen it at all.*

*She continued onward, taking a circuitous route through the cities winding streets, careful to avoid the many blackened alleys into which even the lights of the street lamps feared to roam. There, she knew, thieves and cutthroats lay in wait. As she rounded a final corner and topped a low hill, her destination came into view. The house of the appraiser stood taller than those around it- three stories at least-and a single light shone through a window set in the exact center of the top floor. A sign out front, barely visible in the flickering lights of the lamps, swung idly in a wind that Martia could barely feel.*

*Steeling herself, Martia knocked firmly on the thick door. Stepping back, she saw the light in the window fade slowly-though it soon reappeared on the second floor. Long moments later, a rattling sounded from behind the iron-bound oak door.*

*An eye-level slit in the door slid open, and a soft feminine voice crept out. "It is late. What do you want?"*

*Martia swallowed hard before responding. Her throat had suddenly gone dry. She croaked, "Neiglub sent me. "*

*The voice chuckled. "Yes, yes. I've been expecting you. " With that, the door opened to reveal a brunette in her early thirties. She wow a long, cotton nightgown, rumpled from lying in a bed. Her left hand bristled with rings, and she held a lantern in her right. "Enter, quickly fool. There are things on these streets I would rather not let in. "*

*Martia complied, turning around as she entered, barely glimpsing the woman waving off a shadow encroaching from a nearby alley. It quickly disappeared.*

*"Nebless?" asked Martia, unsure she had the right person.*

*"Yes?" responded the woman as she led her guest into a small sitting room and directed her to a chair. Hanging the lantern on the wall, size lowered herself into the chair opposite Martia and asked, "How can I be of service?"*

*Martia hesitated, and then threw back her cloak. She unfastened her bladefrom her belt and handed it over to Nebless hilt first. "This blade, what can you tell me about it?"*

*Nebless drew the sword from its scabbard, then stood and held it up to the lantern, scrutinizing the Weapon. "Very fine make. Obviously enchanted. " She stepped back and swung the blade about a few times. "Nicely balanced. " She turned to Martia. "I'll give you a thousand gold for it. "*

*"It's not for sale! " Martia blurted. "I just want to know who it belonged to."*

*Nebless harrumped and turned back to the inscriptions along the blade. Suddenly, the blood drained from her face. "My dear," she whirled on Martia, "do you realize what you've got here?"*

*Martia nodded.*

*"It's one of the Seven Swords."*

*"But which one is it? My father wielded the Blade of Honesty. I slew Drahlix with this, but only my father's sword can prevail against my next target."*

*Nebless grimaced. "This is the blade of Chastity. Apparently you bested the dragon with the virgin's edge. "*

*Martia's face fell. Without her father's sword, she was without hope.*

*Nebless noticed the young womans reaction. "Fret not, dear. I are well-versed in the legends surrounding the swords, and I believe I can help you.*

*"Are you saying you know where the Blade of Honesty is?"*

*Nebless laughed with a twinkle in her eye. "Hardly, but I know someone who does. "*

Appraisers are people who know how to identify items and establish a reasonable approximation of their fair market value. Often they enter business as merchants, purchasing items brought to them and then selling the items for maximum profit. Appraisers usually pay their clients about half of what they believe they can get for the item in question, making their living on the substantial profit margins.

Seedy appraisers, those not afraid to deal with the poorer elements of their neighborhoods, sometimes work as pawn brokers. They hand out loans for about half the value of an item used as collateral. If the client defaults on the loan, as often happens, the pawn broker gets to keep, and then sell, the held item.

Another type of appraiser is not afraid to get his hands dirty. He purchases obviously stolen material for a quarter (or maybe 10 percent) of its worth and then sells the "hot" items to discreet customers. This fence receives a much higher return on his investment, but he must deal with criminals (always a dangerous lot). In addition, he takes the risk of running afoul of either the law or the original owners of the stolen pieces.

Each of these appraisers has several things in common. They use the same skills, and they operate their businesses in similar ways. The only real difference among them is their clientele.

### Experience, THAC0, and Hit Dice

Appraisers have their own level advancement as shown on the Appraiser Experience Levels table. Appraisers spend more time establishing contacts and moving in social circles than they do learning how to use weapons. Most appraisers know little about swordplay, preferring to leave those duties to their guards. For this reason, appraisers use the rogue's THACO table and saving throw chart.

Appraisers gain one six-sided Hit Die per experience level up to the 8th. After that, they gain two hit points per level, but do not gain any extra hit points from high Constitution scores.

***Table 7: Appraiser Experience Levels***

| Level | Xps | Hit Dice (6) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1250 | 2 |
| 3 | 2500 | 3 |

| | | |
|---|---|---|
| 4 | 4500 | 4 |
| 5 | 9000 | 5 |
| 6 | 17,500 | 6 |
| 7 | 35,000 | 7 |
| 8 | 60,000 | 8 |
| 9 | 90,000 | 8 + 2 |
| 10 | 140,000 | 8 + 4 |
| 11 | 200,000 | 8 + 6 |
| 12 | 400,000 | 8 + 8 |
| 13 | 600,000 | 8 + 10 |
| 14 | 800,000 | 8 + 12 |
| 15 | 1,000,000 | 8 + 14 |
| 16 | 1,200,000 | 8 + 16 |
| 17 | 1,400,000 | 8 + 18 |
| 18 | 1,600,000 | 8 + 20 |
| 19 | 1,800,000 | 8 + 22 |
| 20 | 2,000,000 | 8 + 24 |

### *Ability Scores*

The life of an appraiser may seem like an easy one on the surface, but these purchasers and purveyors of goods work hard for their money. They must astutely size up not only the merchandise that comes their way, but also the people with whom they do business. In addition, appraisers must earn the good will of their customers, or at least the good will of those who would protect them from disgruntled customers.

For this reason, all appraisers must have a minimum Intelligence of 12, a minimum Wisdom of 10, a minimum Dexterity of 9, and a minimum Charisma of 9. Intelligence is an appraiser's prime requisite.

### *Permissible Armor Weapons*

Despite their rogue-like natures, many appraisers do not have much use for breaking into places and stealing. In addition, most appraisers prefer not to wear armor when on the streets of a city, as they believe that a person who wears armor only invites trouble. A good appraiser knows that this can scare off potential customers, some of whom may be fugitives who do not need any added trouble.

Still, appraisers can wear any kind of armor they like. However, armor affects an appraiser's thieving abilities exactly as it does any &her rogue (see Table 29: Thieving Skill Armor Adjustments in the Player's *Handbook* for full details). If an appraiser wears any armor heavier than studded leather, he forfeits all of his thieving abilities-except for reading languages.

Appraisers can use a club, dagger, dart, hand crossbow, knife, lasso, short bow, sling, broad sword, short sword, or staff, just like a rogue. They do not spend enough time on weaponry to learn the use of other weapons.

### *Individual Experience Awards*

Despite their rogue-like natures, appraisers concentrate their skills more on buying and selling than stealing. Thus, their individual class awards differ slightly from hose of a rogue. Use Table 8: Appraiser Experience Awards for determining how many experience points an apprais er deserves at the end of a scenario.

**Table 8: Appraiser Experience Awards**

| Action | Award |
|---|---|
| Per successful use of a special ability | 100 XP |
| Per successful identification of a magical item | 200 XP |
| Per gold piece value of item successfully sold | 2 XP |

An appraiser receives two weapon proficiency slots at 1st level and a new one every four levels (at the 4th level, 8th level, and so on). He suffers a -3 penalty when using a weapon with which he is not proficient.

An appraiser also receives three non-weapon proficiencies at lst level and gains a new proficiency every four levels after that (at the 4th level, 8th level, and so on). Appraisers can choose from rogue, wizard and general proficiencies without additional cost.

### *Thieving Abilities*

As a class, the appraiser is most closely aligned with that of the thief. A 1st-level appraiser's base thieving skill scores are listed on the Appraiser Thieving Skill Base Scores table. These differ from the standard thief's base scores, owing to the fact that the appraiser spends more time in an office than out "in the field."

Appraisers use the same racial and Dexterity skill adjustments that thieves do for their base scores. See Table 27: Thieving Skill Racial Adjustments and Table 28: Thieving Skill Dexterity Adjustments in the *Player's Handbook* for full details.

When starting out, the appraiser receives an extra 40 percentage points to add to his base scores as he likes. No more than 20 of these points can go into a single skill, otherwise the player may spread points among the skills as he wishes.

When an appraiser reaches another level, he automatically adds 5% to his read languages skill. He then receives another 20 percentage points to distribute among his skills as he likes. No more than 10 points per level can be assigned to a single skill, and no skill can reach higher than 95%,taking into account all adjustments for race and Dexterity.

As an option, the DM can state that the appraiser may only raise those skills that he actually used during his last level. Since most appraisers rarely use skills like pick pockets, these skills will quickly atrophy, while others increase dramatically.

| Skill | Base Score |
|---|---|
| Pick Pockets | 5% |
| Open locks | 10% |
| Find/Remove Traps | 5% |
| Move Silently | 5%. |
| Hide in Shadows | 5% |
| Detect Noise | 5%. |
| Climb Walls | 40% |
| Read Languages | 10% |
| Appraisal | 10% |

### Read Languages

Unlike thieves, appraisers automatically begin with 10 points in their read languages skill. This reflects the fact that reading languages is an essential skill for an appraiser. The ability to decode ancient letters on an item often means the difference between a good deal and a bad one.

### *Appraisal*

Appraisal is a new thief skill available to appraisers only. It replaces the Appraising proficiency.

Appraisal permits the NPC to approximate the worth of a particular item. Appraisers with a poor appraisal skill may soon find themselves out of business.

Appraisal rolls are not required for common items -only for special pieces. Just about everyone is aware, for instance of the price of a good long sword. It takes a master, however, to correctly assess the value of a rare gem, magical item, or work of art.

Appraising an item takes 1d10 rounds. In certain cases, a close inspection with a jeweler's tool or a magnifying glass can assist the appraiser in his job. The use of these tools adds 10 percentage points to the appraisal skill when the appraiser inspects small items, obscure inscriptions, or gems.
In certain cases, the DM should apply penalties to the appraiser's attempt. This can range from -5 percentage points for pricing a weapon still caked with blood to -60 percentage points for identifying a particular rare jewel prized by an ancient culture. Appraisers often consult with historians to establish the identity of certain notable pieces. Such information can be incredibly useful. This consultation helps to offset any penalties the appraiser might have when appraising rare and exotic items. The DNI can add a 5-50 percentage point modifier whenever an appraiser consults with a historian. These modifiers should never exceed the penalties applied to the appraising attempt.

The DM should secretly roll for every appraisal attempt. If the appraisal roll succeeds, the appraiser comes up with an estimate of the item's worth that is accurate to within 10% of the item's true value (known only to the DM). The DM can determine the appraiser's exact percentage of error by examining the appraisal roll. If the tens digit a the appraisal roR is odd, the appraiser estimates too low. If the tens digit is even, he estimates too high. The ones digit gives the exact percentage by which the estimate was off.

For example, Nebless examines an item worth 500 gp. Her appraisal skill score is 75%. The DM rolls a 65, so the appraisal is relatively accurate. Since the first digit of the appraisal roll is even, the estimate is low. The second digit of the roll shows that the appraisal erred low by 5% Nebless estimates the item is worth 475 gp.
If the appraisal roll fails, the DM should subtract the character's appraisal skill score from that die roll. Then the DM adds 10 to that number. This final number is the amount by which the appraisal is off. Again, if the tens digit is odd, the appraiser estimates too low If the tens digit is even, he estimates too high.
For example, Nebless examines another item worth 500 gp. The DM rolls an 87; she fails the basic skill check by 12 more than her skill of 75%, so she is off by 22% (12+10). Since the tens digit is even, she estimates too high. Nebless places the value of the item at 610 gp.

An NPC's race and ability scores affect the appraisal skill. These modifications are represented on Table 10: Appraisal Racial Adjustments table and Table 11: Appraisal Intelligence Adjustments table shown below.
Note that the ability score changes for the appraisal skill are based upon the appraiser's Intelligence, not his Dexterity. Dexterity does still influence an appraiser's other thieving skills.

| Race | Modifier |
|---|---|
| Human | - |
| Dwarf | +10% |
| Elf | -5% |
| Gnome | +10% |
| Half-elf | - |
| Halfling | -5% |

| Intelligence | Modifier |
|---|---|
| 12 | -5% |
| 13 | - |
| 14 | |
| 15 | - |
| 16 | +5% |
| 17 | +10% |
| 18 | +15% |
| 19 | +20% |

***Backstab***
Appraisers can backstab just like thieves. However, they spend most of their time in shops and not on dangerous streets. Because of this, appraisers are not nearly as skilled at backstabbing as are normal rogues.

| Appraiser's Level | Damage Modifier |
|---|---|
| 1-6 | -2 |
| 7-12 | -3 |
| 13-18 | -4 |
| 19+ | -5 |

***Thieves Cant***
Due to their constant exposure to thieves, appraisers can understand quite a bit of their secret communication-called thieves' cant. For every level of experiencv the appraiser has a 10% chance of understanding thieves' cant. At 10th level, for example, the chance is 100%. The DM can adjust this chance for individual characters who have a greater or lesser exposure to thieves.

***Scroll Use***
Appraisers can read scrolls at 8th leveljust like thieves. Their chance of error is only 20%.

***Buying and Selling***
Appraisers are not in business simply to look at pretty objects. Profit is the bottom line, and appraisers make their profit by that age-old maxim of buying low and selling high.
After estimating the worth of an item, an appraiser might offer to buy it-if he thinks there is a market for such a thing. He will generally offer half of the item's estimated retail price.

If the item is something easily converted into the currency of the realm-like precious gems or coins from another land-the appraiser will offer more (up to 90% of the item's value).
Purchasing an item involves a certain amount of risk. After all, an appraiser who cannot sell a recently purchased item loses money This is why most appraisers make low offers when purchasing items.

***Stolen Goods***
If something is obviously stolen (or the appraiser believes that it is), the risk to the appraiser is even greater. If local law enforcement officials catch the appraiser, the best he can hope for is to lose the gold he paid for the item. However, the appraiser could face imprisonment or even a long torture session in which he'll give up the names of those who sold him the stolen piece. This is why most appraisers refuse to traffic in stolen goods. Some less-than-lawful appraisers, however, specialize in such fencing. Unfortunately, the danger and complexity of fencing stolen goods forces the price of the items down. A fence's first offer for most stolen goods is about 20% of its true value. If the item is well known, the offer can dip as low as 10%. A fence never offers to pay more than 40% of a stolen item's overall value.

***Reputation***
The saying that a person is only as good as his reputation goes triple for appraisers. They trade upon their believability and their

honesty. If a customer does not believe the results of a particular appraisal, he will not sell his goods to that appraiser.

When an appraiser makes an estimation of an item's worth, the information doesn't just blurt out of his mouth. He has to decide what to tell his client. If the appraiser hopes to purchase the item, the temptation to report a lower-than-actual price can be overwhelming. Smart appraisers build their need for profit into their bargaining instead of lying to their customers. After all, the client can always walk out the door and get a second opinion from someone eke.

If an appraiser earns a reputation for dishonesty, his business will steadily decline; only those of less-than-savory reputations themselves will frequent his shop. Some appraisers make a profitable living fencing stolen goods, but even they must keep a semi-honest reputation. Cutthroats and thieves are notoriously short-tempered with those who try to cheat them.

***Detecting/Identifying Magical Items***

At 1st level, all appraisers can detect whether or not an item is magical. This ability is similar in effect to the *detect magic* spell. An appraiser can attempt to do this once per day per level. The appraiser must make a successful appraisal skill roll in order to detect magic. Failure means that the appraiser does not know if the item is magical.

***Optional Critical Failure Rule***

If the appraiser rolls a 99-00 when attempting to detect magic, he inadvertently activates the item. This may not *seem* dangerous when dealing with standard magical weapons and armor, however, accidentally activating a *wand of fireballs* could prove potentially devastating. Note that charged items -such as wands, staves, and rods-lose a charge when accidentally set off by an appraiser's critical failure.

After reaching 3rd level an appraiser can identify magical items as per the wizard spell of the same name. This ability requires no actual spellcasting and is nowhere near as exhausting to an appraiser as casting the actual spell. Appraisers cannot identify artifacts or relics.

To identify a magical item, the appraiser must spend one full day inspecting it and consulting local historians. The materials for this identification process cost one-half of the item's XP value. Appraisers usually pass this cost on to the owner of the item, in addition to their usual fee of 1-3%, of the item's determined value. To identify the item, the appraiser must roll under his appraising skill score. Failure indicates that the appraiser has not identified the item. A roll of 100 means that the appraiser has somehow misidentified the magical item. In addition, the DM can use the critical failure rule described above. If the appraiser succeeds, he can identify the magical item just as if he had cast the *identify* spell.

Once an appraiser reaches 8th level, he can make even more accurate and precise identifications of magical items. When an 8th-level appraiser attempts to identify a magical item, the DM should give him the same bonuses as a wizard who grinds up a *luckstone* and adds it to the material component of the *identify* spell. In other words, the appraiser can always determine the exact number of bonuses or charges that an item possesses once he reaches eighth level. In addition, he can figure out all of the functions of a multi-function device with a single attempt.

***Contacts***

People frequent an appraiser's shop because the appraiser has a network of merchants to whom he can sell an item at a good profit-thus ensuring a good deal on the original sale. This network allows the appraiser to get a better price for an item than any adventurer could ever hope to achieve.

These contacts trust the appraiser. They know that the appraiser has a reputation to uphold, and if he fails to do so, he will soon be out of business. The hero has no such reputation to rely upon-at least not as an entrepreneur.

Thus, a good appraiser will give an adventurer a fair price for any items brought to him. This can save the hero untold hours of haggling.

An appraiser gains a contact at each level of experience. So, at 8th level, an appraiser has eight contacts. For this reason, an appraiser often stays in one place for his entire life. If he moves about from one place to another he loses touch with his contact.

When first made, an appraiser's contact is 1d4-2 levels below the appraiser. In this way, the appraiser's new contact will be anywhere from a single level below him to two levels above him. At the DM's option, appraisers can use the rules in Chapter 11 to determine how their contacts rise in levels as the appraisers themselves progress in experiences. Otherwise, assume that the appraiser's contacts move up one level in experience for every two levels that the appraiser reaches. The appraiser will soon outstrip any of his contacts in experience.

However, just because a contact is lower level than the appraiser does not mean that he is any less useful. It means that he or she may not possess the resources to meet the appraiser's constantly increasing needs.

***Changing Contacts***

Each contact is characterized not only by his level but also by who he is and what he does. The appraiser tells the DM what kind of contact he is looking for, and then the DM comes up with an appropriate contact.

For instance, at 5th level the appraiser rolls 1d4-2 and gets a 0 (2-2); this means that the appraiser gains a new 5th-level contact. Recently, the appraiser has dealt almost exclusively with religious items. Thus, the DM decides to give the appraiser a local 5th-level cleric as a contact. He arranges for the two characters to meet and become friends-or at the very least realize how they could mutually profit from knowing and working with each other.

If at all possible, the process of gaining a contact should be worked into the game. A new contact should never arrive instantly or become a simple note on the NPC's sheet. Instead, the DM should set up an appropriate encounter in the course of the game in which the appraiser meets his new contact.

***Selling Items***

When an appraiser wants to sell an item, he usually approaches one of his contacts. Otherwise, he simply puts the item up for sale and hopes for the best. When an appraiser decides to sell an item to one of his contacts, he must make a roll against his appraising ability. If he makes the roll, he has sold the item. The percentage of the item's true value that he receives is equal to double his appraisal roll.

For instance Neblss tries to sell an item worth 500 gp (no matter what her estimation of its worth might happen to be). She rolls against her appraising skill of 75% and gets a 64. This means that she gets (2x64) 128% of its true value, or 640 gp.

If the appraiser chooses to put an item up for sale on the general market, he only receives a percentage of the item's actual value

equal to his appraisal roll. Thus, if Nebless tried to sell a 500 gp item on the general market, she would only receive 64% of the item's total worth.

***Fees***

Occasionally, an appraiser will offer his services for free. After all, the first person to appraise an item often has the first opportunity to buy the item. However, most appraisers charge a fee for their expertise. This fee ranges anywhere from 1-3% of the item's estimated value. Additionally, appraisers charge higher fees for identifying magical items.

Nebless the Fence
Female Human Appraiser

**Weapon Proficiencies**: Knife, short sword, hand crossbow.
**Non-weapon Proficiencies**: Ancient history (16), Forgery (14), Local History (16), Reading/Writing (11).
Equipment: Knives (one in a plain scabbard at her belt and one tucked invisibly into her right boot), *magnifying glass* (adds +10% to her appraisal skill), *cloak of protection +3, philter of glibness, ring of truth, ring of blinking.*

Nebless is a brown-haired, green-eyed beauty in her early thirties. She is a charming woman with many suitors - although none of them have proved sharp or charming enough for her. Still, this doesn't prevent newcomers from trying all the time.

**Role-playing**: Nebless is supremely self-confident She excels at her chosen profession and knows it. She has many city friends in high and low places. Nebless has lived in the city all her life and has no plans to leave.
Nebless can seem a bit haughty to those who do not know her. However, anyone who decides to test her mettle can not find her wanting. She is razor-sharp, wealthy, and well-connected. No streetwise person would dare assault her.
**Combat**: If faced with a threat, Nebless always tries to talk her way out of it, preferring to make friends instead of enemies. Failing that, she uses her *ring of blinking* to effect an escape.

# *The Blacksmith*

*Hoppsman raised the hammer and brought it down hard on the barely shaped lump of metal. Pumping his massive biceps, he repeated the motion again and again, beating the slab of steel mercilessly, forming it with his powerful blows and shaping it to his will.*

*Wrestling with metal was Hoppsman's true calling. The only time that he truly felt alive was when he created something from nothing, like forging a blade from a shapeless lump of steel.*
*Hoppsman kept pounding away at the metal rod until it took the shape of the image that glowed in his mind like the coals over which he feverishly worked.*
*After what seemed like an hour, Hoppsman stopped for a moment to wipe the sweat from his brow. The thin strip of cloth he, wore tied around his fore head had long since soaked through, and the salty fluid flowed into his eyes. His dwarven eyebrows and beard were dusted with a thin crust of that same salt, as the sweat soaked his hair and then dried by the heat of the forge.*
*Hoppsman tossed the hammer to one side, ignoring the clatter it made as it skittered across the cut stone floor. Then he stabbed the still-hot blade into a barrel of water, deeply inhaling the steam that rose from its passing. He hefted the half-made blade in his hands. It was well balanced, and as he swung it about, it became a deadly extension of his arms.*
*He stripped off his black apron, and carried the weapon to his grindstone. As he opened the bladder that would drip water onto the stone wheel at a steady rate, he thought about how many of his ancestors worked at this same wheel before him and how many blades he sharpened on its wide, curved side. The dwarves of his clan had made many an excellent blade, but this particular one would be legendary.*
*Just as he set the blade to the stone, Hoppsman heard the distinctive sound of a throat being cleared. In one smooth motion, he swung himself around, bringing the unsharpencd blade before him. "Hold!" he cried. "Stay where you are, or I'll run you through. This blade may still be dull, but it will only hurt that much more!"*
*Before him stood a tall, thin, hooded figure in a dark cloak-a human by the height of it. "Fear not, blacksmith. My apologies for interrupting your work. I did not mean to startle you. "*
*The voice was feminine, but untouched by tenderness; it held a warrior's intonation. The woman was holding out her hands. In her right, she grasped a wrapped blade with a fine scabbard peeking out through the strips of cloth.*
*Hoppsman harrumphed. "I T'was not startled, lady, but it pays to be cautious. How did you get down here? There are guards. "*
*The woman swept back her hood, and her red hair spilled out, cascading down her shoulders. She stepped forward and began to unwrap the sword, setting it down on the low table that stood almost between them, "My name is Martia. The king himself granted me audience and then sent me down here to see you, the greatest of his smiths. " Hoppsman smiled in spite of himself. "He thought you could help me with this."*
*The wrappings removed, Martia pulled the blade from its sheath; it came out in three separate pieces. Throwing caution to the wind, Hoppsman dropped the blade in his hand and stepped forward to examine the sword. After a long moment, he looked up at Martia, a soft glow of awe in his eyes.*
*"It's the Blade of Honesty. If was supposed to be destroyed," he whispered hoarsely.*
*"And so it was," gestured Martia. "But I need it once more. With it I can finally fell Cardax, the necromancer who rules my lands with an ironfist. Can you help me?"*
*Hoppsman cradled the fragments of the legendary Blade in his hands, marveling over them for a moment. "Oh yes, milady. Nothing short of death could stop me. "*

Blacksmiths are men and women who mine ores from the ground and transform them into the purest metals. These metals are then made into strong or precious alloys that the blacksmith beats, twists, and forges into useful items.
Some smiths content themselves with shoeing horses. Others specialize in manufacturing fine suits of armor. Still others concentrate on the creation of weapons like hammers, maces, swords, and even arrowheads.
Adventurers need blacksmiths more often than they might think. Many heroes purchase their arms and armor from blacksmiths (or at least from merchants who purchased such goods from a blacksmith), but never think about maintaining their equipment. Yet when the hero escapes from a dungeon, it's not only his body that has sustained damaged. His armor is full of scratches, holes, and newfound chinks, and his sword is notched and dulled.
Without proper upkeep, these bits of equipment eventually break. Unfortunately, a mail shirt doesn't tend to fall apart while its wearer walks along a city street. No, most often it shreds when shuck by a blow from a murderous foe, leaving an adventurer entirely undefended against the next attack.
Regular visits to the neighborhood blacksmith can prevent such tragedies. Mail that is kept in shape and weapons that are kept sharp are (nearly always) dependable. The investment in time and money is a worthwhile one.
Of course, the blacksmith can help in more mundane ways as well. In many small towns, blacksmiths are the only source of nails, cast iron pots, wire, and a host of other everyday items. They can also repair those items that are old and broken.

### *Experience, THAC0, and Hit Dice*

Blacksmiths have their own level advancement as shown on the Blacksmith Experience Levels table below. Blacksmiths spend most of their time honing their skills at the forge. In addition many blacksmiths spend time practicing with weapons and armor. These smiths understand that it is useful to know how to wield the weapons and armor that they craft. After all, how can a master blacksmith continue to improve upon his swordmaking technique if he isn't really sure how best to handle such a blade in actual combat. For this reason, blacksmiths use the warrior's THACO table and saving throw chart.
Blacksmiths gain one 10-sided Hit Die per level and receive bonus hit points for high Constitution scores until 8th level. However, these craftsman receive only two hit points per level after the 8th. In addition, blacksmiths do not gain bonus hit points from their Constitution after 8th level.

| Level | XPs | Hit Dice (d10) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 2,000 | 2 |
| 3 | 4,000 | 3 |
| 4 | 8,000 | 4 |
| 5 | 16,000 | 5 |
| 6 | 32,000 | 6 |
| 7 | 64,000 | 7 |
| 8 | 125,000 | 8 |
| 9 | 250,000 | 8+2 |
| 10 | 500,000 | 8+4 |
| 11 | 750,000 | 8+6 |
| 12 | 1,000,000 | 8+8 |
| 13 | 1,250,000 | 8+10 |
| 14 | 1,500,000 | 8+12 |
| 15 | 1,750,000 | 8+14 |
| 16 | 2,000,000 | 8+16 |
| 17 | 2,250,000 | 8+18 |
| 18 | 2,500,000 | 8+20 |
| 19 | 2,750,000 | 8+22 |
| 20 | 3,100,000 | 8+24 |

### *Ability Scores*

Blacksmithing is tough, and the vast majority of people are not suited for it. It requires incredible muscular power and endurance, as well as the ability to understand basic metallurgy. A good dash of common sense is helpful, as the blacksmith works in the real world, not in some pristine laboratory. In addition, nimble fingers help the blacksmith, for he works with sharp tools.
For these reasons, all blacksmiths must have a minimum Strength of 12, a minimum Intelligence of 9, a minimum Wisdom of 9, a minimum Dexterity of 9, and a minimum Constitution of 12. Strength and Constitution are a blacksmith's prime requisites.

### *Permissible Armor and Weapons*

Blacksmiths have no restrictions on arms or armor and can use any kinds of weapons or protection that they like. Because they can get metal cheaply and create the necessary items on their own, most blacksmiths prefer to use metal items - particularly those used in melee combat.

### *Individual Experience Awards*

Despite the fact that they are closely aligned with warriors, blacksmiths concentrate their skills more on making objects than using them. Thus, their individual class awards differ slightly from those of a warrior. Use the Blacksmith Experience Awards table for determining how many experience points a blacksmith earns during the course of a scenario.
When consulting the table, a "major" item refers to an entire weapon or suit of armor. Pieces of a weapon (like an arrowhead) do not count, nor do more domestic items such as horseshoes or pots and pans.

**Blacksmith Experience Awards**

| Action | Award |
|---|---|
| Per major item made | 200 XP |
| Per major item repaired | 100 XP |
| Per gold piece value of item successfully sold | 2 XP |
| Per magical item repaired | XP value of item |

### *Profiencies*

A beginning blacksmith gets three weapon proficiency slots at lst level and receives a new one every three levels (at the 3rd level, 6th level, and so on). A blacksmith suffers a -3 penalty when using weapons with which he is not proficient.
A blacksmith also receives four non-weapon proficiencies at 1st level and gains a new proficiency every three levels after that (at the 3rd level, 6th level, and so on).
At lst level, the blacksmith must select Blacksmithing, Armorer, and Weaponsmithing as non-weapon proficiencies. Normally the Armorer and Weaponsmithing proficiencies cost multiple slots, but due to the blacksmith's dedication to his art, these necessary proficiencies cost him only a single slot.
The fourth proficiency slot can be spent on anything that the blacksmith wants. Some proficiencies are particularly helpful to the blacksmith- Animal Handling makes it easier for the blacksmith to shoe horses. Artistic Ability permits the blacksmith to make his work more than simply functional-it can be beautiful as well. Blacksmiths sometimes choose Heraldry as a non-weapon proficiency so they can inscribe the proper crests and symbols on shields and armor.
Some blacksmiths take up Mining so they can mine their own ore, or, at the very least, negotiate the lowest price when purchasing it from other miners. Other blacksmiths learn to construct ranged weapons through use of the Bowyer/ Fletcher proficiency.
Blacksmiths can choose proficiencies from the general and warrior

groups with no additional costs.

***Warrior Abilities***
Although blacksmiths are closely aligned with warriors, they do not possess all of the warrior's abilities.

***Exceptional Strength***
Like warriors, blacksmiths who have a Strength of 18 can roll percentile dice to determine exceptional ability. This is due to long hours spent over the forge beating raw metals into useful shapes.

***Extra Attacks***
The blacksmith never makes multiple melee attacks per round. No matter what the blacksmithh's level, he can attack only once per melee round.

***Weapon Specialization***
Unlike warriors, blacksmiths cannot specialize in a weapon. They devote most of their time to making weapons, not using them. While they are not unfamiliar with the use of arms, blacksmiths simply do not have the extra time to master a specific weapon. Blacksmiths do, however, receive a +1 to all attack rolls and +2 to all damage rolls made with a warhammer. This is due to the fact that the blacksmith works with the hammer all day and can wield it as if it were an extension of his actual arm.

***Prices of Metallic Items***
Blacksmiths can make their own metals out of raw ore. This is time consuming, but they have to pay only about half the normal value of the resultant metal. It takes a blacksmith 1d6 weeks to reduce ore to basic metals.
Once the blacksmith has the metal, he can make any metallic items he wants (subject to any success with his Blacksmithing proficiency, of course). The total retail cost of an item includes the cost of materials (25%), the blacksmith's time and effort (50%), and the overall profit on the item (25%).
Merchants regularly sell weapons in many different kinds of stores. Armor, however, is a different story. The armoreor must custom-fit the armor to the wearer, otherwise it may cause the wearer some problems in combat. Blacksmiths will usually charge an additional 5% of the armor's cost to cover the custom-fitting process.

***The Blacksmiths tools***
The blacksmith must have access to a forge, a bellows, a coal-fed fire, his trusty hammer and anvil, and all the other elements of a fully equipped smithy in order to fashion items out of metal.

All blacksmiths start out with a modestly appointed smithy at lst level. If this smithy is somehow destroyed, or if the blacksmith wishes to build a new smithy for any other mason, it will cost him 500 gp for every experience level that he has.

Actually making an article of equipment mayor may not require a proficiency roll, depending on the complexity of the item. The blacksmith can automatically craft a simple item-like a batch of nails. Conversely, constructing a full suit of field plate complete with embossed heraldry is quite difficult. Such a task might warrant a -4 penalty to the blacksmith's Armorer proficiency roll. The DM should determine the extent of any modifiers to the Blacksmithing proficiency check.

***Which Proficiency to use?***
When the blacksmith makes armor of any kind, he rolls against his Armorer proficiency. When he wants to make a weapon, he rolls against his Weaponsmithing proficiency. When a blacksmith fashions any other metallic item, he rolls against his Blacksmithing proficiency.

For more details about the use of each proficiency, consult the "Proficiencies" chapter in the *Player's Handbook.* This chapter also lists the length of time required to make armor and certain common types of weapons.

***Maintaining Equipment***
The rules that follow apply to all characters-not just blacksmiths. Adventurers' gear undergoes a great deal of abuse in the course of their travels. Heroes must continually sharpen their blades, smooth out the dents in their chestplates, and repair the broken links of their mail, or these essential objects will fail at the most inopportune time-mostly when heroes need these items to stave off death.

***Damaging Armor***
Whenever a character sustains damage from an attack in which the attacker rolled a natural 20, the defender's armor must make a saving throw versus crushing blow. The DM should then consult Table 52: Weapon Type vs. Armor Modifiers in the *Players Handbook* and apply the specific modifier to the armor's saving throw roll.
For example, a fighter wearing chain mail is struck by a club-wielding ogre that rolled a 20. The chain mail's save vs. crushing blow is a 7. The fighter rolls an 8, but the DM subtracts 2 from the roll after consulting Table 52. The final roll is a 6, which is insufficient to save versus the attack.
Magical armor add +1 to its saving throw for every +1 of its bonus. If the armor in question makes its save, it remains unaffected by the blow. Armor that fails this saving throw, however, sustains damage. The DM should treat damaged armor as if it were poorly made; the armor is still usable, but it functions as 1 AC worse than usual. Unlike the disguised weakness of poorly made armor, however, the weaknesses of damaged armor are quite obvious. Anyone who looks at a suit of damaged armor can clearly see the rents, dents, and tears.
Damaged armor requires skilled repair by someone with the Armorer proficiency. Until that time, the armor suffers a -1 to any future saving throws. This penalty is cumulative. A suit of armor damaged three times without repair suffers a -3 penalty to all saving throws.
Nonmagical armor can only sustain four separate instances of damage. If the armor remains un-repaired after four hits, it will automatically break the next time an opponent rolls a natural 19 or 20. Broken armor does not provide any protection (treat the user as if he were not wearing any armor) and hampers its wearer's movement rate by half. In addition, the wearer suffers a -4 penalty on attack rolls until he removes the armor or takes it to a blacksmith for repairs.

***Damaging Magical Armor and Weapons***
When a magical weapon or suit of armor breaks, it loses all of its combat abilities. However, any, other magical abilities inherent in the item can still function. For instance, a suit of armor of *blending* still appears as a normal suit of clothes even though the armor itself is broken. Intelligent swords even retain their sentience and non-combat powers, although they are useless in combat.
However, these additional powers continue to work only while each of the now-separate pieces of the item touch each other. A broken blade, for instance, still works if the pieces rest against each other in the sword's scabbard. If anyone removes a piece, the sword's

powers do not function.

***Repairing Equipment***

Blacksmiths are most often in demand for their ability to repair damaged equipment. Certain kinds of damage need the attention of a professional and can't be fixed in the held.

***Repairing Armor***

Blacksmiths can repair damaged armor as long as they have access to the proper tools. Nonmetallic (leather, studded leather, or padded) armor can be repaired with patching materials and some thread. Metallic armor requires the use of a forge.

To properly repair a suit of damaged armor, the blacksmith gathers his materials and spends his time fixing the dents, breaks, and tears. Multiply each level below 10 of the armor's defensive rating by the number of times the armor sustained damage to find out the total time required (in hours) to repair the armor.

For example, if a suit of leather (AC 8) was damaged twice, it would take 4 (2x2) hours to properly repair.

Broken armor can also be repaired, although it requires more time. It takes a blacksmith one day for every Armor Class level of the armor below 10 to repair it. Thus, broken leather armor (AC 8) would take 2 (10-8) days to repair. Repaired armor functions normally in combat.

***Repairing Weapons***

Blacksmiths (or anyone else with the Weaponsmithing proficiency) can repair damaged weapons. However, these repairs require the appropriate tools. For example, metallic weapons require the use of a fully operational forge.

A blacksmith can repair a damaged weapon in one hour per day it took to create the weapon. A long sword, for example, takes 30 days to create. It would therefore take a blacksmith 30 hours to repair the damaged weapon. Consult Table 41: Weapon Construction under the Weaponsmithing proficiency in the *Players Handbook* to find out exact construction times of various weapons.

Broken weapons, on the other hand, take substantially longer to repair. This repair time is equal to one-half the weapon's construction time. This means that a broken long sword would take 15 days to repair.

Of course, a blacksmith must have all of the weapon's pieces in order to repair it. If these pieces are not available, the blacksmith must craft an entirely new weapon; this process takes the full construction time of the weapon in question. A long sword with a missing tip would take a full 30 days to repair.

***Repairing Magical Armor and Weaponary***

Repairing magical weapons and suits of armor does not require any additional powers or abilities over and above those the blacksmith already possesses, as he does not have to re-enchant the items. However, the repairing of these magical items does require a great deal of skill, patience, and luck. Blacksmiths suffer a base -4 penalty to their proficiency checks when attempting this difficult task.

In addition, the degree of the item's enchantment also affects the difficulty of the repair job. The DM should give an addition -1 penalty for each level of the item's enchantment (+1, +2, etc.) to the blacksmith proficiency roll.

For example, Hoppsman the blacksmith, who possesses a Weaponsmithing proficiency of 16, attempts to repair a broken *short sword +1.* He rolls a 12 on his proficiency check. Normally, this would be enough to successfully repair the sword. However, Hoppsman must subtract 5 (4 base and 1 for the weapon's level of enchantment from his proficiency score for repairing a magical weapon. This penalty changes his score to an 11). The complexity of the task is beyond the skill of the blacksmith.

The full restoration of a piece of magical weaponry or armor requires all of the item pieces. The blacksmith can replace the missing pieces of the item, but its enchantment will disappear.

***Weapon Quality***

The DUNGEON MASTER *Guide* features guidelines for weapons of exceptional quality. Skilled blacksmiths can make these fine weapons with a little bit of luck. When creating a weapon, the blacksmith must check against his Weaponsmithing proficiency. When a blacksmith rolls equal to or less than the number of extra slots he has in Weaponsmithing, he creates a weapon of exceptional quality. Only blacksmiths with extra slots in Weaponsmithing have the ability to make exceptional weapons.

For example, Hoppsman has an Intelligence of 17. His base Weaponsmithing proficiency score is 14 (17-3). He has three slots in Weaponsmithing (two more than he must have at first level). If Hoppsman rolls less than a 2 while making a weapon, he creates a weapon of quality.

A weapon of quality possesses a +1 bonus to attack rolls or a +1 bonus to damage rolls. The DM decides which bonus applies to the weapon in question. If, however, the blacksmith rolls a natural 1 on his proficiency check, the weapon possess both bonuses. Note that these bonuses are nonmagwal in nature. Creatures hit only by magical weapons cannot be harmed by weapons of quality.

In addition to their attack and damage bonuses, weapons of quality make saving throws with a +1 modifier.

***Apprentices***

Unlike warriors, blacksmiths do not gain followers at a certain level. However, they often pick up blacksmithing apprentices in the course of their business. The blacksmith attracts a single apprentice every level after 3rd. These apprentices remain in the blacksmith's service only until the blacksmith goes up three levels in experience. At that point, the apprentice becomes a lst-level journeyman blacksmith and strikes out on his own.

Most blacksmiths have up to three apprentices at a time, but renowned blacksmiths attract even more. At 8th level and above, the blacksmith attracts up to three apprentices per level Each of these apprentices leave after the blacksmith attains one more level of experience. Apprentices who joined at the master's 6th and 7th levels leave automatically when their master reaches the 8th level.

At 10th level (and each level thereafter), the blacksmith attracts another blacksmith of five experience levels less than himself. This "master" apprentice comes to learn from one of the great masters. However, he only sticks around until the master blacksmith attains the next level. At that point, the "master" apprentice gains another level for himself and strikes out on his own. In rare instances, the "master" apprentice chooses to remain with his master blacksmith. If this happens, however, no new "master" apprentice can study under the master blacksmith.

***Fees***

Like most people, blacksmiths make their living by their abilities. They do not provide free services. The blacksmith's fees depend a great deal upon the circumstances. The higher a blacksmith's level, the more people must pay to benefit from his services. A blacksmith adds a 5'% premium for every level of experience he has. In this way, a 10th-level blacksmith could charge 150%) of an item's normal retail price for any object e makes. This also applies to repair fees.

For example, a long sword normally costs 15 gp. A long sword made by Hoppsman (a 10th-level blacksmith) would run 22 gp and

5 sp. Apprentice blacksmiths do not add any kind of surcharge. This is the reason that most weapons are sold at their normal price.
A weapon made by an experienced blacksmith has no special powers to justify its extra price. It is simply crafted with more skill and ornamented to a higher degree. Owning a weapon made by a high level blacksmith is more of a status symbol than anything else.

***Armor Repair Fee***

A blacksmith usually sets his repair fees in relation to the amount of time it takes him to repair the damaged armor. This fee ranges from 1-5 gp per hour, depending on the intricacy of the armor and the patience of the owner. The usual fee for repairing damaged armor runs 2 gp per hour.
Broken armor costs 10 gp per day to repair. In some cases, the repair work will be more expensive than a new suit of armor.
A blacksmith's fee for repairing damaged weapons can vary a great deal. Normally, a blacksmith charges 1 gp per hour to repair damaged weapons and 5 gp per day to repair broken weapons. It is usually cheaper to replace a broken weapon rather than repair it.
Repairing magical weapons and suits of armor costs more than fixing their nonmagical counterparts. Due to the highly intricate nature of the work, most blacksmiths charge between 15 and 25 gp an hour to repair damaged magical weapons and armor. Broken magical items cost 50 gp a day to repair.

Hoppsman the Weaponsmaster
Male Dwarf Blacksmith

Str: 18/47
Dex: 14
Con: 16
Int: 17
Wis: 9
Cha: 10
Armor Class: -3 *(plate mail +2* and *shield +3)*
Level: 10
THACO: 11
Movement: 6
Hit Points: 85
Alignment: Lawful Good
No. of Attacks: 1
Special Attacks: +1 vs. orcs, half-orcs, goblins, or hobgoblins; +1 to attacks/+2 to damage with warhammer.
Special Defenses: +4 to saving throws vs. magical wands, staves, rods, spells, and poisons; ogres, trolls, ogre magi, giants or titans suffer a -4 penalty when attacking the dwarf.
Special Abilities: lnfravision (60'); Detect information about underground passages.
Special Weaknesses: 20% chance of a magical item not suitable for a warrior to malfunction any time he uses it.
Weapon Proficiencies: Warharnmer, battle axe, long sword.
Non-weapon Proficiencies: Armorer (16), Blacksmithing (18), Weaponsmithing (16), Reading/Writing (18).
Equipment: *Hammer and tongs +2* (adds +2 to Blacksmithing proficiency), *warhammer +3, plate nwil +3, shield +2*.

Hoppsman is stout-even for a dwarf-with corded, muscular arms. He is nearly as broad as he is tall and keeps his hair and beard cropped short. His hairstyle is contrary to dwarven custom, but he finds it easier to trim his hair than to have it catch fire in the forge.
**Role-playing**: Hoppsman is a solitary dwarf who prefers his work to the company of people. This has served him well in his career, but has made him lonely. He yearns for the day he can give up his trade and turn it over to a worthy apprentice; that day seems very far away.
Hoppsman has little time for those who wish to chat, unless they happen to touch upon one of his favorite subjects: arms and armor. Once that happens, he opens up and becomes as friendly as one could expect. Combat: Hoppsman rarely enters combat, being well-protected by the dwarven king's guards. He normally does not wear armor, but when he does, 0 wears one of the most magnificent sets of dwarven plate mail in the kingdom.
Hoppsman will not shy from a fight and will battle to the death to protect his home and those that he loves.

# *The Cartographer*

*Martia left the Sow's Ear sure. that she had been suckered. The old guide who sold her the map looked like she spent more time negotiating her way into the bottom end of a bottle than showing clients the, way to safely travel through Hobgoblin Pass.*

*The weather-beaten woman would probably remain at the tavern for the remainder of the night drinking herself into a stupor, from which not even the gods themselves could rouse her. If it turned out that the besotted outdoorswoman had indeed suckered Martia, the valiant swords woman would still have plenty of time to go back to the tavern and enact her revenge.*

*Three nights later, Martia found herself wasting long hours as she waited for the guide to keep their appointment. Never again would she agree to meet someone "three evenings hence." Such a nebulous time left far too much room for interpretation.*

*Disgusted, Martia wandered through the streets, careful to avoid the darkness of the alleys. When she reached the appointed building, a sturdy structure with a sign that depicted a curling map of the known world, Martia saw that a light still burned on the first floor.*

*She stepped up to the window and peered inside. Hunched over a piece of parchment, a youngish man, sharpened quill in hand, inscribed the outline of a map. He squinted carefully in the dim light of a nearby lantern, his hand making strong and steady strokes on the parchment. He was obviously absorbed by his work. Martia knocked firmly on the window.*

*The young man leapt out of his seat, whirling in the direction from which the sound originated. He held his quill out in front of himself as if he hoped that the creature outside would somehow impale itself on the tip of the flimsy instrument.*

*When he saw Martia, the young man blew out a long sigh of relief. Then, his attention unoccupied by any imagined threat on his life, he suddenly heard the sound of gurgling fluid. The young man turned back to his desk and saw that he had upended a bottle of ink in his haste. The pigment slowly trickled out of the container's narrow neck and onto his unfinished map.*

*He cursed and leapt forward, righting the bottle and cursing again. Then he stood up, walked slowly to the door and let Martia in.*

*"Good evening, Barth" said Martia, barely able to contain her mirth. "My apologies for startling you. "*

*Barth blushed and smiled at her sheepishly. "My lady," he reached out to take her hand and then, realizing that his fingers were covered with ink, withdrew them. "No apologies are necessary. How may I be of help to you? "*

*Martia closed the door behind her and moved further into the room. She reached into her jacket and withdrew the map she had purchased in the tavern. "I need Brantus to take a took at this, "*

*Barth's face fell dramatically. "I'm sorry, my lady, but my father has gone out for the evening. I are the only one here."*

*Martia grimaced meaninq fully. "Do you know where he went?"*

*"I'm afraid not, my lady. He was quite secretive about his plans."*

*Martia considered her situation for a moment before asking, "Then perhaps you could help me? "*

*Barth smiled broadly. "Certainly, my lady." He wiped his hands clean on his apron, already blackened by several previous mishaps. He took the map from her gingerly and held it up underneath the lantern so that he could take a closer look. "And what is it you want to know about this particular map, my lady?"*

*"Have you seen it before? Is it real?" she asked impatiently before realizing she was being short with the young man. "I'm sorry. Its important that I know. And soon. "*

*"Well then, my lady," Barth said, warming to the task, "I'd better get busy. "*

In a fantasy world-as in any other world- information is power. This is especially true for adventurers who travel into the unknown in search of treasure, magic, and fame. Heroes that seek the path less traveled find that a bit of reliable information is their most powerful weapon.

Maps constitute a large part of an adventurer's most informative items. No matter how fearless an adventuring party, or how talented their guide, they must at least know the general location of a treasure before they can travel in search of it. This is why most heroes invest in reliable maps.

Most heroic tales tell of old, wizened townspeople who sell maps in darkened taverns. However, experienced heroes are hardly willing to trust a large investment of their time, money, and safety to a piece of paper hastily scribbled by a noxious, boozy old grifter. Wise adventurers turn to a reputable cartographer for all their mapping needs. Not only can a cartographer supply reliable maps, but he can also neatly copy an adventuring party's hastily made maps. Additionally, adventurers can hire cartographers to participate in quests where their mapmaking skills can prove invaluable.

### *Experience, THAC0 and Hit Dice*

Cartographers have their own level advancement as shown on the Cartographer Experience Levels table.

Cartographers are known more for their ability to translate three-dimensional realities into two-dimensional maps than for any ability in combat They spend a great deal of time hunched over tables in dim lamplight, scratching down outlines and symbols on rough parchment. Thus, cartographers use the wizard's THACO table and the rogue's saving throw chart.

Like wizards, cartographers gain one four-sided Hit Die per level up to the 8th level. They gain only two hit points per level after the 8th and do not receive any bonus hit points due to high Constitution scores.

***Table 15: Cartographer Experience Levels***

| Level | XPS | Hit Dice (d4) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1,250 | 2 |
| 3 | 2,500 | 3 |
| 4 | 4,500 | 4 |
| 5 | 9,000 | 5 |
| 6 | 17,500 | 6 |
| 7 | 35,000 | 7 |
| 8 | 60,000 | 8 |
| 9 | 90,000 | 8+2 |
| 10 | 140,000 | 8+4 |
| 11 | 200,000 | 8+6 |
| 12 | 400,000 | 8+8 |
| 13 | 600,000 | 8+10 |
| 14 | 800,000 | 8+12 |
| 15 | 1,000,000 | 8+14 |
| 16 | 1,200,000 | 8+16 |
| 17 | 1,400,000 | 8+18 |
| 18 | 1,600,000 | 8+20 |
| 19 | 1,800,000 | 8+22 |
| 20 | 2,000,000 | 8+24 |

### *Ability Scores*

Mapmaking is a difficult calling that requires a great deal of patience and the ability to understand spatial relationships. A bit of knowledge about basic architecture and geology doesn't hurt at all either. In addition, cartographers must possess some amount of artistic ability and a steady hand in order to render their maps in a legible and clearly understandable fashion.

For these reasons, all cartographers must have a minimum Intelligence of 12 and a minimum Dexterity of 10. The cartographer's prime requisite is Intelligence.

### *Permissible Armor and Weapons*

Cartographers have no restrictions on armor. They can use any kind of protection that they like. However, when actually making maps, they cannot wear gauntlets or any armor heavier than chain mail.

Cartographers can only use those weapons available to rogues. They do not spend much time on weaponry, as they are far more concerned with improving their mapmaking skills.

### *Individual Experience Awards*

Cartographers are not much concerned with killing monsters or researching magic. Their individual experience awards are, therefore, unique to their class. Use the Cartographer Experience Awards table for determining how many experience points a cartographer deserves at the end of a scenario.

***Table 16: Cartographer Experience Awards***

| Action | Award |
|---|---|
| Per map made from scratch | Varies |
| Per map copied | 100 XP |
| Per fake map detected | 200 XP |
| Per real map confirmed | 200 XP |

The number of experience points handed out for the creation of a new map (requiring the cartographer to do the legwork and research himself) varies greatly. The number depends on the size of the mapped area and the map's level of detail.

Simple maps that cover a small area (up to 100 square yards) are worth 1 XP per square yard. Simple maps that cover a great deal of area (up to 100 square miles) are worth 5 XP per square mile.

The greater the details included, the higher the map's value. Maps that involve several levels, those that are rendered in three dimensions, and those that are topographical in nature are worth double their base value, as they are difficult to produce.

Note that these experience awards are only given out for accurately fashioned maps. Incorrect maps are not worth any experience points at all.

### *Proficiencies*

A cartographer gets two weapon proficiency slots at 1st level and receives a new one every five levels (at 5th level, 10th level, and so on). A cartographer suffers a -4 penalty when using a weapon with which he is not proficient.

A cartographer also receives four non-weapon proficiencies at 1st level and gains a new proficiency every 3 levels after that (at the 3rd level, 6th level, and so on).

At lst level, the cartographer must select the new Cartography non-weapon proficiency (see the section on New Proficiencies below).

A cartographer must also take the Direction Sense proficiency. A mapmaker who can't tell direction will have a short-lived career.

Additionally, cartographers must take the Forgery proficiency. This permits them to convincingly copy maps made by others. They can also use this proficiency to spot fake maps made by con-artists.

Lastly, they must take the Reading/writing proficiency so that they can properly label their maps. Maps without proper labels are potentially deadly.

The cartographer can spend any other non-weapon proficiency slots on whatever he wants. Many cartographers, however, are so dedicated to their art that they use all of their proficiency slots improving their cartography skill.

Here are some proficiencies that may prove useful to a cartographer NPC:

* Artistic Ability: This proficiency enables the cartographer to beautifully embellish and decorate his maps. The successful use of Artistic Ability adds an additional 15% to a map's retail price.
* Modem/Ancient Languages: Knowing other languages is a great asset to a cartographer. Not only will a linguistically educated cartographer enjoy greater success when copying old or foreign maps, but he will also receive many requests to translate foreign maps.
* Navigation: Some cartographers take this proficiency so that they can create maps of the heavens. These maps are extremely important to sailors and "Ming adventurers, who often pay a handsome price for them. In addition, cartographers with this skill can also create detailed maps of the shorelines, reefs, and rocks that surround coastal areas.

Cartographers can choose from the general, rogue, and wizard proficiency groups without any additional costs.

***New Proficiencies***

The cartographer class is based upon the new Cartography non-weapon proficiency. Other characters may use the proficiency; however, these amateurs receive a -2 penalty to all of their cartography checks. In addition, they cannot combine this proficiency with Forgery to determine the authenticity of maps. That particular skill lies purely in the hands of the cartographer class.

***Cartography***

This proficiency permits a character to create maps of any kind. To do so, the character must develop an excellent sense of spatial relationships and become a good judge of distances.
When called upon to manufacture a new map, the first thing a cartographer must do is research the area to be mapped. The length of this research depends upon the size of the area. Obviously, mapping out the borders of a kingdom is a much more involved task than mapping out the streets of a small town.
While performing his research, the character may make several sketches. Once he is done with his research, the cartographer uses these sketches, along with his other notes, to construct the map. The DM then rolls the die and secretly checks the result against the mapper's cartography skill.
If the check fails, the cartographer comes up with an inaccurate and entirely useless map. The cartographer could sell the poorly made map, but his reputation would suffer, and the purchasers will certainly come looking for the seller once they discover how bad the map is.
If the DM rolls a 20 on this proficiency check, the cartographer does not realize the inaccurate nature of the map. Otherwise, the character is aware that the map contains flaws. If the DM rolls a 1 on the check, the cartographer has created an almost perfect map. The cartography community at large will use the perfect map as model from which all other maps of the area in question be based. Such a map is worth triple the normal experience points for the cartographer.
A cartographer can also use this proficiency to create a map of a specific area from memory. When making a map entirely from memory without notes or sketches-the character suffers a -3 penalty to his proficiency check. Success, however, means that the cartographer reproduces a useful map of the area in question.
The Cartography proficiency can also be used to estimate distances. In most cases, a cartographer can automatically estimate distances with 90% accuracy. The cartographer can choose to make a proficiency check which, successful, enables him to judge distances with 100% accuracy. There is no penalty for failing this check.
This proficiency costs one slot and is based on Intelligence.

***A Cartographers Studio***

To make full use of his abilities, a cartographer must have a studio in which to work. Each cartographer starts off with a meager studio at lst level. After that, the cartographer must pay 200 gp per level to upgrade his studio. For example, when Barth reaches 4th level he must pay 800 gp to upgrade his studio.
For every level of experience between the cartographer's experience level and the upgrade level of his studio, the cartographer suffers a -2 penalty on his Cartography proficiency cheeks. For example, Damuth, a down-on-his-luck cartographer, recently attained 6th level. Unfortunately, he only has the funds to upgrade his studio to level 4. Damuth suffers a -4 penalty to all of his Cartography proficiency cheeks until he spends the money to upgrade his studio to level 6.
Unfortunately for Damuth, he cannot just spend 1200 gp (200 gp x his level) and have his studio jump from level 4 to level 6. He must first upgrade his studio to level for a cost of 1000 gp (100 x 5)-before he can upgrade to level 6. Thus, Damuth must pay a heady grand total of 2200 gp to bring his studio up to his level.
A cartographer loses access to some of his abilities when not in his studio. For instance, without a studio, a cartographer cannot find maps that a customer may want. In addition, a cartographer cannot determine the authenticity of a particular map outside of his studio.

***Measuring***

Cartographers who wish to improve their chances at creating a perfect map can actually take measurements instead of simply attempting estimates.
This can only be done in smaller areas in which measuring is possible. Many cartographers use a ball of tough twine, knotted at one-foot intervals, with even larger knots at one-yard intervals. Measuring an area gives a cartographer a +2 bonus to his Cartography checks when making a map.
Measuring, however, is a time-consuming process. When a map needs to be made in a hurry, a cartographer must rely on his own skills instead of any tools. This particularly applies if the cartographer is in a dangerous area-like a battlefield or a dungeon populated with hostile creatures.

***Detecting False Maps***

To detect a false map, the cartographer must rely on his Forgery proficiency. The DM makes the detection roll secretly. If the roll succeeds, the cartographer knows whether a map is authentic, or whether it's a clever forgery. If the roll fails, the cartographer is uncertain about whether the map is a forgery or not.
If the DM rolls a 20, the cartographer incorrectly identifies the map as the opposite of what it actually is (authentic or a fake). For example, a cartographer who critically fails his check (rolls a 20) might identify an original map as a forgery.
A cartographer must have access to reference material (other maps, history texts, etc.) to attempt this detection. Cartographers receive a +2 bonus to their Forgery checks when in their own studio. Cartographers try to protect their reputations and will use their studio (and get the resultant bonus) whenever possible. If this is not possible, they usually give their opinions with the warning that the absence of their own reference materials may adversely affect their evaluation.

***Copying Maps***

A large part of the cartographer's business consists of copying maps in his possession. A cartographer uses his Forgery proficiency to

make an exact duplicate of the map in question.
Most apprenticeships consist of repetitious copying as the apprentices learn their trade. After they have completely copied a map, the master scans the copy, looking for flaws. He uses his own Forgery proficiency to check the copied map's accuracy.
Copying a map can take a great deal of time, depending on the map's complexity. As a rule of thumb, a cartographer can make one good copy of a map per day for every two levels of experience he has (rounded up). If the cartographer is pushed, he can generate more copies, but he suffers a -2 penalty to his forgery proficiency checks for each additional copy over his limit.
For example, Barth (a 3rd-level cartographer) can easily copy two maps per day. If his master demands that he copy four maps in a single day, Barth suffers a -4 penalty to each Forgery proficiency check (a total of four checks).
The DM must secretly roll a Forgery check whenever a cartographer copies a map. If the check is successful, the cartographer has faithfully copied the map in question. If the cartographer fails his check, the copy is an extremely poor one.
If the DM rolls a 20, the cartographer is unaware that he has created a faulty copy If the DM rolls a 1, the cartographer has created an almost indistinguishable copy Other cartographers suffer a -3 penalty to their Forgery checks when. attempting to evaluate the perfect copy's authenticity.
Truly savvy cartographers will use their Forgery proficiency to check for flaws in any map they successfully make. This is performed in the same mariner as if the cartographer were attempting to detect a false map.

### *Supplying Maps*

Cartographers do a great deal of business supplying maps of different areas to the general populace. Whether or not a cartographer can supply a particular map to a customer depends on a number of different factors.
The base percentage chance for a cartographer to have a particular map in stock is equal to the cartographer's mapping proficiency plus three times his level. This number is modified by the map's rarity. These modifiers range from +65% (for a very common map) to -65% (for an extremely rare map).
For example, an interested adventurer wants to see if Darnuth, a 3rd-level cartographer, has a map of the city sewers. The DM checks the cartographer's proficiency (16) and figures out that Darmith's base chance to have the sewer map is 25% (16 + 9). The DM decides that the map in question is somewhat common and adds 55 percentage points to Darnuth's chance, for a total of 80%.
For simplicity, the DM can simply declare that there are certain maps that a cartographer always has on hand. Conversely, there are some maps that a cartographer simply cannot have in stock.
A cartographer cannot supply maps if he does not have access to his studio.

### *Apprentices*

Cartographers do not gain followers-unlike most other classes. However, they often pick up mapmaking apprentices in the course of their business, These apprentices are paid little, but their support aids the cartographer's business, making it easier for him to take on more customers.
A successful cartographer attracts one apprentice for every level he gains after the 4th. These apprentices remain in the cartographer's service until the cartographer gains two levels of experience. At that point, the apprentice becomes a 1st-level journeyman cartographer and strikes out on his own.
After 8th level, the cartographer attracts two apprentices for every level of experience that he gains. Thus, at 9th level, the cartographer gains two additional apprentices. Again, these apprentices are free to leave after the cartographer gains two levels of experience.
At 12th level-and each level thereafter-the cartographer attracts another cartographer of half his experience level (rounded down). Thus, at 15th level, the cartographer attracts a 7thlevel cartographer to his studio.
This master apprentice (as he is known) comes to learn from one of the great masters. The master apprentice usually leaves after the master cartographer attains his next level of experience. At that point the apprentice cartographer gains another level for himself and strikes out on his own.
The master apprentice can choose to remain with his master cartographer if both parties are agreeable. However, if this happens, the master cartographer will not attract any new master apprentices while the current one remains.
Note that the cartographer does not have to settle down and take on apprentices.
Savvy entrepreneurs will certainly leap at such cheap and eager labor, but not all cartographers were meant to languish behind a desk. Some of these skilled mappers prefer to roam the world, exploring new areas and creating new maps. These mapmakers rarely have time to instruct apprentices, and do not burden themselves with inexperienced students.

### *Cartography Fees*

Cartographers' fees can vary greatly, depending on the complexity and rarity of the map needed, the urgency with which it is needed, and the amount of time it takes to produce the map.
Simple maps of local areas cost only 1 gp, but the prices go up from there. A map of the king's palace (restricted by the kingdom for security reasons) could cost 1500 gp or even more depending on how many of the palace's secret passages were revealed on the map.

Barth the Apprentice
Male Human Cartographer
Str: 9
Dex: 16
Con: 7
Int: 17
Wis: 13
Cha: 11
Armor Class: 8 (no armor)
Level: 3
THACO: 20
Movement: 12
Hit Points: 6
Alignment: Chaotic Good
No. of Attacks: 1
Special Attacks: None.
Special Defenses: None.
Weapon Proficiency: Dagger, long sword
Non-weapon Proficiencies: Cartography (17), Direction Sense (14), Forgery (15), Modern Languages (elvish, 17), Reading/Writing (18).
Equipment: Quill and ink, blank parchment (30 sheets), knife, compass, measuring string (100 feet long).

Barth is a young cartographer just starting out in his craft. He has apprenticed himself under his father, a 9th-level cartographer named Brantus. Barth started out as a 0 level apprentice under his father and has yet to leave his tutelage. Brantus is thrilled that his son has decided to follow in his footsteps, and he dreams of retiring and handing the family business over to Barth.
In the meantime, Barth's presence means that Brantus is passing by the opportunity to take on master apprentices (Barth is not of a high enough level to yet qualify himself). Still, as the old cartographer's saying goes, "blood is thicker than ink," and so Brantus keeps his son on. Ever grateful for his father's generosity, Barth throws himself into his studies with vigor.

Role-playing: Barth is a shy young man who yearns for a life of adventure. Unfortunately, he was a sickly child, and his health has not improved. His father is dead-set against sending Barth "into the field," but Barth knows that it's only a matter of time before he strikes out on his own. He has every intention of returning to take over the family business, but first he wants to see a bit of the world.

Barth is breaking further out of his shell every day. He is friendly and happy to talk to customers; he enjoys taking a break from the drudgery of deskwork. Given the chance, he might sign on with some group of heroes to help them map some dangerous labyrinth.

Combat: Simply put, Barth is not well-suited for combat.

# *Chapter 5: The Engineer*

*When Martia left the city and returned to her lands, she happily said farewell to the metropolis. The swordswoman had little patience for the bureaucrats and their ilk who filled the place like good-for-nothing vermin, Back in her homelands, she felt free*

*However, circumstances would not allow Martia any rest. Cardax, the vile necromancer; still held much power-despite the loss of his monstrous ally, Drahlix. All across Martias lands, thc people, heartened by Martia's victory over the evil dragon, were taking up arms and rising up against Cardaxs unholy oppression. They were hungry for freedom. All they needed was a leader to sound the clarion call to the final battle.*

*The time for simple battle cries had ended, though. Martia found herself confronted with an unplacable foe, one who neither expected nor dispensed mercy of any kind. It was up to her to find a way to rid the world of this dead-hearted menace once and for all.*

*She had taken up her father's tattered banner and called to her side all those still fit enough to do battle. They came in droves; not even fear of the necromancer's retribution kept them away.*

*Once they were gathered, Martia put her plan in action. She took the battle directly to the necromancer himself, laying siege to his unholy castle. The black-stoned complex that Cardiax called home struck terror into all who gazed upon it. Living dead patrolled the walls. Some of them sat perched atop parapets, looking like animated gargoyles, their dead eyes all-seeing and never blinking.*

*When Martia arrived at the castle, she was supported by a force of over 1,000 soldiers. When compared to the number of warriors-both living and undead-that served Cardax, this army seemed large enough to destroy the necromancer permanently. Unfortunately, she had not planned upon the stoutness of the edifices walls.*

*After a few runs at the malls, it became apparent that Martias forces would be unable to simply walk into the castle, slay the necromancer, and exit with his head on a pike. She gave her warriors orders to dig in and ready themselves for a siege. Then she called Carter, her father's advisor, to her tent.*

*"My child, " he said as he entered, "it seems that the strength of your good right arm shall not be enough to carry the day. Perhaps it is time to turn to brains where, brawn has failed. "*

*"What do you mean? " Martia demanded.*

*Carter attempted to smother a smile unsuccessfully. "I have taken the liberty-on your behalf, young one-of arranging-for some expert assistance in this matter " He drew back the tent flap behind him, and a hard-looking man stepped directly in.*

*He was tall, and his sandy hair brushed against the top of the tent. His ruddy skin. spoke of long hours spent working outdoors. As his eyes adjusted to the dimness inside the tent, they searched out and found Martia. A thin smile crept slowly across his face, broadening into a wide grin.*

*Carter cleared his throat. "Permit me to introduce-"*

*"No need, old friend," Martia leapt in, cutting the graybeard off. "I have made Wendats acquaintance. "*

*She rose and offered the carpenter a hand which he shook strongly and did not let go of right away.*

*Martia took back her hand and stared defiantly into Wendat's eyes. "So, how is it that you can help me destroy the necromancer? "*

*Wendat laughed. "You always were one to leap right in. "*

*Then, seriously: "I have spent many years building things. With my skills, we could have several siege engines operating within just a few days. Within the week, we could be knocking on the door of Cardaxs inner sanctum. "*

*Martia considered this for a moment. "Very well, Wendat. It seems you are a man* of *many talents. "*

The engineer is one of the most unsung heroes of medieval fantasy. Without engineers, there would not be any castles, bridges, cathedrals, or architectural wonders of any kind. Elven and dwarven engineers also figure importantly in many fantasy settings. These demihuman builders are responsible for fantastic tree-cities and vast subterranean realms.

From a game point of view, military engineers occupy a rather important role, as well. Without their skills, invading armies would have a very difficult time breaching fortified gates and surmounting castle walls. Such edifices would stand nearly impervious to an unprepared army, but the engineer's knowledge can Weak even yard-thick walls.

Most adventurers will not need to hire an engineer's services until they reach higher levels. Experienced generals may contract engineers to build and operate siege equipment during the course of a battle, and high-level heroes often contract engineers to build a solidly fortified keep or base of operations. It is doubtful, however, that beginning adventurers will find themselves commanding vast forces or building their own castles.

Engineers are learned people who aren't afraid to get their hands dirty. They like planning out buildings, roads, contraptions, and all sorts of construction projects. In addition, they like to personally supervise the construction of their projects from beginning to end. Engineers also spend a lot of their time building models and testing new; innovative ideas. Many of these skilled men and women believe that the infrastructure of the world would fall apart without them.

### *Experience, Thac0 and Hit Dice*

Engineers have their own level advancement detailed on the Engineer Experience Levels table below. Engineers spend most of their time either stuck behind a desk drawing up plans, or out in the field supervising their latest project. They are generally intelligent, and possess a strong dose of hard-won common sense. Some engineers are old warriors who have moved from the front lines to the rear, Now, these veterans create devices that help protect their fellow soldiers. For these reasons, engineers use the priest's THACO and saving throw table.

Engineers gain one eight-sided Hit Die per level, up to the 8th level. They only gain two hit points per level after the 8th and do not receive extra hit points from high Constitution scores.

***Table 17: Engineer Experience Table***

| Level | XPS | Hit Dice (d8) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1,250 | 2 |
| 3 | 2,500 | 3 |
| 4 | 5,000 | 4 |
| 5 | 10,000 | 5 |
| 6 | 20,000 | 6 |
| 7 | 40,000 | 7 |
| 8 | 90,000 | 8 |
| 9 | 180,000 | 8+2 |
| 10 | 380,000 | 8+4 |
| 11 | 590,000 | 8+6 |
| 12 | 800,000 | 8+8 |
| 13 | 1,000,000 | 8+10 |
| 14 | 1,200,000 | 8+12 |
| *15* | 1,400,000 | 8+14 |
| 16 | 1,600,000 | 8+16 |
| 17 | 1,800,000 | 8+18 |
| 18 | 2,000,000 | 8+20 |
| 19 | 2,200,000 | 8+22 |
| 20 | 2,400,000 | 8+24 |

### *Ability Scores*

Not everyone is cut out to be an engineer. It requires a great deal of patience, a strong desire to understand how things work, and the ingenuity to improve existing designs. In addition, engineers must have the ability to supervise complex construction projects. For these reasons, all engineers must have a minimum Intelligence of 12 and a minimum Wisdom of 10. The engineer's prime requisite is Intelligence.

### *Permissible Armor and Weapons*

Engineers have no restrictions on the kind of armor they wear and can use any kind of protection that they like. However, when actually using their skills to plan or oversee the construction (or destruction) of something, they cannot wear any armor heavier than chain mail.

An engineer can use any weapon available to rogues. Their complex design and detailed supervision of projects precludes them from intense weapon training.

### *Individual Experience Awards*

Engineers are not concerned with picking locks, worshipping gods, or using and researching magic Engineers are concerned with larger pursuits. Their individual experience awards reflect this.

An engineer's award depends on the nature and complexity of his project. A good rule of thumb is to figure out how long it takes the engineer to do something and base the experience award on that. For example, when an engineer actually designs something new (to him), he earns 100 experience points per day. If an engineer simply redesigns something he has already designed, he does not earn any points.

Once the engineer finally develops a solid design, he can attempt to construct it (or at least supervise its construction). By doing so, the engineer earns 50 experience points per day. He earns this amount no matter how many times he has constructed a similar project. As any engineer will tell you, each project presents its own unique problems. Thus, if an engineer successfully designs a small castle, he can use that design to build castles for several different nobles and earn the construction XP for each structure. Experience points are only awarded for successfully constructed projects.

### *Proficiencies*

An engineer receives three weapon proficiency slots at lst level and another one every four levels (at the 4th level, 8th level, and so on). An engineer suffers a -3 penalty when using a weapon with which he is not proficient. An engineer also receives four non-weapon proficiencies at 1st level and gains a new proficiency every three levels after that (at the 3rd level 6th level, and so forth).

At first level, the engineer must select the Engineering non-weapon proficiency. Due to his dedication to his work, though, this initial selection only costs him a single proficiency slot. Additionally, the Engineering proficiency check mo difier for an engineer is only -1 instead of the -3 normally assessed against characters from other classes.

In addition, engineers must take the Reading/Writing proficiency so that they can properly record their plans on paper or parchment for later use. No engineer is so foolish as to believe that he can consistently access all required information from memory. An engineer must also take at least one of the following proficiencies to determine the engineer's field of specialization: Carpentry, Mining, or Stonemasonry.

Engineers with the Carpentry proficiency can plan and construct wooden structures. This includes frame structures of all sorts. If they also take the Seamanship proficiency they can apply their skills to building boats and other seagoing craft. When combined with Weaponsmithing, the Carpentry proficiency can be used to construct siege engines and other large-scale devices of war.

Engineers who choose to concentrate on Mining (as most dwarves

and gnomes do) know how to plan and carve out mines in any kind of solid soil. These engineers can also his proficiency to properly dig and to reinforce trenches or walls of earth to protect friendly troops. They could even excavate an underground tunnel beneath the wall of an enemy keep or castle.
Engineers that choose Stonemasonry concentrate on building lasting structures. These engineers design and build edifices with sturdy foundations. A properly built structure will likely outlive its designer many times over. Any stone structure constructed and designed by a stonemason/engineer receives a +3 bonus on any saving throws it must make.
The engineer can fill any remaining non-weapon proficiency slots-as well as any future slots-with any proficiency he wishes. However, many engineers are so dedicated to their craft that they simply pick slots that advance their ability in their field.

Certain proficiencies can prove particularly helpful to the engineer.

-Artistic Ability: The engineer can use this proficiency to make straightforward designs into actual works of art. Many cathedrals and palaces have been hilt by, engineers who possessed Artistic Ability.

-Heraldry: The engineer can adorn his creations with the seals of all who commissioned the work.

-Modern Languages: Knowing other languages is particularly helpful to an engineer who regularly works with an army that travels in foreign lands. Such an engineer may be called upon to acquire both local supplies and labor in a pinch.

Engineers can choose proficiencies from the general, warrior, and wizard groups without additional cost.

***Engineers at War***
As mentioned before, engineers can play a big part in a war-particularly when an army needs to launch an assault upon an entrenched foe. The design and construction of siege engines and other battle paraphernalia falls in the hands of the engineer. Players and DMs interested in full details about s1ge equipment and how it's used in the course of a battle should consult the PLAYFR'S OPTION'": Combat and Tactics book.

***Engineering***
Engineering takes place in two steps: design and construction. In the design stage, an engineer must discover viable solutions to an array of specific technical problems.

Once an engineer creates a design, he enters he construction phase. In this phase, the engineer must supervise the implementation of his design.

***Design***
Good engineers plan everything out well ahead of time, creating models, testing stress points, and thinking up new ideas. This highly organized and logical approach often saves time, money, and even lives.

When an engineer draws up plans for something, the DM rolls a secret Engineering proficiency check. The DM should feel free to add as many modifiers as he likes to this roll, depending on the situation. These can take the form of numerical penalties or bonuses (-4 penalties for complex designs and +4 bonuses for simple ones). Additionally, the DM can the require multiple proficiency checks for various project stages, or he can allow the engineer to skip such checks when creating simple designs.
If the project is particularly complex and actually depends on the design of several smaller stages, the DM is justified in making a proficiency check for each part of the design, plus a final check to make sure that each piece was fit properly into the final design.
If the end result is a success, the plans are good, and the engineer can move on to the construction of the item.
If the engineer fails these checks, his design is bad, Any structure or device created from such plans will eventually fall apart (in the case of houses) or fail when stressed (such as a castle wall that crumbles after the first ballista volley). The engineer cannot attempt to redesign that item until he reaches the next level.
If the DM rolls a 20 on the design check, the engineer believes that his design is solid. In reality, however, the design possesses severe flaws. Cautious engineers always try to have another engineer check their work, just in case.
If the DM rolls a 1 on the design check, the design is an exceptionally good one. In time, most engineers will see it as an innovation. An engineer earns triple the normal experience points for such a design.

***Construction***
Once the engineer has a good design to work from, he can begin construction. Note that the engineer does not have to design the structure that he is constructing. All an engineer requires is a copy of a design created by a qualified engineer.
In large engineering firms, the master engineer often does the design work. His higher-level engineering apprentices actually oversee the construction. In this way, the firm can crank out a large amount of product in a relatively short period of time.
The length of time it takes to construct something varies a great deal. For example, castles can take years or even decades to finish. Many lords contract the construction of a beautiful manor and never live to see the final results of their planning.
When an engineer undertakes a construction, the DM makes a proficiency check. If the roll succeeds, the project succeeds.
If the roll fails, the structure or device is constructed poorly. Since so many external variables (quality of materials, weather, skill level of hired labor, etc.) influence any given construction effort, the engineer is not prohibited from immediately trying again.
If the DM rolls a 20 on the check, the engineer has a poorly built structure. However, he believes that the structure is fine. Every time a poorly made item is used or a poorly built structure undergoes stress (battering rams, ballista fire, magical attack), it has a 25% chance of falling apart. Smart engineers always have a second engineer check their work.
If the DM rolls a 1, the engineer has built an extremely durable structure or item. Such well-built objects receive a +1 bonus to all saving throws.

***Evaluation***
An engineer can also use his Engineering proficiency to evaluate a design or construction by making a successful proficiency cheek. However, engineers cannot evaluate their own work. If the check succeeds, the engineer knows if the other engineer's construction or design is any good. If he fails the check, the engineer is not sure. A roll of 20 indicates that the engineer completely mis-evaluates the structure or design in question.

***Apprentices***
Engineers do not gain followers. However, they often pick up engineering apprentices in the course of their work. These apprentices are paid little, but their support aids the engineer's

business, making it easier for him to take on more complex tasks. In return, the apprentices get a (nearly) free education.

After they attain 5th level, engineers attract one apprentice every time they advance to another level. Thus, a 7th-level engineer would have two apprentices. The new apprentice remains in the engineer's service until the engineer goes up two levels of experience. At that point, the apprentice becomes a 1st-level journeyman engineer and strikes out on his own.

At 9th level and above, the engineer attracts a number of journeyman engineers whose combined experience levels equal one half his experience level (rounded up). Each journeyman must be at least a 1st-level engineer.

Thus, at 9th level, the engineer could gain five 1st-level journeyman apprentices, or two 2nd-level and one 1st-level journeyman apprentices, or any combination equaling five. The exact number and level of these journeyman is purely up to the DM.

These apprentices are free to leave after the engineer reaches his next level of experience, but there will always be more on the way. They each gain a level of experience at the same time as the engineer.

At 12th level (and each level thereafter), the engineer also attracts another engineer with four levels less experience. Thus, at 15th level, the engineer attracts an 11th-level engineer to his business. This engineer has come to learn from one of the great craftsmen and studies with the master engineer until he attains the next level of experience. At that point, the "apprentice" gains another level for himself and can strike out on his own again.

The "apprentice" can choose to remain with the master engineer if both are agreeable to that. However, no new head apprentice can study with the master engineer, as there is already too much competition for the master's limited time.

Note that any of these apprentices are attracted cumulatively. This means that a 12thlevel engineer could have two 0-level apprentices, six 1st-level journeyman apprentices, and one 8th-le-vel "apprentice," all at the same time. They form the engineering team which the master engineer manages.

***Engineering Fees***

An engineer's fees vary greatly, depending on the size and complexity of the project, the urgency with which it is needed, and the amount of time it takes to actually produce it.

On the average, an engineer gets paid 2 gp per level for every day that he works. It is a lucrative field, although quite demanding mentally and physically. In addition, engineers usually charge extra for their apprentices according to the following scale:

***Table 18: Engineering Pay Scale***

| Apprentice Level | Daily Pay |
|---|---|
| 0 | 2 sp |
| 1 | 1 gp |
| 2 | 3 gp |
| 4-5 | 6 gp |
| 6-8 | 10 gp |
| 9+ | 16 gp |

Finally, the engineer's employer must assume the cost of all labor and materials necessary to complete the project.

Wendat the Wily One
Male Human Engineer

Sir: 13
Dex: 9
Con: 12
Int: 18
Wis: 12
Cha: 16
Armor Class: 0 *(chain mail +2,shield +2)*
Level: 9
THACO: 16
Movement: 12
Hit Points: 40
Alignment: Neutral Good
No. of Attacks: 1
Special Attacks: None.
Special Defenses: None.
Weapon Proficiencies: club, dagger short sword, sling, staff.
Non-weapon Proficiencies: Engineering (17), Reading/Writing (18), Carpentry (13), Weaponsmithing (16).
Equipment: *chain mail +2, shield +2, long sword +2, cloak of elvenkind, quill* and ink, parchment (10 oversized sheets), measuring string, carpentry tools.

Wendat is a handsome man in his late thirties. The years have been kind to Wendat. Although the sun and wind have weathered his skin, they have not affected his boyish good looks. Wendat's life has been a good one; he has seen much death and destruction (and caused more than a little of each himself), but this has not diminished his ready grin and the easy confidence with which he holds himself.
Wendat has spent his entire adult life Studying engineering and weaponsmithing; there are few who know more about the tools of siege warfare than he. He has two 2nd level, apprentices and one 4th-level engineer apprentice working under him. He works them hard, but they learn well.
Role-playing: Wendat left his home at the age of 12, and he has rarely looked back. His parents were poor farmers, barely able to keep food in his mouth. By entering a trade, Wendat escaped poverty. Although he has not seen his parents for nearly a year, he sends them gold whenever he can.
Wendat is proud of how far he has come from his poverty-stricken roots, but he is careful not to display his wealth. He still sees himself as a farmboy and refuses to put his heritage behind him. He is a man of the people, and his workers respond well to this; they reward his manner and his generosity with incredible loyalty and industriousness.
Combat: Wendat usually sticks to siege warfare, but he can defend himself when pressed. His apprentices and workers will always rally to his side.

# *Chapter 6: The Guide*

*Martia cursed as she pulled her leg from the depths of a leaf-covered bog. The muck sucked at her limb as she hauled it free from the deadly slop. Many a traveler had disappeared into such a pool of quicksand, never to be heard from again.*
*As she found firmer ground, Martia took stock of herself. She was covered in smelly slime and caked dirt. Even the links of her chain mail were full of the, noxious stuff. She was not having a good day.*
*After his defeat at the, castle, the evil necromancer had retreated to his legendary keep. Bloodlust still clouding her reason, Martia had doggedly pursued the death mage directly into the marshland that surrounded his sanctum. At Wendat's request-nay, demand-she had stopped in a city along the marsh's edge to hire herself a guide who would see her safely through the deadly mire. In her haste, she had shuck a deal with the first applicant, a wizened creature by the name of Prada.*
*Prada was an ancient halfling, an old outdoorswoman whose wanderlust had carried halfway across the continent and back. She had grown up near the marshlands, she told Martia, she knew them like the back of her hand. Prada eager to see anyone who could take a poke at Cardax, and the unlikely pair took off into the marsh early the next morning.*
*Martia heard a curse behind her. "How many times must I tell you: follow my footsteps exactly. This place is more dangerous than you know." halfling's tone was that of schoolmarm scolding a child caught cheating.*
*Struggling to her feet, Martia whirled about a found herself belt to eyeball with her diminutive guide. "Do not speak to me that way, halfling. I am paying you to get me to Cardax's home, not to drown me in unending muck!"*
*The halfling's nostrils flared widely. "My most sincere apologies, Madam Martia," the sarcasm dripped from her tongue. "If I had known that ye were* planning a *pleasure cruise, I'd have been more careful. It is absolutely beyond me how one such a you could have killed Drahlix and driven Cardax from his throne. I would have thought such deeds required a spot of courage and a brain larger than that of a besotted troglodyte! "*

*For a moment, Martia was taken aback by the halfling's full-sized fury. Before she could respond, geyser spouted from the marsh beside her, spraying mud and decaying plants thirty yards into the air. Martia wiped the muck from her eyes and swore heartily. Her language took an even darker turn as she saw the creature rising up before her.*
*It took her a moment to recognize it out of its normal context: the bulbous head covered with a chitinous layer of filth, the great dinner-plate eyes glaring with some animal approximation of mortal fury, the eight thick, long tentacles snaking out of the inky depths of the dirt. It was a giant, muddwelling octopus.*

*One of the creature's tentacles had already wrapped itself around Prada's tiny frame. The halfling was stabbing at the slimy flesh with her knife, but it was having little effect. Martia rushed forward, swinging the Blade of Honesty in a wide arc. The flashing blade struck true, severing the mighty tentacle cleanly in half.* I
*The smell clued Martia in to the fact at which she had previously only guessed. The foul stench of the grave sprang forth from the stream of greenish ichor that spouted out of the tentacle's stump. The eight(now seven-) armed thing attacking without any kind of warning was undead-some kind of zombie parody of the original creature.*
*Cardax was no doubt behind the ambush. Steeling herself, Martia leapt for the creature's head as it began to retreat back into the muck. As she did, she felt Pradas lasso encircle her leg.*
*This was going to be fun.*

Sooner or later, any adventurer worthy of the name is going to travel someplace that he has never been before. After all, a large part of being a hero involves venturing into unknown lands. Smart travelers always make sure they have one of two things: a good map, or a good guide. The best travelers use both.

A guide is rarely out of date, doesn't fall apart when wet and is a lot harder to lose. In addition, a guide acts as an interpreter, working as a liaison between the adventuring party and any indigenous peoples they may stumble across while traveling.

A good guide is worth his weight in gold. A bad one can cost even the most alert adventurer his life. Ifs important for a hem to find the right person, someone he can trust. Guides are only good in one locale, but they are familiar with everything in that area. Good guides not only take you from one side of their homeland to another, they also rattle off important facts about an area and relate the region's entire history. They know the real powers in the area and can easily distinguish them from petty thieves or ambitious charlatans.

***Experience, Thac0 and Hit Dice***

Guides have their own level advancement scheme as detailed in Table 19: Guide Experience Levels. They spend their days wandering about, working for whoever will hire their services. In between jobs, guides travel their chosen terrain, keeping themselves abreast of any changes-political or otherwise-that have occurred in the region.

Guides are always ready to defend themselves and are excellent hunters, as they spend much of their time foraging for food. For these reasons, guides use the warrior's THACO and saving throw table.

Due to the fact that guides do not train quite so hard as the average warrior, they only gain one eight-sided Hit Die per level up to the 8th level. In addition, guides never receive the warrior's hit point bonus for high Constitution. After 8th level, guides only receive 2 hit points every time they advance a level and do not gain extra hit points from high Constitution scores.

***Ability Scores***

Most people don't have the temperament to endure stretches of solitude, interspersed with short bursts of intense interaction with total strangers. Others balk at the possibly unsteady nature of the work. Quite a few don't have the charm to pull off the business end of the career.

After all, guides are more than just up-todate maps. They often function as ambassador, interpreter, teacher of etiquette and even cook. For these reasons, all guides m z have a Wisdom of at least 12, a Constitution of at least 10, and a Charisma of at least 9. The guide's prime requisite is Wisdom.

| Level | XPS | Hit Dice (d8) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1,500 | 2 |
| 3 | 3,000 | 3 |
| 4 | 6,000 | 4 |
| 5 | 12,000 | 5 |
| 6 | 25,000 | 6 |
| 7 | 50,000 | 7 |
| 8 | 100,000 | 8 |
| 9 | 200,000 | 8+2 |
| 10 | 400,000 | 8+4 |
| 11 | 600,000 | 8+6 |
| 12 | 800,000 | 8+8 |
| 13 | 1,000,000 | 8+10 |
| 14 | 1,200,000 | 8+12 |
| 15 | 1,400,000 | 8+14 |
| 16 | 1,600,000 | 8+16 |
| 17 | 1,800,000 | 8+18 |
| 18 | 2,000,000 | 8+20 |
| 19 | 2,200,000 | 8+22 |
| 20 | 2,400,000 | 8+24 |

***Permissible Armor and Weapons***

Guides have no restrictions on armor. They can wear any protection they like. However; they cannot use many of their skills when wearing anything heavier than leather armor.

A guide can learn to use any Weapon, although they cannot specialize in weapons like their warrior counterparts. These outdoorsmen concentrate on their chosen areas rather than on improving their weapons-related skills. For a guide, weapons are simply a means to an end, not a way of life.

***Individual Experience Awards***

Guides earn their individual experience points in their own unique way. Their ambition is not to conquer creatures, but to learn more about their home and to earn enough money to live comfortably. Occasionally, they feel the need to travel to foreign lands and spend months or even yea, wandering through new lands, meeting new peoples and making new friends.

Awarding a guide's individual experience awards car be tricky because of their varied experiences. Consult Table 20: Guide Experience Awards when handing out experience at the end of an adventure.

***Table 20: Guide Experience Awards***

| Action | Award |
|---|---|
| Per new path learned | 500 XP (Varies) |
| Per potential disaster averted or avoided | Varies |
| Per vital bit of new information learned | 250 XP (varies) |
| Per gold piece earned in course of acting as a guide | 1 XP |

***Learning Paths***

A guide earns 500 XP for every new significant path he discovers. If the guide simply discovers a new route home from his favorite tavern, that's certainly not worth 500 XP (unless it involves a circuitous route, perhaps through the city's sewers), but it might be worth 10 XP or so.

Conversely, establishing a new trade route through a nearby mountain chain would be extremely valuable to society. Such an action might be worth 5,000 XP or more, depending on the difficulty of the task and the usefulness of the route.

***Avoiding Disasters***

If a guide manages to avert or avoid some kind of impending disaster for his employer, he earns experience points equal to the XP value of the obstacle. For example, if a guide manages to lead a party past a patrol of 15 orcs, the crafty outdoorsman would receive experience as if he had fought and defeated all 15 of those orcs.

***New Information***

Guides collect information about the areas through which they travel. This includes notes about who is in charge, where you can sell stolen goods, where you can find a healer or a cleric, and so on.

Whenever a guide manages to discover a piece of information that could come in useful sometime in the future, he earns a certain

amount of XP. Exactly how much is earned depends on how useful the information is. In most cases, the amount is equal to 50 XP. However, extremely important information brings the guide greater experience awards.

For instance, if a guide learns that the head of the local Thieves Guild is actually the mayor of the town, the DM could award him anywhere from 2,500 to 5,000 XP-depending on the thief's power. Of course, the fact that the guide possesses this information could come back to haunt him. If the mayor discovered that the guide knew his secret, the thief might hire deadly assassins to "take care of" the guide.

***Acting as a Guide***

A guide receives one experience point for each gold piece paid by a client. This does not apply to any treasure earned in the course of an adventure unless the terms of the guide's agreement with the party stipulate that he is to receive a share of the treasure in exchange for his services as a guide.

***Proficiencies***

A guide receives three weapon proficiency slots at 1stlevel and a earns a new one every Our levels (at the 4th level, 8th level, and so on). A guide suffers a -3 penalty when using a weapon with which he is not proficient. A guide also receives four non-weapon proficiencies at the lst level and gains a new proficiency every three levels after that (at the 3rd level, 6th level, and so on).

At first level, a guide must take the Direction Sense proficiency. In addition, he must choose his other starting proficiencies from the following list: Navigation, Etiquette, Fire-building, Fishing, Heraldry, Modern Languages, Riding (land-based or airborne), Weather Sense, Ancient History, Local History, Hunting, Mountaineering, Survival, or Tracking.

Once he earns additional non-weapon proficiency slots through level advancement, he may choose any available skill; the limitations given above apply only to 1st level.

Several different types of guides are listed below, complete with descriptions of which proficiencies would best fit them. DMs do not have to select any of these templates. In fact, it is fairly simple to create a unique NPC guide from scratch. However, adventuring parties are most likely to encounter the common types of guides detailed below.

Note that every guide, regardless of specialized training, receives a particular proficiency's special effect. Thus, if a navigator chose the Tracking non-weapon proficiency, he would receive the benefits that proficiency grants to the hunter.

Guides can choose proficiencies from the general, warrior, and rogue groups without additional cost.

***The Hunter***

Some guides prefer the wilderness and make a good living by showing others how to live off the land. Hunters could easily live as hermits in the wildlands, using their skills to support themselves. However, most hunters hire out as guides because there are certain things that you can't purchase with animal pelts and hides.

Hunters often take on wealthy clients and show them the best hunting and fishing areas. In exchange, the hunters earn themselves enough gold to meet their needs for some time. Some hunters work hard throughout the summer months and then comfortably wait out the winter months in a city.

Hunters must take the following non-weapon proficiencies at first level in addition to Direction Sense: Tracking (which costs two slots) and either Hunting or Fishing.

Unlike most classes, guides do not suffer a -6 penalty to their tracking rolls. In fact, these outdoorsman do not suffer any base penalty at all when tracking. The guide uses the Tracking proficiency in many ways, not the least of which is trailing beasts or foes. Often, hunters use this ability to pick out the easiest trail by noticing well-worn (and presumably safe) lads that local inhabitants and animals have forged. In this way, a guide can actually inanage to work his way through an area about which he knows little or even nothing.

The hunter, of course, also uses Tracking to hunt wild beasts for food and profit. When combined with the Hunting proficiency, this proficiency permits a skilled hunter to follow a beast for several days, if necessary.

Due to his experience as a hunting party leader, the hunter only suffers a -1 penalty to his Hunting proficiency check for every two characters that accompany him.

For example, if a hunter leads five other people into the woods to hunt, he only suffers a -3 penalty. A normal character would suffer a -5 penalty to the check.

The Tracking proficiency may not seem helpful to a hunter who chooses Fishing as his specialization. However, the guide can use this proficiency to discover the best fishing spots in an area.

The hunter can also use his Tracking proficiency to trail large fish, like sharks and whales, and even schools of smaller fish across a body of water. However, the hunter suffers a -6 penalty to his proficiency check when attempting to track the movements of aquatic animals.

***The Escort***

The escort is an urban guide who specializes in navigating his clients through the murky political and geographical waters of a town or city. A 1st-level escort must fill two of his remaining three non-weapon proficiency slots with the following proficiencies: Etiquette and Local History.

Using Etiquette, the escort can help his charges in their dealings with all levels of society-from beggars to royalty. Additionally, he can help them negotiate with local businessmen, bureaucrats, and diplomats

Local History gives the escort an historical perspective of the social and political landscape. He knows me events mat have shaped the local government and he can predict, with some degree of accuracy, the government's reaction to certain situations. Without a local escort, adventurers run the risk of committing terrible social blunders that could get them run out of town or worse. In addition, escorts can prove invaluable in many circumstances by providing the heroes with intelligence about local people and places.

Escorts are free to choose their remaining non-weapon proficiencies from any available groups.

***The Navigator***

Some guides find their true calling on the high seas. They study the skies and direct the path of a ship by way of the stars. Without them, many a ship would have long since run aground. Only the most desperate sailors wHl take a seagoing craft across the water without the assistance of an experienced navigator. Adventurers would be wise to follow the examples of professional ship captains and hire on a capable navigator.

All navigators must select the following non-weapon proficiencies at first level (in addition to Direction Sense): Navigation and Weather Sense.

Normally a character with the Navigation proficiency can reduce the chance of getting lost up to 20% The navigator's base number, however, is 25%. A navigator car reduce the chance of getting lost by an additional 10 percentage points (up to a maximum of 50

percentage points) for each extra proficiency slot he dedicates to Navigation.
Navigators also require a deep understanding of weather. Unexpected storms have sunk many a stout ship. If a guide detects bad weather early enough, there's a chance that he can navigate the ship away from the storm or into a safe harbor.

The 1st-level navigator is free to spend his remaining non-weapon proficiency slots on anything that he wants. However, navigator characters are strongly encouraged to choose the Swimming proficiency.
Later on, the navigator may want to pick up the Seamanship non-weapon proficiency, too. A good navigator knows the basic operations of a sea-going vessel, An extra set of skilled hands may mean the difference between life and death when struggling with the wild nature of the sea.

***The Interpreter***

The interpreter is a guide who specializes in facilitating communication between people. The interpreter is often employed as a diplomat, but this kind of position is usually reserved for high-level interpreters who have worked their way up the political ladder. These ambassadors have paid their dues working as simple translators and occasionally as protocol advisers.
1st-level interpreters must fill two of their remaining non-weapon proficiency slots with the following proficiencies: Etiquette and Modern Languages.
The interpreter uses the Etiquette proficiency to smoothly interact not only with members of his own culture, but also with foreign speaking people. This proficiency also supplements the interpreter's knowledge of a given language, as simple translations often fail to convey the shades of meanings inherent in any language.
To act as an interpreter, a guide must obviously know more than one language. Languages are the cornerstone of the interpreter's business; the more languages he speaks, he more clients he will have. However, some interpreters choose to concentrate on one or two languages, pouring all of their skills into them. Most others, though, find it more valuable to achieve a working facility in a number of different languages.
1st-level interpreters should also take Reading/Writing as their last non-weapon proficiency slot-although this is not a requirement. Interpreters with this skill can translate written words in any language in which they are proficient.

***The Mountaineer***

Some guides specialize in traversing the vast chains of mountains that divide the continents. These hardy souls enjoy nothing more than challenging the most difficult terrain. Mountaineers have a difficult job, as some of the fiercest monsters in the world live in mountains (orcs, trolls, goblins, etc.). Even when traversing well-known passes, many travelers prefer to keep a mountaineer along just in case a humanoid ambush forces them to use a secondary route.
I st-level mountaineers must take the following non-weapon proficiencies in addition to Direction Sense: Mountaineering, Rope Use, and Weather Sense.
With Mountaineering, the guide can actually lead a group of people into We mountains and traverse sheer cliffs with the aid of ropes and pitons. Mountaineers receive a +25% bonus to their chance to climb surfaces when using this proficiency. In addition, they receive a bonus of +10% for every subsequent slot of Mountaineering that they take.
Mountaineers need We Rope Use proficiency for similar reasons. With it, they can safely rope all the members of a party together when climbing a mountain or any other sheer surface. This skill gives a +15% bonus to a mountaineer's climbing skills. Mountaineers also enjoy an additional +5% bonus for each subsequent non-weapon proficiency slot they devote to Rope Use. This means that a 1st-level mountaineer gets a minimum bonus of +40% to any climbing rolls when using a rope. This reflects their dedication to their craft.
As with navigators, true mountaineers need to know about impending changes in the weather, and for this reason they must have the Weather Sense non-weapon proficiency. The weather can change quickly at higher altitudes, and a party caught on the face of a mountain during a thunderstorm is in serious danger.

***The Spelunker***

The spelunker is a close cousin to the mountaineer. Instead of working on the outside of a mountain, the spelunker explores the vast underground caves and massive networks of passages that penetrate the earth below our feet. While the weather is certainly not a risk underground (except in certain magical instances), the spelunker uses a lot of the same skills as the mountaineer.
In. a typical setting, the underworld is rife with all sorts of humanoid races. The spelunker can take a party to these creatures' home, or he can show them how to simply avoid them.
lst-level spelunkers must purchase the following non-weapon proficiencies (in addition to Direction Sense): Mountaineering, Rope Use, and (a new proficiency) Caving.
Consult the mountaineer description to see how Rope Use and Mountaineering affect a guide. The same skills used to climb sheer cliff faces that tower high above the earth can be applied to underground equivalents that descend into unknown depths.
The Caving proficiency is described later in this chapter. Any character class can purchase the Caving proficiency. However, it only costs a spelunker 1 slot to take it, while other classes must spend two slots for the proficiency.

***New Proficiency: Caving***

The caving proficiency enables a character to function underground. The skill modifier varies depending on the complexity of a character's action. Note that Dwarves and Gnomes receive a +3 bonus to their checks.
Because they spend so much time underground, spelunkers are exempt from the standard penalty when attempting to determine character underground. They simply use Direction Sense (a required proficiency) in place of the Caving proficiency.

***Table 21: Caving Penalties***

| Attempt to Detect | Penalty |
|---|---|
| Grade or Slope in Passage | -1 |
| New tunnel or passage construction | -1 |
| Unsafe walls, ceilings and floors | -2 |
| Approximate depth underground | -3 |
| Sliding or Shifting Wall or Rooms | -4 |
| Stonework traps, pits, and deadfalls | -6 |
| Direction Underground | -6 |

***Survival***

Many guides don't have enough proficiency slots to take all of the suggested proficiencies at the onset of their careers. Once they've gone up a few levels and have earned an additional slot, the temptation is often to simply concentrate on their primary

proficiency (Mountaineering, Navigation, etc.)
However, it is highly recommended that a guide take the Survival non-weapon proficiency after he fills all of his required proficiencies. Often a guide will find himself in a situation in which he has no food or water and must rely on himself. In such cases, the Survival non-weapon proficiency means the difference between life and death.
Remember, that each time a guide chooses the Survival proficiency, he must specify an environment. Well-traveled guides often purchase Survival proficiencies in areas other than their primary one. To do so, however, the guide must have spent a substantial amount of time in that particular environment. Otherwise, the DM is within his rights to deny the character the ability to use that specific proficiency.

***Guide Fees***

A guide's fees vary greatly depending on the following variables: the length of the employment, the distance, and the personal danger involved. On the average, a guide receives 5 gp per level for every day that he works. However, this number can change drastically. For instance, if a guide is an escort hired to show a group of adventurers around a new city, he'll probably only command 1 gp per day and the assignment may only last a day or three.
The longer the term of the employment, the less the guide charges. The life of a freelance guide is an uncertain one. The promise of a steady flow of gold is worth a great deal to a person in such a situation. In effect, the guide is offering a rebate in return for job security.
The farther the job takes the guide from home, the more it's going to cost, especially if it's a one-way trip for the employer. After the assignment is over, the guide is going to have to make his way back home by himself.
Obviously, the more dangerous the job, the more the guide is going charge. A mountaineer will charge an exorbitant amount to lead a group into a dragon's lair. Many adventurers cannot afford these fees up front. If they could, they'd hardly be out searching for treasure. However, many guides are willing to take on such jobs in exchange for a portion of the treasure. They will never work for less than half a share, and at that rate, they'll refuse to enter combat unless they absolutely have to.

Prada the Hunter
Female Halfling Guide

Str: 10
Dex: 12
Con: *13*
Int: 10
Wis: 17
Cha: 9
Armor Class: *3(leather annor +2, rhig of protection +3)*
Level: 12
THACO: 9
Movement: 6

Hit Points: 60
Alignment: Chaotic Good
No. of Attacks: 1
Special Attacks: None.
Special Defenses: None.
Weapon Proficiencies: Hand crossbow, dirk, short bow, short sword.
Non-weapon Proficiencies: Direction Sense (18), Fishing (16), Hunting (16), Survival [swamp] (11), Tracking (17).
Equipment: *Leather arnior +2, ring of protection +3, short sword +2,* compass, camping gear, flint and steel, rope 50', pitons, torches, oil.

Prada is a tough old halfling who thinks she's seen it all in her many years. Compared to most of the people she's met, she's right. Prada spent the better part of her life exploring and learning about the swamp surrounding the necromancer's fortress. She remembers when it, was a thriving place, teeming with life instead of undeath, and she yearns to see the restoration of the natural order.

Role-playing: Prada is often more bark than bite. She knows that her size can be a detriment! in a world in which most humanoids tower over he, but she does her best to turn this apparent weakness to her advantage.
Prada was raised in the swamps, and unlike most of her fellows who left when the necromancer claimed the place for his own, she has never left the shelter of its willows for long. No one knows the place better than Prada, and she is quite proud of this fact. The halfling sometimes vanishes in the sweltering foliage for weeks at a time. Combat: Prada is no fool. She knows she has little chance against most humanoids in a "fair" fight. She uses her knowledge of the swamp to her advantage. She can hide in it forever with little chance of discovery. If Prada decides to attack, she usually strikes with her short bow from cover.

# *Chapter 7: The Healer*

*Martia grimaced as pain ran down her right arm and coursed through that entire side of her body. She had been injured in battle before, but never so badly. Now, it was all she could do to keep her feet. She and Prada had held off the necromancer's beasts for what seemed like hours. They had fought back to back until one of the foul creatures imbedded an axe deep into the proud halfling's chest. Her dying word to Martia had been, "Run. "*
*Faced with an overwhelming force against which she now had no aid, Martia did the one thing she had never done before. She took Pradas advice and fled. The shame itself threatened to overwhelm the young warrior, but it was not that which brought her down in the end. She managed to escape the horde of undead creatures, but-she learned too late-these creatures were not the true danger. They were only meant to wear her down and herd her straight to the necromancer himself.*
*Just when Martia thought that she had finally managed to elude the dark mages minions, she ran smack dab into Cardax himself. He laughed at her. In her weakened state, she held no threat for him.*
*Cardax had reached out and snatched the Blade of Honesty from her grasp with a magical force. Then the magical blade, the one that Martia had planned to use against the necromancer, whirled about and cut deep into her right arm, pinning it to her side.*
*Horribly wounded, she had stumbled deeper and deeper into the swamp, away from the necromancer's triumphant glare. Cardax's cackling laugh echoed throughout the slime encrusted trees and into the corners of her skull as she fled, She ran on, desperately trying to escape the man who had become the embodiment of her own personal doom.*

*Martia had finally collapsed about an hour later, though it had felt like days. One horrifying thought flew through her mind before she lapsed into unconsciousness: she knew that even death wouldn't free her from one with such power over the dead.*

*Martia awoke screaming for her life, that horrifying thought still foremost in her mind. She sat bolt upright, not even realizing that she was in a bed. Arms grabbed her and pulled her back down to its soft surface, careful of the stitches and bandages that bound her arm and side.*
*Martia screamed for another minute before her eyes, adjusted well enough to realize that the kindly face looking down at her was not Cardax's. Relieved, the wounded warrior collapsed back onto the bed.*
*Martia felt much more calm after resting awhile. She woke up to find a damp cloth laying upon her forehead. Her arm and side were swathed in bandages, and she was clothed in a loose, white gown. Unfortunately, she also noticed that her sword and armor were nowhere in sight.*
*While she was still considering what to do next, the door to the one-room hut opened, and a young man dressed in blue robes stepped inside. His head was shaved bald, even down to his missing eyebrows, giving him an ageless look. Martia was sure she had never seen him before.*
*"Who?" she began, but her voice faltered. She was still quite weak. The young man held up his hand to forestall any more questions and spoke in a soothing voice.*
*"My name is Gnarvis. Some friends of mine found you unconscious in the swamp. You were bleeding badly so they brought you to me.*
*"I have treated your wounds and given you something for your pain, but you are still gravely injured. You will be in my care for some time.*
*"I need to kill Cardax," Martin rasped.*
*"Of course," said Gnarvis. "All in good time."*

Adventuring is hazardous duty. Anyone who seeks out fortune and glory will certainly encounter danger. Eventually, a hero's luck will run out. When this finally happens, that poor fellow is going to need some "stitching-up." Traditionally, many heroes turn to the cleric in their party for a quick fix. After all, instant magical healing is far more beneficial than nature's slow process.

Often, however, a cleric may not be available to ask the gods' blessings upon a wounded comrade. Alternately a hero may find himself travelling with a war priest who refuses to magically heal wounds because he believes that they are the "gifts" of his deity. Other times, the hero may be unable to afford the attentions of a cleric. Magic is not inexpensive, and persuading a priest to curry favor for you with his god (particularly if you're not a true believer yourself) can be costly

In such cases, wounded heroes make their way to a healer. Healers are cheaper than priests, they don't use magic, and they don't usually worry themselves about deities. This makes the healer an invaluable resource to small villages and heroes in desperate need of assistance.

### *Experience, Thac0 and Hit Dice*

Healers, like any other character class, have their own level advancement (shown on the Healer Experience Levels table). While there are some healers who find time to take up the martial arts, they are few and far between. In general, healers concern themselves more with healing wounds than inflicting damage. In fact, many healers are downright pacifists. For these reasons, healers use the rogue's THACO table. In addition, they use the wizards saving throw table.

Though healers do not engage in physical training, they do realize the advantages of staying in shape. These hard-working men and women generally spend their days laboring in harsh conditions and not holed up in some dank tower engaged in research.

Because of this, healers use a six-sided die to determine their hit points for each level up to the 8th. After 8th level, healers only gain 2 hit points per level and do not receive bonus hit points for high Constitution scores.

***Table 22: Healer Experience Table***

| Level | XPS | Hit Dice (d6) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1,250 | 2 |
| 3 | 2,500 | 3 |
| 4 | 5,000 | 4 |
| 5 | 10,000 | 5 |
| 6 | 20,000 | 6 |
| 7 | 50,000 | 7 |
| 8 | 80,000 | 8 |
| 9 | 160,000 | 8+2 |
| 10 | 320,000 | 8+4 |
| 11 | 480,000 | 8+6 |
| 12 | 640,000 | 8+8 |
| 16 | 1,380,000 | 8+16 |
| 17 | 1,540,000 | 8+18 |
| 18 | 1,700,000 | 8+20 |
| 19 | 1,860,000 | 8+22 |
| 20 | 2,020,000 | 8+24 |

### *Ability Scores*

A good healer is a rare commodity. Many people dabble in the heating arts, but few actually have the dedication to truly master them. It's a long way from the inn matron's chicken noodle soup to a really effective poultice.

Often a healer finds himself in his occupation less by choice and more by some overwhelming sense of responsibility to his fellows. For these reasons, all healers must have a Wisdom of at least 12 and a Constitution of at least 9. The healer's prime requisite is Wisdom.

### *Permissible Armor and Weapons*

Battlefield medics occupy an honored position in most armies. While many healers do not fit this mold, there are those courageous few who brave the dangers of war. Even so, healers cannot perform their duties while wearing anything heavier than leather armor. In addition, a healer cannot wear gloves or gauntlets of any sort. Such things interfere with the healer's ability to work with a patient. Healers are permitted to learn the use of the following weapons: dub, dagger, dart, sling, and staff.

### *Individual Experience Awards*

Like other character classes, healers earn experience points in their own unique way. They tend to focus more on the aftermath of a battle rather than the combat itself, and this affects how they learn from their adventures. They gain experience for healing injuries and for learning new ways to bring relief to their patients.

***Table 23: Individual Experience Awards***

| Action | Award |
|---|---|
| Per Patients hit point healed | 10 XP |
| Per discovery of new treatment or antidote | 500 XP |
| Per Gold Piece earned in the course of acting as a healer | 1 XP |

Occasionally, a healer will stumble upon a new way to treat a fever or disease (such as using rare herbs, or applying a standard treatment to a non-standard affliction). If, in the course of an adventure, a healer successfully uses his Healing proficiency in an original way, the DM should award him 500 XP

### *Proficiencies*

A healer receives two weapon proficiency slots at 1stlevel and gains a new one every four levels (at the 4th level, 8th level, and so on). A healer suffers a -3 penalty when using a weapon with which he is not familiar.

A healer also receives four non-weapon proficiencies at 1stlevel and a new proficiency every three levels after that (at the 3rd level, 6th level, and so on). At 1st level, a healer must take both the Healing and the Herbalism proficiencies. These are the skills that define the healer as such, and without them he could not perform his duties. See the notes in the *Player's Handbook* for full details about how the healer can use these proficiencies to aid patients in healing in a natural, nonmagical manner.

As the healer progresses in levels, he must fill any new non-weapon proficiency slots with either the Healing or the Herbalism proficiencies. In this way, the healer actually progresses in his chosen profession.

Additionally, the healer can change any earned weapon proficiency into a non-weapon proficiency after 1stlevel. These slots are exchanged on a one on one basis: 1 weapon proficiency slot is worth 1 non-weapon proficiency slot. These transformed proficiencies do not have to be spent on Herbalism or Healing, but many healers choose to concentrate all of their efforts on improving their skills. Healers can choose from the general and priest non-weapon proficiency groups without any additional cost.

### *Extra Healing Abilities*

The fact that healers concentrate so heavily on their chosen art means that they gain extra abilities and bonuses from their Healing

and Herbalism proficiencies. Other classes may not receive these bonuses, no matter how closely they may follow the healer's path.

***Working with Poisons***

The healer adds an extra +1 bonus to his patient's saving throws vs. poison for every two proficiency slots he has in both the Healing and Herbalism proficiencies.

For example, Gnarvis spends two of his proficiencies on Healing and an additional two on Herbalism. Normally a character with the Healing proficiency could treat a poisoned wound and give the poisoned character a +2 bonus to his saving throw against the poison. Gnarvis, however, can add +3 to the saving throw. Gnarvis's old teacher Narlick is a legendary healer. He has spent six slots on Herbalism and seven on Healing. This means that he adds +5 (+3 added to the basic bonus of +2) to a poisoned character's saving throw.

***Working with Disease***

Similarly, a skilled healer has a better chance of treating disease. For every three slots of Herbalism, the healer receives a +1 bonus to his Healing proficiency roll when treating a disease.

Gnarvis does not receive any modifiers since he only has two slots of Herbalism. Narlick, on the other hand, receives a +2 bonus to his healing proficiency roll when he treats a diseased patient.

***Working with Mutliple-Patients***

Normally a character can only treat up to a maximum of 6 patients in a day. Healers, however, receive intense training in their field. To reflect this, healers can treat an additional patient per day for every slot of Healing that they possess. Gnarvis has two slots worth of healing and can handle up to 8 (6+2) patients. Narlick has 7 slots of healing and could treat 13 (6+7) patients at a time!

***Complex Wounds***

At the DM's discretion certain injuries can be more difficult to work on than others. If a character has been beaten below 0 hit points (and the optional death's door rule is in effect), the victim suffers from complications that make treatment very difficult.

In such cases, for each hit point of the patient below 0, the healer suffers a -1 penalty to his proficiency check. For example, if Martia was at -5 hit points when she was brought to Gnarvis, the healer would suffer a -5 penalty to his roll when trying to minister to her wounds.

***Focusing Attention***

Normally, a character with the Heating proficiency can only attempt to heal a particular patient once per day. A healer, however, can focus his attention on that patient and try several times to heal him. For a healer to focus his attention on one patient, though, he must spend less time with his other patients. In fact, a healer must give up the opportunity to treat two other patients for each additional healing attempt on the same patient. Furthermore, each successive attempt incurs a -1 penalty.

For example, Gnarvis currently has 10 people in his care. One of these patients suffers from a strong fever that the healer can't break. Gnarvis decides to focus his attention on the feverish patient. This means that two of Gnarvis' other patients cannot receive treatment from the healer this day. In addition, Gnarvis suffers a -1 to his healing proficiency check for the second healing attempt on the fever victim.

Note that a character Gin only be healed a maximum of 3 bit points per day from the Healing proficiency, Once a healer succeeds in restoring 3 hit points to a patient in a single day, there is nothing more he can do for the patient until the next day-

To work as a healer, a character must have access to certain tools and medicines. A healer's At costs 100 gp per level of the healer. Every time the character goes up a level, he must pay another 100 gp to upgrade his kit. If the kit is lost or damaged at any time, it must be replaced.

A healer can work without his kit, but suffers a -2 penalty to all Healing proficiency checks. Additionally, he cannot use his Herbalism proficiency to supplement his Healing proficiency without a healing kit.

***Offices and Hospitals***

Most healers work out of structure dedicated to treating the sick. The size of the edifice directly affects how many patients a heater can minister to each day, as he must have a bed for each patient. Maintaining an office or hospital costs money. For each bed available, the healer must generate at least 5 gp per month. Often the local government will pitch in to help a healer who cannot maintain an office or hospital. After all, it's in the best interests of the community to have a healer on hand for emergencies. However a the healer experiences a sudden windfall, the community will expect to have their funds repaid.

Often, several healers combine their offices to form a hospital. This is a way for the healers to share expenses while treating a large number of people.

When working in a hospital, the healer receives a +1 bonus to his Healing proficiency checks. This only applies if the patient in question actually has a bed in the hospital.

***Field Hospitals***

Many armies bring heaters along with them to set up field hospitals. These are often little more than a number of cots set up under a large tent.

Field hospitals are no place to practice real medicine. Usually, the wounded are patched up quickly and either sent back into battle or transferred to a real hospital. Healers receive an additional -1 penalty to their Healing proficiency rolls when working in a field hospital on patients who have less than 0 hit points.

Many field hospitals have priests on hand to tend wounded officers or heroes. Few regular soldiers ever see a priest when they are wounded. That privilege is reserved for the elite and (upon occasion) the critically wounded.

***Using Herbs***

In addition to his other requirements, the healer must keep a good stock of herbs on hand to use in poultices and medical concoctions. He can purchase these on the open market if he likes, or he can cultivate his own herb garden.

If he decides to purchase the herbs, a healer must spend 10 gp per level each month to maintain his supply. This assumes that he has a steady stream of patients upon whom he uses the herbs. Otherwise, the herbs will keep for 3d4 months before losing their effectiveness.

The price of herbs can skyrocket in certain circumstances. If the healer is in foreign lands, the price will double, as he will have to find local equivalents of the herbs that he uses back home.

At the DM's discretion, certain diseases may only be treatable with particularly rare herbs. Obtaining these herbs may not be as simple as going down to the market. If these special herbs are down at the market, they cost anywhere from 60 to 100 gp for a single dose.

In other cases, the herb may only be found in,,' exotic locals. This is cause for an adventure, as either the healer will have to go someplace to find the herb or he'll have to send someone to find it for him. More likely, the healer will hire on a party to locate the herb and accompany ~ them on their quest. After all, it's likely that th6 heroes wouldn't know how to locate or harvest; the herb in question.

***Herb Gardens***

Many healers maintain an herb garden of their own to save costs and guarantee a steady supply of the proper herbs. Healers who wish to cultivate an herb garden must take the Agriculture proficiency. Alternately, the healer can hire someone to maintain the garden for him, but that gardener would have to have the Agriculture and the Herbalism non-weapon proficiencies to successfully grow the proper herbs.

Maintaining an herb garden costs only 5 gp per level of the healer each month, but this is only if the healer performs the labor himself. Otherwise, it costs 15 gp per level each month to hire on a gardener. Most healers that have a home base start out keeping their own herb garden. It's cheap, easy, and it helps to pass the time between patients. However, at later levels, the demands on a healer's time become more substantial; most take on at least an assistant gardener to keep the herb garden in tip-top shape.

***Home Grown Bonus***

Home grown herbs, those cultivated by the healer himself, add a +1 bonus to any Herbalism proficiency rolls. The bonus is due to the higher amount of control the healer has over the quality of the herbs from his own garden.

In order for the healer to receive the home grown modifier, he must strictly maintain his garden. If the garden stands untended for even a day, the bonus lapses until the garden is brought back up to the healer's demanding standards or quality.

***Maintaining a Herb Garden***

If the garden remains untended for more than a week, any herbs taken from it actually give a -1 penalty to any Herbalism proficiency checks. Each week the herb garden is untended adds a cumulative -1 penalty-up to a maximum of -4.

Restoring the garden merely requires a little hard work. If the garden has been neglected for only a week or less, the healer must spend a half day restoring the garden.

However, it takes one full day to restore the garden for each week of neglect. A garden ignored for four weeks requires four full days of work to restore. The time needed to restore a neglected garden can never take more than a full week of gardening.

Many times, healers band together to share a garden. Sometimes they run it cooperatively, each taking a turn in the garden. More often, they simply hire a gardener to tend the herb garden for them and then split the costs. An herb gardener can only handle so many demands by himself, though,

A gardener can tend enough herbs to satisfy one experience level of his employers' demands for each point of the gardener's Agriculture skill. For example, a gardener with a score of 15 in his Agriculture proficiency could handle the demands of up 15 total experience levels of healers (three 5th-level healers, two 7th-level healers and a lst-level healer).

Once the healers' levels exceed the abilities of their single herb gardener (as they often do in hospital settings or with other large groups of healers), they must hire on additional herb gardeners to help take up the slack. Each additional herb gardeners demands another 10 gp per month in salary.

Herb gardens that sell their product to any healer are often headed by a single herb gardener and some underlings who possess the Agriculture proficiency. Herbs purchased from these gardens do not give the Herbalism proficiency bonus associated with private gardens. However, the underling gardeners only cost 5 gp per month to hire.

Stingy healers can maintain a garden like this if they like, but they will suffer the loss of the bonus. Many hospitals run a secondary garden with herbs available to outside healers, and in that case, they use this method for the non-personnel herbs.

***Apprentices***

Healers do not gain any followers-unlike members of player character classes. However, healers often pick up apprentices in the course of their business.

Once a healer reaches 5th level, he attracts a single apprentice every time he gains an additional level. The apprentice only remains in the healer's service until the healer himself goes up three full levels in experience. At that point, the apprentice becomes a 1st-level journeyman healer.

Most healers only have up to three apprentices at a time, but the most famous and renowned healers attract even more. At 8th level and above, the healer attracts up to three apprentices per level. Each of these is ready to leave after their master attains one more level of experience. Those apprentices that were retained at the master's 6th and 7th levels can leave automatically when their master reaches the 8th level.

At 10th level (and each level thereafter), the healer attracts another healer of five experience levels less than himself. This master apprentice hopes to glean knowledge from one of the legendary practitioners of the healing arts. However, this apprentice is already a healer, and only stays until the master healer attains the next level of experience. At that point, the master apprentice gains another level for himself and can leave the healer's service.

Apprentices require a lot of their master's time. A healer must surrender the opportunity to work on one patient a day for every apprentice he has. This relationship cannot be neglected except in the most dire of emergencies.

Of course, apprentices can help the healer as well. While in his service, they each possess the Healing and the Herbalism proficiencies at half (round up) the level of their master. In addition, they can attend up to four patients per day (their studies take up the rest of their time).

Once an apprentice becomes a 1st-level healer, he is not obligated to leave. If the master healer desires, the new healer can join his practice as a journeyman healer. However, if there is not enough local demand for another healer, the master sends the new healer off-possibly with a letter of recommendation.

***Gnarvis***

Gnarvis the Healer
Male Human Healer

Str: 11
Dex: 9
Con: 15
Int: 12
Wis: 18
Cha: 12
Armor Class: 7 *(robes +3)*
Level: 4
THACO: 19
Movement: 12
Hit Points: 20
Alignment: Lawful Good
No. of Attacks: 1
Special Attacks: None
Special Defenses: None
Weapon Proficiencies: Dagger, staff.
Non-weapon Proficiencies: Healing (17), Herbalism (10).
Equipment: *Robes +3*, healing herbs, staff, knife (surgical).

Gnarvis is a young journeyman healer who graduated from his apprenticeship just over a year ago. After leaving his master, Gnarvis decided to return to his family's ancestral home in the bayou portion of the necromancer's swamp. Most of the area had long since been twisted into something unholy by Cardax's spells, but some small pockets of resistance have held out.
The young healer has kept himself busy over the past year, tending to those in the bayou who lead the resistance movement against Cardax. Gnarvis is not a fighting man, but his skills are highly valued by those remaining in his community. Equipped with only his herbs, his surgical knife, and the robe his master gave him as a parting gift, Gnarvis has given his fellows more cause for hope than any swordsman.

Role-playing: Gnarvis is quiet and confident. He knows that the necromancer could likely destroy the entire bayou if he wanted, but the simply fact that he has yet to do so has encouraged the young healer.
Gnarvis is more than just a healer to the people of the bayou. To them, he represents hope. After all, he didn't have to return to the horrors of the bayou, and no one would have blamed him if he'd taken his education and set up shop in a thriving metropolis far from Cardax. No one, that is, but Gnarvis himself. His sense of duty keeps him where he knows he belongs. Combat: Gnarvis does not like to fight, but he has been trained in the use of his staff. He will only use it to defend himself or if the life of a friend is in danger. Otherwise, he prefers to retreat. He is a healer, and it is not in his nature to willfully damage sentient beings.

# *Chapter 8: The Historian*

*Martia slogged through the muck on the outskirts of the bayou as she searched for the hut of Gnarvis's friend. She'd been looking for nearly an hour already, and the sun would be setting soon. Martia did not want to be caught out of doors after dark. Gnarvis's other patient had been a vibrant example of just how dangerous the swamp could be.*

*Martia had been horrified when the man crawled feebly to the healer's door. Most of the man's face was missing, but Gnarvis had been confident that the poor soul would survive his wounds. Gnarvis could do nothing to reconstruct the man's face, though, and there was little chance the wounded man could afford a cleric's healing touch. He would bear his scars for life.*

*"Palcher here is one of the lucky ones," noted Gnarvis. "He'll actually have a chance to heal. Most people who encounter the necromancer's minions end up deceased-or worse."*

*"Or worse" meant that those who once fought bitterly against Cardax's every advance would now forcibly find their way into his service.*

*"It has been going on for years. Brothers are forced to take up arms and defend themselves against their own brothers, who, only a week before, were fighting against the monstrosities. Sometimes, we must even fight against our grandparents. " With these word, Gnarvis had grown even more solemn.*

*"My father's father roams the swamp these days, although he's been dead and gone for five years. As of last month, his son-my father, fights at his side." Gnarvis had blinked away the water filling the corners of his eyes.*

*"That's why I came back. That's why I can never leave until Cardax is dead!"*

*Coming from the gentle healer, these harsh words had cut deeply. Soon after hearing them, Martia had rededicated herself to her purpose.*

*While she was recovering from her injuries, Martia had realized that there was no way she could make it through the necromancer-tainted portion of the swamp on her own. Even if she did, Cardax would certainly see her coming from over a league away. A frontal assault on the keep was out of the question.*

*She confessed her fears to Gnarvis, and the young healer had told her of a lesson that his grandfather had once taught him. "Grandfather was a great warrior. He wasn't as strong, as tall, or as skilled with a blade as other fighters, but he was smart."*

*"'Know Your foe,'he always said to me. 'To get rid of the largest oak, you attack the trunk, not the branches.' Whether tha tfoe is a head cold or a kobold, that maxim always holds true. Once you know all you can about your foe, you've increased your chances to destroy that enemy. Then you can avoid all those distracting branches and destroy the trunk."*

*"But how can I discover more about Cardax" Martia had complained. "He's been around for so long, and rumor has it that he's long since killed I anyone who possessed any knowledge of his origins. "*

*"Not everyone," Gnarvis had smiled.*

*Now, Martia found herself stumbling through the swamp on the outskirts of the bayou. Exhausted, her injuries still sapping some of her strength, she sat down on a log to rest.*

*As she did, an arrow pierced the air over her head. Her fatigue fell away, and she threw herself into the mucky ground and scrambled for cover, When she finally came to a stop behind a rock, she realized someone was laughing at her.*

*"My dear Martia," cackled the voice, "you are your father's daughter."*

*Who are you?" Martia demanded, more spooked than she cared to admit.*

*"Grahlista," came the voice again, but this time from behind Martia.*

*She whirled back around and came face to face with an elderly woman holding a cocked crossbow pointed at her heart. "As any good historian will tell you dear, 'Know your foe."'*

"Those who ignore the past are condemned to repeat it." This cliche says a lot about a historian's function in society, including one based on fantasy. History plays a vital part in any fantasy role-playing game. Without a decent history, a setting can seem hollow or two-dimensional.

Many questions remain unanswered in such a low-detail fantasy campaign. Where did all the powerful magical items and artifacts come from? How did the king of the largest nation come to power? What kind of wars has this nation fought with its neighbors? Fantasy campaigns high in detail, however, often have answers to these questions. The historian NPC plays an important role in such worlds, as he is the chronicler and guardian of important information. Bards still spin juicy tales of the past in taverns across the world, but historians are more interested in the factual components of these tales rather than the way in which these tales are performed.

The historian's job also includes learning from the past and applying these lessons to "present day" life. Some gifted historians can even predict future events based on centuries of collected data.

Over the years, historians research deeper and deeper into the past, hoping to discover new details and gain some further understanding of what has gone before. They hone their understanding of the past to a razor's edge, and with that edge, they attempt to pierce through the veil of time and arrive at the truth.

### *Experience, THAC)0 and Hit Dice*

Historians, like any other character class, have their own level advancement as shown on Table 23: Historian Experience Levels below.

In general, historians are bookworms who spend their days gathering, collating, and analyzing facts. Sometimes, however, the lure of new information leads them into mysterious-and perilous-waters.

At these times, historians must rely upon heir skill with a blade instead of the sharpness of their wits. For these reasons, historians use the rogue's THACO and saving throw table. In addition, historians receive a c16 Hit Die for each level up to the 8th, and gain 2 hit points for each level of experience above the eighth.

***Table 23: Historian Experience Levels***

| Level | XPS | Hit Dice (d6) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1,200 | 2 |
| 3 | 2,400 | 3 |
| 4 | 4,800 | 4 |
| 5 | 9,500 | 5 |
| 6 | 19,000 | 6 |
| 7 | 38,000 | 7 |
| 8 | 76,000 | 9 |
| 9 | 150,000 | 8+2 |
| 10 | 300,000 | 8+4 |
| 11 | 450,000 | 8+6 |
| 12 | 600,000 | 8+8 |
| 13 | 750,000 | 8+10 |
| 14 | 900,000 | 8+12 |
| 15 | 1,050,000 | 8+14 |
| 16 | 1,200,000 | 8+16 |
| 17 | 1,350,000 | 8+18 |
| 18 | 1,500,000 | 8+20 |
| 19 | 1,650,000 | 8+22 |
| 20 | 1,800,000 | 8+24 |

### *Ability Scores*

Relatively few people are drawn to the academic world of the historian. Aspiring historians must know how to read and write, and have decent penmanship so that future generations can draw upon their works. They must also be able to perceive how seemingly disparate historical events link together in an intricate web. In addition, historians must stud), ancient and modern languages and cultures to broaden their perspective.

More than anything else, historians must possess a driving curiosity. It is this absolute need to know that draws them out of their libraries and into the wilderness.

For these reasons, all healers must have a minimum Intelligence of 12 and a minimum Wisdom of 10. The historian's prime requisite is Intelligence.

### *Permissible Armor and Weapons*

Some of the most famous military units or mercenary organizations actually had historians dedicated to their unit. These military chroniclers often fulfilled other duties, such as healing the wounded and training recruits in the basics of military strategy. Their main duties included keeping a record of the organization7s successes and failures, as well as knowing the name of each and every member of the unit.

Historians cannot wear any armor heavier than chain mail, as these chroniclers require mobility and a clear field of vision. Otherwise, they will never be able to record their observations.

Historians can wield a club, dagger; dart, hand crossbow, knife, lasso, sling, short sword, and staff. However, these academics usually prefer their quill, inkpot, and blank book with which they record their findings.

Historians often think of themselves as journalists for future generations. They try to be impartial and rarely have any reason to involve themselves in the middle of the action.

### *Individual Experience Awards*

Historians earn experience points in their own unique way, as they tend to focus more on how and why things happen. This affects how they learn from their adventures.

Usually, a historian's main goal in life has nothing whatsoever to do with material wealth-although many historians struggle with the necessity of raising funds to support their studies. Instead, they earn points for learning new things and recording important events, thoughts, discoveries, and experiences for the benefit of others.

### *Attending Events*

Some historians glean all of their information from other people's sources-such as books, maps, and libraries. These historians are most often interested in events beyond the memory of most living people. Other historians like to wade in the thick of things so that they can report on modern day events. Eyewitness accounts are essential to any chronicler of modern events.

Historians, then, should seek out important events to witness with the eventual aim of becoming a chronicler of the events. To this end, they receive experience points for simply showing up at an important event and paying attention to it.

Generally speaking, the historian will not become directly involved in the action. Even so, he earns experience for being present at events. The more important the event, the greater the experience. The average amount of experience points that a historian should receive for attending an event is equal to one-fourth of the total XP value for the event in question. A DM should only increase the XP award if the event is truly important, such as the death of a king on the battlefield.

### *Learning Facts*

Similarly, every time the historian learns an important new fact, he cams experience. This award can be in addition to the awards for attending an event. This means that the historian actually earns more points for attending an event and learning new facts from the event.

These new facts cannot only be new to the researcher; they must in some way advance the scholarship in a particular field. For example, Grevnar, a student of contemporary history, learns that the ancient battle of Fo-Chu took place on a volcanic island. As it turns out, this information is part of the established body of knowledge surrounding the battle, so Grevriar would not receive any experience points. If, however, Grevriar discovered that the battle of Fo-Chu never really took place at all, he would gain some experience points.

The amount of experience awarded is based upon the importance of the fact. If the fact is fairly mundane, then the DM should only award 100 XP. However, if the historian manages to learn something earth-shattering -like the fictitious nature of Fo-Chu-he should earn 1000 XP.

***Recording Facts***

Learning facts is not the only job an historian undertakes. He must also record his knowledge, otherwise future generations will not benefit from his work.

Recording facts is a lot easier than discovering them. The historian must simply write his findings down. Eventually, these findings may be copied and find a place in a well-stocked library.

An Historian should receive approximately one quarter to one half of the experience he earned for learning the fact. Note that the historian does not receive experience points for recording common facts.

***Telling Facts***

Many historians come from pre-literate cultures that value oral tradition. These historians do not know how to read or write; their histories are handed down throughout the years in the form of stories. These historians earn their title by committing these tales to memory. They are the guardians of their culture's mythologies and histories.

Historians also receive experience points by telling the histories carried in their head. To actually earn the points, the historian must take the time to tell the tale to a PC or NPC who is actually listening to the story. These NPCs cannot just babble endlessly on a city street-corner and receive experience points.

Each time the historian tells a tale, he earns a number of experience points equal to one tenth to one half the number of XPs he earned for learning the facts behind the tale. Thus, the amount of experience depends on the importance of the tale.

An historian can earn points for retelling a history, however, the tale must be a new one for his audience. Thus, he couldn't sit in a tavern and earn XP for endlessly repeating one boring history.

The DM should make an appropriate History check (either local, modern, or ancient-depending on the nature of the tale) to determine how well a historian recounts an event. If the check is a success, the historian manages to tell the tale in an enthralling and informative manner. If the check fails, the historian's dry recitation of the tale actually causes a large majority of his audience to wander away; he receives no XP for such a failed effort.

***Proficiencies***

An historian receives two weapon proficiency slots at 1st level and earns a new one every four levels (at the 4th level, 8th level, and so on). Historians suffer a -3 penalty when using a weapon with which they are not proficient.

An historian also receives four non-weapon proficiencies at the 1st level and gains a new proficiency every three levels after that (at the 3rd level, 6th level, and so on). At 1st level, an historian must take either the Ancient History or the Local History proficiency. Many historians will take both, but some prefer to specialize in one or the other. See the "Proficiency" chapter in the *Player's Handbook* for full details on these non-weapon proficiencies.

The historian is strongly recommended to take the Reading/Writing proficiency as well. Without it he is unable to gain any experience for recording facts.

As the historian progresses in levels, he is not required to fill new non-weapon proficiency slots with any particular proficiencies. Historians do not need to increase their historical proficiencies as they progress in level-although most of them do.

Historians can, if they like, exchange any and all of their weapon proficiencies for non-weapon proficiencies-although they must take at least one weapon proficiency at 1st level. The proficiencies are exchanged on a one-for-one basis.

Certain non-weapon proficiencies can aid the historian in his work. These are: *Heraldry: With this proficiency, the historian can recognize symbols and family crests. This can be exceedingly important in the historian's line of work, as he generally spends much of his time concentrating on noble or famous families.

*Musical Instrument: Oral cultures often set there ancient histories and mythologies to music. An historian with this proficiency (or the Singing proficiency) receives a +1 bonus to his History proficiency roll.

*Languages: The study of languages is absolutely essential for any serious student of history. This is particularly true of historians who study ancient history. Without the Ancient Languages proficiency, these historians cannot translate eyewitness accounts of long-past events.

At best, language deficient scholars must depend on someone else's (possibly incorrect) translation. At the very least, their is a high probability that the translated text will not contain any of the subtle nuances of the original text. In fact, historians who use translated texts when researching an historical event receive a -1 penalty to their History proficiency roll.

***Other Proficiencies***

Many other proficiencies can be useful for a historian at the proper moment.

Having an applicable proficiency to use on a given historical situation confers a bonus (usually +1 for each relevant proficiency brought to bear on the situation) to an historian's History proficiency check. For instance, an historian with the Armorer proficiency receives a +1 modifier to his History proficiency roll when he attempts to identify a piece of ancient plate mail that once belonged to a famous warrior.

If the application of the non-weapon proficiency to the historical check is particularly tenuous, the historian must successfully make a check of the applicable proficiency before conferring the bonus.

Historians can choose proficiencies from the general, warrior, rogue, and wizard non-weapon proficiency groups without additional costs.

***Character Kits***

The incredible depth and breadth of historical study lends itself to specialization. It just isn't practical to attempt mastery over every single subject in every single time period of a given campaign world. Thus, most historians concentrate on certain periods or subjects within the field of historical scholarship.

Four of these specialists are presented here in the form of Historian Kits. These four kits are by no means representative of the entire field of historical scholarship. Dungeon Masters are encouraged to create kits of their own that reflect the uniqueness of their particular campaign worlds.

### *The Ancient Historian*

The title of this kit refers to the character's area of concentration, not his age. Ancient historians prefer the comp any of musty old tomes to that of most other creatures and spend much of their time nestled in underground carrels of vast libraries.

The majority of ancient historians' discoveries come from new insights gleaned from ancient texts. In addition, these historians develop new theories about established historical facts and principles.

For the most part, members of this kit delve into past events with little concern about how their discoveries may affect "contemporary" life. That kind of understanding will come with time.

**Requirements**: Ancient historians must memorize and organize vast storehouses of seemingly disparate facts and then synthesize them into a meaningful whole. For this reason, they must possess a minimum Intelligence score of 14 -in addition to the standard requirements for a historian.

**Role**: Ancient historians rarely accompany heroes upon epic adventures. However, they may be the impetus behind such adventures. For example, an ancient historian may require a rare tome to complete his studies, so he hires some heroes to retrieve it from its current location.

Also, the heroes may occasionally require the services of an ancient historian. Who else could accurately tell them the particulars of the ancient curse which protects an artifact they've been hired to find.

Governments and nobles often commission these historians to gather and maintain national records and histories. In addition, some ancient historians specialize in the history behind magical items or artifacts (using the Spellcraft non-weapon proficiency).

**Weapon Proficiencies**: Dagger; dart sling, and staff

**Non-weapon Proficiencies**: *Required:* Ancient History, Ancient Language, Reading/ Writing, and Heraldry. *Recommended:* Modern Languages, Spellcraft.

**Equipment**: Ancient historians must have access to major libraries to continue their studies. Without this access, they cannot progress from level to level. In addition, they must maintain their own personal libraries.

Keeping a personal library costs an ancient historian 250 gp per level. Thus, a 4th-level ancient historian must pay 1,000 gp to maintain his personal library. The historian must pay this amount when he reaches the next level. He will not receive the benefits of the new level until this amount is paid.

An ancient historian rarely strays far from his library and always keeps a notebook, a pen, and a bottle of ink with him just in case.

**Special Benefits**: Ancient historians receive a +2 bonus to all Ancient History proficiency checks. This is due mostly to their strong relationship with librarians and book sellers in their area. These merchants and scholars provide the ancient historians with first crack at the finest research materials.

Additionally, an ancient historian can seek out a Patron to cover the costs of maintaining his personal library. To successfully do so, the ancient historian must make an Ancient History proficiency cheek every time he advances a level (the check can be made at 1st level). If he succeeds, the historian has found himself a patron and does not have to pay the library upkeep fee this level.

The ancient historian must make this roll every level in order to keep his patron. If he fails, the patron discharges him, and he must somehow come up with the library upkeep be himself. He can try again for another patron (or even the same one) when he reaches the next level of experience.

Any time that the ancient historian fails such a check, though, he suffers a cumulative -1 penalty to his chance to retain a patron the next time he attains a new level of experience. This prevents the ancient historian from abusing his patron's good will.

The ancient historian's patron may also help with other costs. Often the patron will provide the historian with meals and a place to sleep. Upon occasion, the patron may even finance purchases of truly rare and important tomes or historical pieces. Alternatively, the patron may agree to finance an expedition to locate such items. Either way, the ancient historian must make a check against his Ancient History non-weapon proficiency to convince his patron that the item is worth the cost and effort.

**Special Hindrances**: Ancient historians must always appease their patrons. For example, ancient historians must ask their patrons' permission to leave town. Whenever an ancient historian wishes to leave town, the DM should roll an Ancient History proficiency check. If the roll fails, the ancient historian does not have permission to leave.

The ancient historian can ignore his patron and leave against his wishes. However, he will immediately lose his patron's support. When the historian reaches the next level, his attempt to find a new patron (or reestablish relations with the old one) becomes quite difficult. In fact, the historian must make a History proficiency roll with a -4 penalty to determine if any patron will have him.

### *The Chronicler*

The chronicler (also known as a local historian) is more concerned with the development of history on a daily basis than the ancient historian. He collects stories both legendary and mundane and spins them into epic tales and simple parables, all for the entertainment and edification of those around him.

Many chroniclers travel around quite a bit. in an effort to keep up on current events. In a very real sense, they are the reporters of their time. Without the news that they bring with them on their journeys, people living in remote areas would know little or nothing of their distant neighbors.

Chroniclers are often itinerant wanderers with no place to call their home. They do not have a patron to support them. Rather; they make their living by their knowledge and wits.

Chroniclers spend their days talking to people and learning as much as they can about the histories of the places they visit. Sometimes they record these tales in a book, but more often they simply memorize them.

Many chroniclers use music and song to recount their tales. The music acts as a mnemonic device that helps the chronicler organize and dispense the vast amount of knowledge he possesses. In this respect, chroniclers are much like bards, except that they have no magical powers as such. They rely only on their wits and memories.

**Requirements**: In addition to the standard historian's requirements, the chronicler must have a minimum Charisma score of 13. This is due to the fact that a chronicler must spend much of his time pumping people for new stories. The remainder of his time is spent relating chronicles to a largely illiterate populace. Without some degree of personal charm and stage presence, even the most knowledgeable chronicler will have trouble attracting and keeping an audience.

**Role**: The chronicler can be encountered in just about any situation. He likes to travel and his cuHosity often endangers his health. Heroes may find themselves forced to protect a chronicler from an angry crowd.

Adventurers may also find themselves in need of the chronicler's services, as he probably knows every important detail of the area in which he wanders. Often, the chronicler's insights into local politics and current events can be quite enlightening.

Adventurers who wish to make a name for themselves need look no further than the chronicler. Of course, they will probably need to back up their tales of prowess and glory with some sort of evidence. However, chroniclers may ask permission to join an interesting group of adventurers in order to carefully record their heroic deeds.

**Weapon Proficiencies**: Dagger, dart, staff, short sword, and sling.

**Non-weapon Proficiencies**: *Required:* Local History, Etiquette, and Singing. *Recommended:* Reading/ Writing, Musical Instrument.
**Equipment**: Chroniclers do not require any specific equipment-although some carry notebooks filled with collected stories.
Chroniclers who don't keep notes of their stories must make a Local History proficiency check every time they wish to recall an appropriate story. If they fail this check, they can try again the next day.
**Special Benefits**: Chroniclers receive a +3 bonus to their Local History proficiency roll when attempting to recall an event from memory. These Historians spend much of their time telling and retelling their stories until they become second nature.
**Special Hindrances**: The chronicler is exceedingly curious. He tends to ask questions when he should keep his mouth shut and he constantly sticks his nose into other people's business. For this reason, a chronicler suffers a -2 penalty to his Charisma score when dealing with people who have something they wish to hide.

### *The Annalist*

The annalist is an historian who concentrates solely on a specific topic. The annalist devotes his life to chronicling and maintaining the history of his specialty. Commonly, this specialty area is the proceedings of a royal court or some other form of government. However, annalists sometimes attach themselves to a particular town or wandering mercenary unit.
The annalist is the undisputed expert in his chosen topic. He spends his days listening to tales and recording them in black and white for the edification of future generations.
Many powerful people or organizations wish to be remembered long after they are dead and gone. This is the annalist's task. He maintains meticulous records about his topic and organizes the data in easily recognizable threads or tales.
The annalist often reads some of the histories he has recorded to his employer. Sometimes, he even delves into tomes created by those who have gone before him to find a story appropriate to the situation or the moment.
These tales are sometimes read at affairs of state or before a unit is about to march off to battle. They remind listeners about the traditions and duties they have sworn to uphold. In addition, these tales remind the audience that they are part of something larger then themselves.
**Requirements**: The annalist must organize vast amounts of information and boil it down to a meaningful tale. Also, he must relate that tale to an audience in an entertaining or commanding way. As such, the annalist must possess a minimum Intelligence score of 14 and a Charisma of 12. This is in addition to the regular historian requirements.
**Role**: The annalist usually attaches himself to some larger organization or important personage. Heroes may encounter an annalist any time they run into a person or group with a real sense of history about its family or itself.
Some adventurers may even hire an annalist to record their deeds. Annalists charge 5 gp per week, but this fee can escalate depending on what other duties the annalist must perform.
Some annalists have a great deal of "down" time between their historical duties. Usually, they fill this time by performing other duties for which they charge extra. Annalists who travel in dangerous areas where they must defend themselves-such as a dungeon usually demand a share of any discovered treasure from their employers.
The annalist is an almost inexhaustible source of information about his specialty. However, an annalist will never part with any information without the permission of his employer.
**Weapon Proficiencies**: Dagger, dart, staff, sling.
**Non-weapon Proficiencies:** *Required:* Ancient History, Local History, Reading /Writing. *Recommended:* Singing, Musical Instrument.
**Equipment**: The annalist requires little in the way of equipment. An annalist always carries a blank notebook, a pen, and a bottle of ink with him, just in case he should be required to begin an annal on he spot.
An annalist also has access to his employer's library. This library may contain several volumes dedicated entirely to the annalist's specialty. These books are very likely supplemented by ancillary texts concerning matters related to the main topic.
The cost of maintaining the modest library is borne entirely by the annalist's employer. If and when the annalist leaves his employer's service, he may not take any of his employer's books. In addition, all of the annalist's work becomes the property of his employer. If he Waves under good terms, the annalist may make copies of whatever he wishes.
**Special Benefits**: After spending an entire level with the same employer, the annalist receives a +3 bonus to any proficiency rolls related to the annalist's topic. When away from his employer's library, the annalist still receives a -3 penalty to both Ancient and Local History checks.
Spending an entire level with an employer means that every point of experience for that whole level must be earned while in the employ of that person or organization. If the annalist earns even 1 XP while away from his employee's service, he does not receive the bonus.
**Special Hindrances**: The annalist is bound to his employer. He knows little else about the history of matters outside his area of expertise. In fact, an annalist suffers a -3 penalty to his Local and Ancient history proficiency rolls when investigating matters outside his area of expertise.
In addition, the annalist cannot simply leave his employer at he drop of a Init If he does, the annalist abandons his kit and becomes a regular historian, losing one level of experience in the process. For example, if a 7th-level annalist leaves his employer, he loses all annalist bonuses and becomes a 6th-level historian.
If the annalist ever returns to his former employer, he regains his lost level. However, most employers simply refuse to rehire an annalist who abandoned them.

### *The Collector*

The collector is an historian interested in the physical remains of history. Historical tales are simply backdrops that enhance the collectable nature of rare antiquities; these stories imbue the item with a value that transforms it from an ordinary item into a truly wondrous museum piece.
Collectors can be found in the field much more often than typical historians. They scour the earth looking for the valuable bits and pieces of the past that they desire. They can expound for hours upon their favorite subjects, often to the point of boring those around them. However, these collectors don't care; they are almost lost in the mists of time.
Collectors do not study history for the purpose of entertaining others or keeping records. They desire only the fortune and prestige that comes from owning historical antiquities. Of course, many collectors profess (and actually have) altruistic motives for their passion. They believe that their work confirms the theories of their more desk-bound brethren.
Competition between collectors is quite stiff. Those who run in the same circles and share the same interests are quite aware of each other. They butt heads in the field as often as they do in the classroom. After all, they are competing for the possession of unique objects.
**Requirements**: Collectors spend a lot of time interacting with other people in the field. Sometimes they are called upon to fight for what

they want (or already own). For these reasons, coHectors are more physical than regular historians.
As such, collectors must have a minimum Strength score of 10 and a minimum Constitution score of 12.
**Role**: The collector can be encountered while working alone or with a group. They tend to enjoy traveling by themselves, as they are often distrustful of others.
However, even the greatest collectors need assistance from time to time. This is especially true if one or more of their competitors gathers a force of minions to unearth an item. In such cases, a collector may feel compelled to hire a few adventurers.
Other times, a collector may find himself in competition with adventurers. Perhaps both groups are striving to unearth a particularly rare item. A serious collector will do his best to ensure that the item in question finds its way into his collection.
Many collectors concentrate their efforts on acquiring particularly powerful and unique magical items. Entire adventures or even campaigns can be driven by the importance of finding just one special magical item.
**Weapon Proficiencies**: Club, dagger, dart, mace, sling, and short sword
**Non-weapon Proficiencies**: *Required:* Ancient History and Appraising. *Recommended:* Reading/ Writing, Etiquette, Local History, Disguise, Forgery, Tracking, Modern Languages, and Ancient Languages.
**Equipment**: Collectors do not require any special equipment. They usually dress appropriately for the surrounding locale, as they do not want to draw any attention to their work and alert competitors to their presence.
A s soon as word gets out that a particular collector is in a certain area, all of his competitors will descend on that region, determined to beat the collector to his discovery.
A collector's rank among his fellows is based upon a system of one-upmanship. Those who consistently outperform their competitors earn the most respect.
**Special Benefits**: Collectors can wear any kind of armor they wish-including plate mail. However, most collectors eschew anything heavier than chain mail, as it is quite difficult to remain inconspicuous while tromping around in a suit of field plate armor.
**Special Hindrances**: Collectors must constantly add to their collection. In fact, they must procure one important piece for their collection each level. Collectors are unable to advance to the next level if they

have not attained an important piece-even if they have enough experience points.
The items needed are often magical in nature-particularly when trying to reach the 8th level and above. For this reason, many collectors possess more magical items than one might expect for a historian of their level. This is another reason why collectors try to maintain a low profile. Their wealth makes them obvious targets for thieves and other rogues.

***Grahlista***
Grahlista the Chronicler
Female Human Historian

Stn 8
Dex: 11
Con: 12
Int: 13
Wis: 15
Cha: 14
Armor Class: 8 (leather armor)
Level: 6
THACO: 17
Movement: 12
Hit Points: 22

Alignment: Chaotic Good No. of Attacks: 1 Special Attacks: None. Special Defenses: None. Weapon Proficiencies: Short sword, hand crossbow. Non-weapon Proficiencies: Local History (15), Etiquette (14), Singing (14), Musical Instrument flute] (10), Reading/Writing (14), Ancient History (12). Equipment: *Lute +3* (+3 bonus to musical instrument proficiency rolls made while playing this lute), hand crossbow and 20 bolts, short sword, leather armor, half-filled notebook, pen, and a bottle of ink.

Grahlista is one of the gruffest chroniclers around. She has a hard exterior, but also possesses a heart of gold. Grahlista spent her entire life in the swamp. She was born and raised there, and she plans on dying there.
Everyone in the area knows of Grahlista. In one sense, she is the annalist of the community She is the repository of all the tales and legends handed down to her by her predecessor.
Role Playing: Grahlista is distinctly unfriendly to those she doesn't personally know. Cardax has made the bayou a dangerous place, and as the keeper of the bayou's tales, Grahlista knows she must be extremely cautious in these dark days.
Grahlista warms up to people quickly once she establishes that they are not minions of the necromancer. She is always eager to hear new tales and to find a new audience for her stories. Despite the fact that the people of the bayou have heard Or yarns over and over again, they still love to listen to her ringing voice. However, Grahlista always enjoys a new listener.
Combat: Grahlista is long past her prime, but does not show it. She aggressively protects her territory and prefers to attack from ambush.

# Chapter 9: The Scribe

*Grahlista had been most informative. It seems that Cardax had once been a powerful advisor in the court of Martia's grandfather before he turned to black magic. After the death of Martia's grandmother, her grandfather had been overcome with grief. He ordered his strongest wizard and his best friend to come up with a method to return the beautiful young queen to life.*

*Martia's grandmother, a raven-haired beauty named Manditia, had been assassinated by a killer from a rival kingdom. Not only had the hired blade stabbed the young lady in her sleep, he had also decapitated her. Without that vital piece of her anatomy, even the most devout priests in the kingdom could not restore the young queen to life. She was forever dead.*

*However, Cardax had been unwilling to accept that verdict. He tossed himself into the study of necromancy and disappeared from court entirely while he apprenticed himself to some of the darkest wizards to walk the planet.*

*Even though the young wizard mastered all of the dark arts, he still couldn't raise the queen from the dead. The strain of his frustration and the evil pacts he had made with extraplanar fiends finally shattered Cardax's sanity. He had staged a coup in the kingdom, killing the king and forcing the royal kin to flee for their own safety. In his madness, he set himself up as the supreme ruler of the kingdom and began his conquest of the entire continent. Cardax's, reign had become synonymous with terror; the evil necromancer executed anyone who publicly disagreed with him and then restored the victims to unlife. The numbers of his undead minions had swelled until he was the terror of the entire region. The surrounding nations had swiftly banded together and had driven Cardax's legions back within his nation's original borders.*

*After relating all was this to Martia, Grahlista had reached into* it *trunk at the foot of her bed and withdrew a scroll. She had unrolled it, showing it to Martin. "This scroll was stolen front Cardaxs keep while he was away at the capitol. These days, it's impossible to get within 100 yards of the place, but back then, when his attention was elsewhere, it was not so difficult."*

*She had pointed to the writing on the page. It was in a strange set of characters that Martia could not read. Grahlista had cackled sarcastically. "No one can read it, child. The language in which it is written hasn't been spoken for centuries.*

*"Legend has it that the words on this scroll hold the key to Cardax's downfall. You will need to return to the capital to get it deciphered. There are none here who are the equal of such a task.*

*"In the city, there is a man named Wilshire. Long ago, he was the finest scribe that the country had ever seen. He has spent many years in the service of Cardax, but now that the necromancer has been driven back to his keep, you may find that he is willing to help. May the wind be at your back, child, for Cardax will not suffer being trapped in this swamp for long."*

*The hovel was dark, but even so, Martin could smell the filth. The warrior cursed her luck. It looked like yet another rumor had led her into another dead end. The scribe had gone into hiding after Cardax's fall, afraid of possible repercussions for his work with Cardax. Word was that he had been too scared to brave the wilderness. Martia's contact had been sure Wilshire would be here. She kicked down the door and stormed in, hung her lantern high above her head, she saw a lumpy mattress in one corner of an otherwise barren room. A filth-encrusted man sat upon it and blinked into the light. "Wilshire!" Martin demanded. The man nodded meekly. "Welcome back to the land of the living. You're coming with me."*

Very few people in medieval society actually possessed the ability to read and write-despite the fact that the written word had been in use for centuries. Most people went about their daily lives occupied with more practical concerns. Writing and reading were best left to the nobility, cloistered clerics and wealthy merchants.

In most fantasy worlds, however, the ruling classes routinely write proclamations, writs, and contracts. Spellbooks and thaumaturgical texts contain mostly written words, and even maps use written labels.

This means that the ability to read, while actually held by few is needed by many The basic laws of supply and demand have created a market in which literate people can sell their services to those who cannot read or write-often at exorbitant prices.

Scribes are also useful to the literate community. Long before the invention of the printing press, copies of books were made by hand. These highly trained professionals laboriously duplicate each and every penstroke from an original to a fresh new copy.

In addition, many scribes specialize in translating w6hen words from one language into another. This can be a vital means of communication, particularly between nations. In a particularly tense diplomatic situation, a mistranslated phrase could actually have the power to hurl both countries headlong into war.

More experienced scribes are even of use to wizards. These scribes can read magic, just like a thief, and even copy spells and scrolls. Most powerful wizards employ a scribe to handle most of the "mundane" magical copying-such as transferring low-level spells and copying simple scrolls.

### *Experience, THAC) and Hit Dice*

Scribes have their own level advancement scheme as shown on Table 24: Scribe Experience Levels below. Scribes are the white-collar workers of medieval-fantasy society. They spend their days entirely indoors, slaving away over new and ancient documents. They often work late into the night and their eyesight suffers badly from poorly lit conditions. For these reasons, scribes use the wizard's THACO and saving throw tables.

Scribes are rarely known for their abilities in combat. In fact, these generally nonactive NPCs are more likely to flee an impending conflict than defend themselves. In addition, a scribe's time does not allow him leisure to work on his physique.

Because of this, scribes receive one d4 as a hit die for each level of experience up to the 8th. These NPCs only gain 1 hit point per level after the 8th and do not receive bonus hit points from high Constitution scores.

### *Ability Scores*

Good scribes are as hard to find as honest merchants. A scribe is in a position of complete power when employed by an illiterate person. Few such people have enough gold to double-check the scribe's labor, and so "conning" an individual who can't read or write is easy to accomplish.

Honest or otherwise, the scribe needs to be able to read and write impeccably. He must have excellent penmanship and an excruciatingly accurate attention to detail. Without these, he will make too many mistakes to remain in business.

Of course, the scribe must also possess an ability to understand foreign languages. Otherwise, his value to certain employers (those who tend to pay the most) will be greatly diminished.

For these reasons, all scribes must have a minimum Intelligence score of 15. The scribe's prime requisite is Intelligence.

***Table 24: Scribe Experience Levels***

| Level | XPS | Hit Dice (d4) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1,200 | 2 |
| 3 | 2,400 | 3 |
| 4 | 4,800 | 4 |
| 5 | 9,500 | 5 |
| 6 | 19,000 | 6 |
| 7 | 38,000 | 7 |
| 8 | 76,000 | 8 |
| 9 | 150,000 | 8+1 |
| 10 | 300,000 | 8+2 |
| 11 | 450,000 | 8+3 |
| 12 | 600,000 | 8+4 |
| 13 | 750,000 | 8+5 |
| 14 | 900,000 | 8+6 |
| 15 | 1,050,000 | 8+7 |
| 16 | 1,200,000 | 8+8 |
| 17 | 1,350,000 | 8+9 |
| 18 | 1,500,000 | 8+10 |
| 19 | 1,650,000 | 8+11 |
| 20 | 1,800,000 | 8+12 |

### *Permissible Armor and Weapons*

Generally speaking, scribes do not enter combat if at all possible. They are simply not suited for the martial life. Scribes cannot wear any armor

Similarly, scribes have very little use for weapons. Scribes can learn the following types of weaponry: dagger; dart, knife, sling, and staff. Normally, scribes do not carry weapons, as they wish to promote a nonthreatening image to potential employers.

### *Individual Experience Awards*

Scribes earn experience points through the use of their own unique abilities. They tend to work in scriptoriums and libraries, and rarely ever adventure.

A scribe's main goal is not to rescue the weak (often, they are the weak) or to vanquish monsters. They just want to do the best job that they possibly can-and get paid handsomely for it For Ks reason scribes receive most of their experience points by way of the monies they collect for their services.

Assigning experience points to a scribe is fairly straightforward. Refer to Table 25 for the scribe's earned experience rate.

***Table 25: Scribe Experience Awards***

| Action | Award |
|---|---|
| Per gp earned as a scribe | 1 XP |
| Per magical scroll duplicated | 2,000 XP |
| Per spell copied | 1,000 XP |

Note that experience points awarded for duplicating spells and scrolls are cumulative with any points the scribe earns for being paid for the work. For instance, if a scribe receives 250 gp to copy a scroll, he earns both the duplicating award (2,000 XP) and the wage award (250 XP) for a total of 2,250 experience points.

### *Proficiencies*

A scribe receives one weapon proficiency slot at 1st level and earns a new one every six levels (at the 6th level, 12th level, and so on). A scribe suffers a -5 penalty when using any weapon with which he is not proficient.

A scribe also receives four non-weapon proficiencies at the 1stlevel

and gains a new proficiency every three levels after that (at the 3rd level, 6th level, and so on). At 1stleveL a scribe must take the following non-weapon proficiencies: Reading/Writing and Forgery. Reading and Writing is obviously essential for a scribe, but why Forgery? The reason lies in the fact that scribes spend a great deal of their time painstakingly duplicating documents down to the finest details. in effect, they are creating forgeries of the original.
It is also recommended that the scribe take the following non-weapon proficiencies:
*** Heraldry**: The knowledge of family crests can come in handy when employed by a member of the nobility or upper-class. Sometimes even the slightest error in duplicating heraldic symbols can spark great conflict.
*** Etiquette**: This proficiency not only aids the scribe in dealing with rich and noble clients, but also helps him translate documents into other languages. A letter penned with an incorrect formal greeting can cause a diplomatic fiasco.
*** Languages**: Learning additional languages increases a scribes market value. In addition, many scribes learn Ancient Languages in order to specialize in the translation of historical documents.

Scribes do not have to fill their non-weapon proficiency slots with specific proficiencies as they progress in level. However, noble families and powerful wizards often choose their personal scribes from among the most talented of this NPC class. Thus, most scribes fill their slots with applicable proficiencies.
After 1stlevel, a scribe can exchange any and all of his weapon proficiencies for non-weapon proficiencies. This exchange takes place on a one-for-one basis.
Scribes can choose proficiencies from the general, rogue, and wizard non-weapon proficiency groups without any additional cost.

### *Equipment*
Scribes require a steady supply of paper, pens, and ink. A scribe cannot work without these basic tools. Additionally, most scribes prefer to work at a desk or other stable, flat surface. Any time a scribe works on a rough or unstable surface, he suffers a -3 penalty on his proficiency checks.
Maintaining an office-which includes a desk and the necessary scribing supplies costs a scribe 50 gp per level. The scribe must pay this maintenance fee every time he advances to a new level. For instance, when Brion the scribe advances to 7th-level, he must pay 300 gp to upgrade his facilities and supplies.
Scribes who fail to pay this maintenance fee cannot advance to the next level. In addition, they receive a -4 penalty to all proficiency checks related to scribing until they pay the fee.

### *Scribe Abilities*
Scribes possess a number of abilities similar to rogues and a few which are unique to their own class. The following section details these abilities.

### *Reading Languages*
Scribes have a chance to read languages they do not normally know. lst-level scribes have a 5% chance to read a document in an unfamiliar language. This chance increases by 5 percentage points each time they advance in level. Thus, a 9th-level scribe has a 45% chance of puzzling out the meaning of such foreign writing. This ability cannot rise above 90% regardless of the scribe's level of experience.

The scribe's percentage chance to read the document also represents the total portion of the document he can decipher. If a 9th-level scribe rolls under 45 on percentile dice when trying to read a document penned in a foreign language, he would understand about 45%, of the document's contents. This ability can never rise above 90%,.

### *Reading Magic*
Scribes can use their *read languages* ability to translate documents that are magical in nature (scrolls and spell books). Their percentage chance for this magical translation is equal to their *read languages* percentage. A 9th-level scribe, then, would have a 45% chance to translate a magical scroll.
If a scribe successfully translates a magical document, he can then make a copy of the document (see below). However, the scribe has no real understanding of the document and cannot cast any spell contained in the document.

### *Copying Documents*
To copy a document, the scribe must make a successful Reading/Writing proficiency check for each page. If the scribe fails the check, the document contains a flaw. The DM should always make this check secretly. The scribe can only detect these flaws if he takes the time to proofread the document when he's done. A scribe can copy up to five pages per day per level-up to a maximum of 80 pages,

### *Proof-Reading Documents*
Despite their skill and training, scribes can make mistakes when copying documents. Many scribes proofread important copying jobs to ensure that the copies are accurate.
To proofread a document, a scribe must make a successful Reading/Writing proficiency check for each page. The scribe can check each page as often as he wishes.
Most scribes will note corrections directly on the page unless the nature of the job is such that he must recopy the entire document. Scribes receive a +1 bonus on their proficiency checks when recopying a proofread document.

### *Forging Documents*
Scribes spend much of their time making detailed copies-forgeries, if you will-of documents. These truly detailed forgeries are almost impossible to distinguish from their originals. To create an indistinguishable copy, a scribe must make a successful Forgery check. Failure means that the forgery is easily detectable. Scribes can forge only one page per level per day.
For the most part, scribes do not make these forgeries with the intent of deceiving someone; the documents are entirely legal. Of course, a dishonest scribe can easily turn his skills toward crime and make a living by cleverly forging documents. Occasionally, a disreputable scribe may freelance with a local thieves' guild.

### *Identifying Forged Documents*
The scribe performs this process as outlined in the description of the Forgery proficiency in the *Player's Handbook.* However, the following additional rules apply:
* A scribe cannot detect a signature forgery if he has never seen the original signature. He must have something to reference the forgery against.
* If he scribe has seen the original signature but does not have a copy of it when attempting to detect a forgery, he suffers a -3 penalty to his proficiency check.

### *Translating Documents*
There is always a big demand for written translation-especially in areas where several different races live close to each other. Multi-lingual scribes can often make large amounts of money by,

translating texts, messages, and maps into different languages.
To translate a document, the scribe must know both the original language of the document and the proposed language of the translation. The scribe must then make a Language proficiency check for each language that is not the scribe's native tongue. This means that a scribe might have to make two separate proficiency checks (one for the original document and one for the proposed translation) if the languages were not As native tongue.
If the scribe fails his check of the original, he cannot proceed with the translation and must wait at least 1 day before making another attempt. If, however, the scribe fails his proficiency check on the proposed translation, his failure is not complete. The DM should subtract the scribe's Language proficiency score from his roll and multiply the result by five. This number represents the percentage of the document that the scribe could not translate

For example, Matrou the scribe is proficient in common (no score or need for a check), dwarvish (15), and elvish (15). He needs to translate a one-page document from common into elven and checks against his elven Language proficiency. He rolls a 17 and fails the check by 2. This means that he could not translate 10% (2x5) of the page.
If the scribe rolls a 20 on a language proficiency check, he has made a mistake in the translation. However, he is unaware of this error.
Scribes primarily work with the written word, so they prefer to make a written copy when working on a translation. However, they can translate an entire document and simply read it aloud if they can speak the language in question.

***Reading Documents***

In a mostly illiterate society, the ability to read a document aloud is a marketable skill. With such reading service available, some illiterate persons actually manage to get around their handicap. Of course, scribes charge money for this service, which effectively prevents the lower classes from utilizing it.
A scribe's reputation is of the utmo st importance when dealing with illiterate clients, as few people can afford to have a document double-checked for errors. These prospective clients prefer to deal with trustworthy scribes.
Normally, a scribe does not need to make a Reading/Writing proficiency roll when reading a document-even if it is not in his native language. However, certain circumstances-such as faded ink, poor handwriting, or a partially destroyed parchment-require the scribe to make a successful proficiency check. This check is made secretly by the DM. If the roll fails, the scribe is not aware that he has made a mistake.

***Dictation***

Scribes are available to create documents for those who need them. For the most part, a scribe does not need to make a Reading/Writing proficiency check when taking dictation. However, certain factors-such as client with a thick accent, or a document full of complex instructions on a topic not known by the scribe require the scribe to make a proficiency check.
Again, the DM should make the check secretly. The scribe should not be aware that any mistakes (if any) were made. Errors can be found by successful proofreading the document in question.

***Illuminating Documents***

In medieval society, documents were more than a collection of words on a page. Rather, they were adorned with tiny pictures, intricate titles, and decorative calligraphy. In addition, many documents were inlaid with gold leaf. The process of creating these decorated manuscripts was called Illuminating.
Illuminating manuscripts for rich and noble patrons is one of the chief functions of the scribe. In effect, the scribe turns a simple page into a work of art. Scribes must possess the Artistic Ability proficiency in order to illuminate documents.
The scribe must make an Artistic Ability check for every page he illuminates. If the scribe fails the roll, he has made some error. However, the scribe can easily correct this mistake. All he has to do is work on the same page and try it again.
Unfortunately, a roll of 20 on an Artistic Ability check means that the scribe accidentally destroys the page in question. The scribe must recopy or reforge the page before he can try to illuminate it again.
A scribe can illuminate up to one page per level each day. Scribes can never illuminate more than eight pages in a single day.

***Duplicating Scrolls***

A scribe can duplicate a scroll much in the same way as a wizard or priest (see the *DUNGEON MASTER Guide* for full details). However, there are a few elements in the copying process that are unique to scribes.

To duplicate a scroll, the scribe must have a copy of the scroll. He cannot create scrolls by copying directly from a spell book, nor can he receive the spell as a gift from a deity. Only wizards or priests have the power to perform such tasks.
In addition, the scribe must have all of the proper materials available in order to copy the scroll. If the client does not supply these materials, the scribe includes their cost into his copying fee.
Finally, the scribe must successfully read the spell off of the original scroll before he can copy it. Once he succeeds in reading the original, the scribe can make copies of it as often as he likes. However, if the same spell comes up again on a different scroll, the scribe must make a separate attempt to understand that spell.
If the scribe fails in his attempt to read a spell, he cannot attempt to read it again until he reaches the next level of experience. Also, the scribe must make a separate attempt to read each spell on a scroll. Failure to read one spell does not affect an attempt to read another.

***Copying Spells***

A scribe can copy spells from one spell book to another, just like a wizard can (see the *DUNGEON MASTER Guide* for full details). Of course, the scribe must first read the spell before copying it. This is handled just as if the scribe were trying to read a spell off a scroll.

***Apprenticies***

Unlike the members of player character classes, scribes do not gain followers at higher levels. However, they often pick up apprentices in the course of their business.
Once a scribe reaches 5$^{th}$ level he attracts a single apprentice every time he gains another level (at the 6th, 7th, 8th, and so on). That apprentice remains in the scribe's service until the scribe himself goes up one full level in experience. At that point, the apprentice becomes a lst-level scribe.
At 8th level and above, a scribe attracts up to three apprentices per level. Each of these apprentices is ready to leave after their master attains a single level of experience.
At 10th-level, and each level thereafter, a scribe attracts another scribe of five experience levels less than himself. This journeyman has come to learn from a master. Once the master earns another level of experience, the joumeyman gains a level and can leave if he wishes.
However, the journeyman can choose to remain with his master if both are agreeable. If this happens, no new journeyman seeks out the master scribe.
Once an apprentice becomes a 1$^{st}$-level scribe, he is not obligated to

leave. If the master scribe permits, the new scribe can join his practice as a junior partner.

### *Fees for Services*

Scribes do not lend people their services out of the goodness of their hearts. They expect to get paid like any other professional. Consult Table 26: Scribing Fees to find out the basic service fees of a scribe. Note that these prives can fluctuate greatly depending on the market forces and the scribe's own personal situation.

For instance, a 1st-level scribe without a reputation might only receive half of what a more experienced scribe commands for the same job. This is the incentive he offers his clients to attract their business away from other well-known scribes in the city.

Similarly, high-level scribes can command higher prices for their services. These professionals have established an excellent reputation, and many people are willing to pay more for that.

Some scribes work for a salary. Usually they receive 5 gp per level per week. Sometimes scribes will band together (usually under a high-level scribe upon whose reputation they trade) to form a scribing business. Any extra money left over after salaries covers the business' overhead (the building, paper, pens, inks, candles, and so on).

***Table 26: Scribing Fees***

| Service | Fee |
|---|---|
| Copying documents | 2sp/page |
| Proofreading documents | 1 sp/page |
| Forging documents | 1 gp/page |
| Identifying forged documents | 4 sp/page, |
| Translating documents | l gp/page |
| Reading documents | 1 sp/page |
| Taking dictation | 3sp/page |
| Illuminating documents | 10 gp/page |
| Duplicating scrolls | 250 gp per level of the spell |
| Copying spells | 250 gp/level of the spell |

### *Wilshire*

Wilshire the Unfortunate
Male Human Scribe

Str: 10
Dex: 13
Con: 8
Int: 18
Wis: 9
Cha: 7
Armor Class 10
Level: 10
THACO: 19
Movement: 12
Hit Points: 20
Alignment: Neutral
No. of Attacks: 1
Special Attacks: None.
Special Defenses: None.
Weapon Proficiencies: Knife.
Non-weapon Proficiencies: Reading/Writing (19), Forgery (12), Etiquette (7), Ancient Languages (18), Modern Language [dwarvish] (18), Modern Language [elvish] (18), Artistic Ability (7), Heraldry (18).
Equipment: Nothing

Wilshire is a spineless stooge who possesses a great deal of talent. He once made quite a success of himself by toadying up to anyone who happened to be in power.

When Cardax staged his coup over the local government, Wilshire read the writing on the wall and immediately threw in with the necromancer. The alternative, as Cardax pointedly told him in person, was death.

In the end, it turned out that Wilshire had backed the wrong horse. When Martia's forces kicked Cardax out of the capitol, the necromancer left nearly all of his staff behind, including Wilshire.

Although he managed to escape with his life, the master scribe was stripped of his possessions, beaten, and made a pariah by all those loyal to Martia's family.

Role-playing: At one time, Wilshire was quite a charming man in a slimy sort of way (his Charisma was 14 before his fall). These days, there is barely a flicker of the suave, politically adept manipulator that served as the royal scribe under two governments. In short, Wilshire is a sot who spends most of As nights in the bottom of a cracked mug.

Wilshire still holds out hope that he might one again attain his former glory Despite his current state, he still has a sharp mind. The only question is whether or not he will drink himself to death before his final chance for redemption comes along. Combat: Wilshire's spirit has been almost totally crushed. Although adept with a knife, the fallen scribe will throw himself at his assailant's feet and whimper for his life at the first sign of trouble.

# *Chapter 10: The Seer*

*Martia screamed inside her head as the vision of her father leapt out of the darkness and hovered above the table. She nearly bit through her lip to keep the cry from bursting out of her chest. The taste of blood on her tongue brought her back to the land of the living.*

*It was then that she realized she had closed her eyes. With an effort, she wrenched them open to stare at the apparition that now shared the room with her and Balmira, the elven seer conducting the seance. It truly was her long-dead grandfather-or at least his spirit.*

*Martia swallowed down the lump rising in her throat and blinked back the tears that threatened to blind her. To see him again after so many years was truly a shock. She was loathe to disturb his rightfully deserved rest, but the situation was crucial.*

*After she had slapped Wilshire around a bit and sobered him up, he had been eager to please. The fat weasel had managed to clear his besotted head long enough to perform the task for which Martia needed him: he translated the document*

*It had been an easy feat. Wilshire had recognized the document from years ago when Cardax himself had shown it to him. The scroll contained the text of a prophecy made soon after Cardax's coup.*

*Even then the necromancer had been paranoid about the eventual end of his reign. Martia's grandfather had commissioned a seer to look into the future and prophesy the means by which Cardax's finish would finally come.*

*The prophet's message was twisted and full of riddles and unseen meanings, unfathomable to even himself. However, one truth had come through loud and clear: the necromancer's doom would be brought about by one of his own blood.*

*This broad statement had caused fear and blatant paranoia to rule Cardax's court. He saw traitors everywhere and executed many innocents.*

*Now, sealed off in his castle and surrounded by the undead, Cardax gelt that he was finally safe. There was no one that was "one of his own." Only the dead kept him company.*

*"Time is short," hissed Balmira. "The spirit will not stay with us for long. Ask your questions quickly and be done with it!"*

*The seer's harsh voice cut through Martia's fear, peeling it off of her like a skin she wasn't even aware she had.*

*"G-grandsire, "she stuttered and then trailed off.*

*The apparition smiled down at her seated form. "Yes, my favored one? It is so good to see you again." Then his serene face turned sour. "But if you saw fit to disturb my final rest, than times must be dark indeed. What do you need from me, granddaughter?"*

*Martia pushed her heart out of her throat and found her voice. "Grandsire, there is much turbulence in the land, but we have finally exorcised the demon that stole your throne."*

*With that, the ghostly image smiled broadly. "It was only a matter of time, dear one. If matters are so fine, what do you need of an old one like me? ',*

*"Grandsire, the prophesy of Cardaxs doom. Who is the one that can bring the necromancer down? Can you tell me?"*

*The apparition's grin grew wider until it seemed it would split his translucent head. "Ah, so you have not figured it out for yourself. When that prophecy was made, the seer was actually able to name a name, but for that person's safety, we decided to make the threat to Cardaxs life a bit more ... encompassing. "*

*Martia felt her heartbeat quicken. "Who then, Grandsire? Who?"*

*The old man grimaced showing his years. "In a battle in my youth, dear one, I was made ... unable to father a child."*

*Fear shoved a cold icicle deep into Martia's heart. "But then who sired my father? "*

*The apparition chuckled. "Why Cardax did, my dear one. You are his granddaughter!"*

Few people in society are as feared, respected, and misunderstood as the seer. These enigmatic figures have the power to commune with the dead and talk with spirits about things long-thought buried. They can also peer into the future, parting the veil of time-if only for a little while. For these reasons, the services of a seer are in great demand and command a hefty price. Even if their "expertise" were not in such high demand, seers would still charge a great deal for their services, as working with mystical forces takes an incredible toll on the seer's body. Still, the useful information that they obtain makes up for their exorbitant prices.
Seers are often shunned by the more conservative portions of society. The fact that a talented seer could likely prophecy someone's last moments upon the earth tends to make people nervous.

Still, many people eventually find that a seer is their last hope for finding out important information. Governments use them regularly to solve crimes and to predict the movements of their enemies. In addition, many an assassination has been prevented by the intervention of a seer who received a vision of the assassin's face. However, those who seek out a seer rarely receive an easy answer to their questions. The misty veils of time are difficult to part, and even extremely gifted seers are confused by the complexity and constantly changing nature of their visions. A seer's answer, then, is often cryptic or seemingly nonsensical, and those who seek out these prophetic figures often experience disillusionment and frustration.

### *Experience, THAC) and Hit Dice*

Seers have their own level advancement as shown on Table 28: Seer Experience Levels. Seers are not much for violence, but they understand that a person must sometimes defend himself. In addition, seers are fairly active, spending much of their time outdoors. They wmder around their homeland, trying to keep in touch with all that is going on around them. For these masons, seers use the rogue's THACO table and the wizard's saving throw table. In addition, seers receive one d6 as a hit M Or each level up to the 7th. Seers gain +1 hit point per level after the 7th, but do not receive bonus hit points due to high Constitution scores.

***Table 28: Seer Experience Levels***

| Level | XPs | Hit Dice (d6) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 2,500 | 2 |
| 3 | 5,000 | 3 |
| 4 | 10,000 | 4 |
| 5 | 20,000 | 5 |
| 6 | 40,000 | 6 |
| 7 | 60,000 | 7 |
| 8 | 80,000 | 7+1 |
| 9 | 125,000 | 7+2 |
| 10 | 200,000 | 7+3 |
| 11 | 350,000 | 7+4 |
| 12 | 650,000 | 7+5 |
| 13 | 950,000 | 7+6 |
| 14 | 1,250,000 | 7+7 |
| 15 | 1,550,000 | 7+8 |
| 16 | 1,850,000 | 7+9 |
| 17 | 2,150,000 | 7+10 |
| 18 | 2,450,000 | 7+11 |
| 19 | 2,750,000 | 7+12 |
| 20 | 3,050,000 | 7+13 |

### *Ability Scores*

Seers are truly the jack-of-all-trades of the magical world. They must be smart and savvy, clever and pious, witty and full of wonder. Seers must also have an incredible imagination. It is this which allows them to deal with otherworldly powers and work wizardly magic.
In addition, seers must constantly deal with contradictions and paradoxes. To them, they are simply different paths which lead toward the exact same end.
Besides all this, seers must have a commanding presence. True, the vast majority of people may not wish to hear what a seer has to say, but they usually find the prophet difficult to ignore.
For these reasons, all scribes must possess a minimum Intelligence and Wisdom of 15, and a minimum Charisma of 13. The seer's prime requisites are Intelligence and Wisdom.

### *Seers and Magic*

Seers are a special kind of magic-user. In a very real sense, they are clerics who study a certain kind of wizardly magic to meet their needs. The seer can use divination spells from both the wizard and cleric spell list. Whenever a spell shows up on both lists, use the cleric's version of the spell instead. It is important to note that seers can only use divination spells. They cannot use spells from any other school or sphere.
Seers can freely pick and choose from the priest and wizard spells available to them. There are no restrictions on how many of one type or the other they must take.
Seers must maintain spellbooks for their wizard spells, just like a regular wizard. They are treated like diviners (a wizard specializing in divining spells) and receive all of the bonuses for that school of specialization.

For example, a seer can memorize one additional wizard spell per spell level. The number of spells listed on Table 28: Seer Spell Progression tells how many total spells (both priest and wizard) the seer can memorize. The extra wizard spell for being a specialist is not included in this table. A 1stlevel seer, for instance, could have a single priest or wizard spell and then an additional wizard spell.
Seers get a +1 bonus to any saving throws against divination spells. Also, other characters suffer a -1 penalty when the seer casts a spell against them.
Seers get a +15% bonus when trying to learn wizardly divination spells. When a seer reaches a new level, he can automatically add one wizard spell to his spellbook without having to make a learning roll. If the seer ever attempts to create a new divination spell, the spell counts as one level less when determining the difficulty of the spell.
Seers are allowed to choose cleric spells only from the divination sphere. Note that the seer does not necessarily have to worship a deity (or deities) in order to receive his spells. However, some connection with otherworldly powers and forces is present. DMs interested in including new sources of magic should read PLAYER'S OPTION: Spells and Magic.
The Seer Spell Progression table lists how many spells a seer receives at each level (not including the extra wizard spell for specializing in divination). The seer gains spells much more slowly than either a priest or a wizard. This is due to the fact that they split their time between their wizardly and priestly studies and duties.

***Seers Spell List***

Boldface spells are cleric spells. Plainface spells are wizard spells. Spells that are *italicized* or in *bold italics* are, respectively, wizard and cleric spells from the *Tome of Magic*.

***Permissible Armor and Weapons***

Seers shun combat whenever possible. Their world consists entirely of spells and mysticism They are more concerned with unearthing what has happened, will happen, or is happening in the world than they are in causing such things to happen. Due to their powers, most talented seers often know what threats are coming their way long before they actually materialize. They use this knowledge to avoid any such danger.

Due to the fact that they deal with wizardly magic, seers are not permitted to wear armor of any kind. However, they can use magical items open to both wizards and priests (as well as any available for general use) If a seer decides to concentrate entirely on priestly spells, spurning the wizardly side of his nature, he can wear any kind of armor.

Seers are limited in the kind of weapons they use in the same way. Generally they are only permitted to learn the use of the following two types of weaponry: staff and sling. This incredibly restricted list is due to the crossover between the wizard's limited list of available weapons and the priest's inability to use edged or pointed weapons. However, if a seer forgoes the opportunity to learn and use wizard spells, he can use any kind of blunt, bludgeoning weapon that he likes.

***Individual Experience Awards***

Seers earn experience points in ways unique to their class. Usually, adventurers consult seers before embarking on dangerous quests. Most seers prefer to stay at home rather than actually adventuring. A seer deals in the kind of information that you cannot get from a historian or a guide. Seers can talk to the dead and peer into the future or even the past For this reason, seers receive most of their experience points from creating and researching magical items, earning money for rendering their services, and using their special abilities.

Assigning experience points to a seer is fairly straightforward. Most of the opportunities are similar to those of a wizard or priest.

## Table 30: Seer Experience Point Awards

| Action | Award |
|---|---|
| Per gp earned as a seer | 1 XP |
| Spell cast to over come foe or problems or to divine information | 100 XP/spell level |
| Making potion, or scroll | XP value |
| Making permanent magical item | XP value |
| Spell successfully researched | 500 XP/spell level |
| Tragedy averted through divination magic | varies |
| Fate sealed through divination magic | varies |

***Averting Tragedy***

As a person who possesses an unusual amount of access to information, the seer often get a great sense of responsibility to use his powers wisely. If in his plumbing of the infinite depths a seer comes across information about an upcoming tragedy that will affect an innocent, it is his duty to warn that person of his impending doom.

This can be a great impetus for adventures. The seer may not be able to deliver his warning without help from the adventurers. Perhaps the endangered person is far away or already in some sort of lesser (but still substantial) danger.

Alternatively, the seer may charge the heroes with simply delivering a message for him. They may very well be unable to understand the importance of the seer's words, but they can rest assured that the recipient will (or at the very least should) understand exact), what it is that be seer writes.

Awarding experience for this kind of action can be very difficult. After all, if the seer is helped by many people, they should get some of the credit. The amount of experience usually depends on the level of danger and the importance of the endangered person.

As a guideline, the seer should receive 100 XP for each level of the person rescued by the seer's warning. Note that the DM should alter this 0 accordance with the importance of Me person. For example, if a seer sent word to the king about an assassination attempt, he should probably receive several thousand XP per level of the king.

***Sealing Fate***

While the seer may wish to protect the innocent, he also has a responsibility to see that the guilty receive their just rewards. Sometimes he may find that a certain personage has avoided the just punishment of the authorities. The seer must then deliver a self-fulfilling prophecy to the person in question. This prophecy must be damning, yet inscrutable enough so that if the person does not amend his ways, his own paranoia about the message will drive him to the exact fate that he fears so much.

One classic example of this comes from the story of Oedipus. A seer traveled to see Oedipus's father, the king of the land, and told him that his only son would someday kill him. The king sent a servant out into the forest to kill his son, but the servant didn't have the heart to murder the infant in cold blood, so he simply staked him to the ground by his tiny foot and left him to die of exposure.

A shepherd found the child before he died and raised him as his own. Although maimed by his experience (Oedipus means "club foot"), the boy grew up to be a powerful man. Many years later when Oedipus was traveling to the capitol, he crossed paths with a man in a chariot who would not give way. A fight ensued, and Oedipus killed the man. It was not until later that he found out that the man was the king-his father.

The DM should award experience points for pronouncing a dooming prophecy in the same way he awards XP Or Averting Tragedy The base reward is 100 XP per level of the person whose fate was sealed by the seer's prophecy. This can be affected by the victim's importance (pronouncing a prophecy to a noble is worth more than pronouncing one to a farmer).

The seer does not need to deliver the message personally, although he should get more experience points if he does. The subjects of these messages do not take kindly to the dire portents revealed to them. Many a seer has been killed delivering his warning.

***Creating Spells and Magic Items***

Seers an just as capable as a wizard or priest of concocting potions, inscribing scrolls, crafting magical items, or researching new spells. When working on something wizardly, they use the guidelines for wizards, and they use priestly guidelines for priestly pieces. However, the seer can create magical items that have to do with divination magic. All other forms of magic are outside of the seer's realm of understanding.

***Proficiencies***

A seer receives one weapon proficiency slot at 1st-level and earns a new one every six levels (at the 6th-level, 12th-level, and so on). A seer suffers a -5 penalty when using any weapon with which he is not proficient.

A seer also receives four non-weapon proficiencies at 1st-level and gains a new proficiency every three levels after that (at the 3rd-level, 6th-level, and so on).

When starting out, a seer must take the following non-weapon proficiencies: Ancient History, Local History, and Prophecy (a new proficiency).

Without a strong grounding in history, the seer has little or no chance of understanding the true import of may of his divinations. Communing with the dead means little if you don't share a similar frame of reference with the person being contacted. There is usually not enough time to stop and ask the spirit to elaborate upon the meaning of a particular turn of phrase.

Local History is just as important as Ancient History A seer (or his client) is usually interested in events that happen around his home area. Seers rarely travel great distances, preferring to tap into the vast, unknown, and mysterious storehouse of knowledge that the world offers in their own region.

The seer is strongly recommended to take the Reading/ Writing, Modern Languages, and Ancient Languages proficiencies as well. Since the seer concentrates on communicating with the unknown, it is best for him have a strong understanding of many different languages.

In addition, a spirit may sometimes show the seer some writing. In such cases, it is important that the seer possess the ability to read.

As a seer progresses in levels, he is not required to fill any new non-weapon proficiency slots with any particular proficiencies. After 1st-level, a seer can exchange any and all of his weapon proficiencies Or non-weapon proficiencies. These proficiencies are exchanged on a one-for-one basis.

Seers can choose proficiencies from the general, priest, and wizard non-weapon proficiency groups without additional cost.

***New Proficiency***

The seer has a single new non-weapon proficiency called Prophecy. Every seer must take this non-weapon proficiency at 1st-level. Prophecy is not available to any other character class.

***Prophecy***

This proficiency allows a seer to convey the information he receives through divination magic in a fairly understandable way. Most information gleaned through divinatory methods comes to the seer in quick, almost explosive visions, or nearly incomprehensible words. The seer can use this prophecy to "translate" those visions and words into a format more easily understood by normal men and women. This is not to say that such messages become crystal clear. In fact, these prophecies are often couched in enigmatic and cryptic language. However, without this proficiency, a seer's warnings would be totally incomprehensible.

Once a seer receives a prophetic vision through the use of his magic, he must make a Prophecy proficiency cheek. Failure means that he was unable to convey the message of his vision in a way that anyone else can understand. The seer can also use this proficiency to decipher prophecies made by others. In order to do this, the seer must have the complete prophecy-either written down or memorized-on hand. He then makes a proficiency cheek with a -2 penalty. If he succeeds, he is able to get a general sense of the prophecy. Failure, however, indicates that the seer could not decipher the prophecy.

If the seer fails to interpret a prophecy, he cannot take another shot at it until he has had a full night's sleep. Once he wakes up with a refreshed mind, the seer can attempt to interpret the prophecy again. If the prophecy is a particularly long or complicated one, the DM can require several successful checks on the seer's part. Each time a check is passed, the DM should give the seer a short clue as to the meaning of a particular passage from the prophecy. It's still up to the seer to piece the whole thing together.

If a seer critically fails (rolls a 20) his proficiency check when deciphering a prophecy, he comes up with an interpretation that is totally incorrect. However, he is unaware of his error.

The misinterpretation should be something stated by the DM so that the seer (and any who believe his interpretation) will actually work to make the prophecy come true if they are trying to prevent it. For example, if the prophecy states that the party should destroy *Oghar's gem*, the seer misconstrues the warning and tells the party that they must protect the item. Conversely, if they are struggling to bring the prophecy to fruition, this interpretation will actually set them at cross-purposes to their true desires.

If the seer entirely misinterpreted a prophecy, he cannot attempt to reinterpret it until he is conclusively shown his error. In addition, he requires a full night's rest before attempting to interpret the prophecy again.

No equipment is required to make use of this non-weapon proficiency. All the seer needs is either the message from a spell to turn into a prophecy or a prophecy which someone else has made. This proficiency costs one slot and is based on Wisdom; it has a -2 check modifier.

***Equipment***

Seers do not require much beyond the material components for their spells. Most seers have a preferred place to work in, though, and proper maintenance of this place can be expensive.

The seer's sanctum must be a place of peace and quiet, a room or area sealed off from the hustle and bustle of everyday life. It should be an ideal place to while away the hours lost in meditation upon any subject that happens to cross the seer's roving mind.

While the seer is in this place, he receives a +1 or bonus to any saving throws or proficiency checks he needs to make. Conversely, any saving throws made against the seer's spells are at a -1 penalty under the same circumstances.

The seer can function perfectly fine outside his sanctum. However, he does not receive his saving throw and proficiency bonus when outside this area.

Maintenance of a seer's sanctum costs 50 gp per level- This price must be paid every time the seer advances in level. For example, if he manages to get from 4th to 5th level, a seer must pay 250 (5 x 50) gp.

If the fee is not paid, the seer does not gain any benefits (including additional hit points) from the new level- These benefits can be reinstated at any time by simply paying the fee.

***Priestly Seers***

The basis of being a good seer is founded strongly upon the seer's relationship with his deity or the otherworldly powers that he serves. Thus, a seer can focus on his clerical aspect and ignore his wizardly side. However, the converse isn't true. Simply put, a seer requires

spirituality first and then intellectual rigor.
Once a seer decides to completely focus on his clerical nature, he is called a clerical seer. Clerical seers forgo the use of any wizardly abilities. This includes casting wizard spells, keeping a spellbook, researching new spells, using magical items that only wizards are permitted to use, and so on. However, clerical seers can we any End of armor. In addition, they are only limited to clerical weapons (non-edged).
The priestly seer can become a regular seer if the DM approves. The seer must again follow all the restrictions of the regular seer. He receives all of the wizardly powers of the seer, except the benefits of being a specialist wizard (diviner).
For example, a clerical seer who chooses to become a regular seer does not receive the saving throw bonuses due a specialty. In addition, he does not get a bonus to his chance to learn spells, nor does he automatically learn a spell at each level. Most importantly, the seer does not receive an extra wizard spell for each spell level.

Balmira is a devout, young seer committed to Cardax's destruction. Her studies of the prophecies surrounding Cardax's rise to power indicate to her that the necromancer's days are numbered. To her mind, it won't be long until Cardax falls from power. Role-playing: Balmira is an elf who takes her duties as a seer seriously. Throughout the years, she has plagued the necromancer on and

off by infiltrating her way into his court invisibly and by spying on his people with her crystal ball. With the information she learned, Balmira formulated prophecies that were sure to give Cardax many sleepless nights. Balmira would often turn herself invisible, sneak into the court, and magically appear before the assembled ones who had betrayed the old king. She would deliver her prophecy and disappear just as quickly and quietly as she had come. Close as it might have come at some times, she was never caught. Combat: Balmira does not enjoy fighting. In fact, she goes to great lengths to avoid it. When it appears unavoidable, she usually uses her ring to become invisible and sneaks away.

# *Chapter 11: Using Specialists*

*"You fool!" shouted Cardax as Martia battled her way through the throng of undead soldiers on her steady path toward the necromancer's throne of bone. It seemed like she'd been slashing her way toward her goalfor hours. Gangrenous ichor covered her blade and the magical armor she had found in her grandfather's secret armory.*

*With its help, the dead could not touch her directly, although they were definitely hampering her progress toward their unholy master. Martia gritted her teeth and steeled herself as she fought yet another wave of rapidly rotting warriors.*

*"How do You think you can stand against me, girl?" the man shrilled, as the madness of his many years shone in his eyes. He cackled as he leapt to his feet and stood atop the seat of his blackened throne, the bones of which looked like they has once served as the fuel in some horrible and arcane ritual.*

*"Your grandfather was a fool, Martia. I loved him like a brother, and we both loved your grandmother. And yet he betrayed her memory. He let her die, and he did nothing to bring her back!" The man was actually foaming at the mouth now, and it was all Martia could do to prevent his insane patter from distracting her from the job at hand.*

*The Blade of Honesty hummed angrily as it swept through the undead horde. Light glowed along the edge of its blade and gleamed through the long-dead blood that slid along its edges. The blade was fulfilling the purpose for which it had been forged and reforged once again. The light of its truth banished the dark he that animated these bodies: they were not truly alive.*

*Martia saw the necromancer teetering on the edge of his throne and made a last-ditch push toward the dais upon which it stood. "I've learned about the prophecy 4your end, Cardax. I've come to fulfill its conditions and halt your reign of terror. "*

*As the young warrior battled her way nearer and nearer, Cardax's pale eyes grew wide. "So you say, whelp. But if you've read the prophecy, then you know that I can only be undone by one of my own. " He gestured widely to the unliving men that carried out his will. "As you can see, none of mine are in the position to do anything to harm me."*

*His wild cackle caught in his throat as he saw the undaunted fire raging in Martia's eyes. "Foul man, you are in for quite a surprise if that's what you think."*

*With a final sweep of her sword and a desperate leap, Martia made the dais's outer edge. Standing directly beneath the man who had killed everyone in her family but her, Martia spat out the last words he would ever hear.*

*"For I are one of yours, evil beast. When you lay with my grandmother, she gave birth to my father, who was unknowingly yours. And as sure as I are his daughter, I are one of your own!"*

*With that, she thrust the Blade of Honesty deep into the ancient man's chest, impaling his long-dead heart upon its razor-sharp shaft. The tip of the blade stood out from Cardax's back as he slid down the length of steel and into Martia's waiting arms.*

*"And so I kill you," Martia whispered, her final word to him leaping off her tongue like a curse he would carry with him into whatever afterlife would accept such a twisted creature, "Grandfather."*

*As Martia staggered out of the keep, the sun's first rays poked through the trees and fell upon her upturned face. The long night of Cardax's reign was finally over. Now Martia could return to the capitol and lay claim to her family's throne. There would be pretenders who would seek to steal the birthright that she had fought so hard to reclaim, but she would persevere.*

*As she trod toward her hidden steed, she reflected on the fact that so many people had helped her in her quest. They would probably help her again. With that thought, Martia finally smiled.*

Specialists can play an intriguing part in any campaign. The preceding chapters detailed a number of NPC classes that are sure to breathe life into any fantasy world.
However, keeping track of every player character's various contacts can become quite tedious. Besides all the work involved with NPC generation, a DM must also figure out how the supporting cast moves up in levels with respect to the hero. While a 1st level scribe may be useful to a lst-level fighter, that same fighter at 7th level is going to want to turn to a scribe of a higher level despite any previous relationship he may have had with that scribe.
The system detailed in this chapter allows Dungeon Masters to place responsibility for NPCs in the hands of their players. It also includes some guidelines by which DMs can determine how quickly specialists rise in level without having to keep track of every experience point.

### *Player Characters and Specialists*

Since player characters stand to benefit most from the inclusion of specialists into a campaign, they should be responsible for maintaining records on each of the specialists involved in their characters' lives. There are two ways to introduce specialists into your game.

### *DM-Generated Specialists*

Some DMs like to have total control over the non-player characters in their game. These Dungeon Masters create each specialist and introduce him into the game just as they would any other NPC that the adventurers meet in the course of play.
The starting level for each specialist is up to the individual Dungeon Master, but should rarely be higher than that of the highest-level character in the party. Once the DM creates a character, he must decide whether to attach him to a particular character or the entire party. Perhaps one of the wizards has known this apothecary since his youth. Or maybe the adventuring group has just recently met (or is about to meet) an aspiring young engineer.
Note that specialists attached to a particular character should never initially be of higher level than that character. Ideally, all characters and specialists begin together at 1stlevel. New specialists that are introduced in already existing campaigns can be of any level.
Usually, when a DM generates a specialist, he includes several things about the specialist (knowledge, magical items, hidden agendas) that the party should not know about. Thus, the Dungeon Master needs to keep tack of the NPC information.

### *Player-Generated Specialists*

Dungeon Masters who do not require that much control over their game can simply allow their players to generate specialists for each of their characters. This decreases the DMs workload. However, Dungeon Masters are strongly encouraged to check their players' work when they're done.
Players should create 1st level specialists. At the DM's option, these specialists can be near the character's level. However, this can have a drastic impact upon an ongoing campaign. It is recommended that most advanced-level specialists enter a campaign at one-half the average experience level of the adventuring group.
Players can generate any specialist that they like, although they must come up with some a rationalization as to why the specialist keeps in touch with their character-and vice versa. Otherwise, there is no reason for any kind of special relationship and the specialist is then reduced to the level of a regular NPC. If this is the case, the players should have nothing to do with creating and presenting these specialists.

Once the player or Dungeon Master creates a specialist he must attach it to a specific player or party. Attached specialists are NPCs who have a close relationship with a particular hero or group of heroes. This NPC takes a close interest in the welfare of the person or group, and they, in turn, look out for the NPC
Once an NPC is attached to a player, that player (or gaming group) is responsible for keeping track of the NPC's records (equipment, important information, and experience). In addition, the character's player is also responsible for the NPC's level advancement (discussed later).

### *The Number of Specialists*

A character can have a number of specialists attached to him. However, the maximum number of attached specialists is equal to the maximum number of henchman that character can have. This number is listed on Table 6: Charisma in the *Player's Handbook.* The number of specialists a character can know personally is not reduced by the number of henchmen he may happen to have. Conversely, the number of specialists attached to a character does not influence the total number of henchmen that the character can possess. The two matters are entirely separate.
If a character wishes, he can let a relationship with a certain specialist lapse. He can then pick up a relationship with a different specialist through role-playing. The newly unattached specialist becomes a standard NPC; his fate no longer depends upon the adventurer. Alternately, one of the other heroes in the party can strike up a relationship with the specialist and take him as one of his own attached specialists.
A character does not have to attach himself to his maximum number of specialists. Instead, he can leave a couple of spaces open in case he meets a specialist in the future who will fulfill whatever particular needs he may develop. This specialist can be introduced by the DM as an NPC and then co-opted by the hero (at the DM's discretion), or the player can generate the specialist himself at a later date.
Now that if every player in a party creates the maximum number of specialists available to his character, the DM will have his hands full. The average Charisma of 10 or 11 permits up to four attached specialists. If the party consists of eight adventures, they could have up to 32 specialists attached to their group! DMs are strongly encouraged to limit the number of specialists created at the beginning of play.

### *Level Advancment*

As player characters advance in level, they may soon outstrip the NPC specialists that they consult. After all, these NPCs rarely go on incredible adventures or travel to far-off lands and perform incredible feats of bravery. They are mostly homebodies.
Their are two ways that a Dungeon Master can measure an NPC's level advancement.
These methods are dependant on whether the specialist in question is a standard NPC, or whether he is attached to a specific adventurer or group.

### *Standard NPCS*

Although standard NPCs do not usually gain experience through fantastic adventures, this does not mean that they sit around and do nothing while they wait for the adventurers to return. Rather, these professionals accrue experience by working in their respective fields. While the heroes are off on an adventure, ignoring their friends back home, these specialists go about their business, working for other people and even themselves. A Dungeon Master can decide a standard NPC's experience level advancement as he likes. Most often, the specialist keeps pace with the player characters. Simply

make the specialist's level equal to the average level of the party, or a level or two less. Rarely should the specialist's level exceed that of the most experienced party member.

### *Attached Specialists*

An attached specialist's level of experience is entirely dependent upon the way the character to which he is attached treats him. If the specialist is ignored by the adventurer, he will stagnate, unable to proceed much further without the patronage of a promising hero. However, if the adventurer takes a personal interest in the specialist's career, he can ensure that the specialist prospers throughout the years, keeping pace with the hero's own advancement.

For an attached specialist to advance a level at the same time that the player character does, he must receive something out of the ordinary from that character. The exact nature of this extraordinary action can vary a great deal depending on the hero and the specialist.

The easiest way for a hero to contribute to a specialist's welfare is to hire the specialist on a regular basis. To cause the specialist to gain a level at the same time as the hero, the adventurer must consult with the specialist in some fashion and reimburse him for his trouble. This consultation must be something that would normally earn the specialist at least 200 XP per the specialist's current level.

For example, a 4th-level healer would have to earn 800 XP due to his contact with the adventurer. If this was fulfilled, the healer would progress to 5th level when the hero gained another level.

Heroes can substitute certain items in lieu of consultation with a specialist. Donating magical items to a specialist is acceptable, as long as these items would help the specialist in his work or, at the very least, be of some use to the specialist. The experience point value of the item must be equal to or greater than the number of experience points the specialist would normally require in order to advance from a consultation.

*A potion of extra-healing,* for instance, is worth 400 XP. The adventurer would have to give two of these to the 4th-level healer described above to permit him to advance to the 5th level.

These two methods can be combined in any fashion. The healer might receive a single *potion of extra-healing* (400 XP) and then use his skills to heal 40 hit points (at 10 XP each, that's 400 XP) for the hero or a friend of the hero.

If the specialist actually accompanies the party on an adventure, he should then gain experience normally. In this case, the specialist could advance independently of his patron hero.

### *Gifts to Specialists*

Adventurers can also help specialists from particular classes advance in levels by giving something valuable to that specialist. Appropriate gifts for each specialist class are described below.

It's up to the DM to determine how many and what kind of gifts are required to allow the specialist to gain a level at the same time that the player character does. If the conditions are met (they should be outlined to the players in advance), then the specialist advances a level at the same time as the character.

If these conditions are not met, the specialist cannot advance until he receives more gifts and the hero to whom he is attached gains yet another level. Obviously, specialists of higher level require more important gifts in order to advance.

It is definitely in the heroes' interests to help out their specialists in as timely a manner as possible. If they fail to do so, their specialists may lag permanently behind them.

As DM, you should make sure to present the heroes with opportunities to track down or discover items that their attached specialists might want. These items can function as another kind of treasure with a directly applicable use.

**Apothecary**

Apothecaries like anything that helps them in their quest for an improved concoction. *A* book of recipes from another apothecary, for instance, would be perfect. Alternatively, a sample of a new and unusual concoction might be enough for the apothecary to figure out a recipe of his own.

Besides recipes, apothecaries are always in desperate need of certain rare ingredients-like scales from a red dragon's hide or the brain matter of a psionically active creature. The apothecary may ask adventurers for these items specifically. In fact, he may even send them out on the road with a kind of grocery list. This could provide the background for several side-adventures.

**Appraiser**

Appraisers can use all sorts of objects-as long as they are valuable. An appraiser makes his reputation on his ability to acquire and then sell rare or unusual pieces. If a Oro brings such materials to an appraiser, he can help the merchant a great deal.

If a hero does nothing else but provide his appraiser with rare items, the appraiser can still go up in level. However, the hero must bring the appraiser enough items that he can sell-in gold pieces-one tenth of the amount of experience he needs to advance to the next level. For instance, a 7th-level appraiser needs 25000 experience points to make it to the next level. To help him do so, his heroes need to give him 2,500 gp worth of items.

**Blacksmith**

The blacksmith prizes well-wrought weapons, finely crafted armor, and other metallic pieces as well. He can advance in level through gifts of such rare items.

These items do not have to be magical. The sword used by an ancient king to fell a giant would be sufficient- regardless of whether it is magical or not. Another example would be a sword made from a new metallic alloy or rare orc. A good supply of such ore would also be an incredible gift that would permit the blacksmith to advance in levels for as long as the ore lasted.

**Cartographer**

Cartographers collect maps, and they are always excited to acquire a new map of an unknown land. They even appreciate maps of known areas if these maps happen to bring some new and vital piece of information to light.

If the adventurers keep maps of the areas that they explore, they should give these to their cartographer. Heroes that adventure regularly into interesting and unknown lands and surrender their maps to their cartographer are guaranteed to help him advance between levels. If they're lucky, the cartographer may even make them a copy of the original.

**Engineer**

Engineers live to figure out new and better ways to build things. If the heroes can supply an engineer with blueprints or samples of innovative constructions, they will help him advance in level. Sometimes, providing the engineer with the location of such a construction is enough-especially if the construction ir question is immovable. However, the heroes may have to accompany the engineer to ensure his safety.

**Guide**

Guides are harder to reward by any means other than providing them with work. Still, supplying a guide with a map or with interesting information about a certain race or location can be helpful.

Guides are particularly interested in establishing contacts of their own in distant lands. If the heroes happen to form a friendship with such a person, they should take pains to offer their guide an introduction to this person. If the guide is riot currently with them,

this introduction can take the form of a letter of recommendation bearing the heroes' mark.

**Healer**
The healer is always interested in new healing techniques. If the heroes can provide him with these regularly, he will be eternally grateful. New and beneficent herbs can also help, particularly if they are alive and can be transplanted into the healer's garden.

**Historian**
More than anything else, the historian wants stories and information. These can take the form of tales of the adventurers' own exploits or of other notable personalities. Of course, any tales that the heroes tell had better be supported with witnesses or some other kind of evidence. If a character lies to a historian or unwittingly presents him with false information, the historian misses his next chance to advance another level. In addition, any ancient tornes, scrolls, and relics would help the historian advance.

**Scribe**
The scribe desires nothing more than new books and scrolls which he can copy. An original work adds yet another tome to his inventory. With this he can increase his clientele.
Magical scrolls and spell books are particularly desirable. In fact, they maybe necessary to help the scribe advance through the higher levels. At that point, nonmagical texts simply won't do.

**Seer**
Seers collect prophecies made in the past. The more powerful the seer who made the prophecy-or the more accurate that seer's prophecies have proven in the past-the better. Modern seers can interpret these often ancient visions and use the results to their advantage.
Also useful are items or information that figure into prophecies. Anything that might help bring about a prophecy" ultimate conclusion (or prevent it!) is desirable.

***Other Specialists***
At the DM's option, player characters can attach NPCs from any classes to themselves as specialists. In this way, heroes can call on the special skills of Warriors, Wizards, Priests and Rogues whenever the may need.

# *Appendix*

| Class | Str | Int | Wis | Dex | Con | Cha |
|---|---|---|---|---|---|---|
| Apothecary | - | **12** | | | | |
| Appraiser | - | **12** | **10** | 9 | 9 | |
| Blacksmith | **12** | 9 | 9 | 9 | **12** | |
| Cartographer | - | **12** | 10 | | | |
| Engineer | - | **12** | 10 | | | |
| Guide | | - | **12** | 10 | 9 | |
| Healer | | - | **12** | 9 | | |
| Historian | - | **12** | 10 | | | |
| Scribe | | **15** | | | | |
| Seer | | **15** | **15** | | | 13 |

Boldfaced numbers indicate the class's prime requisite(s). NPCs who possess scores above the prime requisite minimums receive a +10% XP bonus.

| Proficiency | Slot Required | Relevant Ability | Check Modifier |
|---|---|---|---|
| Cartography | 1 | Intelligence | -2/0 |
| Caving | 2 | Wisdom | Varies |
| Concocting | 1 | Intelligence | -2 |
| Prophecy | 1 | Wisdom | -2 |

DUNGEON MASTER® Guide
Rules Supplement

# Arms and Equipment Guide

Copyright 1995, TSR, Inc. All rights reserved.

## Introduction

Dungeon Masters of the world, relax!

Until now, you've all had to duck or dodge questions about armor, lengths of swords, and the blades (or lack of them) on pole arms. At best, you've said, "It kinda looks like a . . . " At worst, you've had to go to the library to look up such information.

A few of you are fortunate to be scholars of history and already know the answers to such questions. But for the rest of you, this book contains the information you've been waiting for.

The *Arms and Equipment Guide* is the most complete compilation of information about armor, weapons, and equipment for the AD&D® game to date. It is intended to help both DMs and players to understand and better use the wide variety of equipment available. We've included a plethora of illustrations to make this volume as user-friendly as possible.

**For DMs:** Be aware that the information in this work encompasses a wide variety of equipment suitable for many campaign styles. Don't be afraid to veto certain weapons or armor to suit your own campaign world. The intention of this book is not to provide adventurers with every weapon known to man; it is merely to expand the choices available. Feel free to disallow any items that don't fit the grand scheme of your campaign.

**Historical Accuracy:** Every attempt has been made to ensure that the information

presented here is historically accurate. However, scholars of history often disagree among themselves, resulting in conflicting opinions among resources. If you find that the information in this volume disagrees with what you know of history, consider checking one of the resources listed below. Or chalk it up to to a different historian. (If you're convinced we've blundered, we're always happy to hear about it in a letter. Any documentation you can provide would be appreciated.)

**Weapons:** As the longest section in this book, the weapons chapter has some unique features. You'll find comments from seasoned adventurers in *italicized* type. These are intended to offer new ideas for role-playing. You'll also find numerous boxed entries. These boxes contain interesting historical tidbits that might provide role-playing ideas and are just plain fun to read.

With these things in mind, you're ready to go forth and conquer. Here's hoping that the *Arms and Equipment Guide* will help you do it!

# CHAPTER 1

# Armor

## Padded Armor (AC 8)

**Description:** Padded armor, also referred to as quilted armor, is the simplest form of manmade armor. It consists of two or more layers of spun cloth stuffed with thick batting and quilted together.

Padded armor typically covers the chest and shoulders, but full-length suits are sometimes seen.

**Campaign Use:** Padded armor is mostly found among the poor and unskilled. Only the poorest excuses for armed forces would be caught dead in padded armor. The bulky and restrictive nature of the armor makes it a poor substitute for a stout set of leather (*q.v.*).

Village militias, neophyte bandit packs, urban street gangs, and primitive barbarian hordes are the most common users of padded armor. In short, this includes anyone who cannot afford leather armor (i.e., the truly destitute), cultures without the technology to tan hide (i.e., the truly primitive), or those who have no other option at their time of need (i.e., the truly desperate).

Padded armor can be made by any race or nation. Thus, it is common protection for the poorer classes. Since making a padded suit of armor requires little more than a crude needle and thread, low-level or desperate adventurers in need of additional protection can usually whip up a set of padded armor in less than two days. The durability and level of comfort afforded by the homemade suit naturally varies in direct proportion to the skill of the would-be armorer. For game purposes, several layers of heavy cloth or furs can be considered padded armor for the purposes of determining a character's base armor class.

Padded armor, being little more than multiple layers of clothing, tends to soil and wear out easily. Although newly fashioned sets may sell cheaply, padded armor must be replaced often, even if it is well cared for. Lice, sweat, dirt, fleas, and insects all take their toll.

If the DM judges that a set of padded armor has seen its last days, the armor class of the armor drops one place (AC 9). The armor, now rotted and torn, is little more than bulky clothing. Importantly, heavily soiled armor reduces the wearer's saving throws against disease and disease-causing spells by -2.

Under ideal conditions, a set of padded armor should be replaced monthly. However, when travelling through heavily infested swamps or in monster-laden forests, padded armor may require replacement as often as every few days. On any long journey, spare sets of padded armor should be taken along as if they were spare sets of clothing. Too much frugality before a journey can lead to much discomfort later.

Naturally, those who have no access to better armor try to make the best appearance whenever they can. Nobody wants to appear cheap or desperate, especially when they are. Therefore, decorating one's padded armor is the most common form of "upgrading" the appearance of one's forces. All armies and nations have banners and shields adorned with their own colors, and these colors are often repeated in intricate patterns on their padded armor. This is most often seen when the local king or noble quickly recruits the local farmers' militia to defend his lands or aid him in launching an assault. The wives, sisters, and daughters quickly whip up anything they can to protect their ill-trained husbands, brothers, and sons. The colors of the lord are either quilted into the design of the armor in checkerboard fashion, or painted or dyed onto the hastily prepared

protection.

In similar fashion, the most nefarious of evil knights have been known to use quilted armor to camouflage their own soldiers as peasants of the opposing ranks, taking devious advantage of the militia's known lack of combat training.

This is only one of many reasons why 0-level fighters are neither feared nor respected by the armed forces. Certainly in the case of padded armor, one can tell a knave by his suit.

## Leather Armor (AC 8)

**Description:** Leather armor, despite the popular misconception, is not soft and supple like the leather used to make a ranger's boots or a druid's robe. That kind of leather offers no better protection than common clothing.

Leather armor is actually strong and stiff, having been hardened in boiling oil and then stretched over a wooden or stone model of a man's or woman's chest. The resulting breastplate and shoulder guards are combined with a tunic or kirtle and, in colder climes, leggings of wool or soft leather.

**Campaign Use:** This is the most common form of "modern" armor. The materials (leather and oil) are readily available in all civilized lands. Only the techniques for boiling and shaping the leather is necessary, and this is not a difficult feat for a leatherworker.

This armor is both inexpensive and durable. While the leather is extremely stiff, it is never fashioned into anything larger than a breastplate, which keeps restriction of movement to a minimum. Naturally, this arrangement means leather armor affords no protection to the joints, but this is true of most types of armor, and is a challenge all civilized races have been attempting to overcome since wars began.

In severe combat situations, leather armor may need to be replaced weekly. However, the armor is easily cleaned, reasonably unaffected by weather, and resists all but the severest of abrasions. This means a good set of leather can be worn daily for many months without need for replacement. Many retired warriors and middle-class militia have a set of leather armor stored away that they take out and polish at least annually.

Because raw leather comes from a by-product of medieval daily life (i.e., eating beef and other meats), in civilized societies leather armor is very common. Even rural communities have little trouble manufacturing leather armor for the troops within a few days.

Cows are not the sole source of hide for tanning. Horses, sheep, and camels can be used just as easily. In short, the creature must have a thicker skin than that of a normal man, but not quite as thick as that of an elephant of bear. The skins of these well-protected creatures, when tanned, becomes hide armor (*q.v.*).

Irregular human forces (e.g., militias and levies, freemen, commoners above peasant level, barbarians, light infantry, and marines) are the primary users of leather armor, for the following reasons: A) leather armor is drastically cheaper and more readily available than metal armor; B) the armor can be worn for long periods of time without leading to increased fatigue or disease; C) the method or protection is so simple that many armies

can make new sets of armor from cattle seized in newly raided territories, often scant days before meeting the defenders in battle; and D) they can be stockpiled for years without the excessive maintenance required by metal armors that are prone to rust.

Another benefit of leather armor, much extolled by those of a more disreputable persuasion, is the ease which it can be silenced. While leather armor is not typically noisy, its buckles and fasteners tend to rattle and clink. Unlike metal armor, leather armor is easily muffled by clothing and as such makes little sound during normal movement. Additional layers of clothing further dampen sounds made by the wearer while hiding. More rouges than can be counted owe their lives to muffled leather armor.

The freedom of movement, adequate general protection, lack of noise, high availability, and low price make this the armor of choice for the general human population.

## Studded Leather Armor (AC 7)

**Description:** Studded leather armor has little in common with normal leather armor. While leather armor is a hardened shell, studded leather armor is soft and supple with hundreds of metal rivets affixed. The rivets are so close together that they form a flexible coating of hard metal that turns aside slashing and cutting attacks. The soft leather backing is little more than a means of securing the rivets in place.

**Campaign Use:** Studded leather armor is known as "poor man's mail" because of its metallic components and low price. It is more common among the general population than most people would first believe because, unlike other types of mail armor, studded leather is relatively easy to make.

While a soft leather backing is the most durable and comfortable, any stout cloth can be used as a backing for the rivets. The rivets themselves are also easy to acquire, as everything from nails to pebbles have been substituted at one time or another in times of desperation. In general, as long as the backing is secure and the rivets are hard enough to withstand a glancing blow, the armor so comprised should be considered studded leather for purposes of weight and protection.

Studded leather, like brigandine (described later), is commonly worn by pirates and other seafarers. The protection afforded is better than normal leather armor, which is an important point during sea combat when a shield may not be practical (a shield is useless when climbing or fighting in a ship's rigging).

With regard to swimming, the weight of studded leather is significantly less than metal armor, and the flexibility of the soft leather backing is better for such demanding activity. Indeed, for short times in the water, it is as easy to maneuver in studded leather as it is to move in a normal leather breastplate. Therefore, most sea-going mercenaries and pirates prefer to wear studded leather as their all-purpose armor. Trained marine contingents, however, whose main function is boarding, usually wear normal leather and carry a shield.

Miserly merchants, who shave pieces of gold more than they like to admit, will often buy studded leather to outfit their hired guards. However, these copper-pinchers pay for the protection one way or another, as studded leather tends to wear out rather quickly.

Not only does the soft backing wear out as quickly as thick clothing, but the metal studs can be affixed only by driving them through the leather, considerably weakening the overall strength of the backing. Eventually, the holes open up and the rivets drop out. Studded leather is also prone to the same problems of sweat, grime, and insects as padded armor (*q.v.*).

## Spiked Leather

A variation of studded leather that is sometimes seen among barbarians of northern climes (and, oddly, among some hill giant clans) is spiked leather. Much as it sounds, spiked leather armor is studded leather armor in which the rivets have been augmented by sharp spikes. (Most intelligent beings would be worried about mounting spikes into their armor, just in case they should trip and fall, not to mention the problems packing or storing the armor).

Overbearing and grappling while wearing such armor inflicts additional damage based on the wearer's size. A small creature inflicts 1-2 points of piercing damage, a man-sized creature inflicts 1-3 points, and a large creature inflicts 1-4 points. These values are considered for each individual attack, not for every round that a creature is grappled.

Spiked armor is usually made specially for the wearer and costs about 150% of the price of a normal set of studded leather.

Spiked armor is occasionally used to equip gladiators, pit fighters, and other specialists.

## Hide Armor (AC 6)

**Description:** Hide armor is made from the thick hide of a very large animal (an elephant, for example) or from many layers of normal leather from common animals, like cows.

**Campaign Use:** Hide armor is much too thick, heavy, and inflexible to be used much in the advanced human cultures. Its weight is comparable to chain mail, but its protection is less. However, among the barbaric humanoid masses throughout the dark forests and misty jungles of the world, hide armor is common.

Because of its simple construction, any race with Low Intelligence or better can make suitable hide armor. All that is required is a dead animal and someone to wear its skin. Since no effort to tan the hide is necessary to get basic protection, creatures with a desire for excellent protection at a fair price (i.e., usually free) find hide armor ideal for everyday use. Proper tanning, of course, improves the armor's life (and acceptance in polite society).

The smell of untanned armor, as any ogre can testify, is something a warrior must get used to.

As mentioned in the section on leather armor, the stiffness that results when hide armor dries completely isn't considered a drawback by humanoids. (In fact, without that stiffness, the hide would lose one level of armor class protection.) For only a little bit of work, any humanoid worth his hit dice can start adventuring at AC 6 and begin hunting for a shield.

Ironically, while leather armor may allow greater freedom of movement, durability, and a more pleasant appearance and smell, hide armor is actually two levels of protection better (AC 6 instead of AC 8). It illustrates that humans trust their dexterity and intelligence to aid in avoiding wounds during combat, while less-intelligent humanoids typically rely on reducing the chances of a vital strike with a thicker armor.

Like padded armor, hide armor is often decorated to show tribal allegiances. Commonly, the type of creature used to make the armor is sufficient to denote clan alliance, as with the Hydra clan fire giants or the Black Bear ogres.

Unique to the humanoid races is the habit of affixing some part of one's notable kill to one's hide armor. While this doesn't affect the armor class rating of this armor in any substantial way, it does tend to make one less popular around the civilized campfire but more important around the humanoid or barbarian camp. Importantly, these trophies, which often include such grisly things as skulls, scalps, teeth and claws, are considered a sign of ferocity and ruthlessness and are therefore seen most commonly among high leaders and shamans.

The equivalent of hide armor among humans and demihuman races is layered leather armor, wherein many layers of normal leather armor are bonded to one another to form a heavy, thick plate of protection. This armor is considered hide armor with regard to weight and cost, but does not suffer the problems of odor and disease seen in hide and padded armors.

Few human cultures employ hide armor extensively. Most notably, certain northern barbarian tribes commonly wear thick hide armor. Some of these tribesmen actually believe that the hide armor gives them animal-like strength and powers, and that human armors like chain and plate mail actually rob them of their innate combat instincts. While this may be dismissed as ignorant superstition, there are shamans of the northern wastes who tell great tales of famous suits of hide armor, blessed with the spirits of the animals from which they came.

Whether or not special hide armor exists (like the *White Skin of Umpluutu*, which allows the wearer to *shapechange* into a polar bear) is up to the DM, but hide armor offers unique avenues in a barbarian or primitive campaign.

## Scale Mail (AC 6)

**Description:** This is a coat of soft leather covered with overlapping pieces of metal, much like the scales of a fish. It is just as heavy as chain mail, but offers slightly worse protection. It has no significant advantages over hide or brigandine armor.

**Campaign Use:** Scale mail is an old type of armor, much like splint mail (described later). It never became popular in western medieval culture for very long; its production was found to be too time-consuming and thus less efficient to make in comparison to other armor types. In the AD&D® game context, scale mail is most common in Dark Age periods, in foreign cultures, or in those areas where its materials are unusually plentiful.

Some human cultures, notably those similar to the Byzantines and other eastern and southern kingdoms, did not pursue the evolution of armor made of large plates, but rather

chose to make use of small plates. Where metal is not forged but is instead cut from sheets of malleable metal ores, the technology of scale mail and its successors (splint, brigandine, and banded armor) predominates.

This is not a matter of primitive versus civilized, but rather two separate approaches to the same problem. Where western cultures stress protection, eastern cultures seek to maximize flexibility (and ventilation in the hotter climates).

The scales in scale armor are made smaller in order to make the suit more flexible and comfortable when worn. Indeed, in this respect, scale mail far exceeds either plate or banded mail.

However, all those scales require more maintenance, as the more items attached to an armor's backing, the greater the chance some will fall off. Scale armor not properly maintained loses one level of armor class protection.

Scale mail suffers the same problems of dirt, grime, lice, and odor that studded leather and padded armor suffer.

Scale mail does offer protection as good as that of brigandine for the same price and at a comparable weight. The choice between scale mail and brigandine armor is likely to be determined by the nature of the cultures in the DM's campaign world.

## Sea Elf Scale Mail

The most intricately constructed demihuman scale mail is found in the undersea kingdoms of the sea elves. More as a matter of appearance and ceremony than for additional protection, the sea elves adapted the idea of scale mail to their own peculiar designs. Their armor can be worn underwater, as it is made of metals that do not rust, and the scales are affixed to a backing of eel-skin, which does not disintegrate as leather does in salt water. Brought forth only in times of war or of great ceremony, this expensive armor is worn only by the noble elven elite.

This scale mail is unique among others for its beautiful silver coating. Some armorers wonder whether this coating is silver, platinum, or even mithril. It is generally agreed that the rare scale mail of the sea elves is nearly as valuable as elven chain mail (*q.v.*).

## Coin Armor

A variant of scale mail is armor made with the common coins of the realm. This coin armor is seen only rarely, and then usually among dignitaries and high generals. Each set of armor can stock a large quantity of coins (up to 1,000!). Rarely are they stolen, however, as the people who are rich enough to wear them are also rich enough to see to their personal security.

There are many variations possible, from armor scaled wholly of gold or silver coins to mixed suits wherein the coins themselves are arranged in a personal, family, clan, or other heraldric pattern.

## Brigandine Armor (AC 6)

**Description:** A development of both scale mail and studded leather, brigandine armor is

composed of a layer of small metal plates riveted to an undercoat of soft leather, thick cloth, or coarse canvas. A further overcoat of cloth is applied to the exterior of the suit, making for a layered protection that is lighter than scale mail. An alternative configuration is for the plates to be sandwiched between two layers of soft leather.

**Campaign Use:** Brigandine is a light armor of composite construction, often worn by brigands and other rogues. The armor is essentially a variant of studded leather with an overcoat of cloth. The cloth covering serves both to strengthen the entire framework as well as to make the armor less conspicuous from a distance. Brigandine armor is quieter than chain, splint, or banded mail, but less quiet than studded leather or leather armor.

Brigandine weighs more than hide but less than scale mail. It is generally more flexible than hide, but its three layers make it somewhat stiffer than scale mail.

Brigandine armor is generally the best armor a run-of-the-mill village armorer can make and still get good results. For anything with a higher armor class, a professional master armorer is required. This means that brigandine armor is the highest level of protection afforded many low-level AD&D® game cultures and campaigns.

This represents the limit for the early Middle Ages period AD&D campaign. If a campaign resembles the Dark Ages more than the Age of Chivalry, scale mail and brigandine armor probably represent the pinnacle of personal armor.

Pirates and bandits (i.e., brigands) find that brigandine can be made from anything on hand from sails to canvas sacks, and from coins to brass shavings. Such armor still offers decent protection against most slashing attacks (the most common types encountered in these professions).

As mentioned, brigandine is easier to muffle than most metal armors and mails and thus is the armor of choice among many rogues and the less reputable members of the campaign society.

Rangers often own a set of brigandine as a field combat backup to their normal armor of either studded leather or leather. Poor or novice rangers and warriors might be able to afford or acquire brigandine armor when other armors might not be accessible.

Brigandine armor can also be useful for smugglers, allowing items to be concealed within its multiple layers. Not only coins and precious metals might be concealed, but treasure maps, personal defense traps, and concealed weapons are all possibilities for the clever character. Whether these are actual machinations of devious minds or just rumors spread to discourage personal thievery is a subject of some debate among adventurers and legal authorities.

What is known is that it is possible to conceal such items, either within the padding or by interleaving them with the metal plates. This potential for use (or abuse) of brigandine armor in the campaign should not be overlooked by the DM or player. Secret pockets for use by thieves or prestidigitators might be revealed in the heat of combat, or local authorities may miss a valuable clue the PCs are lucky enough to discover on their own. Much like gnomish workman's leather (described later), an adventurer's set of brigandine may hold many welcome or unwelcome surprises.

## Chain Mail (AC 5)

**Description:** Chain mail is made of interlocking metal rings. It is always worn over a layer of padded fabric or soft leather to prevent chafing and lessen the impact of blows.

**Campaign Use:** Chain mail is the standard medium armor in most fantasy campaigns. In many places, it is so common that the price of a good suit of chain mail may actually be cheaper than less sophisticated armors like scale mail and brigandine. This makes the appeal of chain mail armor very high indeed.

Chain mail is only slightly heavier than hide or brigandine armor and much lighter than any of the plate armors. Important to the wearer, however, is the fact that the weight of a suit of chain mail does not rest evenly upon the body. Rather, most of the burden of a chain suit rests upon the shoulders, making chain armor feel heavier than it really is.

In game terms, this means chain mail can be worn for only about a day before the shoulders of even the strongest warriors begin to fatigue. Experienced warriors usually carry a second set of lighter armor (often leather or studded leather) for use when traveling or at night when not on watch.

**Optional Rule:** Prolonged shoulder fatigue from wearing chain mail more than one day at a time affects combat (-2 to hit) and leads to headaches and backaches.

In general, chain mail is worn by mid-level fighters, guardsmen, mercenaries, and men-at-arms with some official capacity. The price of chain mail is equivalent to many years income for most peasants, and is thus out of reach for most common folk. However, some middle-class families have a set or two of heirloom chain mail armor handed down from glorious days past for use in dangerous days to come.

Typically, town guards and noble patrols are bedecked in chain mail armor. It is perfect for short duty tours and gives the noble warrior a great advantage over the local rabble. Just the difference between chain mail and leather armor alone can give the officer a significant advantage over most ruffians. Anyone wearing chain mail armor with any sort of heraldic crest or uniform is usually assumed to be a local official of some kind by the experienced and perceptive traveler.

In general, chain mail is the basis for all of the more advanced and more protective armors found in most AD&D® game campaigns. The potentially low cost of chain mail is a reflection of the fact that many sets of chain mail are bought as a base for banded mail and the more sophisticated plate armors.

Because chain mail armor is not usually worn for long periods at a time, its underlying padding rarely suffers the problems of padded armors. The metal mail, however, will rust if not oiled and scrubbed with a wire brush weekly. After a month of neglect, chain mail armor loses one level of armor class since it is no longer as flexible and links may have begun to rust. (Naturally, this applies only to ferrous armor mail and not to chain mail constructed of non-ferrous metals).

Chain mail is certainly the best armor value for adventurers who cannot yet afford the heavier armors.

## Ring Mail

This form of chain mail is made by sewing large metal rings to a leather or cloth backing. Ring mail has the same role in early-period campaigns that chain mail has in

later ones. In later campaigns, it is more expensive to buy than chain mail, weighs a comparable amount, provides worse protection (AC 7), and suffers all the maintenance problems of padded and studded leather armor. Few human groups, other than town militias and bandit gangs, use ring mail to any significant degree.

## Banded Mail (AC 4)

**Description:** Banded mail armor is made of overlapping horizontal strips of laminated metal sewn over a backing of normal chain mail and soft leather backing. Lamination in this context refers to a process in which many thin sheets of metal are hammered or riveted together to form each individual metal strip.

**Campaign Use:** This type of armor is most commonly worn by eastern warriors and would be as common as plate mail in a culture based on the Turks, for example, late period Mongols, or the Japanese.

In a western campaign, banded mail can be considered to be the precursor of plate armor. Since banded mail inevitably will have gaps between the metal strips, however, the total protection of vital areas is not quite as good as heavier plate armors. The result is the slightly poorer armor class rating of banded mail.

The strength and flexibility of chain mail makes it ideal for protecting the jointed areas where large metal plates are traditionally incapable of providing adequate protection.

One advantage of this metal-and-chain arrangement over chain mail alone is the fact that the construction of banded mail naturally restricts movement of the metal plates across the torso. The beneficial side effect is that the weight of the armor is more evenly distributed on the wearer, making it easier to wear banded mail for longer periods of time.

In game terms, while banded mail does have an overall higher level of protection than normal chain mail, the durability of banded mail, especially at the joints, is about half that of a standard suit of chain. While a fine set of chain armor might last six months or more, a set of banded mail rarely lasts three months, even with constant upkeep.

Much like chain mail, ferrous metal bands are subject to rust. However, since the metal strips found in banded mail are already inflexible and designed to remain that way, the armor class of rusty banded mail is no different from that of a new suit. However, the estimation of one's peers would certainly be diminished, as a well-tended suit of banded mail can gleam most beautifully if cared for properly.

## Splint Mail

Splint mail is a variant of banded mail in which the metal strips are applied vertically to the backing of chain, leather, or cloth rather than horizontally as in banded mail. Since the human body does not swivel in mid-torso as much as it flexes back to front, splint mail is more restrictive in battle.

In game terms, splint mail is to banded mail as scale mail is to brigandine: splint mail is the style of the earlier and less efficient armoring techniques. Much like scale and ring mail (*q.v.*), splint mail will be used by the less advanced cultures and poorer warriors. Its

relatively low street price in a western campaign when compared to banded mail and even chain is due to the fact that few western warriors will even touch a set of splint mail unless they are destitute or desperate.

The protection splint mail affords is equivalent to that of banded mail, but it is much more fatiguing to wear in a lengthy battle. Furthermore, broken splints tend to work inward toward the wearer in the course of a battle. More than a few warriors have found themselves painfully cut across the ribs when broken banded mail would have merely shifted up or down. Maintenance problems for splint mail are otherwise the same as for banded mail.

For characters with a light purse, splint mail can be picked up in seedier armor shops. Its price makes it ideal for adventurers who want the extra bit of protection over chain mail.

## Bronze Plate Mail (AC 4)

**Description:** The softest of the true plate mail armors, bronze plate mail is made of heavy metal plates attached to a layer of brigandine or composite layers of metal scales and leather or padded armor.

**Campaign Use:** Historically, by the time the armorer's craft had advanced to the point that plate mail had become common, steel had replaced bronze as the best metal for constructing armor. Thus, aside from ceremonial armor, most bronze plate mail appears in areas where copper and tin are plentiful and iron is rare. In general, since bronze plate mail is designed to be lighter and more flexible than normal plate mail (*q.v.*), bronze plate armorers use leather and padding under the bronze plates instead of the heavier chain mail. Also, to reduce the overall weight of the armor, there are no bronze plates attached to the moveable joints. A large bronze breastplate and greaves are often the only difference between bronze plate mail and bronze scale or brigandine armor.

Bronze plate offers better protection than normal brigandine or chain mail and a lower price tag than standard plate mail. Since bronze plate is usually backed with stiff layered armor rather than loose chain mail, bronze plate mail isn't as flexible as banded, splint, or plate mail.

Who would use bronze plate mail in a standard campaign, when so many other alternatives exist? Plate mail, as will be discussed later, is a sign of nobility to the general population. What does the lowly peasant or innkeeper know of the advantages and disadvantages of various types of plate mail? Little to be sure. In fact, this armor is one piece of equipment whose price is not determined by its true value in combat but by its perceived value to persons around the wearer.

Any knight worth his salt acquires full plate armor (*q.v.*) as soon as he can, even if it means selling prized items of magic or a stout warhorse. If a knight can scrape up 400 gold pieces but can't get the extra 200 gold pieces to buy a real set of plate, bronze plate is the only real choice open to him.

More than a few low-level adventurers with perhaps a little too much gold to spend and not enough experience or training in such matters often are cheated into buying bronze plate mail that has been painted silver. They immediately lose 200 gold pieces in the deal

by taking home the inferior armor. After even one such sucker-sale, the charlatan salesman skips town for a few weeks or moves to a different part of the city. Naturally, such gullible warriors usually don't discover their mistake until the heat of battle, when a weapon strike that would have bounced off a real set of plate mail dents or cuts through the bogus plate. Caveat emptor!

Not all bronze plate is part of a hoax or scam, however. There are versions of bronze plate used by cultures who for one reason or another haven't learned the fine art of forging iron and steel. There is much precedent for this in history and fantasy, and many advanced cultures have lost the art or never struck the right mix of metals throughout their long history. These cultures may have developed the skill of forging bronze into a high art, making armor that looks like gold but wears like steel.

Note that these types of bronze mail last much longer than the typical medieval forms and may have a backing of solid bronze chain and leather. These suits wear like real plate, and the relative softness of the metal is often worked into a decorative design. Easy to emboss with one's family crest or tribal insignia, well-worked bronze shines like gold and can be polished to the sheen of a mirror. Some tribes have literally won entire battles on the distracting beauty of their exquisite armor alone.

## Plate Mail (AC 3)

**Description:** Plate mail is a combination of chain or brigandine armor with metal plates covering the vital areas such as the chest, abdomen and groin. Similar in construction to bronze plate mail, true plate mail comprises heavy steel plates riveted to a sturdy backing of chain and leather. These metal plates are often better constructed than those found in bronze plate and banded mails, relying on superior metallurgy and advanced lamination techniques to produce a lightweight steel with excellent combat characteristics.

Brigandine backing for this type of armor is rare, because the stiffness of brigandine armor makes this type of backing an unpopular choice among plate armorers and warriors alike.

For all of these reasons, plate mail protects the human body more effectively than bronze plate mail.

**Campaign Use:** The development of plate mail heralded the beginning of the age of chivalry and knighthood. Associated most often with classic French medieval culture, the names given to the segments of plate mail reveal their French origin to this day.

The most important metal plate on the armor is called the *plastron-de-fer*, or breastplate. It protects the vital chest and abdominal areas from attack. Typically, the shoulders were protected by metal shoulder guards called *epaulieres*. Lower leg protectors, called *grevieres* (or greaves), and metal-plated chain gloves, or *gauntlets*, are also common accessories to a plate mail suit. Any manner of helm is also desirable (see the section on Helms).

Plate mail is the most common form of heavy armor in fantasy campaigns. It provides maximum protection for a fraction of the cost of field or full plate armor, and can take month after month of grueling combat punishment. It is only moderately heavier than banded or chain mail, and because of its custom fitting and sturdy straps, wears easier

than either.

Because the plates are carefully fitted to combine with the chain suit beneath, the layer of leather or padding beneath the chain is often much thinner and more flexible than that found in banded or brigandine armor. Many long years have gone into perfecting the construction of plate mail, which makes even the most basic of suits a wonder of medieval engineering. With regard to cost, the purchaser of a set of plate mail may have to fork out a considerable sum of money compared to banded mail, but no wearer of plate mail doubts for long the value and summary wisdom of his purchase.

Knights, royal guards, and mercenary captains often wear plate mail. Even as a prize of battle, plate mail is infinitely easier to fit to a new owner than either field or full plate armor. Plate mail is the preferred protection of the vast percentage of the world's most experienced warriors, because it is not nearly as cumbersome to don or remove as other heavier types of armor.

It is a matter of pride among many kingdoms that even the slightest improvement to the general plate mail design was quickly attributed to the armorer who invented the alteration and the king whose wisdom it was to accept the change.

As such, most sets of plate mail were constantly upgraded throughout the known world, and now are very similar indeed. In fact, the perfection of the basic plate mail design was so nearly complete that many armorers had already begun devoting most, if not all, of their time and resources to working field and full plate armor with similar care and precision.

Plate mail is the heaviest armor commonly used by adventurers, both as a matter of pride and for the general necessities of daily use and efficiency.

## Field Plate Armor (AC 2)

**Description:** Field plate is actually a more commonly used form of full plate armor (described later). It consists of shaped and fitted metal plates riveted and interlocked to cover the entire body. Like plate mail, a set of field plate usually includes gauntlets, boots, and a visored helmet (see Helms). A thick layer of padding must be worn under the armor.

**Campaign Use:** This armor is rarely used, except by noble knights on a military campaign. In theory, the bulk of a set of field plate armor is so evenly distributed over the whole body that the encumbrance rating of field plate compares quite favorably with that of plate mail and banded mail. In practice, the increased protection is paid for with reduced mobility and increased fatigue.

Each suit of this extremely rare and expensive armor is custom-made and fitted for its prospective wearer. Only a master armorer can create field or full plate armor, and only a master armorer can re-size captured pieces of a suit for a new owner. The new owner must be of at least a similar size and build as the previous owner, or the effort required to modify the piece in question exceeds the expense and effort necessary in forging an entire new set.

Aside from its expense, the main disadvantages of field plate armor are the lack of ventilation through the suit, which make moisture and fungus a problem, and the time

required to put it on and take it off. As detailed in the AD&D® 2nd Edition *Player's Handbook*, 1d6+4 rounds are required to dress in field plate armor with outside assistance. Triple that amount of time is required if the wearer is alone. Similarly, it takes 1d4+1 rounds to remove such armor, and half that time (fractions rounded up) if pressed for time or assisted by an attendent (see Full Plate Armor).

Field plate armor is typically used by the high knights of a kingdom, like King Arthur's legendary Knights of the Round Table, for everything except formal ceremonies and triumphant battle celebrations. Full plate armor is reserved for such occasions where style is more important than combat.

Field plate can be fixed much more cheaply and easily than full plate, and is built to withstand the rigors of long-term use and combat. The entire body is encased in metal plates, and even the joints are protected with metal caps and sturdy chain mail. A great helm bearing the emblem of the house or name of a legendary knight is common and is one of the few ways a knight can recognize a friend or foe from a distance.

Field plate, while expensive and painstakingly crafted by master armorers, is normally not adorned with many trappings or embellishments. Since legendary knights make a habit of battling great armies and dragons almost daily, their armor rarely lasts longer than a year without needing to be completely replaced.

A DM may decide that being allowed to wear field or full plate armor is a sign of nobility or knighthood in his campaign. In such campaigns, wealthy warriors had better have a legitimate noble crest or recognized royal patron before parading themselves about town.

**Optional Rule:** This rule may be invoked if a player insists on wearing badly repaired or patchwork plate mail. Following every strong jolt to the wearer, whether from a good hit in battle or a fall from a cliff, the material binding the patchwork plate to the backing (as stated at the time of repair) must make a saving throw versus Crushing Blow. Failure means the plate falls off, while success means the next saving throw is made with a -1 penalty to the roll. Note that this penalty is cumulative, so any patchwork plate is bound to fall apart eventually.

## Full Plate Armor (AC 1)

**Description:** Full plate armor is the best armor a warrior can buy, both in appearance and protection. The perfectly-fitted interlocking plates are specially angled to deflect arrows and blows, and the entire suit is carefully adorned with rich engraving and embossed detail.

**Campaign Use:** Suits of full plate armor are as rare as powerful magical items in most fantasy campaigns. Magical sets of full plate are artifacts to be treasured and hidden away, the objects of glorious quests.

In most campaigns, the number of sets of full plate armor can be counted as easily as the numbers of crown knights who owe their allegiance to the king. In many kingdoms, it is a crime to possess a set of full plate armor without royal permission, as a wise king keeps any armorer capable of such craftsmanship at his beck and call.

Full plate armor is one of the greatest gifts a great lord can bestow upon his followers. It is a prize as coveted for the status it confers as its monetary value. A suit of full plate armor will often be a gift presented to great knights upon great service to the realm, or as an incentive to attract a knight errant of unquestioned prowess to the king's private circle.

In addition, full plate armor is the most technologically advanced armor available in the later medieval and high chivalry settings. The special touches and custom enhancements added by the few living master armorers are what give full plate armor its increased armor class rating over the more traditional forms of field plate. At prices that start at 4,000 gold pieces for a simple, unadorned suit, full plate armor represents the crowning achievement of the armorer's ultimate goal--to forge for man a new skin of steel, as flexible as his own, but as invulnerable as anything in the land.

This increased protection comes only with a price. While full plate armor wears well when correctly fitted, it is cumbersome to don or remove without assistance. Herein enters the attendent.

For most knights, the attendent is a vassal or squire who tends to the knight's every need. He sharpens his lord's sword and brushes his horse. However, the great knight chooses his attendent carefully, for he knows his life may depend on this decision.

Without the assistance of a capable attendent, a knight requires 1d10+10 rounds to don his armor. An attendent cuts this time by half. As most combat veterans know, cutting the average armoring time in half can mean the difference between being at the battle and missing it entirely!

Warriors in a hurry can cut this dressing time by half again. The ramifications of this haste is that a knight and his attendent who are extremely lucky might, at best, be able to get dressed in only 3 rounds (i.e., best roll of 1, add 10 equals 11 rounds; 11 rounds cut in half for attendent's assistance equals 6 rounds; 6 rounds halved again for rushing yields 3 rounds).

However, a knight hurrying in this manner suffers penalties in combat. His straps are not adjusted correctly, meaning his plates are too loose or too tight and will hamper his overall effectiveness in battle. The knights suffers a -1 to all attack rolls and his armor class likewise drops one place, meaning his hasty dressing has given him armor equivalent in protection to that of field plate armor.

If a knight discovers that his loose fittings are causing him to miss his mark or be struck by his enemies too often, he need only spend as many rounds tightening his straps as he neglected by rushing his preparations (twice that if unattended, of course).

**Example:** Sir Hujer rolls a 6 on 1d10 when attempting to don his armor, thus needing 16 rounds. An attendent reduces this to 8 rounds, and rushing reduces this further to 4 rounds. The rushing penalties would be removed if Sir Hujer took 4 rounds (attended) or 8 rounds (unattended) to readjust his armor.

## Gnomish Workman's Leather Armor (AC 7)

**Description:** Gnomish workman's leather armor is a variation of high-quality gnomish leather armor (as described in the Equipment Chapter of *The Complete Fighter's Handbook*). Gnomish workman's leather is adorned with dozens of tiny tool holders and pouches, typically filled with the most bizarre collection of coins, nails, tools, weapons,

widgets, and sprockets ever assembled on one body. For this reason, a set of gnomish workman's leather provides protection identical to studded leather armor.

**Campaign Use:** Typically, gnomish workman's leather is as silent as normal high-quality gnomish leather armor (no Thieving Skill Armor Adjustment). However, this is before a gnomish workman has gotten anywhere near it. As with most things of gnomish design, the whole is a rather sundry compilation of many disjointed parts.

Strange inventions, secret compartments, locked and trapped pockets, and a dizzying array of tool holders and layered item racks are added, modified, moved, and camouflaged almost daily. From week to week, a gnomish workman's armor may change drastically in appearance and function. The armor has a stowage capacity of 10 lbs., up to half of which can be considered hidden.

Importantly, the special benefits of gnomish high-quality leather armor are lost when a gnomish workman begins collecting items to tuck into this leather garb. While a few items on the belt do not significantly ruin this feature of the base armor, enough gadgets to alter the armor class cannot help but clink and bang into each other, crinkle and spill out when the owner bends over, or accidentally drop off or explode in the most heated battle or flight.

Outside of gnomish society, this type of armor has been rarely seen by non-gnomes. Humans and elves rarely steal things they cannot use, unless hired to do so, and dwarves, who might squeeze into a suit if offered, find the concept distasteful and the appearance much too garish for their otherwise stoic tastes. Halflings have displayed a weakness for the many secret compartments found in gnomish workman's leather, and halfling thieves in particular might treasure this type of armor above all else. Indeed, the black market for gnomish workman's leather is rumored to be funded entirely by halfling-run thieves' guilds. This only adds fuel to any fires of discontent between halfling and gnomish clans.

In human settlements and cities, gnomes only don workman's armor when working privately, deep in their secret workshops. Since no one around them either appreciates or respects the trappings of "master craftsmanship," there seems to be little need to flaunt them.

Within the gnomish clan, however, there is a constant competition between all gnomish craftsmen, among both masters and apprentices. In some clans, the competitions have become formalized, with actual categories (most items carried, best personal trap, most secure pouch, nicest appearance, etc.) and prizes (clan contracts or a special badge to be sewn onto the armor). These contests are held on high festival days, much like a merchant's bazaar (just another special guild tradition to confuse the newcomer or overnight visitor).

In the largest of clans, many competing craftsman's guilds might sponsor and support individual designs or candidates. Every craftsman in the hall will spend long nights tinkering with his own armor to emulate or duplicate the desired effect. Those who succeed will claim partial credit for "testing and perfecting" the basic design. Those who fail might offer small sums of gold for the secret of the new invention.

## Elven Chain Mail (AC 5)

**Description:** Elven chain mail is the only form of armor made of a legendary elven alloy, a light-weight silvery steel of great strength. Even without enchantment, elven chain mail is typically half the weight of its human-forged counterpart.

**Campaign Use:** The elves guard the secret of making elven chain mail with more ferocity than they protect even their own children. In the entire multimillennia-long history of the elven race, the number of elven armorers who learn the secrets of forging elven steel can be counted on but one hand. Needless to say, these masters of the art tend to be ancient in the extreme, and the choice of an apprentice comes but once every thousand years. This is the highest honor accorded to any single elf, save being chosen by his peers to lead the elven race.

Apprenticeship is not a gift bestowed by the wealthy or powerful, but chosen by magical testing in a secret ceremony. Some outsiders would argue that the training makes the armorer, but tradition holds great sway in elven circles.

Human and dwarven armorers have been able to divine at least some of the secrets of the elven armorers, but not the most important ones. They know, for example, that mithril silver, that part of mithril which gives this purest of metals its glimmer in the moonlight, is somehow alloyed with other materials. The process of alloying has never been duplicated outside of an elven master forge, so most armorers believe some form of magical manipulation is involved in the process somewhere. Furthermore, anyone hoping to forge elven armor must be able to see the magical emanations radiating from it. While this may be done artificially through magic, this task is geared more toward the elves' natural eyesight. Drow armorers (described later) work under similar conditions.

Naturally, when one has a thousand years to perfect the skills for one's job, just about anything is within grasp. The dwarves call this an unfair advantage, while the humans don't even bother trying anymore. Life is too short, they feel, to waste time on creating something that would be easier stolen or discovered in a dragon's horde.

Elven chain mail is used by elven troops, both cavalry and infantry. It is common among the grey (faerie) elves and advanced elven cultures, but less common among the high elves. It is extremely rare among the wood elves.

Since the material is so strong and valuable, in those rare instances when a suit of elven chain mail is damaged to the point of needing repair, the suit is never discarded, but returned to the armorer for repair or replacement.

By the numbers of suits estimated to exist by human military planners and master armorers, best estimates are that it might take upwards of ten years to make just one suit of elven chain. Otherwise, they reason, there would be a lot more of the armor in use by the elves, and many more suits would be found in the lairs and treasure hordes of monsters across the realms.

## Magical Elven Chain Mail

Ordinary elven chain mail is rare in the extreme, but magical elven chain is so precious a gift that only a handful of suits have been rumored to exist anywhere but in royal elven hands.

In addition to the normal weight and flexibility advantages of elven chain, magical elven chain mail is so weightless that it can be worn under one's normal clothes. It is so

comfortable and unrestrictive that it can be worn constantly, even while sleeping. Magical elven chain is so soft to the touch that it can be worn without any padding beneath it. This makes magical elven chain the ideal armor for travelers, excluding only the greatest of knights, who by tradition prefer plated armors over all others.

For rogues especially, a set of magical elven chain mail is a more prized possession than even *full plate armor +1*. Adventurers have lost their lives over mere rumors of magical elven chain.

## Drow Chain Mail (AC 4)

**Description:** Drow chain mail is a finely-crafted, satiny black metal mesh that does not encumber its wearer in the least. It is similar, but not identical to, the magical elven chain mail described previously. It is typically fashioned only into tunics, as drow elves share their forest-bound cousins' preference for armor that adequately protects without being overly weighty or restrictive.

**Campaign Use:** Much like their cousins in the sunlight, the drow have invented their own form of special armor.

What is known for certain is that drow chain mail uses adamantite, the strongest metal known, as the principal component of their mystical alloy. It is mined by myriad drow-allied races in great quantities, and the drow war machine is wholly dependent on adamantite-related technologies.

This alloy has special properties due to the peculiar nature of the radiation emanating from the drow homeland, giving even the basest form of the alloy the equivalent of a magical +1. Drow weapons, shields, armor, etc., all begin with a +1 bonus, and based on the alloy, the amount of time spent in the forge, and the secret processes used, it can increase to as much as +5. The alloy does not radiate magic in the traditional way (a *detect magic* spell reveals no trace of magical properties).

Whenever drow-alloyed creations, including armor, are exposed to direct sunlight, their magical bonuses are immediately lost and they begin to utterly and irreversibly decay. This happens even after one short exposure, meaning that even a set of drow armor that is immediately returned to utter darkness or the nearest drow homeland will still decay. Physical decay begins 1d12+8 days after exposure to sunlight. The armor completely falls apart after another 1d12 days have passed.

If extraordinary precautions are taken, an adventurer could theoretically use a set of drow armor, if worn only in the dead of night and returned to complete darkness (e.g., a light-proof chest or vault) before the break of day. However, the armor *must* be returned to the drow homeland once every two weeks to be re-exposed to the radiation. Armor must remain in the homeland two days per day spent above ground. If the armor is not returned to the underdark before two weeks have passed, the magic of the armor is permanently lost. Decay then begins as described above.

The fragments of metal that remain after drow armor deteriorates may be collected and reused for future forgings. However, the metal is nonmagical until the forging process imbues the enchantment.

The surface elves contend that these conditions are poor workmanship on the part of

the drow, but scholars have noted many parallels between elven and drow alloys.

For example, one possibility is that just as the strange magical emanations of the drow homeland aid in the construction of their special adamantite objects, it is has been surmised that moonlight, pure and cool, may have something to do with the forging of elven mithril armor. The fact that mithril is as reflective, light, and pure as adamantite is dull, heavy, and dense has not escaped observation.

What is certain about the two magical types of armor is that such parallels cannot be sheer coincidence. Somewhere in the distant past of the two races, when times were better and before the dark elves retreated to the earthen depths, there must have been one common armor technology. The drow took the secrets of forging elven metals with them when they left, but had to discover something to replace both the mithril and moonlight components of the ancient secret art.

What they eventually discovered, perhaps after many centuries of experimentation, was a magical alloy more abundant than mithril, yet not as stable as elven chain.

## Dwarven Plate Mail (AC 2)

**Description:** The forged black iron plate made by the dwarves exclusively for their own warrior leaders is both heavy and unattractive by human and elven standards. However, dwarves have traditionally placed less emphasis on appearance than on personal defense. Dwarven warriors who wear dwarven plate are often called "waddling cauldrons" by their enemies due to the bulk of this armor.

**Campaign Use:** As detailed in both *The Complete Fighter's Handbook* and *The Castle Guide*, high-quality dwarven plate is the boilerplate version of human plate armor. It is 50% heavier than equivalent mails, making a single suit of dwarven-sized plate mail armor weigh approximately the same as a set of human-sized plate mail.

Additionally, the denser armor affords protection equivalent to *plate mail +1*, and the armor itself saves against equipment damage at +6, in addition to any bonuses permitted if the dwarven plate in question is also magically enchanted. Stories about dwarven plate armor withstanding the smelting fires of a red dragon's breath may be boastful exaggeration, but it is an established fact that dwarven plate often survives an attack that its wearer does not.

As mentioned, dwarves prize combat effectiveness over a warrior's appearance. It is therefore very rare for the iron appearance of dwarven plate mail to be adorned in any way.

Much like the elves, dwarves do not make dwarven plate for non-dwarves. Not only is it considered impractical to spend one's time building a suit of armor no dwarf can ever hope to wear (a waste of time), but the dwarves will admit to having no skill in working with the peculiarities of the human body. Dwarves tend to ignore things like flexible joints, as their range of movement is already restricted by nature. An ancient dwarven warrior's saying goes something like "If it doesn't fit, bend it. If it still doesn't fit, break it!" Along those lines, another popular dwarven saying is "Never let your armor impede a good fight."

Dwarven field and full plate armor do not exist. Not only would dwarves look like

miniature iron golems when so protected, but dwarves prefer to let their facial expressions speak for them in combat. The problem of free movement plays a big part in this practical decision as well.

No human has ever managed to convince a group of dwarves to forge a set of full plate armor for them. If such a task were even to get past the bargaining phase, it would quickly become apparent to all concerned that the dwarves have no experience or knowledge of such constructions and lack the motivation to learn it. Dwarves themselves claim they'd rather be "beating their hammers on orc skulls than beating them in the forge."

Curiously, gnomes have offered to give full plate their "best shot" from time to time, but so far, no human has been brave or foolish enough to accept the offer.

Dwarven plate mail lasts longer than its human counterpart. As detailed in *The Complete Fighter's Handbook*, dwarven plate mail can sustain twice as many points of damage as normal plate mail (if the optional armor damage point system presented therein is being used).

## Magical Dwarven Plate Mail

Magical dwarven plate mail is only as encumbering as ordinary plate mail. The enchantment is cumulative with the natural +1 to armor class dwarven plate possesses. Therefore, *dwarven plate mail +1* is actually equivalent to ordinary *plate mail +2* for purposes of armor class (but not saving throws). It may be easier for the DM and player if the base armor class for dwarven plate is remembered to be 1, equivalent to field plate armor for humans.

## Shields (+1 AC)

Shields ordinarily improve a character's armor class by 1 (or more if magical). Shields cannot be used to block attacks from the rear or rear flanks.

## Buckler or Target Shield

A buckler, also known as a target shield, is a small round shield of wood or metal that fastens to the forearm. It can be worn by crossbowmen and archers with no hindrance to their attacks with their chosen weapons.

Because of its small size (approximately 1' in diameter), a buckler protects against one attack per melee round. The user can choose which attack he wishes to use his buckler against, but he must declare this before the attack roll has been made. This increases the defender's armor class only by 1 (more if magical) against that single attack.

**Note:** Bucklers should be treated not as full shields when determining the armor class of the user, but more as a special item that can be called upon to add extra protection for one attack per round.

## Small Shield

A small shield is usually round and is carried on the forearm, gripped with the shield hand. Its light weight as compared to a medium shield permits the user to carry other items in that hand, although he cannot wield or carry another weapon.

A small shield (approximately 2' in diameter) can be used to protect against two frontal attacks of the user's choice. Like the buckler above, the user can choose which attacks to use his shield against, but must decide before the attacks are rolled.

**Note:** Like the buckler, the small shield should be considered a special item used for defense, not as a general addition to frontal armor class.

## Medium Shield

A medium shield is carried in the same manner as a small shield (i.e., on the forearm). Unlike the small shield, however, its weight prevents the character from using his shield hand for anything other than carrying the medium shield. Medium shields are usually made of metal, range from 3'-4' in diameter, and can be of any shape, from round to square to a spread dragon's wings. A typical medieval shield resembles a triangle with one point facing downward.

With a medium shield, a character can defend against any number of frontal or flanking attacks in a given round. In this instance, the character applies the +1 armor class bonus (not including magical bonuses) for the shield to his overall armor class rating, providing he remembers to disregard the shield bonus during the occasional attack from the rear.

## Body Shield

The body shield, also known as the kite or tower shield, is a massive metal or wooden shield reaching nearly from the chin to the toe of the user. It must be firmly fastened to the forearm and the shield hand must firmly grip it at all times. Naturally, this precludes use of the shield hand for anything but holding the body shield in place.

Standing around 6' tall, the body shield provides a great deal of protection to the user, improving the overall armor class of the character by 1 against melee attacks and by 2 against missile attacks. As with all shields, these bonuses apply only against frontal and flanking attacks.

Since the body shield is very heavy, the DM may want to use the optional encumbrance system if he allows its use in the campaign. This will help to prevent overuse of body shields in combat.

## Helms

**Campaign Use:** Helms are part of a warrior's basic protection. Failure to use proper headgear leaves a character open to called shots by opponents or to other disadvantages at the DM's option. All headgear except that which does not cover the ears must be removed when making rolls for listening.

*The Complete Fighter's Handbook* offers an optional rule for Hearing and Vision checks. All helms restrict Hearing and Vision checks to some degree. (A Vision or Hearing check is a 1d20 roll against a character's Intelligence or Wisdom, whichever is

higher. These checks can be used when a character has a chance to hear or see something of importance. This check *isn't* used when characters listen at doors; that has its own check.)

Optionally, great helms and closed-face helmets, when worn with plate armor, gain bonuses against dragon's breath and spells that affect the eyes (see the Equipment section in *The Complete Fighter's Handbook*).

**Helms and Thieves:** Thieves suffer automatic penalties to hearing if a helm is worn. The following descriptions include penalties to Hearing and Vision checks. If these rules are not used, the penalties for Vision checks should be ignored; for Hearing checks, substitute a -5% penalty to the thief's Hear Noise ability for each -1 Hearing check modifier (e.g., a -3 to a Hearing check is a -15% to the thief's Hear Noise roll).

## Cap

A cap is a padded, leather, or steel skullcap worn much like a close-fitted cap, beret, or bonnet. Caps are usually worn with padded armor, leather, studded leather, hide, or any other lightweight protection.

**Vision and Hearing:** -1 penalty to Hearing checks; no penalty to Vision checks.

## Coif

A coif is a padded chain mail hood. It fits snugly around the neck and over the head, except the face. It usually comes with or is built into a suit of chain mail or mail-based armor. Often, a heavily armored knight will wear a chain mail coif under a great helm. This allows him to remove his great helm for a better view of the field while maintaining a fair level of head protection.

**Vision and Hearing:** Identical Vision and Hearing check penalties as those associated with a cap (above). If a great helm is worn, penalties are assigned for the great helm and are not cumulative with those of the coif.

## Open-Face Helmet

This class of open-face helmet, made of reinforced leather or metal, covers most of the head, save the face and neck. These helmets commonly provide protection for the nose (this piece of the helm is called a *nasal*).

Open-face helmets are popular with officers and leaders, and are appropriately worn with medium-weight armors like brigandine and chain mail.

**Vision and Hearing:** -1 penalty to Vision checks; -2 penalty to Hearing checks (such helms cover the ears entirely except for a small hole).

## Closed-Face Helmet

The closed-face helmets are identical to the open-face helmets (above), but include a visored faceplate.

These tend to be worn by officers and sergeants-at-arms. They are most commonly worn with plate mail.

**Vision and Hearing:** When the visor is up, Vision and Hearing check penalties are identical for those of open-face helmets. Otherwise, the visored wearer suffers a -2 penalty to all Vision checks and a -3 penalty to Hearing checks.

### Great Helm

A great helm is any massive metal helm that covers the entire head, including the neck and often the upper shoulders. The only gaps in the protection are found in the narrow slits that allow limited vision, and some small holes to permit breathing. The visor is not normally removable.

It is rare to find a great helm used with armor lighter than banded mail. Great helms are most often found in combination with plate mail or heavier armor.

**Vision and Hearing:** -3 penalty to Vision checks; -4 penalty to Hearing checks.

# CHAPTER 2

# Equipment for Mounts

The following information expands the details found in the *Player's Handbook* with regard to barding, tack, harness, and other items used with horses and mounts. Optional rules are provided to allow the DM to match the armor of mounts and their riders (which can be used to simplify the record keeping when large numbers of mounted troops are encountered). In addition, partial barding is covered in an optional table that allows calculation of a mount's armor class if only partial barding is available.

The information in this section centers on horses, because this type of mount is the most commonly encountered. Much of this material, however, can be easily adapted for other types of mounts. The following sections deal mainly with barding, as this will have the most direct effect on adventuring and combat.

## Barding

Barding refers to armor designed for mounts. Mounts are most commonly horses, but also include the huge beasts that carry fighting platforms into combat (such as elephants with howdahs). The vast majority of mounts will wear no barding at all. Such protection is expensive and time-consuming to construct, tires the mount quickly, and reduces the speed and maneuverability of the mount in combat.

Historically, barding reached its peak development in the medieval era. After the introduction of gunpowder and the gun, barding quickly degenerated into little more than parade trappings. The development of barding was controlled by two factors: the breeding of horses strong enough to wear the protection and carry an armored rider, and the technical problems of designing such armor to be ever lighter and more flexible than that worn by men without sacrificing protection. In many ways, the development of barding parallels the development of armor for the fighting man.

## Medieval Barding

Most forms of barding, other than padded or quilted cloth, required massively heavy

and powerful mounts. The weight of barding and the man, including his armor and weapons, easily strained even the largest war horses. For this reason, later barding was redesigned using lighter materials such as boiled leather or thick padded cloth. One of the most common historical bardings was made of boiled leather (sometimes more than 2 inches thick), with specially reinforced parts made of steel bands and wooden planks or short strips of thick, hard wood.

Late medieval barding comprised a number of pieces of armor covering different parts of the mount. These included the *chanfron* (for the head and neck), the *crinet* (for the side of the neck), the *cuello* (for the forward chest), the *poitrel* (for the flanks and broad chest), the *flanchards* (covering areas around the saddle), and the *crupper* (for the hindquarters). Barding almost never protected the legs of the mount.

In warmer and more humid climates, full barding is less common than half barding. When used at all, lighter forms are preferred. Half barding usually includes only the chanfron and poitrel (plus the crinet and cuello for plate barding).

## Barding in Campaigns

In the AD&D® game worlds, the use of barding varies by culture and race. Although individual variations are up to the DM (and are encouraged), a few generalizations are useful. Most barding will be used by human forces. Other than humans, elves (and sometimes halflings) will use horse barding. It is rare to see gnomes or dwarves mounted, except as members of adventuring groups. It is much rarer to see them on barded mounts, as they prefer fighting on foot.

Besides horses, war elephants are sometimes outfitted with leather or metal barding. Camel riders tend not to bard their mounts, as the bulky armor makes them more difficult to handle, reduces their carrying capacity severely, and interferes with their ability to survive desert conditions much more so than with horses.

Worgs and war dogs are occasionally barded with leather, though this is rare.

Aerial mounts can be barded with leather or lighter materials.

## Types of Barding

**Full barding:** This is a complete set of horse armor that provides the rated protection when attacked from any side. Note that the term "full plate" is used to denote a new, more advanced type of horse armor, like the fighter's full plate armor.

**Half barding:** The difference between half barding and full barding is that half barding covers only the front and forward sides of the animal. Attacks from the rear or rear flanks use the mount's base armor class.

**Partial Barding:** This is an option that allows the averaging of a mount's armor class if full barding is not available. See Table 4.

Note: All "suits" of barding, including half barding, are complete units; that is, half barding is not achieved by leaving off half a horse's armor. The pieces are made to be used together--they are specially formed, fitted, and balanced to provide a certain level of protection and a certain degree of mobility in a fight. Cobbling together odd or ill-fitting pieces degrades the effect of the whole, to the degree ruled by the Dungeon Master.

In the following section, barding is discussed in order of least protective to most protective. New types of barding are included. Tables summarizing the information can be found on pages 50-51.

## Pieces of Horse Armor

**Chanfron:** This piece of armor covers the mount's head, neck, and mane. In its most primitive form, the chanfron is made of boiled leather. Chanfrons made by humans and dwarves are usually made of iron or steel, while orcs and other humanoid races tend to favor leather and sylvan elves use wood or strong, fibrous plant materials.

**Crinet:** This neckpiece is found only in plate armor. It covers the upper side of the mount's neck and is made of narrow strips of steel articulated with six to eight inches of mail.

**Cuello:** Found only in plate barding, this is armor for the underside of the horse's neck (the throat). It is hung from the crinet with a number of straps and buckles. In more advanced barding, the cuello has fully articulated plates hinged with wide bands of tight chain links.

**Poitrel:** This part of the horse's barding covers its chest and flanks. The poitrel is also known by names such as the *peytrel*, *pectoral*, or *poitrinal*. It covers the front of the chest and sides as far as the saddle. Early poitrels used heavy cloth with scales, rings, or studs; later ones used plates or bands of steel.

**Flanchards:** These are plates of armor for the horse's side, including the area behind the front shoulders, across the saddle length, and ending at the hindquarters, protecting areas not covered by the poitrel or crupper.

**Crupper:** This piece covers the hindquarters of the horse and is sometimes referred to as the *croupiere bacul*. The lightest form of this armor is made of light leather sewn together into small squares, then joined together by straps and stitches. The most advanced cruppers are made of several thick steel bands joined with pieces of chain or mail, bound to the saddle and the flanchards.

## Light Barding

## Padded Barding (AC 6)

This style of quilted barding has only minor protective value, giving the mount an AC bonus of 1. In the standard AD&D® game campaign, padded barding is functionally the same as leather barding and weighs 60 pounds. Padded barding tends to wear out rapidly with use.

Halflings and elves occasionally use this type of armor on their ponies and light horses.

**Half Padded:** Half padded barding gives protection only to the front and front sides of the mount. It is used mainly in poorer or less civilized cultures. In more civilized cultures, parade decorations might be considered half padded. This protection weighs a mere 25

pounds.

## Leather Barding (AC 6)

This barding is the most common type of light barding. Leather barding has most of the characteristics of the leather armor worn by warriors. Among humans, leather barding is used primarily by irregular horsemen and occasional bands of nomads, whose mounts are usually smaller and able to carry less weight than the specially bred mounts of civilized lands. Leather barding weighs 60 pounds.

Halflings and elves tend to use leather on their light mounts. Halfling barding is usually decorated with colorful beads and bits of shells.

Although dwarves and gnomes generally don't use barding, they will occasionally make leather barding to protect pack mules and similar animals.

Humanoids, if they use barding on their mounts at all, often make use of this type.

**Half Leather:** This is leather barding that protects only the front half of the horse. It weighs 30 pounds.

## Medium Barding

## Scale Barding (AC 5)

Scale barding is an early form of medium protection barding, generally superceded by chain in more advanced regions. It is most common in Dark Ages, eastern, or frontier settings, where it will still be somewhat less common than chain barding in a western medieval setting. Refer to Chapter 1 for more information on the construction and appearance of scale armor. Full scale barding weighs 75 pounds.

**Half Scale:** Half scale barding includes a much lighter mesh of scale and covers only the head and front quarters of the horse. It is the heaviest armor commonly found on a light horse. Half scale weighs only 50 pounds.

Half scale is sometimes used by successful orc and goblin war bands. Other humanoid races may also be found using the barding in their cavalry units.

## Brigandine Barding (AC 5)

A late period composite armor made from small metal plates sandwiched between layers of leather, brigandine is the most advanced barding that a typical village armorer can make. It is not as encumbering as the more restrictive scale, weighing 70 pounds.

**Half brigandine:** This barding protects the front half of the horse and weighs 45 pounds.

The rogues of the road (including occasional adventurers) tend to use half brigandine because it is light, generally non-encumbering, and easy to care for.

## Ring Barding (AC 5)

This early form of barding is made of metal rings sewn onto a heavy cloth or leather backing. It is heavier than standard scale barding, and in most campaigns will be used only by those who can't get anything better. (In fact, whether a barding like ring barding actually existed is open to question; it may have been too heavy for the horses of the time.) Ring barding weighs 80 pounds.

**Half Ring:** This is ring barding for the front areas of the horse. It weighs 55 pounds.

## Studded Leather Barding (AC 5)

This early barding is made of layers of soft leather, reinforced with many small metal studs intended to turn aside slashes. In all important respects, it is equal to ring barding and weighs 80 pounds.

**Half Studded Leather:** This barding covers the front of the horse. It weighs 50 pounds.

Humanoids tend to use studded leather barding. In some instances, the studs are long and filed to sharp points. The damage-causing ability of these short spikes is questionable, but they certainly add to the ferocious appearance of a mount.

## Chain Barding (AC 4)

This barding is the standard armor for medium war horses. It is put on in sections, with the main pieces being attached to the saddle or laid over the horse and buckled underneath. A heavy cloth or blanket is placed under the chain to prevent rubbing and abrasions from the barding, which would cause the horse to quickly become fatigued. Only in the cooler climes can a horse wear such armor for long (the horse cannot move all day with the armor on; it must have sufficient rest and free grazing). Chain barding weighs approximately 70 pounds.

Chain barding is used by grey elf medium cavalry companies.

**Half Chain:** This is chain barding covering the front areas of the horse. It weighs 45 pounds.

**Elven chain barding:** This type of barding exists, though it is extremely rare. It has a weight of 25 pounds. Such barding cannot be purchased and is generally unavailable to anyone other than elven nobility.

## Heavy Barding

## Banded Barding (AC 3)

This is similar to chain barding, but is reinforced with horizontal strips of metal. Officers and riders wealthy enough to afford this type of barding are usually the only persons who use it. Only the large war horses can bear its weight. It remains a hybrid form, and the frequency of its appearence depends on the technological level of the campaign. Such armor weighs 85 pounds.

**Half Banded:** This is banded barding covering the front of the horse. It weighs 60 pounds.

## Splint Barding (AC 3)

Splint barding is similar to banded barding. The main difference is that the strips of metal are vertical instead of horizontal. The weight and protective value are the same at 85 pounds and AC 3.

**Half Splint:** This covers only the front half of the horse. Its weight is 60 pounds.

## Plate Barding (AC 2)

This type of barding corresponds to plate mail, and is the standard protection for a fully

armored war horse. Only heavy war horses can bear the weight of this armor and still fight effectively.

This barding includes the chanfron that covers the head, the cuello that guards the neck and mane, the poitrel that covers the forward chest and quarters, the flanchards that protect the side quarters and flanks, and the crupper that defends the rear.

This barding is made of chain mail and small steel plates linked together and hinged with articulated joints. Over this metal and chain rests a thick padded or quilted cloth equipped with metal studs. The complete set weighs about 85 pounds. This is extremely fatiguing to the mount, and usually such armor is put on the horse only when battle is imminent.

Plate barding is used almost exclusively by human heavy cavalry. Elf lords may also have plate armor for their mounts.

Only in very rare instances will an orc, goblin, hobgoblin, or other humanoid have access to such armor. In such cases, usually only the commander or chieftain of the tribe owns such barding, and then only if allied to a ruler or wizard with the ability to construct such armor.

**Half plate:** This gives the horse plate barding protection to its front. It weighs 65 pounds.

## Field Plate Barding (AC 1)

Field plate barding is the heaviest barding normally used in battle. It is rare even in late period campaigns, and should be restricted to nobles, high officers, and unusual individuals. The construction of field plate barding requires a master armorer. The barding must be constructed and fitted to a particular horse. Field plate barding weighs 90 pounds.

**Half Field Plate:** This gives the equivalent of field plate protection to the front of the horse only. This configuration is never encountered, except perhaps as ceremonial armor. It weighs 70 pounds.

## Full Plate Barding (AC 0)

Full plate barding, like full plate armor, is the highest achievement of the best armorers. It is available only in late period campaigns and will be very rare at the best of times; only the most advanced and richest kingdoms can master the techniques of its construction. The services of a master armorer are required. Full plate barding weighs 90 pounds.

**Half Full Plate:** This gives the equivalent of full plate protection to the front of the horse only. Again, this barding, if encountered, is almost certain to be ceremonial armor. It weighs 70 pounds.

## Horse Tack and Harness

## Bit

The bit is the general name for the two principle kinds of equestrian mouthpieces used to control a horse's movement. Each of the two bit types are described below.

**Snaffle:** This bit is composed of a steel rod or bar with two rings at either end. The reins are fastened to these rings. The snaffle is a gentler bit than the curb designs, and is

usually used for riding horses as opposed to war or work horses. The snaffle bit tends to give less control over a spirited mount.

**Curb:** This bit has a plate that is inserted in the mouth of the beast. Short vertical bars are attached to either side of the plate. Each bar has a ring at the top and bottom of the bar. The reins are attached to the two bottom rings, while the two upper rings are connected by a stout strap or chain passing under the jaw of the horse. This allows great physical force to be brought upon the animal, allowing great control over the movement and speed of the horse. The curb bit is much more severe than the snaffle bit and is often used with war horses.

## Bridle

A simple bridle is nothing more than a heavy ring of rope or leather hitched around the mount's lower jaw and used to guide or lead the animal.

There are three basic parts of a bridle: the *bit*, the *headstall*, and the *reins*. The bit was discussed previously. The headstall is the set of straps and cords that secures the bit to the horse's jaw. The reins are the straps that run from the bit around the horse's neck that enable the rider to steer the animal.

**Bridoon:** This is complex bridle with a snaffle bit and wide reins. A bridoon is much more difficult to snare or cut than a normal bridle. It is also more expensive than the standard bridle (150% of bridle cost).

**Cavesson:** A type of bridle used to train and break horses. The cavesson looks much like other bridles except for two extra rings at the base of the bit, where lead ropes can be attached to be held by a trainer or tied to a pole. The horse can then be led easily and slowly broken and trained. The cost is comparable to that of a standard bridle.

## Horseshoes

In the wild, horses wear down their hooves as fast as they grow them. But domesticated horses, with the extra weight of rider and equipment, will wear away hooves much more quickly. Without protection, the horse would quickly become lame and useless.

Metal horseshoes are used to counteract the wear and tear on the mount's hooves. The horseshoe is nothing more than a steel bar hammered into a ``U'' shape, then nailed tightly into the hoof of the horse. The nails cause no discomfort to the animal. With horseshoes, the mount can travel farther and faster.

Throwing a horseshoe or getting a stone lodged between the shoe and the hoof are events that need extra attention if the horse is to be kept in good condition.

**Magical Horseshoes:** Any number of different types of magical horseshoes can be added to the game: those that allow unusual speed, the ability to move on water or through the air, those that act as magical weapons, and so forth.

## Saddle

Saddle use is assumed in the Land-based Riding proficiency unless a character is specifically from a culture proficient in riding bareback. Any other character who tries to ride without a saddle is subject to special riding checks at the discretion of the DM. (A general no-saddle penalty of -2 is suggested.)

In a typical campaign, available saddles will be based on types used in the mid-to-late

medieval period.

By this time period, the saddle had evolved through many changes in design. The basic saddle includes the frame (called the *tree*), the front end (called the *pommel*), and the back end (called the *cantle*).

Elven saddles are made of wood and pliable, fibrous plants. Halfling saddles are soft and well cushioned. Gnomish saddles are painted and decorated with thin layers of silver, gold, or semi-precious gems.

Orcs and goblins use saddles that are quite small, with fairly distinct pommels and nearly invisible cantles.

**War Saddle:** The knight's war saddle takes on huge dimensions. They typically exhibit high pommels and cantles, and are often covered with steel or brass plates or are decorated profusely with silver and ivory inlays. These usually have rings and straps for attaching barding and heavy stirrups.

## Saddlebags

Saddlebags rest directly behind the rider, on the rump of the horse. They come in many different sizes and varieties. The most common type is made of leather and has two large packs, one on either side of the horse. Each pack or bag can hold about 3 square feet of material or about 25 pounds of weight (for the large saddlebags). Small saddlebags hold 2 square feet and 15 pounds. Saddlebags may also be made of heavy cloth. Variant saddlebag designs might have anywhere from one to four packs instead of the standard two.

## Saddle Blanket

This is a typically a warm woven blanket laid underneath the saddle, protecting the animal from abrasion and preventing the saddle from shifting. A rider who uses a saddle without a saddle blanket will quickly wear his horse down (and might find himself unceremoniously dumped when the saddle shifts).

Elven and halfling saddle blankets are wonderfully woven and often decorated with colorful tassles or jingling bells.

## Spur

A spur is little more than a small metal attachment to the heel of a boot or shoe. The spur has one to six sharp projections that can be used to jab the horse in the sides, causing the animal to move at a quicker gait.

## Stirrup

A stirrup is a leather strap ending in either a conical shielded foot rest or an iron ring. A stirrup is attached on each side of the saddle by a hook and several ties.

The stirrup has many uses. Its primary function is to expedite the mounting of the beast. The stirrup also helps the rider control the mount and stay on if struck by a forceful blow; stirrups are essential in a jousting match.

Stirrups steady the mounted warrior, allowing greater force to be put behind blows with less chance of falling off the mount. They allow mounted warriors with lances to charge effectively with a leveled lance, a feat nearly impossible without them.

**Optional rule:** Mounted fighters without stirrups who are struck in combat must make

a save vs. paralyzation or fall from the horse.

## Bridle Cutter

A bridle cutter is a sharp, hooked instrument used in battle to cut the reins of an enemy and essentially strip him of his ability to control his mount. These tools look like short, bladed axes with several wicked, angled cuts. Bridle cutters are sometimes used by front line troops who face cavalry. Many bridle cutters find their way into kobold, orc, or goblin brigades and are used as melee weapons rather than to cut reins. A bridle cutter inflicts 1-4 points of damage to small- and medium-sized creatures and 1-3 points of damage to large creatures. Refer to Table 1 on page 50 for other weapon statistics.

## Table 1: Bridle Cutter Wielded as Weapon

| Item | Cost | Weight | Size | Type | Speed Factor | Damage S-M | Damage L |
|---|---|---|---|---|---|---|---|
| Bridle Cutter | 3 gp | 4 lbs. | M | S | 4 | 1d4 | 1d3 |

## Table 2: Horse Barding

| Warhorse | Padded | Leather | Scale | Chain | Banded | Plate |
|---|---|---|---|---|---|---|
| Light | Yes | Yes | -- | -- | -- | -- |
| Medium | Yes | Yes | Yes | Yes | -- | -- |
| Heavy | Yes | Yes | Yes | Yes | Yes | Yes |

The *light warhorse* category includes ponies and riding horses (the latter reflects custom and use rather than the ability of the horse to carry actual weight).
*Limits:* A horse can wear half barding one class heavier than its maximum full barding. Flying creatures are limited to leather and padded barding only.
*Padded* includes quilted armor.
*Scale* includes studded leather, brigandine, and ring mail (weights will differ).
*Banded* includes splint.

## Table 3: Optional Barding Armor Class

(This can replace the *Creatures with Natural Armor Class* section in Chapter 6 of the *Player's Handbook*.)

| Type of Barding | AC Bonus | Maximum AC |
|---|---|---|
| Leather (Padded) | +1 | 4 |
| Scale, Brigandine, Studded, Ring | +2 | 3 |
| Chain | +3 | 2 |
| Banded, Splint | +4 | 1 |
| Plate | +5 | 0 |

*AC Bonus* is the amount of protection a type of barding affords. For example, a heavy warhorse (AC 7) in plate barding (+5) has an adjusted AC of 2.

*Maximum AC* is the best AC conferred by non-magical barding of this type. Past this point, the innate toughness of the creature renders this type of barding redundant.

## Table 4: Optional Partial Barding

The following chart may be used to determine the armor class of partial barding. Bonuses are added to the mount's base AC.

| Armor Type | Full Barding | Chanfron/ Poitrel | Cuello/ Crinet | Flanchard/ Crupper |
|---|---|---|---|---|
| Leather | 6 | ----------(see notes)---------- | | |
| Scale | 5 | ----------(see notes)---------- | | |
| Chain | 4 | ** | 0 | ** |
| Banded | 3 | ** | ** | ** |
| Plate | 2 | 1 ea. | ** | 1 ea. |
| Field Plate | 1 | 1 ea. | ** | 1 ea. |
| Full Plate | 0 | 1 ea. | 1 ea. | 1 ea. |

**Notes:**

*Leather:* The only effective combination less than full leather is half leather, which gives protection to the front of the horse only.
*Scale:* Half scale protects the front of the horse only. Any other combination of at least three pieces (except crinet) gives a +1 bonus to armor class.
** Any two pieces give a +1 bonus to AC.

## Table 5: Additional Barding Types (Combined Table)

| Armor Type | AC | Wt | Cost | Time | Half Wt. | Half Cost | Time |
|---|---|---|---|---|---|---|---|
| Leather | 6 | 60# | 150 gp | 4 | 25# | 100 gp | 2 |
| Padded | 6 | 60# | 150 gp | 4 | 25# | 100 gp | 2 |
| Scale | 5 | 75# | 1,000 gp | 8 | 50# | 500 gp | 6 |
| Brigandine | 5 | 70# | 1,000 gp | 8 | 45# | 500 gp | 6 |
| Ring | 5 | 80# | 800 gp | 8 | 55# | 400 gp | 6 |
| Studded Leather | 5 | 80# | 800 gp | 8 | 50# | 400 gp | 6 |
| Chain | 4 | 70# | 500 gp | 10 | 45# | 300 gp | 8 |
| Banded | 3 | 85# | 1,750 gp | 14 | 60# | 1,000 gp | 12 |
| Splint | 3 | 85# | 1,750 gp | 14 | 60# | 1,000 gp | 12 |
| Plate | 2 | 85# | 2,000 gp | 16 | 65# | 1,500 gp | 14 |
| Field Plate | 1 | 90# | 5,000 gp | 18 | 70# | 3,000 gp | 16 |
| Full Plate | 0 | 90# | 8-20,000 gp | 20 | 70# | 5-15,000 gp | 18 |

*Half weight* and *half cost* are the weight and cost for half barding.
Time is the time an armorer requires to make the barding (as per *The Complete Fighter's Handbook*). Half barding takes 2 weeks less than full barding.

# CHAPTER 3

# Weapons

One of the most common events in the life of an adventurer, regardless of profession, is the need for armed combat. Some adventurers make a career of hacking and slashing, while others use combat as a last resort, after diplomacy, negotiation, or spellcraft fail.

Fortunately for adventurers, there are as many different types of weapons as there are reasons for using them. This chapter details the vast majority of weapons available to the discerning adventurer. A fair warning, though: a weapon is only as effective as the hero who wields it. Sometimes, a smaller, less lethal-looking weapon may be called for. Most of the entries that follow include commentary from distinguished adventurers. Heed their advice, look over the list carefully, and choose well; your PC's life may depend on it!

**Notes:** During the research into the various weapons, conflicting backgrounds arose for several of the weapons. The terminology and history that follow were chosen for consistency with what has already been established in the AD&D® game universe.

Many references are made to an item known as the Bayeux Tapestry. This is a tapestry that depicts the Battle of Hastings in 1066 AD, in which William the Conqueror led the Normans from the European Continent to England. The Normans defeated the Anglo-Saxons under King Harold. This tapestry has given scholars many clues on how warfare was conducted at that time.

### Arquebus

The arquebus is a musket used by cultures just learning the technology of guns. It is a two-handed weapon, fired like a rifle except that the arms absorb the recoil, not the shoulders, since the weapon does not rest on the latter. The gun is also called a "hackbut."

Years after its development, the term "arquebus" expanded to include handguns of the same era, and eventually the word lost its original meaning and was used instead to describe small handguns used by cavalry. In terms of AD&D® game campaigns, the arquebus refers to the large, two-handed primitive gun with a smooth bore barrel as opposed to a rifled barrel. Hence, the gun is technically not a rifle. This form of arquebus often has a hooklike projection on the underside of its barrel.

The arquebus was developed in order to give the average infantry the use of smoke powder, whose destructive potential is only newly recognized in many areas.

The musket arquebus is loaded by pouring smoke powder from a flask or horn into the muzzle and firmly packing it with a piece of paper. The projectile, an iron ball, is rammed in after this. Once the barrel is ready, the pan is filled with smoke powder, the pan's cover is closed, and a burning slow-match (a piece of cloth or paper rolled into a fuse) is placed in the mechanism called the serpentine (the curved piece of metal where the trigger would someday be on a modern rifle). Pressure on a metal plate releases the serpentine into the pan, and BOOM!

Since this weapon involves smoke powder, DMs may forbid its use. Players should

check with their DM as to whether it is allowed in the campaign.

Smoke powder is considered a magical item. The historical arquebus required two types of gun powder, a finer variety for pan loading and a coarse variety for muzzle loading. Each type was carried in a separate container. If the DM desires, the gunner may require the two different powder types in order to operate the arquebus.

The arquebus is a very dangerous instrument, nearly as dangerous to the user as to the target. In order to reload, the gunner has to hold the smoldering slow-match in his left hand while reloading with his right. A slow-match burns for eight rounds.

An arquebus can be fired only once every three rounds providing the character is not being attacked while loading. Treat the gunner the same as a spellcaster casting a very long spell. When firing an arquebus, all range penalties are doubled.

If an arquebus attack roll is a 1 or 2, the gun backfires, inflicting 1d6 points of damage to the gunner. It is also fouled and cannot be used until cleaned, a process which takes at least 30 minutes (and relative peace).

When an arquebus scores a hit, it does 1-9 points of damage on 1d10. If a 10 is rolled, the die is rolled again and this amount is added to the 10. Each time a 10 is rolled, the die is rolled again and added to the total.

There are no Strength modifiers to an arquebus' damage.

If the arquebus' smoke powder is exposed to water, the powder is ruined.

*"As far as many folk are concerned, smoke powder and magic don't mix! Sure, the arquebus is a newfangled weapon, but not all new things are necessarily better! With an arquebus, the firer has to take time to reload, unless he wants to have someone tag along and supply him with an extra arquebus, already loaded, in order to keep up a steady rate of fire. Oh, certainly that can be done--or the more intelligent adventurer will go out and get himself a long bow which fires arrows quicker than an arquebus can throw shot, and has comparable range! As far as can be determined, the arquebus is good for making gods-awful noise that will either scare the Nine Hells out of any enemy, or possibly anger the target into attacking with even more ferocity."*
-- *Grymwand, Professional Mercenary*

The arquebus gets its name from the German Hakenbuchse, meaning "gun with a hook."

### Battle Axe

Contrary to popular artwork, the most common version of the battle axe is a stout pole about four feet in length with a single-edged, trumpet-shaped blade mounted on one end. Battle axes are also called broad axes.

The battle axe is a footman's weapon, giving these soldiers a longer reach and a fighting chance against mounted opponents. Its long handle allows the wielder to put considerable force into his swing. Despite the shaft length, a battle axe is a one-handed weapon.

The typical dwarven battle axe is a double bladed weapon, usually with a spiked top. Dwarves favor these weapons since the long handles compensate somewhat for the shorter dwarven stature, especially against large humanoid opponents. They are often

wielded with two hands. In many dwarven cultures, the battle axe is a symbol of dwarven might.

A thrust with the spiked head of a battle axe inflicts 1d3 hit points of damage.

Dwarves are not the only race that favors the battle axe. Gnolls often are encountered with battle axes. Troglodytes use a stone version of the battle axe, with all of the disadvantages of stone weapons (i.e., prone to chipping and shattering).

Two-handed battle axes have the same statistics as the bardiche. They are called "great axes."

*"Though the battle axe is a one-handed weapon, its longer handle, which gives it good momentum, is not a good horseman's weapon, as the wielder has to put a lot of his weight into the swing, something hard to do from a saddle. It is also useless as a missile weapon. Still, its damage is respectable, and it looks nasty, especially the dwarven styles. A battle axe is good for the foot soldier or adventurer who needs to strike at a large creature or at someone on horseback.*

*"Battle axes are good for their percussive and cutting effects against armor. If adventurers want to use a battle axe and still gain some measure of protection, it is wise to fight alongside a companion who is armed with a sword and shield. The companion acts as the axe-wielder's defense while the latter is busy chopping away. This is a good exercise in teamwork, which may keep both adventurers alive much longer.*

*"As for dwarves, our center of gravity is low enough that we can swing a battle axe and not topple over from the momentum. It is a fine weapon for hewing the legs of a giant out from under him, and it is a weapon that lets us put all of our weight into the swing."*
*-- Dagalor Goldenbeard, of the Dwarven Clan Goldenbeard*

The battle axe has the distinction of being one of the oldest tools and weapons of man. The first battle axe dates back about 35,000 years, when weaponers began attaching the blade to long wooden handles. The double-bladed battle axe was born in Egypt during the Bronze Age, but the design did not gain widespread acceptance.

During the Greco-Roman times, the battle axe was seen as a barbarian weapon used by the Franks, Celts, Lombards, and Vikings.

The earliest modern battle axes were a Danish weapon of the ninth century. These weapons did not have double-bladed heads, but were still two-handed weapons. The Danes often decorated these axe heads with carvings. Some shafts reached six feet in length, which caused great structural strain on the point immediately below the axe-head.

English knights of the 14th century adopted the battle axe as a favored weapon in foot combat. Its long handle afforded a great reach, and allowed for a great amount of force to be focused in the blow.

Naval crews used battle axes as boarding weapons until the tactic of boarding parties became obsolete.

The dwarven battle axe design is based on an actual design by the Swiss, who called their version the mordaxt.

### Belaying Pin

Not intended as an actual weapon, the belaying pin is a wooden or metal rod that is inserted in holes bored through a ship's rail. Ship's ropes are secured to these belaying

pins. The pins are usually found in rows, bringing a series of ropes together to one location. The pins may be pulled out and used as a melee weapon, more often than not during boarding actions at sea when no other weapons are in reach.

The pin is a one-handed weapon. If hurled in combat, it is treated as a club.

*"When a bloke is at sea, unarmed and surrounded by degenerate pirates, a belaying pin makes a fine on-the-spot weapon, even though its primary function is to hold rope, not bash heads. No warrior in his right mind would bother to specialize in or stock up on belaying pins!"*
-- *Captain Ar, of the Galleon* Flameburst

### Blowgun

Blowguns are long, hollow tubes composed of wood or metal, ranging from four to seven feet in length. They are used to fire darts, needles, and pellets. The weapons date back to primitive times, when they were used mostly for hunting.

Blowguns may have had a part in the invention of guns, since the blowgun demonstrated that one end of a tube needs to be closed off in order for the propelling force to shoot the missile in the proper direction.

Tribes still exist, especially primitive peoples in tropical jungle cultures, that use the blowgun. In most cases, these tribes are not advanced in terms of inventions, especially weapons of war. Some tribes use stands to brace their blowguns. If a stand is used, the firer gains a +1 bonus to his attack rolls.

The grippli have been known to use blowguns on rare occasions.

*"Though the blowgun has poor range, it is a quiet weapon which may be fired twice per round. Desperate adventurers who find themselves weaponless may make blowguns out of the local flora, such as reeds, if they are resourceful.*

*"Blowguns can also be used as makeshift breathing tubes if adventurers are crossing or hiding in a body if water.*

*"Being virtually noiseless, the blowgun is a good weapon for use in infiltrating a stronghold. Darts dipped in a sleep drug may knock out sentries quickly, and this may be an ideal arrangement for someone who wishes to avoid causing excessive bloodshed. It is certainly better suited for that sort of work than combat on the field, since the blowgun is a very fragile weapon."*
-- *Cedric D'Abalone, Sage*

**Blowgun Darts:** The blowgun dart is a small arrow with a wad of cotton or other plant fibers instead of fletching. This allows for a build-up of pressure from the user's wind. The fibers make a better seal in the tube, allowing more force to gather behind it. A blowgun dart is not the same as a regular dart, and the latter cannot be shot out of a blowgun.

**Needles:** Needles are sometimes used to deliver a poison, often a paralytic poison such as curare. Needles do less damage than other blowgun missiles, but this is not a disadvantage, since their function is to carry the poison to the target, not to cause damage.

**Blowgun Pellets:** Most blowgun pellets are of hardened clay, and are used for hunting.

A solid hit from a pellet can stun a small bird.

## Bola

The bola is a missile of prehistoric origins. Currently, it is still used by arctic tribes and by savages who dwell on temperate plains. The main function of the bola is to provide a hunter with a good missile weapon that will catch the prey off guard and entangle it so as to make escape impossible.

The bola is basically a leather strap or straps with weights fastened to the ends, although there are many variations to the design. Arctic bolas are generally used for hunting birds. The bola may have four, six, or ten weights made of walrus ivory or bone. The weights are egg-shaped, spherical, or carved into the likeness of animals. All of the straps or cords join together to make a sort of handle. The thrower grasps the handle, jerks back the strand to straighten them, whirls the bolas over his head, and releases them. Each bola strand is about 28 inches long and each weight is about two inches in diameter.

Two-ball bolas are called somais; triple-ball bolas are achicos.

Temperate plains bolas are usually twice as large and consist of a single leather thong with a leather-covered stone at each end. Often a second cord is fastened in the center of the first cord, with a small weight attached at the end. This weight is held by the thrower. This version of the bola can bring down a man-sized target. When a bola hits, the victim is held fast and must take a round to make a Strength check in order to get free. Failure means the bolas are still holding fast.

If an attacker makes a Called Shot to the target's legs and succeeds, the bolas wrap themselves tightly around the victim's legs and prevent further movement. The target must make a Dexterity check in order not to fall down, incurring a -3 penalty if the victim was moving when the bolas hit.

If the attacker succeeds in a Called Shot to the victim's arms, the bolas wrap themselves tightly around the torso, preventing the victim from using a weapon or employing the protection of his shield until he frees himself. Strength checks are made at -2 penalty due to lack of leverage.

A successful Called Shot to the victim's head wraps the bolas around his neck, strangling him (unless the character is wearing a great helm or closed-face helm). The bolas cause normal damage on the round in which they hit, then an additional 1d3 hit points of strangulation damage every round the bolas are still in place.

*"This is a good weapon to trip someone up, in case ya wanna take an opponent alive. But ya gotta make sure ya got enough room to give the bola a good swing. Bolas only work outside or in huge rooms. They work good if yer on horseback."*
*-- Barkhan, Bounty Hunter*

## Bow

In one form or another, bows have been used since the early days of man. They represented a great step in man's ability to cause damage, since the attacker was at a considerable range from the target, not within reach of the enemy's claws or melee

weapons. The first bows were long, slender rods (also called staves) with a string of animal tendon or plant fiber.

### Short Bow

Short bows were the first to be developed, although they were not called such. This is more of a default term that refers to anything which is not a long bow. Short bow staves are about 5 1/2 feet long on the average. As the years passed, attempts were made to increase bow ranges. Bows were either given longer staves or flexibility was increased with no change to the length. The former resulted in what is now called the long bow.

Bows fell into decline with the spread of handguns. It was reasoned that while a wounded or weakened soldier might lack the strength to pull a bow, he could still pull a trigger. In fantasy settings, there is no danger of the bow being replaced so quickly.

Short bows can fire only short bow arrows (identical to flight arrows for game terms).

### Long Bow

The long bow is similar to the short bow, except that the staff is about as high as the archer, usually 6 to 6 1/2 feet. It has better range than the short bow, and can fire both flight and sheaf arrows.

### Composite Bows

Composite bows are long bows or short bows whose staves are made from more than one type of material. This gives greater flexibility, and thus better range. These were developed after the normal long bow.

The second material that makes up a long bow may be anything from another type of wood to bone, sinew, or metal. The different materials are usually glued together.

An adventurer who wishes to gain a damage bonus from high Strength when wielding a bow must purchase specially crafted bows. Such a bow costs the normal price for a bow *plus the normal price again for every bonus point desired*. Thus, a warrior with 17 Strength who wants a long bow (base cost 75 gp) that gives him his +1 bonus to damage rolls would have to pay a total of 150 gp. The same fighter with 18/00 Strength (+6 bonus to damage) would pay 525 gp. These bows can be strung and drawn only by characters of that Strength or higher. Others attempting this must make a successful bend bars/lift gates roll.

Most archers protect their wrists from the snap of the bowstring by fastening a piece of horn, bone, or leather to them. Such an item is known as a bracer.

*"In our times, bows still are preferable to the primitive firearms or even the crossbows offered. A high rate of fire, low noise, and good range make the bow a better choice than the other missile weapons.*

*"Centaurs favor bows, usually composite bows adapted to enable them to take advantage of their Strength. Elves in particular are adept at making and using bows, of both the long and short varieties. Exactly how the elves happen to be so good at archery is up for debate. Some say elves are trained to shoot beginning in childhood. Others say that their skills are no different than those of humans, but the uncanny, keen elven senses enable the fair folk to anticipate the target's location at the time of the arrow's impact.*

*"Whatever the reason, no one argues that the elves exhibit clear evidence of the*

*superiority of the bow as the best missile weapon available to the aspiring adventurer.*

*"Bows are not without their faults. Bowstrings must be kept dry, the staff must not be allowed to crack, and a certain amount of strength is required to string and pull a bow. Still, even a short bow is a good thing to have when a warrior wants to inflict damage on someone from a long distance!*

*"A short bow can fire only flight arrows, while the long bow can fire any type of arrows. However, the short bow is easier to carry and is good for the fighter who relies primarily on a melee weapon but wishes to have a respectable missile weapon."*
*-- Lady Adriennedar Ironedge, Ranger of Hawkhaven*

Bows were used extensively for war by the Egyptians, Babylonians, Jews, and other peoples of the eastern Mediterranean world. In ancient Greece and Rome, bows were used mainly for hunting.

The Huns were the deadliest archers of all the invading barbarian peoples who attacked Rome. Charlemagne made the bow a mandatory weapon for the "civilized" armies.

At the Battle of Hastings in 1066, many historians claim that the Normans, led by William the Conqueror, beat the enemy by unleashing a rain of arrows on them. Some speculate that Harold died from an arrow through his eye. The bow used was only five feet long.

The English, learning from the lessons of Hastings, continued to refine and adapt their bows, making the staff longer and longer, copying the Welsh long bow. This became known as the English long bow within England.

The long bow proved very effective, especially in the British victories at Crecy and Agincourt. In the former, British archers outshot their Genoese counterparts who were using crossbows. Just as the Italians and French gained reputations as excellent crossbowmen, the English gained a reputation for archery. In the time of Henry VIII, English law required all males to learn the use of a long bow by the time they reached their teens.

European bows were most often made of ash and yew wood. Short bows were called Continental bows, while long bows were sometimes called Welsh bows.

An example of the potency of the long bow can be found in a particular historical incident. An arrow fired by a Welsh bowman is reported to have pierced a knight's leg armor, his leg, the armor on the other side of the leg, the knight's saddle, and to have finally lodged in the horse, pinning the knight to his mount.

Medieval archers did not always use quivers, but rather kept their arrows tied in bunches and secured to their belts by loops. Mounted archers used quivers that were attached to the saddle.

Bows were used as late as 1807, when Russian irregulars harassed Napoleon's armies, and in World War II, when detachments of American archers were used in special actions in Asia.

Even today, certain African pygmy tribes and indigenous folk of the Amazon use bows.

## Arrows

In general, arrows range in length from 20 to 40 inches. The feathers, or fletching, of

the arrow consist of two or more feathers set coaxially to the shaft. This gives the arrow its aerodynamic lift. If the feathers are instead set diagonally, the arrows rotates in flight. Goose feathers and parrot feathers are used most often in fletching, though pressed paper and leather are sometimes used.

### Flight Arrow

The flight arrow, as its name implies, is built for distance. These are lightweight arrows and are often used for hunting. Most of these arrows are made of ash or birch and are 30 to 40 inches long.

### Incendiary Arrow

An incendiary arrow is any arrow type (except bone or stone) with a wad of hemp soaked in a bituminous substance (such as tar) placed just beneath the head. The hemp is lit before the arrow is fired.

In addition to its normal damage, the arrow causes one additional hit point of fire damage on the round of impact unless the target makes a saving throw vs. death magic. At the DM's option, flaming arrows may ignite combustible materials contacting it.

### Sheaf Arrow

Sheaf arrows, also known as war arrows, are heavier arrows with less range than flight arrows, but cause more damage. The arrowheads are steel and quite sharp. Sheaf arrows are used in warfare and can be fired only by long bows. These arrows range in length from 20 to 27 inches.

### Stone Arrow

Stone arrows are considered flight arrows for game purposes, except that the stone arrowheads cause less damage and have a tendency to shatter if they impact armor or similarly hard surfaces. If a stone arrow hits any object made of metal, stone, or a harder substance, it has a 20% chance of surviving the hit without damage to the arrow. If a die roll does not indicate success, the arrow is still allowed a saving throw vs. crushing blow with a +4 bonus using the figures for Rock Crystal. Failure indicates that the arrow shatters.

Stone arrowheads are almond shaped or rhomboid and are usually made from stone splinters of flint or obsidian.

## Caltrop

A caltrop is a metal ball bristling with metal spikes or prongs. When a caltrop is left on the ground, there is always at least one spike standing more or less upright, ready to pierce the foot of the unwary.

In order to be effective, at least 10 caltrops must be dropped in an area of 25 square feet (a 5'x5' square). Each character entering the area must make a saving throw vs. paralyzation. Failure means that the pursuer has stepped on a caltrop, suffering 1d4 hit points of damage. The character will be able to move at only one-half his normal rate until the caltrop is dislodged from his foot. The victim must also make a second saving throw vs. paralyzation, with failure indicating that the character is lame for 24 hours

(unless magically healed), and can move at only one-third his normal movement rate. In any case, the victim must spend one round removing the caltrop from his foot.

If half the number of caltrops are dropped in an area (five in a 25 square foot area), the first save is made with a +4 bonus. For every five *extra* caltrops over the required 10 dropped in a 25 square foot area, the saving throw is made at a -2, up to a maximum penalty of -6. A new saving throw must be made for each five-foot section entered in which caltrops have been dropped.

Characters moving at less than one-third their normal movement rate through an area of caltrops need not make a saving throw. They are moving slowly enough to avoid the caltrops (although they must be able to see the terrain in order to do so).

## Cestus

The cestus is a leather glove that has spikes and razor edges on the back and across the knuckles. Other forms of cesti are loaded with lead or other heavy filler in order to give a punch more force. The weapon is mainly used as a gladiator weapon in the arenas of sport.

The damage caused by the cestus (1d4 vs. small and medium creatures; 1d3 to large) replaces the damage caused by a punch. Although this may seem to be a disadvantage, remember that punching damage is temporary while damage from the cestus is permanent until healed. There is no proficiency in the cestus, though a warrior can spend a proficiency slot and specialize in it.

*"A cestus isn't a true weapon of battle. It's just a cruel way to add damage to a fighter's punch. A cestus is a good weapon only if you like to punch opponents.*

*"But since most combatants inside and outside the arena have missile weapons, spells, long melee weapons such as spears, polearms, and swords, or benefits due to size, a fighter using a cestus may find himself badly chewed up, if not dead, before closing in enough to use the weapon. And using a cestus in tavern brawls will probably accomplish little more than calling the city guard's wrath on the owner of the cestus.*

*"The cestus is just a dramatic device meant to draw blood and make a contest look more terrible. Few monsters will care about the drama produced by a cestus if the glove is used in real combat."*
*-- Tisha, Swordswoman Extraordinary*

## Club

Most clubs are stout, hardwood sticks, narrow at the grip and wider at the end. This simple weapon has been used since mankind first began using tools. Anyone can find a good stout piece of wood and swing it; hence the club's widespread use.

The club is the ancestor of the mace, since warriors eventually fitted their clubs with spikes and metal heads in order to increase their deadliness.

As centuries passed, cultures began embracing civilization and advanced technology. They looked down on the club as a primitive tool and a barbarian weapon. Peasants often arm themselves with clubs, sometimes adapting them by adding iron spikes, resulting in the morningstar.

Centaurs are often seen wielding clubs, since sylvan settings have ample wood for fashioning such weapons. Ogres also use clubs, since the weapon does not require brains to use or make.

*"Despite the lowly status of the club, it is a useful proficiency. A stout tree branch, a wooden chair leg, or a metal rod all may be considered clubs, and all can be found most anywhere. When an adventurer is without a weapon, knowing how to wield a common stick may save his life.*

*"Clubs are common among adventurers. City guards who do not intend to shed blood use clubs in law enforcement, thieves who wish merely to steal a purse carry them, and humble peasants or street urchins who cannot afford a sword may wield a stout piece of wood. If anyone anticipates a life filled with tavern brawls, proficiency with the club is a must.*

*"Druids favor clubs, since they can cast* shillelagh *spells on the wood. Carrying a weapon made of wood, an organic, natural material, is preferable to using iron, since many self-respecting druids will use metal weapons only as a last resort."*
*-- Archdruid Heather Rose*

The versatility of the club is shown in the Bayeux Tapestry, which depicts squads of Saxons wielding clubs as both melee weapons and missile weapons. Some cultures decorate their clubs or even carve the club heads into representations of the creatures they expect to hunt.

### Crossbow, Light and Heavy

A crossbow is a bow mounted crosswise on a wooden or metal shaft, the latter called a tiller. The bow is usually made of ash or yew. The crossbow fires a quarrel (also called a bolt).

Crossbows are loaded by pulling the string back until it locks onto a nut fitted on the tiller. A man's strength is enough to pull the bow to the locking position, although heavier crossbows with more powerful bows require a mechanical aid. The most effective of these devices is the windlass, a series of pulleys and crank handles fitted at the crossbow's stock. For crossbows that do not have the windlass, a stirrup is fitted on the front of the crossbow. When resetting the bow, the firer places his foot in the stirrup in order to keep the bow off the ground while he is pulling the string up to the locking position.

The main differences between the light and heavy crossbows are the size of the quarrel and the presence of a stirrup, which is found only on the heavy crossbow. Heavy and light crossbows are more correctly referred to as two-foot and one-foot crossbows, respectively. This term refers to the length of the quarrels.

The one-foot crossbow is made with a steel tiller and is quite rugged. It may be easily concealed beneath flowing garments such as cloaks or robes. It is frowned upon by the more lawful, civilized cities.

Although bows cannot be used underwater, the crossbow can, since the tension produced by the weapon overcomes the water resistance. Underwater races such as the locathah, mermen, and tritons use crossbows of both heavy and light varieties.

## Crossbow, Hand

This deadly little bow is a pistol-sized weapon made with a steel tiller. It is more easily concealed than the light crossbow and its use is considered unethical in civilized society. Hand crossbows have a reloading mechanism built into the tiller.

*"Apparently, the drow couldn't care less about the hand crossbow's reputation, since they favor this weapon in all encounters. Derro also use hand crossbows, probably a habit they picked up from their fellow subterranean dwellers, the drow.*

*"Of all the crossbows, light crossbows were the first to be developed. Their rate of fire and range are their main advantages. But damage potential is less than that of a bow and arrow.*

*"Heavy crossbows have better range and damage potential, but they can fire only once every other round. If a warrior does not kill his opponent with the first shot, he may not get another chance.*

*"It would be foolish to dismiss the crossbow completely. Heavy and light crossbows have better ranges than their respective bow counterparts, the long and short bows. The best tactic when using a crossbow is to assemble a line of people, all armed with these weapons, who unleash a devastating volley at an enemy.*

*"Hand crossbows are easily concealed, have an adequate rate of fire, and good range for such a small weapon. On the other hand, damage potential is worse than that of a dagger, and the weapon may be banned in some lawful kingdoms or cities. Some societies, such as the drow, place poison on their bolts in order to immobilize an opponent."*

*-- Emryl Aelorthas, Professional Bowyer*

## Quarrels

Quarrels or bolts are the ammunition fired by crossbows regardless of the weapon's size. Crossbows are rated as one-footers or two-footers, according to the bolt's length. Quarrels are shaped like arrows, but the shafts are shorter and thicker. The quarrel heads used for warfare are conical or pyramid-shaped iron heads.

European crossbows have existed since the 4th century AD and at first were used primarily for hunting. By 1000 AD, crossbows had been adopted for warfare. Use began to wane upon the advent of the English long bow, for despite the fact that the crossbow was a more powerful weapon with better range and was easier to use in close quarters, the rate of fire of a bow was a huge psychological advantage. The most talented makers and users of the crossbow were the Italians, whose Genoese mercenary crossbowmen were the best in the world.

Although heavy and light crossbows enjoyed a favorable reputation among military commanders, these weapons suffered a bad reputation. The crossbow was so lethal that Pope Innocent II banned its use in 1139 AD. The edict was later changed, however, so that Crusaders could use it against Moslems.

Light crossbows were considered unethical weapons, and were often banned between the 16th and 18th centuries. The light crossbow was primarily used as a hunting weapon.

The crossbow was originally developed in China, culminating in a sturdy, reliable

model during the Han Dynasty, circa 206 BC. This particular crossbow model, some scholars believe, was seen as early as about 36 BC by about 100 Roman soldiers who were taken prisoner in Central Asia. Such experiences or the trade routes that eventually opened passed the concept of the crossbow from East to West.

Initially, the European crossbow was made with a wooden stave. This construction, however, does not give optimum power to the bolt's flight. By the end of the 11th century, it is believed that many crossbow staves were made of composite construction, usually horn and sinew in conjunction with wood (usually yew). This method of crossbowmaking came from the Saracens, and the Saracen influence in southern Europe explains why the area became well known for crossbow manufacturing and use.

## Dagger

The typical dagger has a pointed, usually double-edged blade, as opposed to a knife, which has a single edge and is a bit shorter than the dagger.

The dagger is one of man's oldest weapons. The first daggers were most likely hand-held spearheads used by cavemen, made of bone or stone. Bone daggers are made from the bones of large animals such as reindeer and bison, with one end sharpened and the handle carved to resemble the animal from which the bones came. Such daggers are relatively fragile, and stone replaced bone when early man discovered how to work with stone.

Stone daggers are more difficult to make due to the composition of stone. Most stone daggers are made of flint, a hard stone that can be worked easily. The flint is chipped until the proper shape is achieved, usually that of a broad leaf, then it is sometimes lashed to a wooden handle. This sort of stone dagger has a major weak point: the place where the blade is attached to the handle. Primitive tribes know that the best stone dagger is made from a single piece of stone with the dagger's handle consisting of a straight section of stone. The handle is then wrapped in hide for a good grip. The average stone dagger measures 12 inches long.

When man began working with copper and bronze, the technique of making a dagger's handle and blade from a single piece of material remained. Blade lengths increased up to 24 inches long, and when the length exceeded this, a new weapon, the short sword, was born.

Some weaponsmiths have turned dagger making into an art form, decorating the handles, crossguards, and even the blades, with beautiful carvings. Some daggers are decorated with carved scenes derived from a culture's mythology.

With the advent of swords, the dagger was relegated to the role of back-up weapon. In fact, the average Roman soldier did not carry a dagger, but his Teutonic barbarian enemy used them. As the barbarian's influence swept over Europe, the dagger was given new life.

Daggers with steel blades became necessary in order to penetrate armor. Although knights carried daggers, they were considered a weapon of last resort.

The modern handshake derives from a habit used by bodyguards. They would take the hand of anyone visiting the king and shake his arm, hoping to dislodge any dagger concealed in the visitor's sleeve.

## Dagger, Dirk

A dirk has qualities of both the dagger and the knife. While useful as a weapon, it was designed for a variety of uses. It is a version of the ballock knife (or "kidney dagger"). The dirk has two round, symmetrical globes at the base of the handle, where the handle meets the blade. The grip itself emerges from between the globes and is flared at the top. The blade is often made from a large shard of a sword blade. The dirk is a single-edged, grooved weapon with a back edge near the point. It usually features a decorative notch at the base.

Most dirks have a special scabbard that has two small pockets in the front, one for a knife and one for a fork, used by warriors in the field as an early mess kit.

The dirk is a Scottish weapon, carried by Highlanders, making its appearance in the late 17th century. The grip is usually leather, ivy root, or ivory. In the 18th century, the dirk was sometimes mounted in silver or gold. Though normally considered a civilian weapon, the dirk was produced as a military blade when Scottish men were incorporated into Britain's regular army.

*"A dagger is great because it's easy to conceal, it's good in close-fighting or as a backup weapon, and its shape allows it to be hurled. It has only a few problems--it's a short weapon, with neither the reach nor the damage potential of a sword.*

*"A dagger makes a handy tool as well. Soldiers and adventurers use their daggers as eating utensils. Owning a sharp blade that is easily carried makes life easier (just try drawing a long sword to cut some bread or a piece of rope!).*

*"My favorite advantage of a dagger is that when you rely on stealth, you can use a dagger to dispatch a foe and draw less attention than resorting to a sword, in which case you might as well yell out your intentions. This is one reason why those of us who attack our enemies indirectly savor the dagger and usually carry at least two."*
*-- Jasmine, Halfling Thief*

## Dagger, Parrying

This specialized type of dagger is used in conjunction with a sword. It is used to catch or break an opponent's sword. Some versions of this dagger are equipped with spring blades that split into three blades at the push of a button. When such a dagger is employed in this fashion, it cannot be thrown successfully.

Most parrying daggers have long, straight or curved quillons, and a tough side ring that extends perpendicular to the blade in order to protect the user's fingers.

Unlike the main-gauche, the parrying dagger is made for a specific purpose, to deflect or break an opponent's weapon. The main-gauche, while also good for parrying, is less of a weapon-breaker.

## Dart

The dart is a small, easily concealable missile weapon that is thrown rather than fired from a bow or other launcher.

Darts are known to exist among advanced caveman tribes. These darts are usually

small, wooden shafts fitted with a head of bone or stone.

In modern cultures, darts have leaf or arrow-shaped heads and stabilizers on the shaft's butt end, much like miniature arrows.

Many cultures use darts for sport, hunting, and warfare on land and sea. Lizard men use barbed darts.

*"Darts are small, easy to hide, and have a good rate of fire. Range is slightly better than a dagger, but darts cause less damage. Darts may be smeared with various toxins to make them more effective. It makes sense to fire darts at their maximum rate* (three per round), *which not only gives the thrower three chances of hitting, but also offsets the low damage potential by offering the possibility of multiple hits.*

*"A dart is a good weapon to throw at a spellcaster. As long as one dart hits a spellcaster, the latter's spell is ruined, regardless of the damage caused. Of course, this is why many spellcasters carry darts. Most are nimble enough to use them effectively, and if they are unable to cast a spell but see an enemy spellcaster about to cast, a dart can ruin the spell. It helps to be a sharp-eyed, quick-thinking, nimble, handsome fellow such as myself."*

*-- Malraz Alizar the Magnificent, Illusionist Without Peer*

### Flail

The flail is a sturdy wooden handle attached to an iron rod, a wooden rod with spikes, or a spiked iron ball. Between the handle and its implement is either a hinge or chain link. The weapon was originally used as a tool for threshing grain. Whether a flail is used by a foot soldier or a horseman, the principle is the same.

Rumors tell that the flinds' flindbars are in fact a variation of the flail. This has not been substantiated, and the flinds have no wish to cooperate in the research.

### Footman's Flail

The footman's flail has a handle approximately four feet in length. It otherwise conforms to the above description.

### Horseman's Flail

The horseman's version of the flail has a two-foot-long handle. The horseman already has a good positional advantage, sitting atop a horse, and consequently does not need the greater reach afforded by the long handle of the footman's flail. This is a one-handed weapon.

*"In the adventurer's world, a flail can be used by warriors or priests, especially if the latter is not allowed edged weapons. The footman's flail causes more damage, since the longer pole enables the wielder to make a stronger swing. This is a good weapon to use in subduing someone, or even for a disarming maneuver. Bear in mind that the footman's flail is a two-handed weapon, whereas the horseman's flail is one-handed.*

*"There is certainly no problem in a footman using a horseman's flail, although it is not a good habit. A foot soldier would be better off with a different blunt weapon that can cause more damage or have more versatility, such as a warhammer."*

-- *Brother George, Cleric*

The followers of Peter the Hermit who fought in the Crusades in the 11th and 12th centuries used flails, placing spikes on the short flail heads. This adaptation gave rise to other modifications, such as replacing the second bar with two or more iron balls attached by chains.

Footman's flails were used mostly in the 13th and 14th centuries by foot soldiers, especially peasant troops, while the horseman's version enjoyed use by cavalry troops during the same time period.

Flails were used as late as the 1920's by Polish peasants against Soviet troops.

### Gaff/Hook

The gaff or hook is actually a tool used to hook and land fish. It is commonly found where fishing boats are encountered, and the hooks are in plentiful supply, affording the disarmed adventurer a weapon of last resort.

The gaff consists of a metal hook with a wooden or metal crossbar at the base. A one-handed tool, the hook protrudes from between the middle and ring fingers.

Some sailors who have lost a hand have a cup with a gaff hook attached to the stump, guaranteeing that they are never without a weapon.

*"Ya don't often see adventurers whacking away with gaffs. To them, it's only a tool. But more often than not, dock workers, press gangs, pirates, and sailors have a pretty good swing with those hooks."*
-- *Rych the Seeker, Harbormaster*

### Hand or Throwing Axe

The hand axe or throwing axe is also known as a hatchet. The axe blade has a sharp steel tip, counterbalanced by a pointed fluke. The short handle has a point on the bottom and the head may have a spike on top.

This weapon is often used by barbarian tribes. Some hand axes are carried on the saddles of knights and horsemen, who respect this weapon after seeing barbarians wield the axes effectively.

Despite this acceptance by civilized folk, the throwing axe is often relegated to backup weapon status since the creation of the battleaxe, whose longer handle gives the wielder greater force in his swing. The maximum length of the hand axe's handle is about 18 inches, not very great, though better than a dagger's reach in hand-to-hand combat. The throwing axe's last advantage, its ability to be hurled, was eclipsed with the advent of better bows such as the long bow.

Short races such as gnomes make good use of hand axes. The gnomes' traditional enemies, the kobolds, also use hand axes. The weapon's size is small enough to be wielded properly, and it can be hurled as a last resort. Dwarves, of course, are far more interested in the heavier battleaxe.

*"The throwing axe is a good backup weapon for an adventurer. It can be used in melee*

*combat or as a missile weapon, although with mediocre range. The weapon is also useful as a general tool, especially to outdoor types such as rangers, who often need a good tool to hack away at undergrowth in order to blaze a trail."*
*-- Dalraun Ironedge, Ranger*

### Harpoon

The harpoon is a hunting weapon, which, in times of duress, may be used for defense. Its development by primeval man was for hunting marine mammals and large fish.

The first harpoons were merely pointed sticks. Later, these became sticks with a sharp head of horn or bone. The heads often had hooks cut into them for increased damage and to hold the harpoon fast in the beast's flesh. The head was then fitted or attached to the end of the shaft, secured by animal sinews.

Metal harpoon heads evolved later, most with pointed or barbed heads. These heads are usually detachable from the shaft, but are connected to the thrower by a cord attached between the point and the barb.

When a hunter throws the harpoon and hits an animal, he follows the victim as best he can, playing out as much rope as needed until the beast tires and dies.

Some creatures may be of sufficient intelligence to try to free themselves from the harpoon. If the target has Intelligence of 2 or greater and some means of dislodging the hook or breaking the line, it is allowed a saving throw vs. poison. Success means the victim is freed. Failure means the harpoon is still attached, the victim takes another hit point of damage, and is drawn 10' closer to the harpoon's wielder. The victim is pulled toward the wielder *only* if a concentrated attempt is made and the victim is of a size and weight that makes this possible (e.g., a harpooned whale cannot be hauled in by a fighter with 13 Strength).

Certain primitive jungle tribes traditionally use harpoons to hunt wild boar. Kuo-toa, the aquatic subterranean fish-men, favor the harpoon with as many nasty barbs on the weapon as possible.

Harpoons may be used one- or two-handed, and there is no change in speed factor for using it one way or the other. This is a definite advantage. On the other hand, the harpoon has a poor throwing range, and damage potential is less when it is used one-handed, much like a bastard sword. The harpoon is a common weapon in coastal areas, but its primary function is not as a weapon against an intelligent opponent.

Adventurers on ships may experiment with fitting harpoons onto ballista launchers, if the DM permits. This may be especially handy if the PCs are hunting some sea creature that they must haul back to port.

### Javelin

Javelins are classified as light spears, suitable for melee or missile combat, usable either on horseback or on foot. The weapon has been around since man's earliest days. The javelin head is not very large, and is usually leaf-or lancet-shaped. Javelin heads may have barbs.

As a weapon of war, the javelin has low popularity, though it is often used for hunting purposes. Javelins are also used as a ceremonial weapon of bodyguards in civilized

nations. Halberdier yeomen are often assigned javelins.

Javelin throwing is a common contest of the games of sport of ancient civilizations.

Javelins may be used either one- or two-handed, and like the harpoon, there is no difference in speed factor between the two styles. The javelin has a respectable throwing range, certainly better than that of a spear, with damage potential comparable to the spear. Like the harpoon, the javelin gives the adventurer the advantage of a weapon that may be used effectively either as a melee weapon or as a missile weapon.

Many drow carry javelins, often coating the weapons with the same poison they use on crossbow bolts. Kobolds also use javelins, as any weapon which inflicts damage from a long distance is embraced by that cowardly race. Advanced races of lizard men are also javelin users.

## Knife

A knife consists of a single-edged, pointed blade with a handle mounted asymmetrically. It is an early weapon, used even by primitive tribes. In these cultures, a knife is little more than a flint blade with one or two cutting edges.

Bone knives are little more than a sharpened piece of bone, often decorated in the same way as daggers. Like other bone weapons, bone knives are apt to shatter.

True knives appeared when man began using alloys such as bronze. A knife was cast from a single piece of bronze, with a single straight edge or slightly curved blade. The curvature is often accentuated near the point.

When man began using iron, knife handles went through a change. The malleability of iron made it easy to create and keep a sharp edge, while also enabling the maker to extend the blade into a flat tang, which was then covered with sidepieces of wood, bone, or horn. This made the handles easier to decorate. In primitive civilizations, knives are used as an all-purpose tool, on the hunting grounds, and as a tool of sacrifice.

Different forms of knives may be found among the different peoples who depend heavily on this useful tool. Small knives are made for domestic uses, longer knives for hunting and war.

Small knives exhibit their own evolution, resulting in the common man's small knife with a four-inch blade and a plain handle of bone or horn. The more influential citizen may have a knife with a handle of rock crystal or other stone, enclosed in a precious metal. Despite the great value of these knives, they are not as effective in combat as the larger knives (-1 to attack and damage rolls).

Non-domestic knives, or outdoor knives, have stronger blades and sharper points. They are carried in their own sheaths, or in the scabbard of a larger weapon, such as a sword, creating a specialized set.

In some areas, knife makers are prohibited from selling knives with leaf-shaped blades. Such decrees are an effort to prevent such knives from being carried casually. The leaf shape causes a large, gaping wound that bleeds heavily.

*"Though it seems as if a dagger and a knife are very much alike, there are important differences. A knife is lighter than a dagger. Its shape does not allow it to be thrown as easily, which explains why the lighter knife has the same throwing range as a dagger. The knife causes only slightly less damage than the dagger. Both weapons have the same*

*rate of fire. The dagger is less a tool and more a weapon, while it can be argued that the reverse applies to the knife.*

*"An adventurer of high station way wish to have a knife and a sword of similar design, both housed in one scabbard. Such a thing is certainly considered a status symbol (definitely a mixed blessing).*

*"A big advantage of knives is that they are found everywhere. Cooks, trappers, and hunters are but three occupations that justify carrying a knife."*
*-- Peripim Furfoot, Halfling Adventurer and Professional Cook*

Knife handles historically exhibited wide variations in materials and workmanship. Cast silver knife handles were popular in the 16th century, inlaid mother-of-pearl was in vogue in the 17th century, porcelain handles were popular in the 18th century, and carved ivory and bone with fine silver plate was the trend in the 19th century.

Nations or cultural groups created knives that suited their particular styles or customs. A common knife in southern Europe, for instance, had a blade that folded toward the handle, with the cutting edge housed in a special groove. In Spain, these were called the Navaja, and in Italy the Serramancio. We know them today as clasp knives or jackknives.

By far the most famous knife of the past two centuries was a heavy, single-edged, sharply pointed blade with a small handle with wooden sidepieces. The knife was designed for melee combat. This knife was much in use in the American West, and was named for its creator: Colonel James Bowie.

## Lance

The term "lance" originally referred to spears wielded by footmen and cavalry. It eventually referred only to cavalry spears.

Lance design varies between cultures and eras. Generally, the lance is a long shaft of tough wood, usually ash, with an iron head in the shape of a laurel or willow leaf, with cutting edges and a sharp point meant to penetrate armor.

Lances are meant to be gripped close to the bottom, putting a great distance between the wielder and his target. As a rule, the lance is aimed diagonally above the horse's neck. The opponents face each other with their left sides oncoming.

Along with almost any variety of sword, the lance is considered the best offensive weapon for mounted soldiers. Some knights carry a small fabric pennant affixed just below the lance head. These pennants are either triangular or square, and carry the colors or symbols of the knight's family or liege.

In parades, lances are held vertically, with the butt set in a stirrup or on the horseman's right thigh. On a march, the lance is held across the shoulder, across the saddlebow, or horizontally alongside the horse.

Through evolution, weaponsmiths sought to increase the damage caused by the lance by making them heavier.

One of the biggest problems with using a lance is the jarring impact on the user. In order to address this problem, a thick leather ring called a graper is fitted to the shaft just behind the wielder's hand. This acts as a stop against the armpit, halting the lance's rearward motion upon impact.

Another important part of a lance is a rest. The rest is a small, sometimes folding

bracket fixed to the right side of the knight's breastplate armor. The graper is leaned against this rest when the lance is in use. The rest enables the knight to get the maximum push from his lance, inflicting the most damage.

The difference between the light, medium, and heavy, lances stems from the length (10' for a light, 12' for a medium, and 14' for a heavy), and weight (five pounds, ten pounds, and fifteen pounds for light, medium, and heavy respectively).

Each lance type can be used only if the rider is on a horse of corresponding type or greater. Thus, a knight on a heavy warhorse can use any lance, while the scout on a light warhorse is limited to the light lance.

### Jousting Lance

Jousting lances, used in "jousts of peace," are the heaviest lances, weighing 20 pounds and measuring at least 13 feet long. These lances are fitted with a three-pronged head in order to prevent armor penetration. The prongs are short, blunt projections that emerge from the headpiece, as opposed to a sharp point. This lance is also known as a "courtesy lance." In a full tilt, a joust of war, the head is blunt and may actually cause fatalities.

Locathah riding on the backs of giant eels use light lances.

*"Light lances can be used as a polearm by adventurers who do not relish combat on horseback, preferring instead to meet the enemy on foot. It can be hard to wield a heavy lance in a forest, so a medium lance may be a good compromise.*

*"Lances are best used as a mounted weapon. When used from the back of a charging mount, it inflicts double damage.*

*"Nothing is more awe-inspiring than a mounted knight, wielding her lance and charging a dragon. Of such things legends are made, and no mounted warrior worth his salt should be without his lance, especially a paladin. I know I have mine!"*
*-- Maura Smallwood, Paladin*

The lance's history can be traced to the Middle East, and was widely used by Greco-Roman horsemen.

Though rendered obsolescent in 1600 by the advent of firearms, lances were still used by light cavalry until the 19th century, with many European armies maintaining use of the lance in the Russian Civil War and World War I. Two of the most well-known uses of the lance in the 20th century were the Polish lancers' charges against German armor in 1939, and the Italian charges against the Russians in 1942.

### Lasso

A lasso is a length of rope with a loop at one end, tied with a knot that enables the loop to be tightened. The wielder twirls the lasso and throws the loop at the intended target. If it hits, the lasso has encircled the target, enabling the attacker to dismount the victim, make him fall, pin him, strangle him, etc. The wielder must specify exactly what he wants the lasso to accomplish before making his attack roll.

A successful hit does not cause damage to the target, but incidental damage can occur from the results of certain actions performed with the lasso, such as making someone fall

or strangling a victim.

The many tricks which can be performed with a lasso are outlined in the Equipment Chapter of *The Complete Fighter's Handbook*.

A lasso may be severed by 2 hit points of cutting damage. A victim's Strength can break a lasso, using the character's Bend Bars/Lift Gates roll. Only one attempt can be made on any one lasso.

Lassos are also called lariats. Characters can take lasso as a weapon proficiency, but they should remember that the Rope Use nonweapon proficiency gives a +2 bonus to hit with a lasso.

*"Lasso? What sort of heroic weapon is a lasso? What is a warrior going to do, tie up his victim and make him die of embarrassment? Bah! If a warrior is so keen on using a length of hemp rope, let him learn Rope Use. That way, not only is there a better chance at hitting a victim with a lasso than if he were proficient with the lasso as a weapon, but the adventurer will also pick up many more tricks, rather than wasting time trying to become expert at throwing silly loops of rope! Lassos, indeed!"*
*-- Kedar the Dark, Warrior Lord of Adauntlynn*

## Mace

The mace is a direct descendant of the basic club, being nothing more than a wooden club with a stone or iron head mounted on one end. The head design varies, with some being spiked, others flanged, and still others with pyramidical knobs.

The mace has existed since man began working with metal. The first maces were made in order to give the club wielder more power in his swing.

High-level priests, knights, and even paladins may have a personalized, decorated mace that serves primarily as a symbol of rank.

Since the mace is a weapon that requires very little in the way of specialized training, it is a favored weapon among goblins.

### Footman's Mace

Footman's maces originated as heavy wooden truncheons, about two and a half feet in length and covered with iron studs. As time went by, flanged heads similar to the horsemen's mace were used instead. This mace is a two-handed weapon.

There are two different types of footman's maces: an emergency weapon made from materials at hand and thrown together by a blacksmith, and the maces made by professional weaponsmiths for troops. In order to reflect the difference between the two types, the homemade mace should be given a -1 penalty to attack and damage rolls.

The hasty, emergency maces are usually a wooden handle with any sort of metal head attached.

### Horseman's Mace

The first horseman's maces were a wooden handle, about 18 inches long, with a leather wrist strap at the bottom of the handle so the weapon would not be dropped, and a metal head. As time progressed, knights preferred to have maces made entirely of metal.

The horseman's mace became an important weapon to the knight. Knights usually keep

a mace slung over a hook on the saddlebow. Not surprisingly, an alternate name for the horseman's mace is the knight's mace. This type of mace is a one-handed weapon.

*"Maces are a step up from the basic club, and are a good weapon especially for priests who cannot use edged weapons. Adventurers may find that the horseman's mace is actually a good secondary weapon for a footman, though the reverse is certainly not true!*

*"A mace is specially made for crushing things, especially helmets and armor."*
*-- Brother "Helmsbane" Maynard*

The Romans armed their allied auxiliaries with bronze-headed maces, although they never used maces themselves.

Two styles of mace head patterns emerged before the 14th century. The first was a ferrule from which extended knot or node-shaped pieces, and the second was a geometrically designed head with vanes (conical or diamond-shaped flanges).

Gothic influence in the 14th century made maces more decorative, a trend which ended in the 16th century, when maces were given a more military form. Eastern European maces, especially those from Poland and Hungary, had onion-shaped heads, an idea taken from the Turkish maces. Maces were used as a weapon up until the 18th century.

During the Middle Ages, arming oneself with a mace took on significance among nobles and army commanders. The mace became a preferred weapon among wealthy or illustrious users, and it became symbolic of power, wealth, and renown. These maces were shaped or decorated in a manner that represented the wielder. Thus, the owner of a mace became recognized as a person of prominence and rank, with the number of ribs and flanges on the mace indicating the owner's status.

### Main-Gauche

The main-gauche (French for "left hand") is a large dagger with a basket hilt. Since most swordsmen use their right hand to wield a sword, this dagger is meant for the left hand, wielded as a defensive weapon when a warrior is using the two-handed fighting technique. The main-gauche is also called a "left-hand dagger."

The heavy basket of the main-gauche is the equivalent of an iron gauntlet for the purposes of hand-to-hand combat.

Fighters proficient with main-gauche gain a +1 bonus to hit with Disarm and Parry maneuvers. More information on fighting styles and maneuvers can be found in *The Complete Fighter's Handbook* in the Combat chapter.

*"A main-gauche causes the same damage as a normal dagger, but the former is designed especially for defense. It's important not to confuse the main-gauche with the parrying dagger. The latter has a different design, including longer quillons and sometimes a triple blade. A parrying dagger also has a greater likelihood of breaking an opponent's weapon. A main-gauche offers better protection to the user's hand. In any case, it is quite a sight to see a warrior using a sword in one hand and a main-gauche in the other."*
*-- Mendrill Halfelven, Bard*

## Mancatcher

A mancatcher is a polearm with a special function: to capture an opponent without killing him. The weapon consists of a long pole with a set of spring-loaded, sharpened jaws at one end. The victim is caught between the jaws, which then snap shut.

The target, regardless of armor and other defensive devices (magical or otherwise), is treated as AC 10, though appropriate Dexterity bonuses are allowed. If a hit is scored, the opponent is caught, losing shield and Dexterity bonuses. In addition, the victim can be pushed and pulled around at the whim of the mancatcher's wielder.

While caught in the mancatcher, the victim suffers 1d2 hit points of damage per round. There is a 25% chance that the trapped character will fall to the ground.

The victim may attempt to escape the grip of a mancatcher by making a successful bend bars/lift gates roll, but he suffers an extra 1d2 points of damage while breaking away.

*"Mancatchers are good for pulling horsemen off their mounts and pinning them to the ground, but the weapon is only good on man-sized opponents. Smaller creatures like goblins and kobolds can just slip on through, and the larger creatures don't have the right frame, though why anyone would want to capture any of these disgusting things alive is beyond me.*

*"Mancatchers are used often by that foul, subterranean race of fish-men, the kuo-toa. Some adventurers who may have suffered the depredations of the kuo-toa and who see a character wielding a mancatcher may get a bit upset. Often, it's best to steer clear of weapons that remind certain people of certain races, unless of course, someone is really good with the weapon in question!"*
*-- Troxel the Unpredictable*

## Morning Star

The morning star is a wooden shaft topped with a metal head made up of a spiked iron sheath. Morning stars have an overall length of about four feet. Some such weapons have a round, oval, or cylindrical shaped head studded with spikes. Extending from most morning star heads, regardless of design, is a long point for thrusting.

The weapon is designed to allow the wielder to inflict greater damage with his swing. The weighted, spiked head adds to this ability significantly.

Long-handled morning stars are used by foot soldiers, while the short-handled versions are used by horsemen. It is a very popular weapon due to its effectiveness and its simplicity of production.

The morning star traces its ancestry to the mace, which in turn traces its lineage back to the club.

Hobgoblins, a race that takes great delight in inflicting pain, often use morning stars. Troglodytes use stone morning stars.

*"Morning stars are clubs with a real nasty attitude. They can cause as much damage to a man as a longsword, probably because of them spikes. I hear tell that the morning star*

*is called a bludgeoning weapon as well as a piercing weapon, but tell me, have you ever seen a sharp spike hit someone at high speeds and have that called bludgeoning?"*
*-- Suriel, Cleric of Tyr*

The morning star was derived from the Swiss Morgenstern (literally: "morning star"), and was used during the 16th and 17th centuries, especially in England. The weapon had the perverse nickname of "holy water sprinkler."

The morning star was popular from the Middle Ages to the late 17th century, though its use continued among peasants and poor urban militiamen and gangs up to the 19th century.

### Net

The net is a tool that has been used as a weapon since the days when emerging civilizations held gladiatorial arena combat. This version of the net is an eight- to twelve-foot diameter circular net with weights around the edges and a trailing rope used to guide the net and pull it away. It is usually folded in such a way that it twirls open when thrown. It is tossed with one hand, with the attacker holding onto the guide rope with the other hand.

A successful hit with this weapon means that the victim is netted and must try to break free by making a Strength check once per round until successful. The netted victim cannot make any sort of attack until the net has been shaken off.

On the round after the victim is netted, the attacker has several options for his next action, including using another weapon to strike the entangled victim. The victim loses his Dexterity and shield bonuses to armor class until he is freed.

The attacker may improve his grip on the victim by looping the trailing rope around the netted character. This requires a normal attack roll for success, and the victim loses 4 points of effective Strength (for determining success of freeing oneself from the net) per successful round of attack. If the victim's Strength is reduced to zero, he is hopelessly tangled and cannot escape unless helped by someone outside the net.

If a warrior throws a net and misses, it is open and unfolded. It may still be thrown, but it is no longer folded correctly and is consequently an unwieldy weapon. Attackers suffer a -3 penalty to hit when throwing an unfolded net.

A properly folded net allows the attacker to perform Disarm, Parry, and Pin maneuvers. Such attacks are at a -3 to hit if the net is unfolded.

Certain underwater races, such as nixies and sahuagin, use nets not only for fishing, but also as a combat weapon, usually when they wish to take a victim alive.

*"This weapon is rather unusual, but it can be quite effective. Imagine, a weapon which, if it hits, will immobilize an opponent in just one round. Of course, such a weapon is not very effective on larger than man-sized or exceptionally strong creatures (such as an ogre), though it may buy a wounded adventurer some time, since a successful hit means that the victim must abandon plans for attacking and concentrate instead on getting out of the net.*

*"Characters who can set snares and traps ought to consider the net when making their little traps. It could come in handy for defense or in a hasty retreat."*

-- *Bramm Po, Illusionist*

### Pick, Military

The medieval military pick was a specialized weapon. It probably originated from the common mining tool. As armor grew heavier, the pick's form and function were soon adapted to a specialized role. This role was to penetrate the heavier armor types, from chain mail up through full plate armor. The military pick was a modification of a weapon called the *martel-de-fer*, a type of war hammer that had a hammerhead balanced by a thick, curved piercing fluke or "crow's beak."

The military pick generally consists of a heavy piercing fluke mounted on a haft. The weapon might have either one or two flukes, and the haft might be spiked.

The weapon is popular with knights and the heavy foot soldiers of certain mercenary companies. Dwarves and gnomes are also fond of the weapon, and deep gnomes (svirfneblin) in particular use great numbers of them.

#### Footman's Pick

The footman's version of this weapon has a longer haft (up to 5'), enabling it to be wielded with two hands. The weapon weighs about six pounds and can be swung with great penetrating force.

#### Horseman's Pick

The horseman's pick is lighter (about 4 pounds) and has a shortened haft (about two feet), making it easier to wield from horseback. It is commonly used by knights and heavy mercenary horsemen, who face more heavily armored opponents. The deep gnomes' weapon is also of this lighter variety.

*"Races who particularly enjoy mining, such as gnomes, svirfneblin, and dwarves, can be found with these weapons. They usually know how to use a pick both as a tool and as a weapon, though they will first use normal weapons if given the chance. Sometimes they have to wield these as weapons against another race known for its subterranean diggings, and who also use the pick as a weapon: the duergar."*
-- *Nahac the Gnome Sage*

### Polearms

Also called staff weapons, polearms are defined as hafted weapons--edged weapons mounted on a short handle or on a longer shaft wielded with two hands. The shafts are usually made of wood, though metal shafts sometimes exist.

An alternate term for polearm is pollaxe, which is used to describe any weapon which has a metal head in a combination of axe, beak, or hammer, mounted on a pole ranging four to six feet in length. Poll is the contemporary word for a steel head mounted on a staff, and the term should not be confused with "poleaxe."

Though descriptions of the various polearm types follow, there are certain characteristics common with all pole weapons, as outlined here.

Polearms are easy to make and are used often by peasants and common foot soldiers.

The polearm is a great equalizer for these troops, who often must fight armored men on horseback. A polearm gives the wielder a long reach without exposing himself to the swing of a sword. Setting polearms to receive a charge grants the wielders an initiative bonus.

A primary use of the polearm is to allow warriors in the second rank to attack over the shoulders of the front rank. Often times, a fighter with a hand weapon and shield will team up with one using a pole arm, and they will fight as a coordinated unit.

Polearms that have special attachments to topple mounted targets have a base 20% chance of success.

Special optional rules for implementing polearm tactics may be found in the Combat chapter in *The Complete Fighter's Handbook*.

Gnolls and hobgoblins make it a point to carry polearms often. A band of such creatures encountered carrying polearms will be knowledgeable in polearm tactics. Orcs favor halberds, pikes, and glaives.

While the Master Weapons Chart at the end of this chapter shows which polearms cause extra damage when set to receive a charge, any polearm can be used to receive a charge regardless of whether it causes extra damage.

***The Real Way To Use A Polearm***

*"Alright, listen up, for I am only going to say this once. I grow weary of seeing groups of bumbling amateurs running around with polearms, each person with a different type. One uses his halberd, another uses a pike, still another has a guisarme-voulge, and he cannot even* pronounce *it, let alone use it! This is ridiculous. If you are going to use a polearm, use it correctly! Here's how.*

*"First of all, for the gods' sake, try to get some idea of where your group is going. Are you going to the jungle or a dense forest? You are? Then why buy a polearm, you fool!? You will have no room to wield it, and more often than not you'll wind up poking your comrade's eye out. Make sure that the terrain suits the weapon.*

*"Next, once you know that the destination justifies a polearm, each person should get the same type of polearm. The weapons vary in the speed with which they can be swung and the amount of space needed to wield the things. Different polearms complicate what should be a simple operation.*

*"When you see an enemy charging at you, have all the polearm bearers line up in the front row, with weapons set to receive the charge. In order to set for a charge, the wielder should stand sideways, leaning forward so the left shoulder faces the oncoming foe. The polearm should be set at an angle, with the head pointing away from the ground, facing up at the enemy. The end of the handle should rest against the instep of the right foot. Both hands hold the pole firmly. You are now ready to receive a charge.*

*"Once the enemy impales himself on the blades, you cannot just pull out the staff weapon and begin hitting the creature. Your non-polearm-wielding comrades behind you should begin throwing spells, hurling missiles, spears, whatever, at the impaled foes. Try your best to keep the enemy on the blade, and out of your reach.*

*"Now that's the way to use a polearm! It is a team effort that needs to be practiced often. Remember this, and perhaps it will save your life!"*
*-- Fiona the Ranger, Daughter of Dierdre*

### Awl Pike

Also known just as a "pike" and a Morris pike (corruption of Moorish), this is an infantry spear ranging 16 to 22 feet in length. Awl heads are usually leaf- or lozenge-shaped. The pole is made of a strong wood, such as ash. Many pike heads are made with two tongues of steel, nailed down the sides of the shaft in order to prevent the head from getting hacked off. The grip is often bound with cloth and the butt capped in steel to prevent the shaft from splitting. The awl pike has the dubious distinction of being the slowest polearm available. Add to this its mediocre damage against man-sized opponents, and one is left with a weapon of questionable value, except when used en masse on the battlefield.

### Bardiche

The word bardiche is the corrupted spelling of berdysh. The berdysh (Russian term) is in effect an elongated battleaxe with a large, narrow, curved axe head measuring 24 to 32 inches long, mounted on a pole five to eight feet long.

The upper part of the head can be used for thrusting, while the lower part is in the form of a langet. A langet is an iron strap used to increase the strength of the head and protect the most exposed part of the weapon from blows.

Berdysh require more room to wield than a pike or a spear, but the weapon has a unique function: it can be used as a gun rest. The smaller berdysh have two rings for attaching to a shoulder strap. This arrangement is popular among horsemen.

### Bec de Corbin

Also called the bec de faucon, the names mean "crow's beak" and "falcon's beak" respectively. This pole weapon has a hook much like a bird's beak and is ideal for cutting open armor like some great can opener. The weapon also has a hammer or axe side that delivers a solid hit. This is a highly specialized weapon, designed for the purpose of cutting armor then striking the now unarmored victim with the other side of the weapon. The pole shaft is eight feet long.

### Bill-Guisarme

Also known simply as a "bill," this weapon is derived from an agricultural tool, the bill hook. Throughout its years of use, the bill's head went through many changes. Its most common head form is a sharp spike with a sturdy hook whose inside and outside edges were sharpened, and a cutting blade reminiscent of a cleaver. The pole length ranges around eight feet.

### Fauchard

Developed from the common agricultural sickle or scythe, the fauchard consists of a long, curving blade with a large, pointed head and a *fluke* (a small, curved hook found on many polearms). The head is mounted on a wooden pole about eight feet long. Peasants can often change scythes into fauchards.

The fauchard is classified as a glaive. It is not very good as a thrusting weapon, but is used mainly as a slashing weapon. It fulfils the need for a weapon that puts some distance between the wielder and his enemy.

Since the fauchard is not an instrument designed foremost as a weapon but rather a

farm tool adapted for war, it is inefficient as a weapon of war, being rather bulky and needing a large area to be used properly.

### Fauchard-Fork

This term denotes a fauchard with the fluke attached. The fluke was added in order to improve the weapon's thrusting capability, but the effort was fruitless. It is still a bulky weapon, requiring much space to be wielded effectively.

### Glaive

The glaive is a pole weapon with a large head shaped like a knife or a sword mounted on an eight- to ten-foot long shaft. The blade usually turns outward in order to increase the cutting area. Some glaives are fitted with flukes. Overall, the glaive's damage potential is not spectacular, but its long reach makes up for this. It effectively takes a normal sword blade and gives it a great reach.

### Glaive-Guisarme

This term describes a glaive with a fluke mounted on the back of the blade. It is slower and heavier than a glaive, and its potential damage is nothing noteworthy.

### Guisarme

Also called the gisarme or the giserne, the guisarme is an elaborately curved blade, much like the crescent blade of an axe, attached to a six-foot long staff. Thrusting spikes are often attached to the top of the shaft. The guisarme is supposed to have come from the farmer's pruning hook. The weapon may have contributed to the development of the berdysh and the halberd.

### Guisarme-Voulge

This term describes the guisarme in its later stages, with a curved axe-head. It features a back spike, the fluke, for punching through armor, and the blade's end tapers for thrusting attacks. Often, the fluke is replaced with a sharp hook for use in dismounting riders. It is a slower weapon than the plain guisarme but causes comparable damage.

### Halberd

By far the oldest and most often used polearm, the halberd consists of a cleaverlike axe blade mounted on a staff averaging six feet in length. The axe blade is balanced at the rear with a fluke, and surmounted by a sharp spike, usually of quadrangular design. The fluke is sometimes replaced by a hook used to dismount cavalry. A halberd can be best described as a cross between a spear and an axe.

Though a halberd's main function is to dismount cavalry, it may also be employed as a thrusting weapon and a cutting weapon. It is not a fast weapon, even compared to other polearms. Still, it does more damage to a man-sized opponent than all other polearms.

### Hook-Fauchard

Like the fauchard-fork, the hook-fauchard is another attempt to improve the fauchard. This weapon has a hook fitted on the blade's back. The hook is used to dismount cavalry. Like its predecessors, it was not a very effective weapon. Its damage potential is horrible

compared to the fauchards that it was supposed to improve upon, and it is slower than the original fauchard.

### Lucern Hammer

The lucern hammer is a hammerhead with a spike at its rear, mounted on a long pole, reaching as much as ten feet in length. In some cases, the end is fitted with a spike to keep enemy soldiers at bay. It is one of the heavier pole weapons and is rather slow. The entire weapon is usually made of steel, including the pole, and often it is decorated with carvings and precious metal gilding.

### Military Fork

The military fork is the warrior's version of a simple agricultural farming tool. The head consists of two parallel spikes, often fitted with hooks for pulling horsemen off their mounts. Certain versions of the fork have a blade mounted just below the spikes. The wooden staff is about seven feet long.

Forks are useful not only as thrusting weapons, but as tools for climbing the defender's ramparts, setting up ladders, and hoisting baskets of supplies.

### Partisan

The partisan (alternatively spelled "partizan") is a staff weapon consisting of a long, tapering, double-edged spear blade with two diagonally-set flukes at the base. The shaft is about eight feet long. The partisan's flukes may be used to catch and break opponents' weapons, as well as to inflict extra damage. Partisan heads are large enough to allow engraving and ornamentation.

### Ranseur

Also known as the rancoon and the rawcon, the ranseur resembles a partisan, except that the ranseur's flukes are longer, resulting in a three-pronged head. The flukes are, however, shorter than the middle blade. Partisans are sturdier than ranseurs. The three prongs are large enough to puncture armor or trap a weapon and disarm the opponent (considered a Called Shot, -4 to hit, see Combat chapter of *The Complete Fighter's Handbook*).

### Spetum

Spetums are similar to ranseurs, except that the side blades sometimes angle backward, increasing the damage when the blade is pulled out of a wound. When the weapon is pulled out of a victim, he suffers an additional 1d2 hit points of damage due to the side blades. The spetum's shaft is eight feet long.

### Voulge

Also called the vouge and the Lochaber axe, this weapon is a large, long blade, narrowing to a spike at the top, with a hook-shaped fluke at the blade's rear. The staff is eight feet long. Though it is a simple weapon to make, this advantage is offset by the fact that it is one of the slowest polearms available.

*"Taken as an entire weapon group, polearms are a useful weapon especially in an*

*outdoor setting. Their advantages include a good reach, excellent defensive capability, and the ability to knock opponents off their mounts. Among the drawbacks of polearms as a whole are the amount of room needed to wield them, their diminished usefulness in close-quarters melee, their overall slowness, and their encumbrance. Also, with so many polearm types to choose from, it is unlikely that a group of adventurers all have the same weapon or that everyone in the group will want a polearm of any sort in the first place. Polearms are more effective if several people have them; a single adventurer wielding a halberd is not going to stop a row of four charging orcs. Remember the advice given earlier and try to co-ordinate polearm choices before going off to adventure."*
*-- Fiona, Daughter of Dierdre*

The sarisa, a Macedonian infantry spear, was the ancestor of the pike. The Swiss rediscovered the idea of mounting a spear head on a very long pole, and it became so popular that they adopted the pike as their national weapon in the 15th century. Their prowess with the pike, not only as a defensive weapon but as an offensive one, prompted other European nations to adopt it. The pike remained in use until the end of the 17th century, when muskets and bayonets made the long spears obsolete.

The berdysh were created by the Russians and used by Muscovite infantry during the 16th and 17th centuries. They were also used in Scandinavia and eastern Europe.

The bec de corbin (and faucon) was used by the upper classes during the Late Middle Ages and early Renaissance. The terms are French, but the weapons were so named by English writers!

The bill was a popular weapon with the English, and, along with the halberd, remained in use longer than all other polearms, well into the early 17th century. The English bills had a shorter shaft length, usually around four feet, and were rather tough.

The glaive (derived from the Latin *gladius*, meaning "sword") blade increased in size over the years until it was big enough to have a nation's or ruler's coat of arms engraved upon it. It was often carried in parades. Glaives were introduced in the 14th century and favored by the French. The blade is said to resemble a large bread knife. The 16th century Italians and Germans favored the glaive as a palace guard weapon.

The guisarme was used extensively between the 12th and 17th centuries.

Halberds were introduced sometime between the 6th and 9th centuries AD, when foot soldiers of Northern Europe mounted their swords, called scramasax, on poles. The Swiss refined this weapon and wielded it with devastating skill. In fact, halberds were known to split a man's head from pate to jaw, armor notwithstanding! The halberd got its name during the first primitive versions made by the Swiss.

The word *halberd* comes from the German words *halm* (staff), and *barte* (axe).

Primitive halberds had a wide blade with a straight cutting edge. The staff fit through two sockets in the back of the blade. This design was probably inspired by the guisarme. By the end of the 15th century, the halberd was modified in order to increase its effectiveness. This is the halberd type most often referred to when using the term. The primitive halberds were soon referred to as the *Swiss vouge* (voulge). Like most polearms, the halberd fell into decline with the introduction of firearms.

Confusion often exists whether a lucern hammer is a hammer. It is safe to say yes, it is a hammer, and is alternately called a war hammer. A short-handled version of the lucern hammer was used by mounted troops as early as the mid-13th century. It is longer than

the weapon most adventurers call a war hammer and is used mainly by massed units on the battlefield. The lucern hammer gets its name from the Swiss city of Lucerne, whose armories were well-stocked with the weapon, so much so that scholars named them after the city.

Military forks are descended from farmer's pitchforks, though the former's spikes were straight as opposed to the curved spikes of the latter. This weapon appeared frequently during the Crusades and peasant revolts from the 15th to 19th centuries. In 1920, Polish peasants used forks to fight off Soviet troops attacking Warsaw.

Partisans are a derivative of the langdebeve, a broad-bladed spear. The name *partisan* came from the people who wielded it, the partisans, in late 15th century France and Italy. After its retirement as a weapon of war, partisans continued to be used as ceremonial weapons in royal courts. In fact, the Swiss Guards of the Vatican and the Yeomen of the Guard at the Tower of London still use partisans at state occasions or when in full dress.

The term *voulge* has been used to describe many types of polearms, thus its true meaning is obscure. A number of texts associate the voulge with the English bill, the French glaive, and the Swiss vouge, the latter of which is the accepted voulge form. The lochaber axe is a Scottish polearm used in the 16th to 18th centuries, most likely descended from the gisarme.

## Quarterstaff

The simplest and humblest of staff weapons, the quarterstaff is a length of wood ranging six to nine feet in length. High quality quarterstaves are made of stout oak and are shod with metal at both ends. The quarterstaff must be wielded with both hands.

*"Such a simple weapon, yet so popular. Any class of adventurer, be he an armored warrior, spell thrower, cutpurse, or man of faith, can use a quarterstaff. The staff is also a fine practice weapon, especially in place of other two-handed weapons such as two-hand swords or polearms. The staff is held in the middle with the left hand, while the right hand holds on at one-quarter of the whole staff's length from the end.*

*"Quarterstaves are popular among the kenku, the mysterious, Oriental, birdlike humanoids. This blunt weapon is usually used to knock out an opponent as opposed to killing him.*

*"Wizards may decorate their staves, even cast spells on them in order to make the weapons look magical. It may fool someone into thinking that a simple wooden staff is in fact a* staff of the magi."
-- *Albertus, Battle Mage*

## Sap

Alternatively called a blackjack, the sap is a small leather bag filled with sand, lead shot, coins, or other weighted materials. It is used to quietly knock out a victim by administering a blow to the head or back of the neck. Thus, the sap has no effect on helmeted targets. If the sap strikes any other part of the body, the damage is halved and there is no other effect.

Of the damage caused by the sap attack, 25% is actual physical damage, and the other 75% is temporary damage that wears off in 1d6 turns.

In order to effectively use the sap, the attacking character makes a Called Shot at -8 to hit. If a hit is scored, damage is determined normally. The attacker then has a 5% chance per hit point of damage to knock out the victim, up to a maximum of 40%. This maneuver works only against targets that are man-sized or smaller.

When a sapping maneuver is performed on a sleeping or magically held victim, the maneuver automatically hits, but the chance of knockout increases to 10% per hit point of damage, to a maximum of 80%.

*"A sap is more suited to an urban environment than to the great outdoors or dungeon crawl. It is a weapon favored by thieves looking to cosh someone on the head and take his purse. If a party of adventurers is infiltrating a stronghold in order to capture someone, however, a sap may come in handy."*
*-- Kyrian Darkstar, the Infiltrator*

### Scourge

The scourge is a short whip with several leather tails or thongs. Each thong has metal barbs, broken glass, or any other sharp fragments attached along its length. A similar device, the cat-o-nine-tails, is a nine-tailed whip with knots tied in each thong.

The scourge is not so much a weapon as it is a means of inflicting great pain. Still, it causes damage and can be used as a weapon.

The only creatures known to wield scourges with any sort of consistency are the Balor Tanar'ri, chaotic evil denizens of the Abyss. This should give the idea of the type of creature who wields such an instrument.

*"A scourge? Why would any self-respecting adventurer want one? Those dreaded things are most associated with torture, not combat. No one raises an eye when an adventurer walks into town with a sword; a man has to protect himself, and, times being what they are, no one will begrudge an adventurer's right to carry a sword. But carrying a scourge will probably mark someone as a follower of some cruel, torturing deity, or at the very least, as an evil person. Any adventurer with a shred of decency will avoid the scourge and get something that will put an enemy out of its misery, not prolong it!"*
*--Strang of Tempus*

*"How odd. Personally, I find the scourge to be of great value in temple worship. It is also a great motivator."*
*-- Leeahn, Priestess of Loviatar, Mistress of Pain*

The scourge is truly a monument to man's ability to cause suffering. When a scourge hits a victim, the thongs curl around the trunk and limbs, with the barbs digging into the flesh. The torturer then pulls the scourge away, ripping even more of the victim's skin. In ancient Rome, certain soldiers were trained with the scourge to cause the maximum amount of pain without killing the victim. Roman citizens were exempt from scourging, while subject peoples were not.

### Sickle

The sickle is a farming implement consisting of a crescent-shaped blade mounted on a short handle. It is used in combat primarily by peasants or adventurers who have no weapon and are forced to make do with whatever they can find. Most farms have sickles, which are used for cutting weeds, grass, and grains.

Druids favor the sickle due to its strong association with agriculture. Golden sickles are used to harvest mistletoe as components for druid spells.

As a weapon, the sickle is as effective as a dagger, but is slower overall.

### Sling

Slings have existed since the beginning of recorded history. The basic sling consists of a leather or fabric strap with a pouch for holding the missile. The weapon is held by both ends of the strap and twirled around the wielder's head. When top speed is attained, the missile is launched by releasing one of the strap's ends.

The sling is a cheap weapon and is easy to make. Thus, it is common among peasants, especially since it makes a good hunting weapon.

The sling's missile is either a smooth, rounded stone or a ball of lead. While stones are easier to find (most shallow streams have an abundance of smooth stones), the lead bullet causes more damage and flies farther than the stone.

A sling's projectile is capable of producing severe bruising or even broken bones against a man or his mount. Against armor, however, the sling loses most of its effectiveness.

Halflings are known to be quite good at using the sling, and it is a common weapon among members of that race.

*"Slings are a fine missile weapon for thieves, since the weapon is easily concealed and quiet. Actually, it is not a bad proficiency for anyone to pick up, since making a sling and finding ammunition is easy. The sling's missiles have a good range. If using a sling out-of-doors, one never lacks for ammunition, though lead bullets fly farther and cause more damage."*
-- *Ariane, Professional Cutpurse*

Slings were heavily used by the peoples living around the Mediterranean basin. The Romans did not assign slings to their soldiers, but allowed their auxiliary troops to use them. The sling was used during the Middle Ages, and slingers are depicted on the Bayeux Tapestry, not as soldiers, but as hunters.

### Spear

One of man's earliest weapons, dating back to the most primitive of times, the first spears were simply wooden poles or sticks sharpened at one end. When fire was discovered and mastered, spear points were hardened by charring. As man became more adept at using tools, spears were either fitted with a stone head or the point was reinforced with splints of stone or bone.

When man mastered metals, spear heads were made from iron and steel. Having reached this end, weaponers began experimenting with different types of spear heads, thus leading to the development of certain polearm types such as the ranseur.

Spear shafts are usually made from yew or ash, since these woods are both flexible and strong. The shafts range five to eleven feet in length. In melee, spears may be used either one or two handed, with more damage inflicted if used in the latter mode. Spears 10 feet or longer cannot be wielded with one hand.

Though spears are normally used for thrusting, they can also be thrown. Special devices exist for hurling spears. These devices are variously shaped pieces of wood, horn, or bone with hooks, hollows, or grooves meant to house the spear butt. When using one of these throwers, the spear's throwing range is doubled. The cost of a spear thrower is 1 gold piece. The thrower weighs two pounds.

A character wielding a spear gains an attack bonus for high Dexterity and a damage bonus for high Strength.

### Long Spear

A long spear is like a normal spear, except that its shaft ranges 12 to 13 feet in length and cannot be thrown.

Orcs and ogres use spears often in battle. They are simple weapons for simple-minded creatures.

*"Spears are versatile, since they can be used by footmen and horsemen alike. The former can set their spears into the ground, in hope of impaling a charging enemy. Footmen can use spears as melee weapons or as missile weapons. Horsemen use spears in much the same way as lances.*

*"As for long spears, unless one is prepared to forego shield protection and use the weapon with two hands, it is not worth selecting over the normal spear. Long spears need room to be wielded properly, they cannot be thrown, their damage is not much better than a normal spear, and they are slower than their smaller bretheren."*
*-- Lord Boris Vladimir, Professional Warrior*

Spears have existed since the Paleolithic era, some 500,000 years ago. Horsemen of 20,000 BC began using them as missile weapons, complete with the hurling devices explained earlier.

The Greeks were fond of large formations of spearmen in their armies.

The Franks began producing what we know as the spear. These spears had long, leaf-shaped blades and two triangular "wings" set just below the head. These wings prevented the spear from penetrating too far into a victim (and consequently making it harder to pull out), and enabled the spear carrier to parry more easily with his weapon.

In the 14th century, spears used by horsemen evolved into the lance. Long spears in the 15th century developed into the pike.

### Staff-Sling

Also called the fustibalus, the staff-sling consists of a wooden rod, three to four feet in length, with a sling attached to one end. The rod is used to increase the range that a heavy object can be thrown by enabling the slinger to twirl the sling harder. It is not meant to increase the distance of the average sling bullet. In fact, it has poorer range for stones or bullets.

An optional form of ammunition is the stinkpot, a clay vessel filled with burning sulfur or quicklime. This is considered a grenade-like weapon and is subject to the combat rules found in Chapter Nine of *The Player's Handbook*. For range, the stinkpot has a short range of 20 feet, medium range of 40 feet, and long range of 60 feet.

When the stinkpot breaks, everyone in a 20-foot diameter circle who does not leave the area within one round must save vs. poison or be unable to attack or move at greater than half their movement rate. Those who save successfully attack at a -2 penalty due to nausea and watering eyes. The effects last as long as the subject remains in the area and for 1d4 rounds thereafter.

The stink cloud lasts for 1d3+1 rounds, then dissipates. Optionally, stinkpots in underground settings may give off clouds that last 1d6+1 rounds due to lack of open air.

Due to the trajectory that a staff-sling gives a missile, it cannot fire at short-range targets. It has less range than a sling and is a slower weapon, but the staff-sling can hurl a heavier object.

*"Anyone who gets a staff-sling in the hope of seeing his sling bullet fly into the next kingdom is in for a rude shock. The weapon is only good for hurling large loads a healthy distance. The stinkpot idea is perhaps the best way to get the most use out of the staff-sling. One thing's for sure, as much as halflings like slings, you'll rarely catch one using this thing!"*
-- *Severian, Master Swordsman*

## Stiletto

Also known as a stylet, the stiletto is a short dagger with a strong, triangular or square-sectioned blade that tapers to a sharp point at the tip. The stiletto is designed for thrusting, in particular to pierce armor such as leather or mail. Therefore, the stiletto gives the wielder a +2 bonus to attacks against plate mail, ring mail, chain mail, and all forms of leather armor. Most stilettos are made completely of steel.

Most cities, except those involved in a war, prohibit the carrying of a stiletto since it is an easily concealed weapon.

Stilettos are narrow enough to be concealed in sword canes or even in the handle of a large sword, such as the long, bastard, or two-handed swords.

## Sword

## General Information

### History of the Sword

The most common definition of a sword is an edged weapon with a long blade made for cutting blows, thrusts, or both.

Swords first appeared in the prehistoric period when humans, who had been using daggers of stone, began working with copper. The copper dagger could be fashioned with a long blade, and in the ensuing years, the blades got longer and longer. Eventually, the blade reached such a length that it could no longer be called a dagger.

This new, improved weapon was superior to the dagger, which was quickly relegated

to a secondary role in melee combat.

Copper eventually gave way to bronze. Swords of varying lengths (what we now know as the long sword and short sword) came into being, with blades ranging from 27 to 35 inches.

Sword design was influenced by the dagger. Since the dagger is a thrusting weapon, early swords were also designed for thrusting. Eventually, the need arose for a weapon capable of slashing blows, so swords developed the double-edge, still retaining the sharp point.

Sword handles went through their own stages of development. In southern Europe, sword handles were decorated with ivory, gold, and semi-precious stones, while in northern Europe, the handles were decorated with engravings.

The discovery of iron revolutionized sword making. Bronze was rare, while iron was plentiful, though the latter was harder to work with. The change from bronze to iron was slow. For three centuries, both iron and bronze swords were in use.

The Romans developed the gladius, a short sword, in order to have a weapon that their rigidly-trained troops could use with swiftness and precision.

With iron proving itself superior to bronze, the latter was relegated for accessory parts, such as the grip or the sheath. The Hallstatt culture developed longer sword blades (31-35 inches) as advances in ironworking enabled them to make lighter and stronger blades. These blades were so pliable that they could be twisted into a spiral for three or four turns before breaking. This was known as "pattern welding." One drawback of this, however, was the fact that the blade could become misshapen when it struck something, often forcing the wielder to stop fighting and straighten out the blade with his foot or a rock! This was the type of sword that Gallic and Teutonic armies used against Roman legions, and is considered a long sword. Often, the craftsman making a sword placed a trademark identifying the maker.

As swords evolved, a small oval plate was placed between the shoulder of the blade and the grip. This was designed to protect the grip against damage from the metal mouth of the sheath. It also protected the user's hand.

Early stories of famous knights include lore about their swords, even mentioning the craftsmen who made the weapons. Siegfried had Balmus, Roland had Durandal, and Charlemagne had Joyeuse. King Arthur, of course, had Excalibur.

In the Carolingian period, the sword's grip was altered, becoming more specialized and defined. The oval attached to the grip was turned into a four-sided bar about four inches long. This became the guard. The wooden grip ended in a large pommel, which balanced the weapon. Such a sword measured about 40 inches in length.

At the start of the Romanesque Period (11th-12th centuries), the sword's form remained the same, but the blade became broader. These swords are considered broad swords by some scholars.

During this period, the sword was used primarily for slashing blows, as reflected in the Bayeux Tapestry, which shows armed men using swords in this manner.

The Gothic period saw swords becoming more specialized, depending on the knight's intentions. The knight's sword was a thing of beauty and strength, and it is this sword that resembles the long sword of fantasy. Knights usually owned several swords, each with its own use.

In the 15th and 16th centuries, swords were given to common foot soldiers, and their

designs changed accordingly. There were more ring-guards (to protect fingers), knuckle bows, and other such devices. The two-handed sword emerged from this era.

During the 16th century, fighters began emphasizing sword thrusts, and blades changed to accommodate this. Elaborate basket hilts were perfected to give the hand better protection. This gave birth to swords such as the rapier.

By the end of the 16th century, with guns rising in prominence, swords were increasingly relegated to duelling.

The longsword is considered by some to be the principle weapon of nobility, the broad sword the typical weapon of the commoner, and the bastard and two-handed swords the specialized weapons of mercenaries.

Eventually, the sword became a symbol of tradition, and is still worn on many military dress uniforms out of respect for that tradition.

### Bastard Sword

Also known as the hand-and-a-half sword, the bastard sword derives its name from the fact that it is halfway between the two-handed sword and the long sword.

The bastard sword has a double-edged blade and a long grip, which can accommodate both hands if preferred. The overall length of the bastard sword ranges between four feet and four feet ten inches.

Some bastard swords are equipped with knuckle guards, and others have asymmetrical pommels shaped like animal or bird heads.

*"The bastard sword is an excellent, versatile edged weapon which can be used one-or two-handed. Using it two-handed gives a warrior better damage potential, but makes him unable to use a shield. It is also a slower weapon. Using it one-handed allows the use of a shield, but causes less damage, comparable to that of a long sword."*
*-- Lord Jon Ironedge, Ruler of Hawkhaven*

### Broad sword

The broad sword is a heavy military sword with a double-edged blade. Overall sword length is about three and one-half feet, and the sword is designed mostly for cutting. Most broad swords have a basket hilt or a shell guard. A favored cavalry weapon, the broad sword is known in different cultures by different names, usually dependant on the hilt configuration. The basket hilt broad swords offer a +1 bonus to Parry maneuvers. In addition, punching attacks done with the basket hilt are treated like a metal gauntlet (see the *Player's Handbook*, Chapter 9).

*"The broad sword is as fast as a long sword and causes comparable damage to man-sized targets, but lacks the same ability against larger creatures. Its benefits in parrying and hand-to-hand combat are good, but if an adventurer is more of the `forget finesse, let's just hack them to bits' school, a long sword or a bastard sword may be a better choice. Someone who likes showing off, such as a swashbuckler, would favor a broad sword."*
*-- Rushlight of Tethys, Ranger*

### Claymore

The claymore is a large, cross-hilted sword consisting of a straight, broad, double-edged blade and long quillons angling toward the blade. The grip is leather-covered and topped with a wheel-shaped pommel. The sword is slightly shorter than the two-handed sword.

Claymores are treated as bastard swords in terms of damage, weight, and weapon speed.

Claymores are greatswords of Scottish origin, used by Highlanders and Scottish mercenaries in Ireland. The sword was popular from the end of the 15th century to the early 17th century. The term *claymore* is from the Gaelic *claidheamohmor*, meaning *great sword*.

### Cutlass

The cutlass is a sword with a single-edged, curved, broad blade attached to a basket hilt. The blade is short and heavy. The sword is favored among pirate crews and is easily found in port communities, but is rare inland. Cutlass users enjoy the same advantages in Parrying as broad sword users.

*"Cutlasses cause damage compared to short swords, but are slower and heavier. A broad sword is a better weapon, since it gives the same Parry benefits and causes more damage."*
-- *First Mate Arlundar, of the galleon* Angelwing

### Falchion

The falchion is a sword with a single-edged, heavy blade. The blade's back is usually straight, while the edge has a curve. The blade also broadens close to the tip, which gives the blade a cleaver-like appearance and increases the damage inflicted. The sword is heavy, which also contributes to a fearsome cutting blow.

### Gladius

The gladius is the first refined version of the short sword. It has a double-edged blade and a strengthened tip. The grip is made of wood, bone, or ivory and is topped with a round pommel. The sword is carried on a warrior's right side, slung from a baldric passing over the left shoulder. In terms of damage and length, the gladius or drusus resembles the short sword.

A drusus is a gladius of exceptional quality, and consequently has a series of special things associated with its care in order to maintain a sharp edge. The restrictions are listed in *The Complete Fighter's Handbook* (Equipment Chapter).

### Khopesh

This Egyptian weapon has approximately six inches of handle and quillons. The blade extends straight out about eighteen inches from the handle, then curves into a slight sickle shape for another two feet. In effect, this only adds another eighteen inches to the overall length. The entire sword is usually made of bronze or iron.

*"The khopesh is a slow sword, heavy and unwieldy. Its damage is unremarkable as compared to other swords, especially when one realizes the drawbacks that must be*

*suffered when wielding the khopesh. All in all, it is a primitive weapon of a culture that has not grasped the finer techniques in sword-smithing.*

*"Still, the weapon resembles a sickle in some ways and is usable by druids. This gives these nature priests a chance to wield a sword, yet stay within their weapon restrictions."*
*-- Eibhelin Hathleah, Warrior/Priestess*

### Long Sword

These swords are usually referred to as doubled-edged swords, war swords, or military swords. In many cases, the long sword has a single-edged blade. There is no single version of the long sword; the design and length vary from culture to culture, and may vary within the same culture depending on the era.

Among the most common characteristics of all long swords is their length, which ranges from 35 inches to 47 inches. In the latter case, the blade is known to take up 40 inches of the total length.

Most long swords have a double-edged blade and a sharp point at the tip. Despite the tip, the long sword is designed for slashing, not thrusting.

Often, long swords have two grooves that run the length of the blade, one on each surface. These grooves are called fullers, and are meant to make the sword lighter and more flexible. If a sword did not have some elasticity, it would shatter when it hit a target.

The handles of all long swords fit only one human-sized hand. Most long swords have a small, oval, metal plate between the blade's base and the grip. This oval protects the grip from getting damaged against the metal in the mouth of the sheath. It also offers some modest protection to the hand. A second piece of metal, either oval or round, is fitted onto the pommel.

*"Ah, the long sword! A warrior's best friend! It is without a doubt the most common melee weapon among skilled adventurers, and rightly so. It inflicts a respectable amount of damage to both man-sized and large opponents, is fairly fast for its size, and is relatively light.*

*"Elves favor long swords, and most are trained from childhood in their use. One guess as to the reason for this is the fact that the sword is light and quick and can cause a lot of damage when in battle, much like the elves themselves. That's only a guess, of course, and the truth may never be known, at least if I have anything to say about it."*
*-- Lord Noro Goldentree, High Elf*

The classic long sword depicted in fantasy gets its design from the Gothic period. This is the longest variety of long sword, with a 40-inch blade.

### Rapier

The rapier is a light weapon with a straight, double-edged, pointed blade. It is designed to be a light, thrusting sword. The term *rapier* is often used to describe a civilian weapon, as opposed to the heavier and deadlier swords of soldiers and mercenaries. Rapiers are fashionable among nobles and gentlemen.

As a new art of fighting evolved with emphasis on thrusting with the blade as opposed to slashing, a new weapon was required. This art is known as fencing, and it requires a

rapier. As the sport grew in popularity, the rapier was required to be narrower and lighter. It became not a slashing weapon at all, but a weapon purely for thrusting.

The early rapier handles have straight quillons (cross guards), side guards, and knuckle bows. The later versions have shell guards, similar to the basket hilts of the broad sword and cutlass. As a result, the rapier wielder enjoys the same Parry and punching bonuses outlined earlier.

*"The rapier isn't as fast as the short sword, but it does a slight bit more damage. The rapier is a good dueling weapon, and is popular with rich young nobles and swashbucklers."*
-- *Rollo, Aspiring Swashbuckler*

### Sabre/Scimitar

Alternatively spelled *saber*, this sword is a long, curved, single-edged blade intended mostly for horsemen. It is a popular weapon for light cavalry. The sabre's hilt grants the user the Parry and punching bonuses of the rapier.

Members of the foul race of yuan-ti often use scimitars.

*"Another curved, single-edged blade? Well, the sabre is a bit different since it's meant to be a slashing weapon instead of a thruster like the rapier. Both swords cause the same amount of damage and are equally as fast.*

*"As for the scimitar, it is merely another form of sabre, but with heavier Oriental influences. It causes slightly better damage than the sabre, and is just a bit slower. Druids favor scimitars."*
-- *Gwynne Arendahl, Fighter*

The sabre was initially developed in Central Asia, used by tribes that wandered the steppes. By the 9th century, the Slavs, who battled the Asians, had adopted the weapon. The term *sabre* is Slavic-Hungarian.

Sabres were used extensively in central and eastern Europe and by the Turks.

The Persian style of the sabre was discovered by Napoleon's troops. This version was known as the shamshir, which is commonly called the scimitar. This blade has a greater curve to it and is tapered to an elongated, sharp point.

### Short Sword

The short sword is the first type of sword to come into existence. In the simplest of terms, a short sword can be considered a dagger with a blade so long that it can no longer be called a dagger. The term *short sword* does not exist in sword classifications. However, it has come to be used to describe a double-edged blade about two feet in length. The sword tip is usually pointed, ideal for thrusting.

Short swords are fitted with a handle that can accommodate only one hand.

*"The short sword is a good weapon for archers, crossbowmen, and other warriors whose primary weapon is not a sword, but who see the necessity for having an edged weapon that causes respectable damage. The small size and lightness of the sword makes it an ideal weapon to carry without the warrior worrying about getting encumbered with*

*too much weight. Short swords are quick weapons, almost as fast as daggers, and causing more damage. A short sword with even a minor enchantment becomes an extremely valuable weapon.*

*"Halflings, gnomes, and dwarves are known to favor short swords, since the weapon's length is compatible with their stature.*

*"Elves are trained in use of the short sword. It is a common elven weapon for two reasons: the elves favor the swiftness and lightness of the weapon, and, since many elves are archers, the short sword becomes a good fallback weapon should the enemy close ranks into melee range.*

*"The short sword is often seen on the belts of the average man, or at least the average man who can afford one and knows how to use it! It is a good weapon to have in a city, provided one follows any local rules for securing the weapon. A short sword enables a man to discreetly wear a sword in the city, not calling as much attention to himself as he would if he wore a bastard sword or two-handed sword strapped to his back!"*
*-- Cendril, Elf Warrior-Mage*

The short sword is a descendant of the Roman gladius. In essence, it is a gladius made by improved metalworking techniques.

The Germans developed the *baselard* short sword, common in the 16th century, while the Italians had the *cinquedea*, a short sword with a blade that was broader at the base. Both versions of short sword were popular with civilians, not professional soldiers or knights.

### Two-Handed Sword

The two-handed sword is a derivative of the long sword. Weaponsmiths have always looked for ways to improve existing weapons. In an effort to improve the long sword, the blade was lengthened (having a longer reach than one's enemy is always preferable). Eventually, the handle had to be extended and two hands became necessary in order to properly swing the sword. The primary function of two-handed swords is cleaving mounted knights and breaking up pike formations.

The blade on the two-handed sword is a long, double-edged blade. The blade point may be sharp or rounded. The hilt has straight or slightly curved quillons. The pommel may be faceted, triangular, or pear shaped, though whatever the shape, it tends to get larger toward the top, as a counterbalancing measure.

As its name implies, this sword is a two-handed weapon and cannot be used in one hand, even if the wielder has high Strength. The weapon and its hilt are balanced for two-handed use. A fighter wielding a two-handed sword cannot use a shield.

An average two-handed sword measures five to six feet in length. It is a favored weapon among foot soldiers.

The astral race known as the Githyanki favor two-handed swords. These weapons tend to be decorated with gems, beads, and precious metals.

*"This is the sort of weapon that makes a statement to all who see the wielder, and the statement is* beware. *The two-handed sword is correctly associated with lots of damage. In fact, wearing such a sword slung across your back may make the impression that the wielder is not so much interested in saving his own neck (since he cannot use a shield*

*and is consequently easier to hit) as he is in relieving an enemy of his head.*

*"This sword is slow and heavy, but then again, it needs to have great mass in order to cause the damage that it does. Warriors who carry a two-handed sword usually don't carry any other large or medium-sized weapon. At best, a dagger is carried as a backup weapon of desperation.*

*"Despite the impressive features of the two-handed sword, a bastard sword is a better weapon. First of all, the bastard sword gives the warrior the choice of using it one- or two-handed, thus enabling him to use a shield.*

*"Furthermore, the bastard sword is faster. The two-hander does a bit more damage than the bastard sword wielded two-handed, but the difference is insignificant. Still, when it comes to hitting those extra large beasties such as dragons, a two-handed sword comes in mighty handy."*

*-- Finnegan Bospur, Paladin*

The two-handed sword was a weapon of 13th century Teutonic origin. It was extensively used by German and Italian foot soldiers from the mid-15th to the late 16th century. In later years, the two-handed sword became largely a ceremonial or processional weapon, usually heavily decorated.

### Trident

A trident is a long pole measuring four to eight feet with a metal, triple-bladed fork on one end. It is not used as a weapon by professional armies, but has seen some limited use from peasant guerrillas. The trident is normally a tool used for fishing, with some limited uses as an agricultural or hunting tool. It is a two-handed weapon.

Several aquatic races, such as locathah, mermen, sahuagin, and tritons, use tridents. They realize the versatility of the trident, since it is effective as both a fishing tool and a weapon.

### War Hammer

Mounted knights cannot effectively use long pole weapons while on horseback, and as a result, many weapons have been fitted with shorter shafts so they may be wielded with just one hand. Maces and flails are two previous examples of this--the war hammer is another.

The horseman's war hammer is the descendent of the Lucerne hammer. It is made entirely of steel, with rondels protecting and strengthening the grip. Rondels are small disks of metal, often shaped into decorative designs. The shaft is about 18 inches long.

Dwarves favor war hammers as a primary weapon. It is guessed that, given the dwarves' skill in using the hammer for non-combative purposes, they naturally developed the skill for using it as a weapon of war. The war hammer personifies the dwarven race: short, tough, and blunt.

Some war hammers are fitted with a spike at the top. This can be used as a thrusting weapon and causes 1d3 points of damage.

*"A war hammer is a good secondary melee weapon. It causes a little more damage*

*than a dagger and can be thrown just as far. The weapon is terrific against skeletons, better than edged weapons. In a pinch, the war hammer can also be a tool for things like hammering in spikes. A lot of clerics who can't use edged weapons have found the hammer an acceptable alternative."*
*-- Pandar Goldsmith, Dwarven Warrior*

### Whip

The whip or bull whip is a long, heavy, plaited lash usually made of leather or rawhide (untanned hide). The braided leather is thicker toward the handle, narrowing to a slender cord at the end. Some handles are wooden rods attached to the lash, while others are part of the same piece of rawhide. The whip's length varies from 15 to 25 feet. A whip is carried coiled and attached to the user's belt.

Common uses for the whip include leading herd animals and as a tool for punishment.

If a character wishes to knock a weapon out of an opponent's hand, this may be attempted with a whip using a Called Shot with intent to disarm. The attacker gets a -4 penalty on his attack roll. Further details are found in *The Complete Fighter's Handbook* in the Combat chapter.

A character proficient with the whip can entangle an opponent's limbs or weapon. Before rolling the attack die, the user declares whether or not he intends to entangle. If a hit is scored, some sort of entanglement occurs. If wielded by a non-proficient user, the chance to entangle is only 5%. If wielded by someone proficient, there is a 5% chance per level that entanglement occurs (to a maximum of 95%). Percentile dice are rolled to determine the exact effect. The entanglement chances are 50% (01-50 on 1d100) for one limb, 10% (51-60) for two limbs, 20% (61-80) for the weapon arm and the weapon, and 20% (81-00) for the head.

Hobgoblins are known to carry whips, but this is probably more for keeping prisoners and slaves in line than as a combat weapon. Still, a hobgoblin wielding a whip should be presumed to be skilled at it, and able to make the special attacks with it.

*"The whip is another example of something designed for one purpose that gets used for another, much like a pitchfork, pruning hook, or harpoon. As a weapon, the whip is unimpressive if you're talking about raw damage. The whip is great for Called Shots and such, but try using a whip on a troll, and all you'll get is one slightly stung, very mad troll.*

*"The same holds true for armored targets. A whip is designed for hitting bare skin. Any sort of armor, including leather and padded, will help protect the wearer from the whip's sting.*

*"No, if someone is looking for a weapon that causes damage and is a good parrying tool, the whip is not it. If you enjoy fancy maneuvers and bizarre trick shots, then the whip is the right thing. The whip is better suited for the city environment, where there are more humans, demi-humans, and other such races which fear the lash, as opposed to the wilderness, where myriad monsters abound who do not shrink from a little pain.*

*"A whip is a slow weapon. Someone using a whip must have at least 10 feet between himself and the enemy, since a whip will not work too well in close quarters.*

*"A whip is great for a fighter who wants to disarm an opponent, snare a victim, or even wrap the whip around a beam and use it to swing over a chasm."*

*-- Gorin Grimblade, Veteran Warrior*

## TABLE 6: Master Weapons Chart

| Item | Cost | Weight (lbs) | Size | Type | Speed Factor | Damage S-M | Damage L |
|---|---|---|---|---|---|---|---|
| Arquebus*** | 500 gp | 10 | M | P | 15 | 1d10 | 1d10 |

* This weapon inflicts double damage against charging creatures of L or greater size.
** This weapon can dismount a rider on a successful hit.
*** This weapon available only if allowed by the DM.
@ This weapon inflicts double damage when used from the back of a charging mount.
# This weapon inflicts double damage when firmly set to receive a charge.
‡ These items weigh little individually. Ten of these weigh one pound.

# Chapter 4

# Adventurer's Equipment

The following section includes information about the general equipment used by adventurers. In addition to armor and weapons, a character also needs equipment to fight the elements and rugged terrain that he will encounter on his journeys.

### Backpacks

Adventurers' backpacks come in a wide variety of shapes, sizes, and materials. The least expensive variety is a simple canvas sack equipped with shoulder straps. These may be purchased or constructed by the adventurer.

A backpack may also be a woven basket with a woven or wooden lid. This is carried on the back by means of shoulder straps. They are durable, but cumbersome due to their rigid form.

The preferred style of backpack is a leather bag equipped with multiple pockets and slung over the shoulders with padded shoulderstraps. Some types of leather may be waterproofed. Such a bag has a leather flap that is secured with one or more buckles. If the bag is loaded properly and secured correctly, the contents will not spill even if the

adventurer is suspended upside down.

Experienced tailors or leatherworkers may be commissioned to construct special backpacks. This may include special pockets to hold commonly used items or a special padded section of pockets to hold valuable breakables such as potions. Cost of such bags is generally double that of the deluxe backpack.

Cost: Sack 4 sp
Basket 5 sp
Deluxe Leather 2 gp

## Block & Tackle

A block and tackle is a set of ropes and pulleys that increases the ability to lift heavy objects. When a rope is passed through the multiple wheels of the blocks, it allows characters of any degree of strength to pull heavy objects (more than their normal strengths would allow).

A block and tackle has limited use and normally can be used only to lift objects vertically. In addition, the block and tackle must be able to be securely suspended above the object and have enough room for the adventurers to work.

A block and tackle may be considered to add a +4 bonus to any one character's Strength, for purposes of lifting, to a maximum of 19. If a number of persons work together, a bonus of +2 is added to the Strength score of each participant.

Block and tackles vary in weight depending on the load they can support. A block and tackle suitable for lifting objects of less than 200 pounds weighs 10 pounds; a set capable of lifting 1,000 pounds weighs 50 pounds; and a set suitable for lifting up to 5,000 pounds weighs 200 pounds.

A block and tackle comes equipped with a series of square wooden blocks with greased internal wheels, straps and harnesses to attach the blocks to a wall, tree limb, or other attachments, and 50 feet of rope appropriate to the set (depending on the weight of the block and tackle, the rope may be light, heavy, or chain).

Cost: 8 gp (light), 15 gp (Medium), 25 gp (Heavy)

## Crampons

Crampons are sold in pairs to be attached to hard boots by several leather straps. Crampons are spiked and gnarled bands of steel that increase the traction of smooth-soled boots. They can be used to scale rocky cliffs or cross icy plains. When worn, crampons increase Climbing ability by +15% or Mountaineering proficiency by +1. Crampons can also be used as a weapon. If a victim is prone, stomping on the victim while wearing a pair of crampons inflicts 1d2 points of damage per 100 pounds of weight of the character. If the victim is in melee, a successful attack roll must be made. Success causes 1 point of damage (only one foot can thrust). If an attack roll indicates a miss, the wearer must make a successful Dexterity check to avoid falling. Using crampons in this way ruins them in a 1d10 rounds of active use.

Cost: 4 gp

## Clawed Gloves and Shoes

Similar to crampons, claws give climbers and mountaineers greater ability to cling to handholds and ledges. Both types are held on with leather straps and add a +5% to Climbing and a +1 to Mountaineering.
Cost: Gloves 3 gp, Shoes 5 gp

### Flint and Steel

More than the name suggests, flint and steel may include a number of items. The equipment is carried in a small leather pouch, often waterproofed, and includes a large piece of flint, several coarse steel bars, tinder, and scraps of charred cloth. With such tools, a character can start a small smoldering flame in 1d6 rounds (longer in windy conditions or if the kindling is wet).

Starting a fire with flint and steel requires practice, but is not difficult. A wad of tinder (frayed cedar bark, thistledown, or dried grass) is placed in a dirt depression. A scrap of charred cloth (a one-inch square is sufficient) is placed on the tinder. The flint is struck against the steel, knocking sparks off the metal. The carbon content of the charred fabric is highly ignitable and lights quickly when touched by a spark. This, in turn, lights the tinder and the fire may gradually be fed with larger bits of wood.
Cost: 5 sp

### Grappling Hook

A grappling hook is used to secure a rope for climbing. A grappling hook is normally made of two, three, or as many as four cast iron bent bars welded or fused together. Deluxe grappling hooks are sometimes available with folding hooks; thus, they can be folded flat for easy carrying. Such a hook costs approximately twice the price of an ordinary hook.

The grappling hook can be thrown easily into a tree, roof ledge, or rocky crevice. In determining whether a grappling hook catches in the target object, a normal attack roll is made vs. AC 10. One round is required to throw the hook; another round is required to retrieve it.

In an emergency, the DM might allow clever adventurers to fashion a makeshift grappling hook from a rope and a wooden slat or metal rod. This may be used as a normal grappling hook.
Cost: 8 sp

### Healer's Bag

This bag may come in any shape or size, but is usually made of leather or heavy canvas. It is used primarily by characters who have the Healing Proficiency. A healer's bag allows such a character a +1 bonus to his chance to successfully heal a victim.

A healer's bag may be purchased new, complete with all supplies, or may be assembled by a healer. A complete bag includes 30 rolled bandages of varying size, 20 feet of rolled gauze, a tiny metal mixing bowl, a ceramic mortar and pestle, and ten jars of various herbs that can be crushed and mixed with water to form a paste to be applied to wounds. The kit also includes three curved needles (often made of gold to prevent rust) and a

spool of white or black silk thread (50 feet) to be used to stitch gaping wounds. Some kits may include several ceramic vials to be filled with clean water.
Cost: 6 gp

### Housebreaker Harness or Spider

This leather halter is essential for any thief. The harness, sometimes referred to as a spider, is an assortment of straps that are hooked around the thighs and over the shoulders. A broad leather strap is secured around the waist. Attached to the belts are small hooks, safety clips, and adjustable clamps. From these various clips, the thief can hang small tools or attach ropes or tether lines. Using this harness can prevent a thief from falling, secure him to a wall, or free his hands to use his picks.

One possible drawback to such a harness is the jangling noise it may make. If a thief spends two rounds securing all clips and removing any unused clips, he operates under his normal chance to move silently. If such precautions are not taken, the thief's chance to move silently is penalized 15%.
Cost: 8 gp

### Lantern

An adventurer's lantern is similar to a common lantern, but is usually made of more rugged material. Adventurer's lanterns rarely have a glass plume or tower. In general, lanterns come in three varieties, as described below.

**Beacon Lantern:** A beacon is more than a simple lantern. The light source weighs as much as 50 pounds and is normally found in a light house or mounted on a ship rather than with a group of adventurers. A beacon provides a focused beam of light reaching 240 feet, with an additional 120 feet of semi-darkness (a total of 360 feet of light). A beacon is fueled by lantern oil which lasts 2 hours per pint.
Cost: 150 gp

**Bullseye Lantern:** A bullseye lantern is an easily portable light source, similar in design to the beacon lantern. It has a metal housing with a panel of glass to keep wind away from the flame. The metal is usually polished on the inside to reflect light outward. A trap door or shutter can be set in place over the glass to block out the light. Even when the shutter is closed, some light still escapes from the lantern. Closing off every crack in the lantern's assembly would quickly extinguish the flame. Such lanterns are often equipped with adjustable vents to regulate airflow. Adventurers must remember that even if the shutter is closed, the lantern will shed enough light to give away their position in a dark dungeon.

This lantern projects light in a funnelled path. A bullseye lantern's light reaches 60 feet, with an additional 20 feet of semi-darkness. A bullseye lantern burns six hours per pint of oil.
Cost: 12 gp

**Hooded Lantern:** A hooded lantern projects light in 360 degrees and is capped overhead

to limit the radiation of heat. This allows it to be carried with a handle located at the top of the lantern.

Hooded lanterns generally have a metal reservoir for the oil and a metal cap. Between the two is a cylinder of thick glass that allows light to escape. Some models have metal spines between panes of glass or a metal assembly with disks of thick glass set in. The latter type is the most durable.

Few hooded lanterns can be covered to restrict light, but the DM may allow such lanterns to restrict light to a few feet.

This lantern projects light 30 feet in all directions and burns six hours per pint of oil supplied.

Cost: 7 gp

### Locks

Locks are available for a variety of purposes. These range from simple padlocks suitable for securing a small chest to elaborate inset door locks for houses and mansions. Simple locks are usually made of iron, steel, or bronze and have a simple mechanism that opens with one key. Elaborate locks may be made of gold, silver, or other precious metals. They may have a hidden keyhole or multiple keys.

Inset locks are usually commissioned to fit a specific door. Padlocks may be available for ready sale from a locksmith or sometimes a blacksmith. Single key locks are most common; double key locks are available from perhaps 20% of locksmiths.

Cost: Good - 100 gp, Poor - 20 gp

### Provisions

Dry provisions generally consist of a few basic foodstuffs. In general, rations include a hard biscuit called hardtack, made of ground wheat and water, and beef or buffalo jerky or dried fish. Dried fruits such as apples, apricots, cherries, and raisins may also be included in dry rations.

Many hard cheeses can survive several days or weeks on the trail. Cheese, however, is not part of standard rations and must be acquired in addition to the standard package.

Rations are not meant as a substitute for meals for any length of time. Foraged herbs, greens, berries, and vegetables are necessary to maintain good health. Without such supplements, various nutritional diseases may set in. The disease most likely to plague adventurers is scurvy. This can be avoided by the inclusion of fruits, especially citrus, and onions.

Both beef jerky and hardtack are relentlessly hard; the biscuits have very little taste. Considerable quantities of water (as much as double a normal ration of water) must be consumed when living on such rations to make such food digestible; lack of water can also result in dehydration.

If a party attempts to live on rations for more than three to four weeks at a time, the DM may rule that 1 point of Constitution is lost due to nutritional deficiency. This may be recovered by eating foods other than rations for one week.

Hardtack, jerky, and the like are generally carried by human adventurers. Other races have their own variations on rations. Elves in particular carry a mixture of nuts, corn,

seeds, dried fruit, and small candies. This is sometimes carried as a loose mix, and is sometimes carried in small patties held together by brown sugar, honey, molasses, or lard. Either variation requires the consumption of extra water as explained above.
Cost: 7-15 gp (per one-week supply)

### Rope

Rope is one of the most important items of equipment to an adventurer. A 50-foot length of rope will be used when climbing surfaces, pulling heavy loads, repelling down sheer cliffs, and traversing deep ravines. There are two basic types of ropes.

**Hemp Rope:** Hemp is a tough, fibrous plant used to make stout rope. A hemp rope is rugged and durable, but very bulky and heavy. The diameter of a hemp rope can range from 1/4-inch to three inches or more (found primarily on ships). A fifty-foot length of hemp rope weighs nearly 20 pounds and is capable of holding more than 500 pounds of weight.
Cost: 1 gp

**Silk Rope:** A silk rope is made of long threads of silk. The threads are braided together with other strands of silk to make thin cords, and these in turn are braided together into a pliable and stiff braid. A silk rope is less encumbering and easier to work with (its smooth texture is not as rough on the hands), but does not have the ability to hold as much weight as a hemp rope. Usually no more than 200 pounds can be held by the line at once. A silk rope weighs about eight pounds for a 50-foot length.
Cost: 10 gp

### Thieves' Picks and Tools

A thieves' toolkit comes in a flat, folding leather case or a rolled suede case and includes dozens of small tools. A set normally contains 20 wires, ranging in gauge from the thickness of string to that of a slender pencil. Each is approximately 12 to 18 inches long. These are used to poke into small holes or push triggers or buttons from a short distance. The toolkit also includes a set of 12 skeleton keys that fit many standard locks. Also in the set are several screwdrivers, a wire clipper, clamps, and pincers ranging in three sizes from minute, small, and average. Bundled with this package may be a small chisel, hacksaw, and hammer.

In some of the more deluxe toolkits, small vials of metal-eating acids may be found, along with magnifying glasses and slender pieces of high-tempered steel that are used as miniature crowbars. A thieves' toolkit will range in weight and size greatly, depending on the initial cost of the package.

Cost: Basic 30 gp
Deluxe 50 gp

### Waterskin/Wineskin

Water and wine skins come in a variety of shapes, sizes, and materials. The most common type is the kidney-shaped goatskin bag with a metal cap on the narrow end.

Other types may be encountered made of sheepskin, bearskin, or other hide. Barbaric races and humanoids (especially orcs, goblins, and hobgoblins) may adorn their waterskins with teeth, horns, or hooves of the animal that gave up its hide for the item.

A waterskin of normal size can hold two quarts of water. Players should remember that a normal human requires two quarts of water per day to maintain good health. More water will be required in hot conditions or in cases of high physical activity. Characters subsiding on dry rations also require more water. An active character may drink a gallon of water a day, and those trekking through deserts and open savannahs may find it necessary to drink as much as two gallons per day.
Cost: 8 sp

### Weaponblack

This oily substance comes in small vials or jars. Such vials could potentially be mistaken for potions (consumption causes 1d10 points of damage).

Weaponblack is used to smear the surfaces of weapons and metal armor to coat them with a pasty, matte black finish, rendering them nearly invisible in darkness. Thieves who coat their blades gain a +5% bonus to their chances to Hide in Shadows. After a typical melee, the weaponblack will be wiped from most of the blade from its heavy use. The weapon must be blackened again if desired. Armor will need its black coating touched up following a melee.

A jar of weaponblack contains enough material to coat one full set of plate armor, two sets of scale mail, or three sets of chain mail. The same size jar can coat a long sword 10-12 times.
Cost: 1 gp

# Chapter 5

# Clothing

### Introduction

Clothing for the fantasy adventurer varies drastically between character classes, among social classes, from one city or province to the next, and from campaign to campaign. The types of apparel presented here are the most commonly worn items of the medieval period.

Many variations exist in each article of clothing. Fabrics, fasteners, embellishments, and the quality of craftsmanship can all create wide variations in style, comfort, and durability. For example, a doublet might be made of silk, linen, or woolen cloth, depending upon the skill or location of the tailor. This must be taken into account when using the prices presented here. The price ranges are intended to be guidelines only. Prices should be adjusted to suit the occasion within the adventure, taking into account

the available materials and workmanship and the needs of the character.

## General Styles and Trends

### Peasant Clothing

The peasant or poor beginning adventurer generally has few resources and wears whatever is available and functional. Such individuals rarely bother with fashion. Keeping warm is usually the first priority. Therefore, peasants tend to wear as many layers as possible.

The most typical, basic, and fundamental peasant garment is the chemise, which is a loose shirt that covers the body from the neck to the thigh or mid-calf. A chemise may have long or short sleeves or may be sleeveless.

The next layers of clothing add two garments to the basic costume, a cote and surcote. These two articles of clothing are worn over the chemise, with the surcote over the cote. These items may vary in the extreme, ranging from a style resembling a knee-length tunic to variations on a simple or hooded cloak.

### Academical Dress

Early universities are often associated with the church, so many of the educated people, especially teachers, are of a Holy Order. Therefore, priestly and academic dress are practically identical.

The earliest medieval Ecclesiastical dress is the same as the everyday clothing of the average person. This consists of many loose, long tunics (down to the ankles), a hood with shoulder cape, hose, and shoes. A round hat with a tab or nub on the top may also be worn.

While secular styles change, the dress of priests and academics tends to remain the same. This stagnant style has the effect of distinguishing the academic community from other members of the equivalent class level. Many priests wear similar types of clothing and can therefore be immediately identified as either an educated person or a member of a priestly society.

### Sumptuary Laws

The Sumptuary Laws, historically passed from 1300 to 1700 A.D., were designed to restrict the import of foreign goods, and, more importantly, to maintain a social class structure by permitting only members of a certain class level and position to wear specific garments, fabrics and styles. For example, at one time, the most important indication of one's status within the upper class was the type of fur that lined the edges of garments. Furs permitted only to the aristocracy included marten, vair, and ermine. In descending social importance order, other furs were otter, fox, beaver, lamb, goat, and wolf. Any commoner wearing restricted materials was subject to harsh punishment.

Another example of a Sumptuary Law is the reservation of the color purple for persons of royalty. Specific purple dyes are made available only to the tailors of the aristocracy.

At the DM's option, sumptuary laws might be created for certain cities, provinces, or countries. Therefore, specific materials may be hard for the adventurer to find for sale in the open market. Such laws will undoubtedly add flavor and color to role-playing and may provide the basis for unusual adventures.

Adventurers traveling from one kingdom to another could easily and unknowingly offend the local aristocracy by wearing a forbidden color or material. Common punishments include a specified term of hard labor, a whipping, or imprisonment. The severity of the punishment varies widely, depending on the kingdom and other factors.

## Materials Used in Medieval Clothing

### Brocaded Material
A rich fabric, often silk, woven with raised designs, usually with gold or silver thread. Highly sought by the upper classes.

### Brocatelle
An imitation of brocaded material executed with a combination of colored yarns. This material is used by members of the lower class to emulate genuine brocaded material.

### Camlet, camelot
This refers to a fabric that is rumored to be composed, in part, from an exotic animal's coat, namely camel hair. It actually refers to an elegant fabric that is a mixture of silk or velvet and some camel hair. Used only by the upper classes.

### Fur
Fur is the dressed pelt of various animals, used in the making of garments. It is used as the predominant material of some garments, while used only as trimming and decoration in others.

Many outer garments that are designed specifically for warmth are made of fur, and may line the inside or the outside of such a garment. Peasant cloaks and other fur-lined garments are usually composed of sheepskin, wolfskin, or other smaller mammals. Other furs used primarily by the lower classes include rabbit and common squirrel. The poorer people tend to stitch pieces of smaller animal furs together to provide protection from the cold.

Some furs are restricted and are allowed to be worn only by the upper class. Furs reserved for the aristocracy included sable, ermine, and vair. Especially prized by royalty is the darker skinned sable and black-tipped white ermine. A vair is a highly sought species of squirrel.

An adventurer could make a good deal of money selling furs if a good furrier and a willing buyer of the furs were discovered. Such entrepreneurs should remember that some furs are not only restricted for wearing, but merely owning the animal's hide may be illegal.

### Leather
Leather may be created from the hide or skin of any animal, bird, or reptile. The skin is tanned or treated to preserve it. Leather is used in the creation of many objects of clothing and armor. The major advantage of leather is that it provides adequate protection while remaining flexible and supple, for quiet and complex maneuvering.

## Articles of Clothing

### Apron
Aprons are worn for a variety of reasons. The most common uses are to protect clothing and the wearer of the apron. This can range from a simple cloth apron worn while preparing a meal to the wearing of a leather apron by a blacksmith. Such aprons are made of thick leather and are intended to protect the wearer from flying sparks and chips of metal.
Cost: Cloth 5-8 sp, Leather 8-12 gp

### Bag, Pouch, Almoner, Gipser
These pouches are made from a variety of fabrics including leather, silk, wool, or linen and come in a variety of sizes. A special type of pouch is called the almoner. It is worn by members of the upper class and is used especially for holding money to be given as alms, hence the name.

All such items are usually attached at the belt or girdle. The pouch might be in plain sight, or, often in populated areas, it might be belted to the undertunic so the wandering eyes of thieves wouldn't see it.
Cost: 4-8 cp

### Baladrana
This is a full, wide cloak with a hood used by travelers to protect against the rain.
Cost: 6-9 sp

### Baldric, Bandoleer
Usually made of leather (or silk for those who can afford it), this article of clothing is slung around the body from one shoulder to the opposite hip and is used to carry a dagger, pouch, bugle, or sword. Some baldrics are decorated with bells or tassels along the bottom edge. Baldrics are used both for decoration by the lords and ladies of the aristocracy, and for practical purposes by adventurers and government officials. Women of the upper class may wear silk baldrics with gold bells for ornamentation.

Decorative baldrics always have tassels, bells, or other adornments and are made of fashionable materials such as silk or brocade. Functional baldrics, in contrast, are composed only of leather and a buckle, for ease of use and practicality.
Cost: Ornamental 25-50 gp, Leather 7-10 gp

### Band
Bands are variations of collars that include the ruff that is favored by royalty. Some bands simply fold over the outer shirt and are called a falling band, while others are designed to stand up, and are appropriately called a standing band. The ruff is reserved for formal occasions, while a falling band might be used for daily wear by an official. Most peasants and adventurers believe the wearing of these bands to be snobbish and a blatant attempt to emulate the aristocracy.
Cost: 1-4 sp

### Boots
Boots are an important part of the wardrobe for traveling and outdoor work and

adventuring. They are vital for protection against cold and wet conditions as well as hot and rocky terrains. Many peasants need to wear boots indoors as well, as their living conditions preclude much comfort or heat.

Boots may be found in many stages of design. One of the most popular is the pointed toe variety. The extended toe is especially popular among performers and jugglers, although thieves would do well to avoid them. The pointed toe tends to get in the way while climbing and running.

Another common and functional boot is the leather, mid-calf boot with roll-tops, laced up the side. A variation on the mid-calfboot is the knee-high boots, worn by peasants and called cockers.

Elegant designs reign at court. Such boots might be made of soft leather and even silk, embroidered or inlaid with gems. These are more for show than any practical purpose. See Shoes for more information about footwear.
Cost: 2-8 gp

### Boot Hose

These hose are cloth stockings worn inside the boot to protect the silk stocking underneath. They are not visible outside the boot and are generally used only by the upper class.
Cost: 1-5 cp

### Braies

Braies are shapeless trousers held up by a drawstring at the waist, worn by men. They are usually kneelength or longer, with the bottoms either being tucked into stockings or bound with leg wrappings. Braies form the basic daily legwear for the commoner.
Cost: 6-10 sp

### Breeches

This outergarment is worn by males. Breeches cover the hips and legs down to the knees. This garment has many different styles, from full, puffed designs made from expensive material to tights made with common cloth, similar to the braie.
Cost: 2-5 gp

### Buckle

A seemingly inconspicuous piece of a person's clothing, buckles actually hold great significance. The buckle is one of the items that denotes wealth and status within society. Materials used to create buckles include silver, gold, iron, steel, copper, and even ceramic. Along with the basic form of the buckle, these items might be engraved, inset with jewels, or otherwise adorned.
Cost: Common 1-4 gp, Ornamental 10-20 gp

### Cannons

Cannons are tube-like breeches that fit snugly over a man's thighs, down to his knees. This article of clothing is usually embroidered in colored silk, gold, or silver thread. Cannons are worn chiefly by the upper classes.

Cost: 8-12 gp

### Caps
Many types of caps exist, but the most useful type for adventurers is a fur cap necessary in cold climates. High quality versions of this cap may have ear-coverings attached. Generally, caps fit closely on the head and are usually brimless.
Cost: 1-4 sp

### Cassock
A cassock is a long coat or cloak worn outdoors. It is used chiefly by soldiers and hunters. It is worn unbelted, and buttons down the front. This garment is used, especially by hunters, for extra warmth while out in the cold. The soldier's version also serves as an identifying uniform.
Cost: 6-10 gp

### Caul
These are netted caps worn by women, made of silk and wool with various designs. For practicality, a caul is used by women to keep long hair out of the way. For decoration, a more elaborate caul is used during formal functions and gatherings.
Cost: 3-7 gp

### Chainse, Chemise
This is a white linen undertunic worn under the bilaud, the overtunic. The sleeves of the chainse are fitted at the wrists and are visible beneath the overtunic. The neckline is a simple roundcut with a short slit. This is the most common garment for the peasant. Men of higher classes wear other outer coverings over the chemise.
Cost: 1-6 gp

### Cloak, Mantle
The cloak can be made in every possible shape with just about every type of fabric. The most common forms are a circular piece of fabric with a hole in the center for the head, and fabric draped from neck, connected by a chain, brooch, cord, or pins.

A common double use of the cloak is as a blanket in the wilderness. Outdoor cloaks are large and made of durable, thick fabric to keep the adventurer warm during those cold nights under the stars.
Cost: 2-8 sp

### Coif
Coifs are white linen caps worn by both sexes. They fit closely on the head and are tied under the chin. The coif is used as a sleeping cap and as an underlayer beneath another hat.
Cost: 1-6 gp

### Doublet
This is a shirt, usually fastened up the front with buttons, and sometimes having a short, skirt-like section or peplum. There are many style variations of doublets.

Cost: 1-6 sp

### Drawers
Drawers are an undergarment for the body and legs, usually made of white linen. Drawers are worn under other trousers to provide additional warmth.
Cost: 4-8 sp

### Ferronniere
This item of jewelry is a thin chain worn around the forehead with a small jewel set in the center. The ferroniere is worn exclusively by ladies of the upper class. The wearing of a ferronniere is considered to be an elegant touch within the aristocracy. An adventurer hoping to impress someone of high station might benefit from wearing a tasteful ferronniere.
Cost: 50-100 gp

### Fitchet
Not an item of clothing but a feature on a garment, a fitchet is a vertical opening at the hip of a gown or surcoat, used to reach the belt and pouch concealed within. This is convenient for hiding valuables in a pouch under many layer of outer garments, making it difficult for a thief to filch the bag.

### Gamash
These long leggings are worn outside other leg garments to protect the wearer from cold and wet weather. They are made of cloth and are buttoned down the outside of the leg.
Cost: 3-8 sp

### Garnache
This outer garment covers the wearer from the neck down to the ankles. It has wide, elbow-length sleeves cut as part of the garment, like a cape. This allows the wearer to hide bulky items, such as weapons or pouches, under the garnache without attracting attention.

Thieves and fighters especially favor this garment for its excellent ability to conceal objects and allow the wearer full, unhindered movement.
Cost: 5-10 sp

### Girdle
The girdle, in its usage as it applies to the medieval period, is a belt for the hips or waist. It is worn by both men and women. The girdle is made of metal, leather, cord, or fabric and often has one or two ends hanging loosely. Objects may be hung from the girdle to add embellishment to the overall outfit.
Cost: 1-6 gp

### Gloves
Gloves come in many different types and styles. The most common type is a leather glove worn to protect the wearer from cold weather and from injury. A heavier leather gauntleted glove is used for falconry and hawking, to provide a perch for the bird and to

protect the falconer.

Another functional glove is one designed for archery. Designed to be worn with a normal pair of gloves, the archery glove has two or three reinforced leather fingerstalls which are buttoned across the wrist to provide protection when firing arrows.

Decorative gloves are also worn by men of the noble class. These gloves are made of soft leather, suede, or kid and are adorned with embroidery, jewels, and fringes.

In general, gloves are worn mainly by the upper class. Peasants make do with either cloth mittens or by wrapping their hands in the extra long sleeves of their shirts.

Many customs have been built around gloves. Knights wear them as favors in their helmets during tournaments. They may be used as pledges and can be tossed down as a challenge.

Cost: Leather 1-3 gp, Archer 3-8 gp, Ornate 10-20 gp

### Gorget

The gorget is a collarlike article of clothing for the neck, full and broad in front. This originally referred to a piece of armor that protected the neck, but it also applies to the article of clothing men and women of the upper class wear around the neck.

Cost: 1-3 gp

### Hoods

Hoods are used to keep the head dry and warm in inclement weather. Hoods were originally a simple head covering, but evolved into more elaborate designs such as a hood with a small cape attached. See liripipe for a specific version of a popular hood.

Cost: 1-6 sp

### Hose

Hose are a common covering for the legs. The original design was as roughly-fitting trousers; they evolved into a tighter-fitting garment. The material used to make hose can range from homespun cloth for peasants to velvet and silk for the wealthy. This article of clothing is worn instead of drawers. The main difference is that hose have a tighter fit than drawers. Both garments serve the same function, keeping the wearer's legs warm.

Cost: 1-3 sp

### Liripipe

This is a hood with a long peak that can reach a length of 2 to 6 feet. The length of the peak varies with the fashion of the day. Jokers, jugglers and other performers especially favor the liripipe.

Cost: 5-10 sp

### Pantaloons

These are various forms of loose coverings for the legs, reaching from the waist to the calves. Pantaloons are tight fitting at the waist and calves, emphasizing the owner's stockings and footwear. They are worn primarily by the upper class while indoors, such as in court.

Cost: 1-6 sp

### Ruff
This tight, ruffled collar is worn encircling the entire neck. The ruff is highly admired within the upper class and is used almost exclusively by aristocracy. Although held in disdain by the lower class and most adventurers, the ruff is an excellent piece of clothing for a thief to own, especially one who enjoys disguises. Wearing an authentic ruff in conjunction with other appropriate upper class clothing will almost always guarantee entrance to aristocratic functions with little or no fuss over invitations.
Cost: 8-12 gp

### Shirt
Any undergarment covering the top half of the body may be considered a shirt. This is a basic piece of clothing worn next to the skin.
Cost: 1-3 sp

### Shoes
Peasants and poor adventurers often wear a simple piece of rawhide as footwear, often with the fur still on it. A leather thong is threaded through the top of the piece of leather and tied at the top in order to hold the leather in place.

Wealthier people wear a basic leather shoe, constructed with a pointed toe. The length of the toe varies according to the individual shoemaker. Some shoe points are so long that they must be chained up and fastened at the knee. This type of shoe would be a hindrance to an adventurer, but might be worn in a city.
Cost: Rawhide 1-3 sp, Leather shoe 8-12 sp

### Slop
This term describes many loose fitting articles of clothing such as cloaks, mantles, gowns, or baggy breeches. The term *slop* indicates a particularly cheap, ready-made garment; therefore the low cost.
Cost: 5-8 cp

### Surcoat, Surcote
A surcote is a loose-fitting garment worn over a cote or tunic. There are many styles of surcotes, some with sleeves, hoods, capes, or any combination thereof. The surcoat is used primarily as another layer for warmth and is worn by the middle class.
Cost: 5-10 sp

### Tabard
A tabard is a loose-fitting, rectangular piece of cloth that hangs back and front over the tunic. It was originally used to cover armor from the sun's rays, keeping the wearer cooler, but has developed into clothing adopted by non-armored men and women. A person's symbol, colors, coat of arms, or other identifying marks are commonly placed on this garment.
Cost: 4-8 sp

### Tunic

This body garment is slipped over the head and may be styled with or without sleeves. It may be girded at the waist. This garment can be knee- or ankle-length and is sometimes called a cote.

Cost: 5-10 sp

# Dungeon Master® Option: High-Level Campaigns

by Skip Williams

## Foreword

Utter the words “high-level character” to just about any group of AD&D® game fans and you are certain to get a strong reaction. Veteran players often shake their heads in disgust, but there are a few whose eyes gleam with fond memories. Referees often look pained or confused. Everyone, it seems, has an opinion about high-level play.

If you are a fan of high-level campaigns, there is very little I can say about this book. You have probably already thumbed through the pages, lingering over the choicest bits. Perhaps you’ve studied the rules and tables of legendary monsters in Chapter 2 or considered the possibilities that the new character powers from Chapter 7 can bring to your game. Enjoy!

If your opinion of high-level play is lukewarm or worse, you might be wondering why I wrote this book at all. I’ll share a secret with you. Before I started this book, I wasn’t any too fond of high-level play either. My mind began to change, however, as I began planning the book and talking to people about what it should contain. Although high-level play can be difficult, I learned that there have been plenty of successful high-level campaigns over the years.

Along the way, I began thinking about an old character I once played: Ellis Strongheart. Ellis began life as a 1st-level ranger full of spunk, and he wound up as a the lord of a huge castle. Ellis had a list of powerful enemies as long as your arm and an equally long list of allies, including a time-traveling dragon and a host of servants and retainers. The campaign that gave birth to Ellis is long gone, but Ellis is now firmly ensconced in my own campaign as an NPC. The players in my game are strangely attracted to Ellis (lesser mortals call him Lord Strongheart). Ellis is very much a viable character, with a long history and an enigmatic reputation. To me, Ellis is proof that high-level play can be worthwhile, even if it does get rather wild.

This book’s first chapter, The Seven Maxims, discusses what DMs have to do to make sure their campaigns stand up to the rigors of high-level play. All campaigns require work, but high-level games require a special touch, and it is the lack of that knowledge that causes many high-level games to go astray. If you have tried a high-level game and failed, the material in the first two chapters should help you avoid critical mistakes. The rest of the book provides ideas for keeping a game—and its player characters—fresh. There are rules and suggestions for building adventures and whole new worlds, conducting magical duels, and making magical items. Two chapters are worth special note: Chapter 6, True Dweomers, and Chapter 7, High-Level Characters. Both of these chapters introduce new powers into the game.

True dweomers are essentially 10th-level spells. I included them not just to satisfy power gamers, but to allow high-level spellcasters to create world-shaking magic. When the rules are used properly, the casting of a single true dweomer can keep a group of PCs busy for a long time. Chapter 7 includes some hard-and-fast rules about what characters

can do. In it there is a revised rule for automatic failure of saving throws—something that places a little fear back into high-level character's lives—and a host of new powers. Don't be put off by these new abilities; their purpose is twofold: First, they give players something to look forward to. No longer do high-level characters simply accumulate more hit points once they reach 9th or 10th level. Second, they put truly epic abilities into the hands of player characters. These new powers are not going to allow PCs to lay waste to the countryside, but using one indisputably marks a character as a legendary figure. That's what high-level play is all about.

# Chapter 1:

# The Seven Maxims

High-level AD&D® campaigns pose some special problems for the referee. Encounters are more difficult to construct because the DM cannot simply throw monsters at characters whose prowess are equal to those of Hercules, Merlin, and other heroes of myth and legend. Keeping a high-level campaign on-track and exciting can be so difficult that many players and DMs prefer to retire their high-level characters and start over at 1st level rather than continue the campaign.

Retiring powerful characters and starting over is not an unreasonable course of action. Indeed, Chapter Three of the *Dungeon Master® Guide* explains that retirement is inevitable once characters exceed level 20. If you are reading this, however, you've decided to forge ahead and experience what truly powerful AD&D characters can do.

The book you hold in your hands contains rules and campaign suggestions for characters of up to 30th level. For our purposes, any character of level 10 or more is high-level.

It is possible to have a successful high-level campaign, but only if the participants are willing to put forth extra effort to build a game that works. This chapter presents seven basic principles that anyone who runs a high-level campaign should understand:

Don't depend on the dice.
Use adversaries intelligently and inventively.
Control magic.
Be aware of demographics.
Think on an epic scale.
Plan ahead.
Share responsibility with your players.

Following these principles does not guarantee a great game, but all successful high-level AD&D campaigns use them to one degree or another. If you keep these maxims firmly in mind, your campaign can continue to provide you and your players with many hours of enjoyment even after the player characters have achieved fantastic levels of power.

## 1. Don't Depend on the Dice

Every AD&D campaign requires a certain level of tension—a great adventure includes something glorious to gain and something equally important to be lost. It's a good idea to play a light adventure just for laughs from time to time, but the game is at its best when the PCs find themselves poised between grand success and dismal failure.

Early in a campaign, just rolling the dice provides enough uncertainty to keep everyone on the edge of their seats. Fighters hack at their opponents, hoping their attacks hit. Even against lowly goblins, a 1st-level fighter misses with a melee attack about half the time (more than that if the character doesn't enjoy combat bonuses from Strength and weapon specialization). All players wince inwardly—sometimes visibly—when the DM calls for a saving throw; a simple poison has an excellent chance to slay or incapacitate a 1st-level character. Likewise, when each player character has only a handful of hit points, even the initiative roll is crucial because a single blow from a sword often spells death for

a novice adventurer.

In each of the preceding examples, the chance of failure is significant for the PC, and the consequences of not succeeding are grave. As the campaign matures and the PCs become more powerful, however, players learn not to dread the dice so much. Fighters of 4th to 6th level can expect their attacks to hit more often than they miss, and even priests and rogues can expect to hold their own in a short fight. All characters at this level have more staying power than 1st-level characters, and they can afford to take a little abuse when they face dangerous opponents. The DM still can make the players fear for their characters' lives, however, by confronting them with increasingly powerful enemies.

Increasing the foes' strength is a good thing for low- to mid-level campaigns for two reasons. First, it helps maintain the level of tension by making things more difficult for the heroes. Mid-level characters can expect to hit goblins more often than they miss, but they have a harder time dealing with wyverns. Second, it helps maintain the level of reward. The tougher the foe, the more experience you can award. This is important for maintaining a steady rate of advancement because a PC advancing from 1st to 9th level must earn an increasing amount of experience between each level, as even a cursory glance at Figure 1 reveals. Figure 2 shows the increasing rewards for more powerful foes.

The cycle of escalating power begins to break down as the PCs exceed level 9. First, the PCs' THAC0 and saving throw numbers become so low that success is virtually assured, especially when the effects of high ability scores and magical items are factored in. Likewise, PC Armor Classes tend to become so good (again due to magical items and high ability scores) that many monsters can't damage the PCs in combat. Second, the experience required to gain the next level no longer increases geometrically once the PCs reach 9th level—there is a flat increase from level to level instead. Figures 3 and 4 help illustrate the problem.

Combat, once the most dramatic activity in the game, can become a dull routine of hack, inflict damage, and hack again—especially if the DM allows the players to think their characters are invincible. Of course, you can restore the level of tension by presenting the PCs with increasingly powerful foes. However, simply bringing the antagonists to the PCs' level of power is not a good idea—it cheapens the heroes' accomplishments. Tension in the game is a positive element, but many players despair when they realize that their characters are always in some kind of peril. Players often feel their characters are pushing their luck with each new adventure and opt to retire their favorite characters before they are killed. Stiffening the opposition also brings the PCs more experience, which accelerates level advancement, and in turn makes the whole problem even worse.

The key to maintaining tension in the game without inflating the level of power is to create situations where the players must rely on their own memories and reasoning skills. Rather than confronting high-level player characters with huge numbers of powerful foes, try smaller numbers of weaker foes who attack according to a plan. Also, not every encounter has to be a fight. Give your players problems that require them to think rather than roll dice—complex political struggles, mysteries, puzzles, and the like challenge the players directly. To keep the game centered on the characters, present the players with situations that make them search for new ways to use their characters' abilities. See Chapter Two for more suggestions.

Do not try to eliminate dice rolling altogether, however. Everyone likes to trash

something once in awhile, and players expect to be able to do something with their high-level characters' newfound powers. The key is to not allow the PCs to become so dominant that every situation descends into a die-rolling extravaganza where the only fun involved is in determining the number of casualties the party can create in one round.

2. Intelligent Adversaries You can challenge your campaign's high-level player characters without making every monster and villain in your world a killing machine. In a well-run game, what you decide to do with your bad guys is far more important than their raw power. Try to think beyond the simple all-out assault by a mass of expendable foes. High-level characters have little to fear from such attacks, and their players generally expect more originality and ingenuity from their DM. This section contains a few tips for getting the most out of any adversary your PCs face.

## Consider the Opponent's Intelligence

Make sure the opponent acts as smart as it should. Any foe worthy enough to challenge high-level PCs didn't get that way through foolish actions. This does not mean that only foes with genius-level intelligence are suitable in high-level play. Even opponents with low intelligence can learn from experience and are not necessarily foolish. A man-eating tiger, for example, has an Intelligence rating of 2–4, but its experience in stalking people can make it a canny and unpredictable opponent for any group. An opponent doesn't have to be brilliant to challenge high-level characters: It has to avoid obvious mistakes.

Many DMs tend to think of very weak creatures, such as goblins and kobolds, as prone to foolish and unintelligent behavior; this is an error. Kobolds and some goblins have average Intelligence, which make them as smart as a typical human. Humans are pretty inventive creatures. They have survived an ice age and have produced and maintained our incredibly complex and technical culture. Creatures with average intelligence might blunder when making split-second decisions, but they learn from their mistakes and prepare for the worst. For a more complete discussion of how intelligence affects a creature's actions in combat, see Chapter 10 of the *Player's Option™ Combat & Tactics* book.

## Review the Creature's Weaknesses

No matter how intelligent the creature is, any opponent of high-level PCs should be as prepared as possible to face the party. Unintelligent creatures undoubtedly have another force that tells them what to do, and this behind-the-scenes antagonist makes sure that any discernible weaknesses have been minimized. Against high-level PCs, few allies are expendable—the villain must make sure that each ally has a specific purpose.

As DM, it is your responsibility to make sure that the PCs' enemy has adequately prepared for any confrontation. Obvious weaknesses, such as a rakshasa's susceptibility to a blessed crossbow bolt, should should be shielded from the PCs. Perhaps the rakshasa has read a *scroll of protection from magic*, or is protected by a *minor globe of invulnerability* when the PCs attack. Some additional examples follow:

Fire and acid are troll's worst enemies because they prevent the troll from regenerating (see the troll entry in the *Monstrous Manual™*). A troll's regeneration ability also has a

delay; the creature regains no hit points until three rounds after it suffers its first wound.

Trolls that have each consumed a *potion of fire resistance* and covered themselves with *oil of acid resistance* might prove quite a challenge for PCs who are accustomed to chopping up trolls and dousing them with flaming oil.

A cavern filled with pockets of explosive gases would make any fire-based spell hazardous for the PCs.

Player characters might hesitate to attack trolls with fire after a trap douses them with flammable oil.

A troll that spends a few rounds hurling missiles at a party before closing to melee might just suffer an arrow hit that starts its regeneration before it begins suffering really heavy damage from the party's warriors.

Vampires suffer from diverse vulnerabilities that players know all too well: sunlight, garlic, mirrors, holy symbols, turning by priests and paladins, and running water.

Living deep underground and keeping a few items enchanted with *continual darkness* spells effectively eliminates the threat of sunlight.

Smart vampires keep charmed minions on hand to break mirrors, destroy garlic, and snatch away holy symbols.

A well-placed *wall of ice*, *Otiluke's freezing sphere*, or *lower water* spell makes immersing a vampire in running water difficult if not impossible.

Remember that it is running water that harms vampires. Stagnant water doesn't hurt them at all, and a clever vampire might use standing water as a hiding place to ambush overconfident PCs.

A vampire employing a disguise might not be recognized as an undead creature until after it attacks, providing hefty surprise penalties to the PCs. A *nondetection* spell would prevent its discovery by *detect undead* or similar spells.

A vampire living in a particularly unhallowed place might be resistant to turning attempts.

Giant slugs are wildly inaccurate when they first use their acidic spit in an encounter, and they have a terrible Armor Class.

A giant slug might automatically hit with its initial acid attack if the party must approach it through a narrow opening or constricted passage.

The slug's poor Armor Class is irrelevant if the party cannot attack it. Perhaps it lies on the far side of a crevasse or behind a portcullis or other barrier.

In many cases, you also have to find ways to explain why a creature enjoys the advantages it has for the situation you have constructed. Remember that the PCs might want to incorporate some of your ideas into a defensive aid for their own keeps and castles. Keeping the PCs' alignments in mind, your rulings—for or against—should be consistent.

Perhaps a member of the troll's group is a *polymorphed* or *reincarnated* wizard who is making the best of a bad situation by brewing potions for her companions.

The explosive gases are a naturally occurring event in that region. An alchemist could

reproduce the explosive for the PCs, but it would be expensive.

Vampires have the intelligence and longevity to dream up all manner of special defenses and contingency plans. Did someone say *contingency*?

Perhaps the giant slug is another creature's pet or guardian. The portcullis, which the slug might easily batter down, is coated with a thick layer of salt that discourages the monster from pushing against it except in one place that is just large enough to accommodate its head.

## Review the Creature's Strengths

Pay equal attention to the creature's strong points and find ways to maximize them. Intelligently played monsters can wreak havoc on even the most well-prepared group of high-level heroes. Start by identifying their strengths and then formulate plans to take advantage of them. For example:

Trolls boast regeneration, multiple attacks, and respectable Strength scores.

A group of trolls might attack in waves so that damaged individuals can retreat and regenerate lost hit points while the fresh troops press the fight.

A troll attacks three times each round; a *haste* spell increases this to six.

A troll's great strength allows it to employ a variety of indirect attacks, such as rolling boulders onto opponents from atop a cliff.

Trolls armed with magical weapons, such as two-handed swords, could successfully attack characters with low Armor Classes and do considerable damage in the process (their damage bonus when using weapons is +8).

Everybody knows that vampires drain life energy, but they have a vast repertoire of powers including high mobility, various spell and weapon immunities, high Strength scores, formidable charm ability, and can conceal themselves by posing as normal humans or demihumans.

A vampire is at its best when it can attack a lone, high-level PC. One-on-one confrontations give the vampire a chance to use its charm gaze and attempt melee without fear of an overwhelming spell assault or clerical turning attempt.

A vampire can only be hit by magical weapons, so protecting itself with spells like *invulnerability to magical weapons* or *antimagic shell* allow the vampire to wear down high-level warriors without fear of the PCs' blades slicing through it.

In a high-level campaign, mobility is the vampire's greatest power. (*Scarabs of protection* and spells such as *negative plane protection* and *restoration* make level-draining undead considerably less formidable than they are in campaigns where the PCs have fewer resources.)

*Gaseous form* allows the vampire to move through barriers that are impassable to the PCs. A few pinholes in a wall, floor, or ceiling that has been reinforced with metal bars (to defeat *passwall* spells) allows a vampire to come and go as it pleases.

Time is also a vampire's ally, especially if it is deep underground where it doesn't have to worry about natural sunlight. If forced to retreat, a vampire can spend some time

regenerating, then return—at full hit points—to harry its enemies from a new angle.

The vampire might pose as a resident from a nearby village who is here to slay the vampire. Players are not likely to recognize a vampire for what it is if the monster is running round with a wooden stake and mallet in hand.

Giant slugs have endless supplies of acidic spittle, immunity to blunt weapons, and boneless bodies that can fit through small openings.

Repeated acid attacks can wear down even the strongest characters, and the acid has a chance (however small) to destroy magical items and make high-level PCs a little less formidable.

*Stoneskin* can protect the slug from weapon attacks for a brief time, giving it more time to wear down the PCs. A *spell engine* could be setup nearby to absorb spells, or a *chain contingency* could be in place on the slug to activate spells like *fire shield* (cold version), *lightning bolt*, and other unexpected surprises.

A giant slug's ability to squeeze into small places allows it to lie in wait for the PCs in a place that appears empty at first glance.

Minimizing weaknesses and maximizing strengths allows you to challenge the PCs and maintain tension without power inflation; foes become slightly harder to kill and a little more challenging in a fight.

There are other advantages as well. Players with high-level characters often are veteran players who are very familiar with most AD&D game monsters. Their encyclopedic knowledge allows them to strike immediately at a monster's weak point, easily defeating the creature. If you take pains to minimize monsters' weaknesses and exploit their strengths, you encourage your players to think creatively by providing a new challenge (thinking of a way to exploit the shielded weakness or avoid the amplified strength). You also restore some freshness to your campaign, because the players quickly learn that all monsters are not exactly alike. Since the players are no longer certain how much danger they face, they learn to respect the offensive capabilities of any creature they meet, which encourages them to consider alternatives to fighting.

## Handling Defeat

The easiest way to decide what a creature does in the face of impending defeat is to check its morale rating and roll the dice to see if it runs away. Don't handle every foe this way. Player characters don't have to check morale, and neither should important nonplayer characters, monsters, or other foes. Rank-and-file troops, however, are part of an encounter's setting and should follow the morale rules. Very few leaders are so charismatic that *all* their followers march to their deaths *all* of the time. Likewise, the PCs' own allies and henchmen might quit the field at times when the heroes find it inconvenient for them to retreat.

In many campaigns, the DM follows the forgoing advice at least in part; monsters and villains usually slug it out with the PCs until the bitter end. Fighting to the death isn't such a bad idea, because most PCs can obliterate fleeing opponents before they have a chance to get away. If death is inevitable, one might as well do as much damage to the enemy as possible before dying.

Defeat need not always mean death or retreat, even in a pitched battle. Real battles, for example, have much lower kill rates than fantasy battles. Picket's infamous charge during the Battle of Gettysburg killed 50% of the attackers; that means half the people who participated in the attack survived. There are basically four options open to an opponent who is staring defeat in the face:

**Surrender:** The creature simply gives up—or appears to give up.

**Flee:** A retreat from battle need not be a mindless rout. The opponent might choose to withdraw and fight again under better circumstances. In any case, leaving a battle and surviving the attempt is a fine art (see below).

**Reversal:** If the opponent's first plan of action isn't leading to victory, it might try another approach. Since defeat is looming ever-closer, this tactic is usually the most daring.

**Fight:** The creature simply continues the fight and hopes for the best.

## Motivations

Exactly which option an opponent takes should depend on the creature's motivations, knowledge of the enemy, and resources. Start by thinking about why the opponent is attacking in the first place.

**Coercion:** Opponents who attack because a stronger creature has forced them into it might very well fight to the death. For these creatures, fleeing the battle might be worse than dying at the hands of the PCs. Creatures that have been forced to attack usually don't have the resources or creativity to regain the upper hand through some bold action when things begin to go bad—they stick with the original strategy against the PCs unless told otherwise.

If the PCs have a reputation for showing mercy, foes who are too fearful of their masters to run away might surrender instead. If the PCs have a reputation for killing every opponent who crosses swords with them, however, no foe is likely to surrender under any circumstances.

**Magical Motivations:** Opponents who attack because they have been magically charmed or are under some other kind of externally imposed compulsion to attack might literally be unable to preserve themselves through flight or surrender. Likewise, their clouded mental state often prevents them from winning a victory through some inspired action.

**The Home Front:** Opponents who are defending their homes or a fortification usually do not quit the field altogether. Instead, they most often try to fall back so they can attack again. If unable to retreat, the opponent might surrender in hopes of delaying the attacker (prisoners can be such an encumbrance) or for the chance to break free and attack again at an opportune moment.

**Looting:** Opponents seeking loot or who attack during an unplanned encounter flee at the

first hint of difficulty. Brigands and cutthroats who commit crimes when the opportunities present themselves fall into this category.

**Pride:** Opponents who have attacked out of sheer bravado, spite, or aggressiveness usually do not flee from a battle except as part of a calculated plan of hit-and-run attacks. When faced with utter defeat, this type of opponent tries something dramatic, such as a retributive strike with a *staff of power*, rather than surrender or flee.

## Leaving the Field

An effective retreat, like an effective attack, requires some advance planning and a grasp of the current situation. To flee an encounter successfully, a creature has to accomplish three things: outrun the PCs, survive or foil the PCs' ranged attacks, and elude any long-term pursuit the PCs might attempt.

Of course, what looks like flight can easily be a rush to higher ground or the beginning of a series of hit-and-run attacks against the party.

**Running Away:** Outrunning the PCs is best accomplished by moving faster than the heroes. Failing that, the fleeing creature should go somewhere that the PCs cannot follow. For example, a horde of kobolds has no chance to outdistance a company of mounted knights on a road or in clear terrain, but they probably could get away if they fled down a steep, wooded slope where horses could not follow. It is always best to have an escape route in mind before a battle starts, and most intelligent combatants (except, perhaps, PCs) do so.

The surest way to flee a battle is through spells such as *teleport, dimension door, word of recall, phase door, plane shift*, and items with similar effects, such as *cubic gates* and *amulets of the planes*. These spells and devices work quickly and whisk the users far away, leaving no real clues as to their whereabouts.

If the opponent is too slow to get away and doesn't have a magical means to escape quickly, the best bet is to misdirect or divert the PCs. There are many ways to create successful diversions. Powerful magical illusions, such as a *programmed illusion* triggered by a command word, or *invisibility* tend to work the best. Reinforcements are great for shifting an attacker's attention away from an all-but defeated opponent. If neither of these are available, an opponent can try something desperate, such as throwing dust or red-hot embers in the PCs' eyes. Spells such as *wall of fog, fog cloud, mount*, or *rope trick* are ideal for a personal escape.

If the PCs cannot be distracted, the next best thing is to do something that slows them down. A few caltrops, a raging brush fire, or some tripwires can discourage direct pursuit, as can spells such as *web* or *entangle*.

**Foiling Ranged Attacks:** Opponents who have put some distance between themselves and the PCs are still not entirely out of danger. Many characters can deal out impressive amounts of damage from considerable distances with missile fire or spells.

The best way to deal with distance attacks is to get out of range as quickly as possible. Sometimes the method of escape takes care of the problem—teleportation outdistances just about anything instantaneously.

If the opponent cannot get out of range quickly, the next best thing to do is take cover

or hide. Even a little bit of concealment from a hedgerow or orchard can make missile attacks harder to use. Simply hiding makes some highly useful spells impossible to use because these attacks must be directed at something the caster can see (see *PHB*, Chapter 7). An opponent who shuffles his feet to create a cloud of dust or employs spells such as *wind wall* or *obscurement* can live to fight another day. An *antimagic shell* makes a great mobile shield against spell attacks. The spell's big disadvantage is that it neutralizes the caster's own magic, but that's usually not a problem when the user is running away. Magical items such as *cubes of force* are very useful for defeating ranged attacks.

Sometimes it is useful to delay flight for a few rounds and cripple the PCs' ability to use ranged attacks. A *warp wood* spell on a warrior's bow or a called shot that breaks a ranged weapon can save a lot of future trouble. Wizards and priests might have a little difficulty concentrating on spells if their opponents have splashed them with acid or flaming oil before they flee.

**Foiling Long-Term Pursuit:** Once a fleeing opponent has broken away from an encounter and gotten out of the PCs' sight, the opponent isn't entirely safe. A determined party can track an opponent back to his lair, striking again while the foe is weak. If the PCs succeed, they also gain whatever treasures the opponent has stored in the lair.

The surest way to discourage long-term pursuit is to leave behind no trail; the PCs can't follow if they don't know where the opponent has gone. Teleportation magic is excellent for this purpose. Flight is the next best mode of escape, as it allows for quick travel over any kind of terrain and leaves behind no tracks. The *pass without trace* spell can be useful for hiding a trail, but it also allows resourceful PCs to track the fugitive magically for a short time (1d6 turns, see the spell description in the *PHB*), which makes it unsuitable for opponents who wish to flee only a short distance.

Opponents who cannot avoid leaving a trail should try to leave a very faint trail. Rocky areas make better escape routes than muddy ones. If the PCs are tracking the fugitive by scent, the opponent can throw them off the trail by crossing a river or leaving behind something to cover the scent, such as pepper or another pungent spice.

Making the PCs think they have lost the trail can be an effective ploy. A *polymorph self* or *alter self* spell can allow a fugitive to take flight, which makes the trail appear to end abruptly. If flying is impractical (as might be the case if the PCs can fly), polymorphing into a new form changes the tracks and might confuse trackers, especially if the change to a new form takes place in a location where tracks are hard to find. For example, a party might have a fairly easy time tracking a fleeing ogre mage. They might be very confused, however, when they follow the trail to a busy road and the only tracks they find on the other side were made by an elf. A delayed use of the *pass without trace* spell also is useful for this purpose. A party of trackers might not think to check the area with a *detect magic* spell when the trail they've been following for an hour suddenly disappears.

A fleeing opponent can confuse pursuers by changing his mode of travel. Keeping a mount hidden near the battlefield allows for an unanticipated burst of speed; it also helps protect the mount from injury or death during the battle. A hidden cache of potions such as *speed*, *flying*, *polymorph self*, *gaseous form*, and *oil of etherealness* can accomplish the same thing.

Terrain can be a fugitive's ally. The earlier suggestion about going where the PCs

can't works in the long term, too. Disappearing into a monster-infested swamp can slow down even the best-equipped PCs. An armored paladin might have great deal of difficulty tracking a fleeing assassin up the side of a mountain.

**The Perils of Withdrawing:** Opponents seeking to withdraw to a better position rather than fleeing altogether face a set of problems different from creatures who wish to simply escape.

The biggest problem is to avoid an overwhelming attack while moving; if the PCs vigorously press the attack, an orderly withdrawal becomes a rout. Speed is also important—it doesn't do any good for an opponent to fall back if the PCs get to where the opponent is going first.

The best way to ensure a safe withdrawal is to restrict the PCs' movement. A large force of opponents might withdraw in smaller groups, leaving behind a team to keep the PCs engaged in melee while the remainder fall back and prepare to support the team's withdrawal. Many other things can hinder an attacker's ability to follow and harass withdrawing opponents: the various wall spells; prepared traps such as covered pits; spells such as *slow, entangle, repulsion, and solid fog*; natural terrain, such as hillsides; and fortifications, such as ditches and walls.

It never hurts to have support waiting when making a withdrawal. A hidden group of archers or spellcasters can do a lot to discourage PCs from following withdrawing troops too closely.

The preceding comments about dealing with the PCs' ranged attacks also apply here. A prearranged escape route or a plan designed to minimize the effects of the PCs' spells and missiles can make a withdrawal much easier to complete.

**Hit-and-Run Tactics:** Opponents who have decided to wear the PCs down through a series of hit-and-run attacks advance and withdraw according to some kind of prearranged plan (though they might concoct the plan at the spur of the moment). Generally, the opponent should hit the PCs hard and be gone before they effectively react. Some useful ideas include:

Hitting the PCs from concealment is an excellent way to cause maximum damage in minimal time. Attacking from two or more directions at once can be especially devastating.

Missile weapons and other ranged attacks, such as spells, work best for this strategy because they allow for a more speedy escape.

Concentrate attacks on the people who are a threat and leave the rest alone. Spellcasters and mounted characters are the prime targets because they can most readily make counterattacks and interfere with the opponents' withdrawal.

## Surrender

Opponents choose surrender as a last resort. A creature that surrenders has made a conscious decision—however hastily—that becoming a prisoner is preferable to risking death by continuing the fight or running away.

It's always helpful to have a bargaining chip. Opponents who have something the PCs might think is valuable, such as information or treasure, have more motivation to surrender than opponents who do not. Most opponents do not give up their bargaining chips easily—they withhold them until they can be sure of reasonable treatment.

There is no reason why an opponent should be a model prisoner. The creature might do whatever it can to hinder the PCs and might try escape or attack if not properly guarded.

### Reversal

Opponents for whom flight or surrender is unthinkable often try to change the situation when defeat looms over them. The opponent does not always try to win the battle with a single act of desperation or luck. A subtle change in tactics or shift in position can lead to victory eventually.

The surest and often the most dramatic way to turn the tide is to exploit an opportunity unique to the current situation. Things that might put an enemy in peril can provide opportunities. Are there bridge supports to cut? Is the encounter occurring in a building full of flammable materials? Is there loose snow or rock overhead that might cause an avalanche?

If the opponents can take advantage of the opportunity without significant risk or consequence, they should do so immediately. Very often, however, opponents initially opt for a normal fight or negotiation to avoid undue danger to themselves.

If the ultimate goal of the battle is to take magical items and other treasures from the PCs, it's unlikely that the opponents take actions that might damage or make those items inaccessible. Spells of destruction (*fireball, meteor swarm,* and *cone of cold*) are replaced with spells that neutralize the PCs (*slow, time stop,* and *chaos*).

Many opponents hold back their most potent weapons, such as magical items or spells, and use them only when all else fails. This might seem to contradict the prior point, but it is usually best to hold something back. An opponent who reveals the full extent of his strength at the beginning of a confrontation puts himself at a disadvantage because the PCs can plan and react accordingly. Also, some powerful weapons (such as a *staff of the magi*'s retributive strike, a *potion of storm giant strength,* or the opponent's only 9th-level spell) can be used only once.

Knowledge can be a potent reserve weapon. Opponents who know the PCs well might try to break off a fight and negotiate. Perhaps the PCs can be bluffed by playing on their fears. Perhaps they can be persuaded to redirect their aggression toward a common foe who is (or appears to be) more dangerous than the their current enemy.

Desperate opponents might attempt risky maneuvers, such as a called shots aimed at crippling or disarming the enemy's lead warrior, charging through the front rank to attack spellcasters in the rear, or just plain bluffing. These tactics tend to be dangerous for the person who attempts them, but they have spectacular results when they work.

## Minimizing Personal Risks

Tangling with PCs of any level is hazardous to a creature's health. Player characters tend to win fights; after all, they are the heroes of the story.

Smart opponents recognize the danger that adventurers represent and take steps to

protect themselves. Minimizing risks is different from dealing with defeat—it involves limiting the consequences of defeat and reducing the chance to get hurt during a victory or a draw.

This approach is not only reasonable from the opponent's point of view, it also means the PCs have to work a bit before they can root out the campaign's true villains. This also keeps them from becoming overconfident since they know that the truly formidable opponents still await them. Making sure the campaign's most powerful foes don't take unnecessary risks has another benefit for the campaign. As the demographics section explains, powerful creatures are rare. The DM has to be careful lest the PCs kill off everything that has a hope of challenging them.

The best way to minimize personal risk is not to go anywhere or do anything dangerous. The opponent might use his powers to learn all he can about the PCs and then send henchmen or mercenaries to do the dirty work. The heroes can't slay a villain they have not met unless they, too, employ indirect attacks.

Opponents who take an active hand in attacks on the PCs have a better chance to survive unhurt if they can manage to be somewhere other than where the PCs think they are. Spells such as *project image* are great for this ploy. A *magic jar* spell is riskier, but apt to confuse PCs who expect to meet a wizard and instead find a warrior or other character. If an opponent leaves the magic jar in the hands of a servant who hides nearby, his escape is almost assured if things go wrong—especially if the servant is equipped with teleportation magic. The opponent also might pose as a bystander or rank-and-file foot soldier, relaying commands to a subordinate telepathically. If the PCs triumph, they might unwittingly make their rival a prisoner and never know that they are harboring a deadly enemy.

A safe and often effective strategy is to strike where the enemy is vulnerable, but not on hand to defend. The opponent might raid a PC's castle when the party is out adventuring. The opponent also might attack the PCs' friends, family, and business associates. A clever opponent might plan his attacks so carefully that the PCs don't even suspect that they are his true targets.

## Bad Guys Don't Fight Fair

Two of the things that make bad guys truly evil is their desire to win at all costs and their determination to make someone else pay those costs. There is no trick too low, dirty, or mean for a truly dishonorable villain.

Many times, the villain makes sure that there are innocent bystanders milling around before a battle starts. Not only does this prevent the PCs from using their powerful area of effect spells against the villain's henchmen, it also confuses the PCs' ability to determine their true enemies. Of course, the villain cares little for the innocents in his midst; they only serve as a shield against the PCs. Meeting the heroes in an empty dungeon chamber or in a deserted street for the equivalent of a fantasy gunfight allows the high-level party to bring all of their guns to bear, spelling almost certain defeat for the villain.

### Diversions

The opponent might create a diversion that forces the PCs to abandon the fight. For

example, if a battle is taking place in a town, the opponent might set a fire. The PCs must choose between pressing the attack or saving the town. They are likely to become very unpopular if they choose the former. They might even be accused of setting the blaze.
Innocent Bystanders

Particularly villainous opponents have no compunctions against using missile weapons and area of effect spells against PCs when they are surrounded by innocent bystanders. A panicking crowd might very well hinder the PCs by blocking vision, disrupting spellcasting, and restricting movement.

Villains might even set up a passerby so the heroes—in the heat of battle—mistake an innocent person as part of the villain's band. Even low-level illusions are quite effective at misleading a party in the midst of a battle, and it's unlikely that the PCs take time to verify each and every target of their attacks. Once the battle is over, the townspeople might accuse the PCs of murder, since all of the other bystanders saw the PCs attack without provocation.

### Sentimental Targets

The opponent might attack a target that has sentimental value but little strategic or tactical value, such as a family home. The attack might not do a great deal of harm, but it can goad the PCs into making decisions based on emotion instead of careful thought. For example, the PCs might expend a great deal of time and resources guarding their family homes while bandits stalk the countryside.

### Contingency Plans

Intelligent opponents, and especially major villains, don't meet the PCs in a fair fight. Villains always have escape routes and they use them when needed. Most villains do not risk even the chance of meeting the heroes in combat unless they have an advantage the PCs don't know about.

## 3. Control Magic

Magic in an AD&D campaign is a splendid thing. It opens new possibilities for play and, more importantly, it provides a sense of wonderment for the players. Piles of gold and gems might make players' eyes sparkle, but magic is different because it gives PCs the power to do wondrous things. Magic puts a little bit of fantasy into the players' hands.

Too much magic, however, ruins play at any level. Excessive magic destroys game balance by giving the heroes too much power too quickly; the PCs cease to be heroic personas struggling in a hostile world and become high-powered exterminators who magically fumigate castles and dungeons, cleaning out the monsters and treasure before moving on to their next clean-up job.

Overabundant pluses also exacerbate the breakdown of game mechanics at high levels. Look at figures 3 and 4 again. Every plus a character gains (whether from magic, high ability scores, or special abilities) shortens each bar by one unit. The shorter the bar, the less risk of failure and the lower the level of tension in any particular encounter. Less tension means that every game situation is more commonplace and less satisfying to complete.

When magic is common, it loses its ability to evoke a sense of wonder in the players. If magic is fairly rare, even a minor item such as a potion can be a momentous find.

Players tend to appreciate whatever their characters can get when magical items are hard to find, and even the short-term boost a potion grants to a PC is significant. In contrast, even a holy sword is no big deal if every PC in the game already has two or three magical weapons. The more magic the PCs have, the less likely they are to be impressed with any single item. In the latter example, the PCs are undoubtedly much more powerful than the magic-starved characters in the former campaign, but magic in the former campaign actually has a greater impact on play.

Magical armor has perhaps the greatest impact on play. Every paladin on the block would love to have his suit of *full plate +5* and a *shield +5*, but this presents some serious problems for encounter design. Not only do you have to create an encounter that builds on strengths and minimizes weaknesses, but now you must also provide opponents capable of striking a –10 Armor Class. Once characters get below an Armor Class of –4, a great deal of the tension dissipates. The heroes are virtually immune to most physical attacks. Proficient use of rust monsters and other armor-eating beasties are highly encouraged.

*Bracers of defense* and even mid-level *rings of protection* create the same problems as a suit of *full plate +5*. *Bracers of defense AC 2* grant an effective Armor Class bonus of +8 and should be more rare than even magical plate—*bracers of defense AC 0* should be viewed as gifts from the gods! When introducing protective magical items, remember that a little bartering or loaning of magical items within a party can allow a single character to attain an unbelievably low Armor Class. The characters who give up their magical items to protect a comrade make themselves a little easier to be attacked, while their friend is virtually cloaked in protective magic.

It is important to remember that campaigns can have too little magic. Finding magical treasure is an important award for PCs who have done well. Players become disheartened and cynical if their characters do not enjoy rewards commensurate with the risks they take. Consequently, giving out few or no magical treasures is not an appropriate way to control magic in the campaign. Workable—and fair—controls are discussed below.

## Use Magical Items

When intelligent opponents have magical treasures, they should use them against the PCs. If faced with defeat, an intelligent opponent who owns a charged magical item should expend charges freely; if the PCs capture a charged item with lots of charges left, the opponent probably wasn't using the item properly.

If the PCs seek favors, information, or services from NPCs—or even from their own henchman—they should expect to offer magical items in payment, especially if the task set before the NPC is particularly demanding. Note that even the most loyal henchman is going to become a little surly if the PCs start carrying around (or storing) magical items they never use.

Don't forget to roll those item saving throws when a PC fails a saving throw, and remember that magical protections a character enjoys don't extend to his equipment once a saving throw fails. For example, if a high-level character wearing a *ring of protection +3* and a *cloak of protection +3* fails a save vs. a *disintegrate* spell, the character's items do not enjoy a +6 saving throw bonus. Each item saves individually.

## Magic is Tempting

Remember that the bad guys want the PCs' magic as much as the PCs want theirs. Villains are prone to demand magical items for ransom when a PC or henchman is captured, and hire thieves to pick the PCs' pockets or burglarize their homes.

## Remove Unwanted Magical Items

Create situations where the PCs have saving throw penalties so that item saves become more common. A few pesky leprechauns are great for removing unwanted items from a campaign, either by stealing them or polymorphing them into bizarre shapes (or both). It's also possible to create situations where PCs might accidentally lose items.

For example, characters who fall overboard during a storm at sea might have a hard time holding onto all their equipment, and the bottom of the ocean is not terribly easy to search. Characters who annoy deities might suddenly find that their favorite items no longer work properly. Be careful not to overdo it. Offhandedly zapping a character's favorite sword is churlish, but a closet full of *long swords +1* is fair game.

## Spell Memorization and Acquisition

Magical items aren't the only source of magical inflation in a campaign. High-level spellcasters can become unstoppable engines of destruction if the DM allows them to simply dump out their full complement of spells every adventure. Remember that memorizing a spell requires a good night's sleep and 10 minutes of prayer or study per level of the spell; a 20th-level wizard requires 18 hours of study time to memorize a full complement of spells. By contrast, it only takes 37 minutes for the same wizard to cast every spell in memory.

## Magic's Limitations

This point goes hand-in-hand with the previous one. The 5th-level *teleport* spell requires 50 minutes of memorization time, which makes it impractical for almost any trip that can be made in less than an hour by other means. Further, *teleport* is risky; even if the caster is very familiar with the destination there is a 2% chance per use for at least a minor accident (arriving too high) and a 1% chance for a potentially fatal accident (teleporting low).

It's important to remember that magic is unlike technology in that most spells do one thing and one thing only. *Magic missile*, for example, harms creatures but has absolutely no effect on inanimate objects; *knock* can force open doors and locks, but it can't bowl creatures over or effect portals such as portcullises and drawbridges. Players tend to have modern minds and they often expect their character's magic to be as adaptable as technology. Make sure that they don't get away with doing that.

## Magic Shops

Do not let magic become a commodity. Magical items should never be bought and

sold like milk and eggs. Allowing PCs of any level to simply purchase magical items, or even to purchase magical supplies such as quills and inks for writing scrolls, takes some of the mystique away from magic and makes the whole world seem a little more commonplace.

It is not necessary to stubbornly forbid the buying and selling of magic; the key to keeping magic fanciful is to make sure that any transaction is an adventure of a sort.

Magical supplies should never have clearly marked prices and be sold from neatly arranged shelves—that's too such like a modern supermarket. Instead, things such as spell components, quills, and exotic inks should be available only at specialty shops run by would-be wizards or retired adventures. Barter or intense haggling should be the norm. Of course, the only guarantee as to what the PCs are actually getting is based on the proprietor's reputation. (Is that really a cockatrice quill or did it just come from a large chicken?) A PC who needs a specific ingredient for a potion or scroll ink might have to choose between several similar items; only a series of careful questions about how each item was acquired reveals which one the PC should choose.

When it comes to purchasing magical items, make the PCs buy "pig-in-a-poke." Characters generally sell only magical items they cannot use, so they really have no idea what they do. In most cases, mere cash is not sufficient. The seller wants a service of some kind, or wishes to barter for another magical item the character can use.

Player characters might occasionally wish to sell an item for cash. A harried DM can find gold piece values in the Encyclopedia Magica™ books, however, the values given there are more useful as a way to establish relative values between items. The market value for something as powerful and useful as a magical item is highly variable and hard to calculate.

Finding the right buyer should be an adventure in itself. A magical item for sale draws thieves like flies, and those thieves could range anywhere from the neighborhood fiend to the local tax collector. Perhaps a vampire drops by one evening and tries to charm the item out of the PC's hands. In most cases, the buyer is wary, because determining an item's true powers is a difficult task, and the buyer can never be sure exactly what he is getting.

Shops that sell magical items are a bad idea for several reasons. First, the quest for magical treasures is what drives the game. It's true that high-level characters tend to have more magical items than they really need, but such characters often desire specific items to assist with whatever task happens to be at hand.

For example, it is known that Lord Mayor Charles Oliver O'Kane of Ravens Bluff™ (in the Forgotten Realms® campaign setting) is seeking a *cube of force* so he can deal with a troublesome dragon. The DM could allow the character to walk down to the local magic shop, hand over a pile a coins and gems big enough to choke the dragon, and get his cube of force, but a clever DM seizes upon the character's desire as an opportunity to create an adventure. Several different adventures could arise from the mayor's search:

A charlatan might appear and offer the mayor a fake *cube of force*; some well-placed illusions might convince even the most skeptical buyer that the false item is genuine. Even if the mayor detects the hoax, actually catching and punishing the charlatan could prove to be difficult.

The character might locate a damaged *cube of force*. The cube might be completely inoperative, but repairable under some special condition that the owner might be able to bring about. Alternatively, the cube might be partially functional; perhaps it works at less than full power or randomly deactivates itself. The new owner might learn the cube's quirks through trial and error.

Someone might have a *cube of force* he can live without. The owner, however, refuses to sell the cube for mere cash and wants another powerful magical item in trade. Perhaps the cube's owner knows where the other item can be found, but believes getting it would be too risky. The cube owner, however, would gladly reveal the other item's location in return for a promise to trade the item for the cube.

The dragon might learn about the mayor's search for a *cube of force* and decide to pay the mayor a visit. Perhaps the dragon would be willing to negotiate, or perhaps the dragon opens hostilities before the mayor is ready.

Another powerful character, perhaps a political rival, offers to loan the mayor a *cube of force*, for a favor to be named later. If the mayor accepts, repaying the favor might prove especially difficult or embarrassing. Refusing the loan might prove equally difficult or embarrassing, especially if the dragon damages the city and the rival lets it be known that the mayor refused an offer that might have defeated the dragon.

### 4. Be Aware of Demographics

High-level characters don't just spring into existence overnight. It takes an exceptional person just to survive the rigors of an adventuring life, and characters who make it to the top should be both rare and famous.

Just how rare are high-level characters? Let's assume, for purposes of this example, that the minimum requirement for an adventurer is having an ability score of 15 or better in a prime requisite in one of the four character classes (Strength, Dexterity, Intelligence, and Wisdom), a Constitution score of at least 9, and no other score lower than an 8. About one person in 10 meets these requirements if ability scores are rolled using the standard method of rolling 3d6 once for each ability score. (If your campaign uses an alternate method for rolling ability scores, what you're really doing is making sure your PCs fall into the top 10%, non-adventurers are still assumed to use the standard method). Now, let's assume that out of every group of adventures only half actually make it to the next level (the remainder either die, retire, or just haven't yet accumulated enough experience to advance). This last assumption is an oversimplification, of course, but a little arithmetic produces some instructive results:

There is only one 10th level character in a general population of 5,000. The actual numbers are summarized in Table 1.

An 18th level character of any class is truly a one-in-a-million individual.

Only .2% of the population (1 in 500) qualifies to be a paladin. Other subclasses with strict ability score requirements (such as bards, rangers, and druids) are equally rare.

Keep these numbers in mind when creating NPCs for your campaign. Your world not only becomes more believable if it isn't overrun with super characters, but your players have a greater sense of accomplishment when they realize just what they have achieved. Be sure to keep important NPCs alive when possible—it can take a generation to replace a high-level character.

### 5. Think on an Epic Scale

It's easy to think of low-level characters as people who have dangerous jobs. Depending on your campaign style, low-level player characters might frequently be called upon to do heroic things, and well-played characters often have goals more complex than merely slaying monsters and accumulating treasure, such as social recognition, romance, political power, and the like. No matter how well-developed a low-level character is, the character's chief goal essentially remains making a living and surviving to enjoy the fruits of his labor.

High-level PCs, as the proceeding section on demographics shows, are the foremost heroes of their age. They are the people who bards sing about and who poets write about. Stories of their adventures are told and retold for generations after the PCs are gone. Whether they like it or not, the PCs are larger than life. They have larger-than-life friends, larger-than-life foes, and larger-than-life problems. Practical details such as where the character's next meal is coming from or how the hero is going to get armor or weapons repaired become petty when compared to the real issues of the character's life.

**Table 1:**
**Demographics**

| General Population | Character Level | Approx. No. in 1,000,000 |
|---|---|---|
| 10 | 1 1st | 133,120 |
| 20 | 1 2nd | 66,560 |
| 40 | 1 3rd | 33,280 |
| 80 | 1 4th | 16,640 |
| 160 | 1 5th | 8,320 |
| 320 | 1 6th | 4,160 |
| 640 | 1 7th | 2,080 |
| 1,380 | 1 8th | 1,040 |
| 2,560 | 1 9th | 512 |
| 5,120 | 1 10th | 256 |
| 10,240 | 1 11th | 128 |
| 20,480 | 1 12th | 64 |
| 40,960 | 1 13th | 32 |
| 81,920 | 1 14th | 16 |
| 163,840 | 1 15th | 8 |
| 326,680 | 1 16th | 4 |
| 655,360 | 1 17th | 2 |
| 1,310,720 | 1 18th | 1 |

## Heroes Are Not Anonymous

Other mortals pay attention to what heroes say and do. Weaker characters seek out their advice, but usually try to stay out of their way. Some low-level characters might idolize them or seek to emulate them. More powerful characters watch what the PCs do to anticipate perils and opportunities; some of these characters might become jealous and resentful of a PC's successes. Deities also begin watching the heroes; they seek to help and encourage characters who promote their interests and to hinder characters who might oppose them.

## Heroes Deserve Heroic Tasks

High-level PCs have progressed beyond the find-the-monster-take-the-treasure mode, and the DM must find herculean tasks for them. For example, a group of PCs might find themselves charged with rescuing a prince or princess early in their careers. At higher levels, the PCs might find that the fate of an entire kingdom rests in their hands—that kingdom may very well be their own. Later, the PCs might find themselves saving the entire world, and in the meantime they probably function as agents of the gods themselves.

## Far-reaching Impact

Even a simple expedition to slay a monster can send tremors through the world. For example, consider the aftereffects when the PCs search out a venerable red dragon's lair, slay the beast, and return with heaps of treasure.

First, the dragon is a fearsome creature, probably the most powerful monster within several hundred miles of its lair. The dragon's death most likely produces a local power vacuum. Many types of evil creatures, from ambitious giants to upstart younger dragons, could become embroiled in a struggle to occupy the dragon's former position in the power structure (not to mention fighting over possession of the abandoned lair). Perhaps one or more fairly powerful groups of lesser creatures become free to expand now that the dragon is no longer around to keep them in check. Anything from a community of mountain dwarves to a horde of trolls might take over the area after a few years.

Second, the PCs can set all kinds of things in motion just by enjoying the spoils of victory. A treasure as large as a dragon's hoard is bound to attract attention, perhaps even before the PCs begin spending it. If they carry it off by normal means, thieves and brigands are bound to take notice. Once the PCs begin to spend their money, the local economy might boom from the influx of cash—especially if the PCs spend it on things like castles, land, or businesses. The local economy might suffer ruinous inflation. Eventually, thieves and other adventurers learn about all the neat gems and magical items the PCs have recovered, and they may plot to steal some of it for themselves. If the characters distribute magic to their henchmen, their enemies suddenly have a problem—the competition just got a lot tougher. If the PCs don't share their spoils, they're going to have unhappy henchmen.

All of the foregoing assumes that the DM hasn't put any special effort into the

dragon's lair. Some of the items from the lair might be significant to the campaign. For example, what do the people in the neighboring kingdom do if they learn that a legendary sword lost in antiquity shows up in a PC's hands. The character might be in for a wild ride; the holder of the sword might inherit anything from a claim to a throne to an ancient blood feud. Now consider what might happen if a deity or dragon ruler starts wondering who it was that slew the mighty dragon? Remember also that dragons have offspring and long memories.

6. Plan Ahead Any successful AD&D campaign requires a great deal of preparatory work on the DM's part. If you intend to play a high-level game, however, you also must prepare your campaign for PCs who have the power to radically alter it, and you have to be sure your campaign can provide a continuing challenge.

The best time to prepare for high-level play is during low-level play, when the PCs are just learning about the world and you have had time to see how things are working. If you wait too long, lots of details about your world become fixed in the players' minds, and you won't have the flexibility you need to make changes. If you start too soon, you may burn yourself out before you ever run an adventure (all work and no play makes the DM dull), and you run the risk of over-planning and trying to force the campaign's action in directions the players don't want to go. In other words, get your campaign going at low-level, see what you're players are going to do with it, and then start laying the groundwork for high-level play.

## Create Villains Who Learn

Create villains that can grow with the PCs. A growing villain is a character who has personal ambitions and achieves them over the course of play, just as the PCs do. The villain also becomes more powerful and accumulates his own hoard of magical items, associates, and followers. This approach reminds the players that their characters are not the only people who are making a difference in the world. It heightens the sense of urgency the players feel when the PCs confront a threat or opportunity because they know there are NPCs who are just as determined and powerful working toward results that the heroes won't like.

Backgrounds are important for NPC villains. The heroes have the advantage of constant molding and shaping by their own actions as well as the plot twists that the DM throws at them. The villain needs the same benefits in order to be truly challenging to the PCs. Some examples are included below, but the list is by no means exhaustive.

**Source of Power:** What is it that allows the NPC to be villainous? Does the villain merely depend on spells and character skills, or does he also command an army, run a government, or control a business?

**Objectives:** What vile thing does the villain want to accomplish? The emphasis here is on the word vile. The NPC's objective should be objectionable to the heroes at the very least, if not outright detrimental. The villain might wish to destroy or enslave the nation where the PCs live, wipe out an entire race, or even destroy the world.

**Motives:** Why does the villain wish to do vile things? He might simply be highly aggressive, have a compulsive need for power, or a thirst for revenge.

**Personality:** What is the villain like in person? Decide what the NPC looks like, how the character acts, where the character lives, and so on. Great villains are never flat characters; if your villain is simply a collection of statistics, the players look at the evildoer as just another monster rather than someone they love to hate.

**History:** How did the villain come to be? Decide where he was born, what significant things he has accomplished in the past, what failures the villain has suffered, and so on. Great NPCs are shaped by their past.

**Allies:** What other NPCs does the villain use or abuse? Decide if the heroes' nemesis has henchmen or servants to carry out plans and decide who those servants are. Perhaps the villain serves an even more powerful master.

## Consequences

Consider the consequences that can arise from your low-level adventures. Remember that adventurers don't live in a vacuum, and your world is a bigger place than the small area the PCs happen to be in at any given time. When the PCs finish an adventure, you still have work to do.

Start by thinking about what could happen when the PCs leave the adventure site. Ask yourself who's still hanging around to pick up any goodies the PCs might have left behind. More than one villain got his start by collecting the remnants of his slain master's treasure hoard. Consider what that survivor might do. Does he flee or retreat and fortify? Would he seek protection from a more powerful creature?

Now think about how much time might pass before creatures that were not directly involved in the adventure discover what the PCs did. If the heroes are given to boasting about their accomplishments, it won't take long for word to spread. If witnesses escape, or the adventure site receives regular visitors, word of the deed spreads quickly. It might be a very long time before anyone notes the disappearance of a small, independent band of goblins, but a royal messenger's demise is going to be noticed very quickly.

Consider who might care about what the PCs did. Is anyone helped? If so, how can they take advantage of the opportunity? Is anyone hurt? If so, how can they minimize or repair the damage? Take the preceding example of the slain red dragon. Perhaps the dragon has a charmed servant lurking in a village nearby. The servant is responsible for informing the dragon how much wealth the villagers have hidden and keeping track of the village's maidens and would-be dragon slayers. As one of the dragon's confidants, the servant is hated and feared, but the charm keeps the servant from thinking too hard about how unpopular he has become. When the dragon no longer visits the village to collect its annual toll of maidens, the servant is forced to flee.

The servant might make his way to the dragon's abandoned lair. If he is the first to reach the lair, he might collect a few left over coins and an overlooked magical item or two and go off to start an adventuring career. If something else got to the lair first, the servant might be captured by the lair's new resident. The servant could be killed, which

ends the story line, or he might betray the village in an attempt to reestablish himself as someone to be feared. You don't have to have all of this in place before the adventure starts, just be prepared to use every adventure as a springboard for new ideas.

Not all consequences have to be bad. For example, the PCs might acquire a follower or henchman when a freed prisoner decides to follow them home. Nor do all consequences have to fall directly onto the PCs. For example, if the party infiltrates a building by using stone shape spells to force an entry, many stone buildings in the area might hastily be reinforced with metal bars, and the PCs might not be affected until they, too, wish to build something.

In many cases, however, simple adventures might have multiple layers that the PCs peel away one-by-one. In the classic adventure Against the Giants, the party begins by dealing with a single group of marauding hill giants but discovers clues that lead to a conspiracy that ultimately was hatched deep in the bowels of the earth. Ultimately, a resolute party follows the trail into the Abyss itself.

Simple, seemingly harmless incidents that the PCs dismiss with a laugh might have far-reaching implications. Bosamp, the villain in the TSR® novel *Captains Outrageous*, began as a fairly harmless young wizard who suffered from an unfortunate love affair and ultimately threatened to destroy the world.

## Fame and Infamy

Keep track of PC fame and infamy. It's fun to watch players' faces when they hear exaggerated accounts of their characters' early exploits. Imagine the role-playing possibilities when they encounter a blowhard who claims to have known them way back when—imagine the possibilities when they encounter a blowhard who actually did know them way back when!

Fame and infamy should have an effect on how PCs are received later on in their careers. For example, characters who break their word too often find it difficult to get land grants or honorifics such as knighthoods later in their careers.

## Balancing Act

Remember that it is easier to build a balanced campaign than to fix one that's out of control. A campaign that is in control has a reasonable balance between the hazards the PCs face and the rewards they gain. A controlled campaign also has a reasonable survival rate among characters who are played well.

To build a balanced game, start by reading Chapter Eight in the *DMG*. Decide how quickly you want your player characters to advance, and set up your campaign's experience point awards accordingly.

You also need to keep an eye on the treasure and magic you give out. You should decide in advance how much magic you want the PCs to have, then carefully place it, making sure that the PCs have to take appropriate risks to get it. Killing an orc to get a *long sword +5, holy avenger* is too much reward for too little risk. If the PCs seem to be finding too much magic, make it harder to find by removing some undiscovered magical treasures or making sure that unattended magical items are well-hidden and defended by traps, curses, or spells. Remember to regularly take excess magic out of circulation.

How much magic is enough? That's up to you to decide. If you've decided that magic is going to be fairly rare, a PC should expect to find about one permanent or rechargeable

magical item for every two or three levels of experience, plus one or two additional consumable items for every two levels of experience. This means that if you're following the *DMG's* suggestion of three to six adventures between character levels, a party of six characters should find only about one item every adventure (after six to twelve adventures, all six characters have at least one magical item). Note that a character might own considerably fewer magical items because they are used up or destroyed during play.

### 7. Share Responsibility

A high-level campaign's vast scope is enough to overwhelm anybody who tries to handle the task of keeping it running without help. Fortunately, high-level campaigns usually come equipped with a cadre of talented and resourceful advisors who can help—the players. In many cases, players are willing to help the DM handle some of the basic background work, such as detailing unexplored areas, developing histories and myths, and taking charge of NPC actions that don't directly involve their characters. At the very least, the players can help you focus your creative energies so that you don't waste time and effort on things that don't advance the campaign.

## Garner Interest

Find out what the players are interested in doing. It doesn't do the campaign any good if you spend three weekends laying out territories for the PCs to develop if the players are interested in going artifact hunting.

Unanimity among players is a rare thing, so be prepared to run adventures that encompass several different player interests at once. For example, if your group includes a thief interested in artifact hunting, a paladin interested in establishing a dominion, a priest seeking to eliminate or diminish an opposing religion, and a wizard interested in spell research, there are several story lines you might introduce into the campaign. One might go like this:

The paladin and the priest decide to search the countryside. The paladin hopes to survey potential sites for a castle while the priest questions peasants and travelers about the rival church's recent activities.

Meanwhile, the thief consults a sage, who complains that someone has broken into his library and stolen several pages from one of the books. The sage relates several vague legends about a lost artifact, but gives few details. The wizard has been busy, too, consulting with fellow wizards about a new spell. Unfortunately, the local expert on such magic has vanished, apparently kidnapped.

While the thief and the wizard investigate the twin crimes, the priest and the paladin break up a group of brigands and take two of them prisoner. Among their treasure is a traveling spellbook.

When the priest and the paladin return to town, they show the captured spellbook to the wizard, who immediately recognizes the book as belonging to the missing wizard. Questioning reveals that the brigands work for an evil priest who sought the wizard's advice about a strange sigil recently discovered in an ancient ruin. The thief recognizes the sigil as a ward used to seal away an ancient artifact.

The PCs stage a rescue attempt, freeing the wizard and routing the priest's servants. The paladin realizes that the site is entirely suited to his needs. The evil priest, however,

has fled with the artifact. The party hires a team of mercenaries and laborers to clear the ruins for new construction while they pursue the villain.

Later, the villain might strike back by ransacking the construction site, attacking the NPC wizard, or both. If one of the players develops an interest in politics, diplomacy, or warfare, the evil priest might turn up in a neighboring kingdom's court, perhaps openly functioning as an evil priest or perhaps in disguise.

## Goals

Encourage the players to develop long-term goals for their characters. High-level characters need more motivation than the simple pursuit of wealth and experience. If a character has some intangible goal, such as political power, social status, or enduring fame, the campaign can offer more rewards for clever play. In some cases, the PCs might end an adventure weaker and poorer than they started, and the players still feel a sense of accomplishment if they make some progress toward a personal goal.

Not every goal is realized in a campaign, especially in the case of far-reaching requests. Characters desiring to control vast stretches of the world under a distinct rule probably spend their entire lives trying to accomplish it. Campaigns should be built around character goals and ambitions, but it should never be ruled by overzealous or selfish desires.

## Allies and Enemies

Keep track of who the PCs' friends and enemies are. Pay attention to the way player characters interact with important nonplayer characters in your world. Rivalries, favors, and even romances can be a great source of information.

Remember too that friends sometimes call in favors as well as grant them to the PCs. Heroes who constantly called upon favors earlier in their careers may spend many years repaying those acts of kindness.

## Personality

Have each player put together a personality profile for all of their characters. This goes beyond ability scores, equipment, and statistics listed on the character record sheet.

Get as much detailed information about the hero as possible. The process helps the player concentrate on aspects of the character that might otherwise be overlooked, and the player can probably role-play the champion more convincingly and consistently afterward. Your increased knowledge of the character allows you not only to tailor adventures for the hero but it gives you a clearer picture of how an NPC might perceive that champion, which improves your role-playing as well. A good profile should contain the information described below. You can make up a form for your players to fill out, or you can ask the player a series of questions and record the answers yourself. It doesn't matter how you collect the information, as long as you get it in a form you can use.

**Occupation:** Most people define themselves by what they do. A player who lists a character's occupation as semi-retired adventurer has a mental image different from a

player who sees the same character as a country squire. Occupation also helps determine what the character does when not adventuring. A semi-retired adventurer probably spends a lot of time swapping tales about old adventures and listening for rumors. A country squire probably spends a reasonable amount of time managing property and pursuing outdoor activities, such as riding or hunting.

**Personality:** This refers to the character's general behavior, temperament, wit, sense of humor, and other non-physical traits. Ask the player to sum up the character in a few paragraphs. This information should give you a clearer picture of what the player is trying to do with the character.

**General Appearance:** This is what the character looks like. The player should note the character's hair, eye, and skin color, favorite clothing, height, weight, favorite equipment, and so on. The list should start with what a person might see when glancing at the character and finish with what might be seen if a person studies the character for awhile.

**Distinguishing Features or Habits:** These are personal oddities and quirks that might not be immediately visible. A fighter's buck teeth or funny cowlick won't be noticed while the warrior is wearing a helmet. This category includes things such as birthmarks, scars, tattoos, and the like. It also includes favorite expressions, nervous habits, speech patterns, and anything else that make the character unique.

**Tastes and Preferences:** Note the character's hobbies and other leisure pursuits, favorite foods, favorite color, collections, pets, and the like. Also note things the character doesn't like; activities the character finds particularly distasteful or boring, foods the character refuses to eat, least favorite animals, etc.

**Residence:** This is where the character lives. At the minimum, note the place's location, size, and state of repair. It is best, however, to have the player make up a detailed floor plan and description of the character's home. Also make a few notes about the surrounding area's geography and politics.

Ideally, this should be a miniature dungeon complete with room by room descriptions, specific spell effects, guard strengths, wards in place, etc. As DM, you'll need to look this over very carefully. Not only do 0-level servants probably work here, but it has to be a livable space as well. If the villain comes to visit, the PC might be thankful for the emergency exit installed during the construction.

**History:** This includes the character's race, when and where the character was born, and where the character was raised and educated. Note the role that parents or other relatives played in the character's early life. If the character is an orphan, find out who filled the parental role. Make a list of the hero's living relations, children, and spouse (if any).

**Friends and Allies:** Note an influential acquaintance the character might have. List the PC's close friends and long-time associates. Include all of the hero's important employees and henchmen (unless they belong on the enemies list). Make special note of anybody the character meets or interacts with on a regular basis.

**Enemies:** List the character's enemies. Start with personal enemies of the character. Note the reasons for the animosity. List anyone with interests or desires that are contrary to those of the character, and note the source of the contention.

**Short-Term Goals:** Consider what the character hopes to accomplish in the near future. Find out what problems or opportunities currently loom the largest in the

character's mind (this requires frequent updating).

**Long-Term Goals:** Consider the character's plans and ambitions for the distant future. Find out what the character does if his goals are achieved. Find out what the character does if the goals cannot be achieved.

# Chapter 2: Adventures

No matter how you construct your campaign, adventures remain the heart of the action; adventures are the way player characters interact with and shape the world. The player characters might build mighty empires, take the first steps toward divine ascension, and wield legendary artifacts, but if they don't have adventures that stimulate and entertain the campaign is doomed.

This chapter assumes that you are already familiar with the basics of adventure design. As a reminder, a good adventure:

Begins with a hook—something that piques a player's curiosity,

Unfolds like a novel or short story, plunging the characters into an ongoing web of activities,

Tests the skills of both player and character,

Contains plenty of excitement, especially at the beginning and the end, and

Changes the world, perhaps only in a small way, but always in a discernible way.

This chapter considers some difficulties you are likely to encounter when designing adventures for high-level characters (and the veteran players who run them).

## Common Mistakes

In the surge of excitement—or panic—that precedes a gaming session, it is easy for a DM to overlook important elements or to try shortcuts that ultimately cause problems that detract from the adventure. With a little care, you can avoid these errors and make all of your adventures memorable.

### Don't Tell-Show.

Get into the habit of creating brief descriptions for most of the scenes in your adventure. Include sensory details such as colors, smells, textures, sounds, and the like. The sensory information helps make your world more believable and tangible to your players. Once you become skilled in describing your world in sensory terms, it is easier to slip subtle clues about the adventure to your players.

The same rule applies to spells. Instead of telling the player what he sees with his *detect magic* spell, explain the varying hues and colors associated with the magic he is viewing. *Detect undead* could produce nausea, and that immense globe of fire hurtling

toward the party could be either a *fireball* or a *delayed blast fireball*.

Adding sensory details also makes it much easier to control the mood of the adventure. Not only do players feel the sense of urgency building, they are able to smell the ozone from the last *chain lightning* spell that tore into them.

## Don't Over Plan-Prepare.

Thorough preparations are a must for successful adventures at any level of play. High-level characters, however, usually have the resources to set their own agendas, and you should avoid spending too much time and effort on adventures and encounters the players might choose to ignore.

Effective preparations start with an adventure plot (see the **Plots** section on page 35). Once you have decided on a plot, gather up all statistics, maps, and other materials needed for your encounters. Make some notes about what each encounter area in the adventure is like. Stick to the basics for now; note what the areas look, smell, feel, and sound like, and who or what is in them. Design any random events or rumors the player characters might encounter. If you're generating events or rumors from a table, roll the dice ahead of time and record the results.

Your preparations should be aimed at making sure you have what you need in terms of hard data—monster statistics, NPC personalities, treasure lists, and so on—in a form that you can locate and use quickly. You should not be trying to choreograph every moment in the game; instead, you should be trying to have everything you need readily at hand so that the action doesn't stall while you decide what happens next.

## Don't Force the Action

Consider contingencies that can preserve your plot. Treat your adventure as a story with an unwritten ending, and be willing to let your players write it. If you have over-planned, you must fight the desire to lead your players around by the nose.

This doesn't mean that high-level characters are the deciding force on your campaign world for every event, but they probably have the power to shape events around them. A high-level nemesis can aid in pushing the PCs in the direction you want them to go, but it's doubtful the villain is so ingenious that he never gets foiled. After all, if the heroes of the land cannot successfully oppose the villain, who can?

A common justification for forcing the action is designing plots that turn on single events, such as the actions of a single villain: "But if the Count doesn't get away, he won't be around to set fire to the bridge in the final encounter."

High-level player characters have a way of upsetting well-laid plans, so build plots that can stand up to PC tinkering. If something doesn't go the way you planned, have a backup plan. In most cases, the player characters should find it easier to complete the adventure if they cause a break in the plot, but not always.

For example, suppose a particular NPC is supposed to escape the PCs' clutches and then travel to a distant city where the villain is highly respected. When the player characters arrive at the city, they are framed for a crime and earn the local ruler's wrath.

The plans begin to unravel when the player characters capture the villain with a *rope of entanglement*, an item the DM forgot the party had. Rather than concocting some

feeble reason why the villain escapes, a thoughtful DM puts a backup plan into effect.

When the player characters interrogate their prisoner, the villain lies—of course—about what is really going. The player characters easily discover the lie, but they also uncover the villain's travel plans. The heroes might travel to the city, hoping to discover what the blackguard was up to. The villain's agents might frame the player characters anyway, but the heroes, having sifted a few essential facts from the villain's lies, are slightly better off than they otherwise would have been.

The DM might put a similar backup plan into play if the player characters slay the villain. Perhaps the villain's agents convince their ruler that the heroes are bandits, spies, or assassins. When the PCs arrive, they become embroiled in a diplomatic crisis.

## Encounters

Don't use just one type of encounter, offer a variety of challenges. In this case, type refers to the main kind of action the encounter offers: combat, trick/trap, negotiation, and so on. The actual mix of encounter types varies from campaign to campaign. The bulk of your encounters should be the kind your players like best, but a mix keeps them on their toes and keeps boredom from setting in.

## Combat vs. Creativity

Don't encourage combat, encourage creativity. Fighting isn't the best solution to every problem, even for characters as wise as Merlin and as strong as Hercules. Also, as Chapter One points out, most combat rolls are moot for high-level characters, so fights can be pretty unsatisfying.

Give the player characters some problems they just can't solve through combat. A raging forest fire, for example, won't succumb to sword strokes and *death spells*, nor is it intimidated by a powerful hero in its path.

Even combat encounters can require a little brain power on the player characters' part. For example, an insane fire elemental might have started the forest fire in the previous example, but the PCs might be unable to locate or attack it until after they quench the blaze.

## Don't Inflate-Enhance

Chapter One points out the detrimental effects power inflation has on a campaign. Resist the temptation to create bizarre new creatures with mind-boggling power, to introduce legions of high-level villains, or to place high-level player characters in direct conflict with deities.

Enhancement means finding ways to challenge PCs without overpowering them. Chapter One's discussion of maximizing strengths and minimizing weaknesses describes one type of enhancement.

## Gifts vs. Rewards

A gift is anything the PCs haven't truly earned. For example, if the PCs blunder into a

narrow cavern and defeat a dragon that can't fly or maneuver to use its breath weapon, that's a gift—even if the dragon's treasure lies elsewhere. Not all dragons are geniuses, but they are all sufficiently cunning to avoid obvious death traps. Any battle with a really big dragon should be an epic conflict, with the dragon making full use of its mobility and special abilities.

Gifts commonly come in the form of powerful magical items. An item such as a *vorpal blade*, *staff of power*, or *robe of the archmagi* is a reward only if the player characters find it after a long and epic quest. If you drop one of these items into your campaign as part of a randomly generated treasure, you are probably giving the players a gift.

## Creating Multiple Threats

A threat is anything that can damage the player characters or keep them from reaching their goals. It is what provides tension, and hence excitement, in an adventure. If there is only one source of threat, such as a single villain, the adventure coasts to a halt if the heroes overcome the threat. Even if the PCs merely hold their own, the adventure usually lacks variety. A single source of threat usually generates only one type of challenge.

Adventures with multiple threats tend to be more flexible and resistant to player character successes. They also offer more variety. For example, consider an adventure where the player characters are pursuing a kidnapper. If the kidnapper is the only element actively opposing the heroes, the adventure becomes a mere chase with the villain trying various tricks to slow the player characters or to throw them off the scent. No matter what the villain's resources, there is a limit to the number of tricks and ploys the kidnapper can throw into the PCs' way. The heroes might end the adventure prematurely through the use of items such as *crystal balls* in conjunction with spells such as *teleport without error*.

Suppose, however, that a rival party also is pursuing the villain and hoping to beat the player characters to the prize. Let's also place the adventure in a dark jungle filled with deadly creatures, including a tanar'ri who remained here after an unsuccessful summoning by a long-dead wizard. Now, the heroes have numerous problems to deal with simultaneously.

They still must track and overtake the villain, but they also must deal with their rivals' attempts to foil their efforts. The party must deal with tropical heat that makes heavy armor impractical, dampness that is baneful to spellbooks and scrolls, swarms of biting insects, and the tanar'ri and his minions. Even if the player characters catch and defeat the villain, they still must get out of the jungle with their rescued kidnap victim. After they escape, the party must be on the alert for reprisals from their rivals.

## Don't Kill—Scare

Grinding down a high-level character is difficult, and the task is often monotonous for the DM and frustrating for the player. It is much better to look for ways to undermine player confidence and to keep them from feeling cocky.

The best way to take players down a notch is to get personal by attacking specific

player character strengths. The lowly 2nd-level priest spell *silence 15' radius* is a great way to remind high-level spellcasters that they don't run the world. *Antimagic shells, scrolls of protection from magic*, and the occasional magic dead zone are more potent ways to keep spellcasters in line. In a similar vein, thieves can find *magic mouth* spells very annoying and fighters often have difficulty acting heroic when their weapons and armor have been subjected to *heat metal* spells and rust monster attacks.

Players can be their own worst enemies when it comes to inflicting mental anguish on themselves. The simple ploy of presenting a party with a foe they cannot detect often has players assuming the worst. For example, a few bow specialists who have used *dust of disappearance* on themselves and consumed *potions of speed* can send a hail of missiles at a party, leading the players to assume they are surrounded and outnumbered when, in fact, they're simply the targets of harassment.

Trying to design lethal adventures can be harmful to the campaign in other ways. As Chapter One pointed out, increasingly lethal adventures tend to make players want to retire their characters before their luck runs out. Also, remember that outrageously powerful magical items used against the PCs in one adventure are going to be used on the monsters who oppose them all too soon.

## Character Knowledge

Don't waste time with minor details or arguments about character knowledge—find an efficient way to deal with them. Smart players expect their characters to have some basic knowledge about the places they frequent. They also expect their characters to have some ability to lay their hands on information about places they visit.

It is a good idea to prepare reference materials about your world and always keep them on hand. Include things such as geography, climate, political divisions, and similar information that is common knowledge. Likewise, prepare a list of rumors and other easily obtainable information about the current adventure, and pass it around at the beginning of the game. Doing so not only saves time, it also helps make players feel that their characters are part of a living world.

Of course, high-level characters are specialists in their areas of expertise. If the adventure is going to be an in-depth investigation of a new twist on an old spell, the archmage of the party probably knows all about the spell. It's perfectly understandable that the wizard doesn't know about the spell's new use, but common knowledge should be readily available.

## Don't Ignore the Rules

Rules should be used creatively. It is important to remember that the AD&D game rules (or whatever version of the rules you happen to be using in your campaign) help define reality for PCs, just as the laws of physics help define reality for real folks.

Players, especially experienced gamers, use their knowledge of the rules to help them interpret what is going on around them and to help them decide how their characters react when it's time to take action. If the DM interprets the rules inconsistently, or applies one set of rules to the player characters and another set to the monsters and NPCs, players often have no firm basis for making decisions about their characters. Uninformed

decisions aren't terribly meaningful. The players' inability to make meaningful decisions ultimately robs them of control over their characters, and frustration quickly sets in.

The rules themselves can provide a creative springboard for designing adventures and describing NPCs. For example, suppose the PCs are searching a vast dungeon complex to locate a lich. The group discovers a block of prison cells and frees the inmates, which include a sharp-eyed woman who seems to have fairly good knowledge of the complex. The woman offers to guide the party as far into the complex as she can take them. The woman, in fact, is the lich, using a *polymorph self* spell.

Assuming that the PCs don't immediately detect the masquerading lich with a true seeing spell, the "woman" might display a few quirks that clever PCs can detect. From a rules standpoint, *polymorph self* lasts only two turns per caster level, 60 turns (10 hours) if the lich is 30th level. So, if the lich has spent several days in the cells, her neighbors might have noticed her renewing the spell from time to time. A particularly sharp-eared neighbor might note that the woman is in the habit of mumbling to herself once in awhile.

If the party allows the woman to accompany them, she must find an excuse to be by herself at least once every 10 hours or her ruse is revealed. If you're already in the habit of requiring moving characters to take regular rest periods, this shouldn't be hard to arrange, but it should provide the PCs an opportunity to notice the spellcasting. If rest periods aren't part of your normal game routine, you need to find some other way to regularly separate the polymorphed lich from the party. Perhaps she just moves on ahead while the PCs talk among themselves, or periodically makes an excuse for leaving the party. Such ruses can make for lively role-playing.

A *polymorph self* spell also does nothing to eliminate the aura of magical power and cold that surrounds the lich (as the DM, you can rule otherwise, but remember to use your rule consistently for the remainder of the campaign). High-level characters are unaffected by the magical aura and might not even notice it, but the polymorphed lich must be careful to stay out of lesser creatures' sight lest they flee in fear. In addition, the lich's chilling touch continues to function as well, and the creature would have to avoid touching and paralyzing anyone. Thick gloves might do the trick. Of course, sharp players might wonder what a prisoner is doing with a set of gloves, but that is exactly what they should be doing.

## Proactive—Not Reactive

Foes capable of challenging high-level adventurers are not stay-at-home types who sit in their bedchambers waiting for groups of PCs to come along and attack them. They make plans and actively try to implement them. Particularly alert foes might notice PCs encroaching on their territory and take steps to discourage or defeat them before they can inflict too much damage.

Even foes who have no immediate plans for sweeping conquests should have a personal agenda to follow.

## Responsive—Not Passive

When PCs arrive on the scene of an adventure, they represent a major disruption in the normal course of activity. Foes should respond to this disruption in a manner

consistent with their intelligence and level of organization. Plans and activities already set in motion should be dropped or altered to meet the situation.

The worst example of this kind of mistake is the keyed dungeon complex or castle where the player characters can move from room to room, defeating the occupants one by one. Such adventures are simple to run, but they lack the depth needed to challenge high-level characters and keep players entertained. Make sure the locals react to what the heroes do.

Start by deciding what goes on while the PCs are not present. Note the major NPC's daily actions and the general activities of the lesser characters (guards, servants, visitors). This allows you to establish a routine for the area and can help determine a proper reaction. An attack during a typical midafternoon, when the guards are very alert but most of the locals are scattered about the countryside, is going to create a reaction quite different from that of an attack made during the week's major religious observance.

## All Failures are Not Catastrophic

The occasional adventure to save the world from immediate, irrevocable, and utter destruction is fine, but not every situation high-level PCs find themselves in should be an all-or-nothing proposition. After all, what happens to your campaign world—the one you put all that work into—if they fail?

The PCs have earned a little resiliency; if they fail in a task but manage to survive the attempt, allow the world to change for the worse, just a little, and then allow the party another chance to set things right. For example, if the player characters cannot stop an assassination attempt against an important NPC, such as a king or high priest, there should be a general cry of dismay among the people loyal to the slain individual. A dead king might also cause a valuable military alliance to break down, and the passing of the high priest could bring about a deity's wrath.

Use failure to create additional opportunities for adventure as the PCs scramble to limit the damage.

### Plots

A simple list of encounters, foes, sundry perils, and treasures is just a catalog of obstacles the player characters must face. This is seldom enough for a successful high-level adventure. Players need to feel a sense of purpose and revealed destiny as their high-level characters struggle against the opposition.

A plot provides a unifying theme or story to the adventure; it deals with the adventure's who, what, when, where, why, and how. The plot sets an adventure's tone and form and helps provide the epic scope that separates a simple "monster and treasure hunt" into a heroic venture.

To construct a superior plot, think about the events that lead up to the adventure's first incident or encounter and then create a description of the state of affairs when the player characters get involved. This kind of groundwork allows you to create an adventure that seems believable to the players and gives them a sense that there is more to be discovered if they just dig a little deeper. The best adventure plots seem simple at first, but often prove to be very complex. A good plot also gives the players a clear idea of what their characters might stand to gain if they succeed and what they might lose if they fail.

In high-level campaigns, it is important that your plot relate the adventure to the rest of the campaign in some way. Not every adventure must relate directly to the campaign's major theme, but every adventure should logically arise from some element in the campaign's structure.

A high-level adventure's plot should also be based on player goals or include subplots that incorporate those goals. See Chapter One for an example of a plot that accomplishes this.

Something in the plot must grab the player characters' attention and get them interested in the action; this is called the adventure hook. When dealing with high-level characters, the most effective hooks involve the player characters' personal goals or quirks. For example, a character interested in romance might become embroiled in an adventure after learning of a potential NPC mate or companion who has difficulties. Perhaps the NPC has been kidnapped (a bit overused, perhaps, but a classic), faces financial ruin, or requires a champion to perform some errand. Likewise, a character with an interest in music might be willing to go to extreme lengths to learn a new song or acquire a rare instrument.

A good plot is not rigid. Adventures for high-level characters require flexible plots that keep the story going and allow PCs to move on and resolve the main conflict even if they do something unexpected. An excellent way to keep a plot flexible is to concentrate on what the players decide to do, not what their characters can accomplish.

Even simple adventures can benefit from flexible, decision-oriented plots. For example, let's suppose the player characters become involved in a dispute between two NPCs over a magical item.

The adventure might begin when one of the antagonists (the one who currently owns the item) settles down in the PCs' area without their knowledge. Perhaps one of the PCs is the area's ruler.

The first incident occurs when the villain sends a raiding party to steal the item. The other NPC goes into hiding, leaving the PCs to deal with the raiders.

After dealing with the raiders, the player characters track them back to their lair and ultimately confront the villain, who either is killed or forced to flee.

The adventure has reasonable potential. The party is faced with a variety of difficulties, including dealing with the raiders quickly and with minimal damage to the countryside. They also must deduce where the raiders are coming from, and they face a difficult fight against an entrenched foe. The plot, however, fails to consider actions that thoughtful players might choose to take. A flexible plot that offers the players more choices might go something like this:

The player characters are going about their normal business one day when a newcomer arrives in the area and stops to pay his respects. He is very pleased to meet such famous heroes, and he presents each character with a small, but fairly valuable, gift. Perhaps the stranger shares an esoteric hobby with one of the player characters. In general, the newcomer proves to be a very agreeable person.

The newcomer discovers a team of spies or burglars snooping around his home. A spectacular battle ensues, creating damage that the player characters must clean up.

The newcomer confesses that he has something the villain wants. The player characters now have several choices to make. They can drive the newcomer away, take the disputed item, offer protection from future attacks, tell the newcomer to deal with the problem himself, or confront the villain.

The adventure continues in one form or another no matter what the player characters do. If the item stays in the PCs' area (because they took it away or allowed the newcomer to stay), the raids continue and begin to grow in strength. If the characters seized the item (or offered to guard it), they become the subject of the villain's attention.

If the PCs told the newcomer to scoot, they're still in for trouble. Perhaps the newcomer pretends to leave—but goes into hiding instead—or escapes to another plane, leaving behind a replica of the item to distract the villain. In either case the raids continue.

One way or another, the PCs must locate the villain's lair and confront him. If they don't wish to fight, they can surrender the item—and perhaps the newcomer—to the villain. This approach isn't very heroic, but it's an option.

If the newcomer has fled, the PCs might convince the villain to leave them alone, but the villain might demand a humiliating service or payment in return for the favor.

If the PCs favor a more active approach, they can attack, killing or driving away the villain. In either case, they acquire some new enemies but also gain some treasure, enhance their reputation as heroes, and maybe gain a valuable ally or henchman in the form of the grateful newcomer.

## Types of Encounters

Once you've created a workable plot for an adventure, you need encounters to flesh it out. Encounters set the stage for the player characters and give them a chance to function as heroes.

As this chapter's first section points out, a well-designed adventure offers several different types of encounters. Twelve different types of encounters are described below. The categories are not definitive, and there often is considerable overlap between them. Their purpose is not to force your encounters into inflexible molds, but to help you consider the many options open to you when planning them.

**Combat:** The encounter is intended to deplete the party's resources, particularly hit points and spells, through some form of attack. Combats can be pretty dull for high-level characters unless the opposition follows a logical tactical plan that allows them to challenge the party and create the illusion of danger. See the **Planning Combats** section for some tips.

**Deception:** The encounter is not what it appears to be. A common form of deception is one type of encounter masquerading as another. For example, the player characters are traveling along a road and meet an old peddler who evades their questions and tries to sell

them her goods. The encounter appears to be an interaction until bad guys spring out of the woods and attack. Surprise!

An encounter that includes a disguised or delayed danger falls into this category. The peddler from the previous example might lie to the PCs, complicating future matters if the PCs fall for the ruse. The peddler might be a villain or monster. Perhaps the impostor is biding her time until she can attack the party, or perhaps she simply wants to get close to the party so she can learn something about them.

Another form of deception is the misdirection or red herring; the player characters discover an apparent clue that leads to a false conclusion or throws them off the scent. For example, in Poe's classic story, *The Murders at Rue Morgue*, a witness reports that the criminal spoke German. In fact, the criminal, being an ape, didn't speak at all. The hero of the story eventually detected the red herring by noting that every witness thought the criminal was speaking a different language, but players in a heroic fantasy game might be completely fooled.

Deceptions don't often work unless the DM uses a variety of encounters. For example, if a campaign doesn't use many interaction encounters, the sample deceptions described here are probably not going to work because the player characters tend to be suspicious. Parties accustomed to fighting everything they meet would probably attack the peddler at the outset and expose the deception or make it irrelevant.

Deceptions also tend to fail when they are overused. Players who are constantly on the lookout for deceptions not only detect them more readily, but their distrust makes it harder to pick up legitimate clues and hints during the game. Frustration sets in quickly if the players conclude that every NPC is a liar and every clue is a red herring.

**Delay:** The encounter retards the party's progress and consumes their time without offering any real dangers or rewards. Anything that can grab the party's attention and hold it for a time can make an effective delay, even an empty room in a castle or dungeon complex. Delays might seem like a general waste of time and a source of player frustration at first glance, and that is just what they are when they're overused. However, they can be very effective if used sparingly and thoughtfully.

Delays are very useful for controlling magic in the campaign; they eat up game time and exhaust the durations of nonpermanent magical effects the party might be using. To keep players from becoming bored, it is best to introduce delays that consume lots of game time, but very little real time. For example, searching a 10' x 10' section of wall for a secret door requires a full turn (10 minutes) of game time; most other searches and close inspections proceed at similar rates. However, it only takes a few seconds of playing time to resolve the search.

Delays also are useful for keeping players on their toes. If everything the party encounters is valuable, dangerous, or significant to the plot, the players don't have to give much thought to their actions—going over everything they find with a fine-toothed comb is the prudent thing to do. If, however, most intriguing things the party finds turn out to be nothing special, the players quickly learn to use some judgment about how they use their game time.

Delays also serve to vary an adventure's pace. A few innocuous breaks in the action give players and their characters time to relax a bit. These pauses also tend to encourage role-playing by giving players opportunities to explore aspects of their characters that are

not directly linked to success or survival. Even the most ardent mineral collector, for example, isn't going to be terribly interested in the surrounding rocks if an army of 1,000 orcs is descending on his location.

**Dilemma:** The encounter forces the player characters to choose between two or more alternatives, both equally attractive or equally undesirable.

A dilemma can really get players' hearts pounding when they have to make a decision quickly and with minimal forethought. It is best if the potential rewards and consequences are immediately apparent—such as life or death for the PCs or an important NPC. For example, the player characters find themselves on a demiplane where their spells and magical items work erratically and sometimes misfire dangerously. While exploring, they are caught in a small room with a *sphere of annihilation* in pursuit. Do the PCs try to control the sphere (not always a safe task), exit through a magical portal to an unknown destination, or *teleport* out of danger (and risk a misfire)?

A moral dilemma can help shape the players' views of the campaign world and force them to examine their characters' deepest convictions and emotions. For example, consider what might happen if the party finds an orphaned drow child in the wilderness. As DM, you know if the child is born to be evil or if alignment is something that has to be nurtured over time; perhaps the child is naturally inclined to become chaotic evil but can learn to follow another alignment. What does the party do with the child? Abandon it? Adopt it? Kill it? The choice could spark a lively debate among characters of different alignments.

Note that high-level player characters might frequently be called upon to make determinations that fall within the gray areas of their experience. Right or wrong, the PCs' decisions could profoundly shape commoners' attitudes toward the world. Other powerful mortals and even the gods themselves also note the heroes' decisions and judge the PCs accordingly.

**Event:** The player characters witness something noteworthy occurring. Anything that happens more or less on its own, without direct involvement from the PCs or obvious involvement from the adventure's villain, can be considered an event: storms, celebrations, vast natural disasters, brawls between minor NPCs, etc. The PCs might be swept up in the event in spite of themselves, or they might be observers who can choose to stand aloof; however, it is best to avoid events where the player characters are forced to be passive observers.

Events are useful tools for advancing an adventure's plot. The DM can use them to provide clues and warnings to the PCs. For example, if the party has stumbled into an area where magic no longer works properly, a simple event such as an avalanche or blizzard might prompt them to employ a spell or magical item which fails, which in turn gives them fair warning that they must depend on their wits for the rest of the adventure.

Events are also useful for providing a little terror or excitement during an otherwise dull stretch in an adventure. For example, a party of high-level characters flying over a desert might believe they have an uneventful trip ahead of them until a killer sandstorm forces them to take shelter.

A swift stream of events can disguise a single crucial incident or interaction, leaving the PCs mired in a situation before they know it. For example, the party is attending a fair

when they witness a brawl. Cooler heads prevail and a singing contest, with the PCs as contestants or judges, gets started. The music prompts a few onlookers to begin dancing, and several comely locals offer to shake a leg with the PCs. Afterward, one of the locals spins a tall tale. Some time during the string of events, perhaps during the brawl or the dance, a pickpocket steals a crucial item from the party. The search for the culprit is on when the PCs finally notice the loss.

**Guardian:** The encounter features a creature or trap that must be dealt with before the party can proceed. Cerberus, the multi-headed dog that guards the underworld in Greek mythology, is the quintessential guardian. Sometimes bypassing or ignoring a guardian is the best way to deal with it.

To be effective against high-level player characters, guardians must have defenses powerful enough to withstand at least a few rounds of a major offensive and enough firepower to make players think twice about attacking in the first place. The ability to detect invisible or disguised intruders is very useful for guardians.

**Interaction:** This encounter turns on the ability of the party to have some sort of dialog with an NPC. The player characters might need to conduct a negotiation, ask directions, or otherwise establish communication. An interaction creates a good role-playing opportunity for the DM—who gets to play the NPC and might have an excellent chance to really ham it up—and tests players' communication skills.

Interactions are an excellent way to impart information that a party needs to continue with an adventure or solve a mystery. However, there is no reason why getting the necessary information has to be easy. At the very least, the player's should have to be shrewd enough to ask the right questions. More difficult interactions might require the player characters to bribe, intimidate, or trick the NPC.

Interactions often go awry if the player characters are inclined to be distrustful or to attack everything they meet. This is not necessarily a bad thing if the DM wants to break aggressive PCs of their bloodthirsty habits. The local wise woman, for example, might be a disagreeable old wizardess who has a sweet tooth and who knows that some nearby ruins are infested with olive slime creatures.

A gift of honey or some ripe fruit is enough to get the lady's information. Parties who fail to win her over must face the slime creatures unawares. Parties who kill her discover the old woman's 60-year-old journals, which mistakenly report that the slime creatures are normal zombies. Characters who wade into combat with the slime creatures expecting to encounter normal zombies are in for shock no matter how powerful they are.

**Obstacle:** This encounter features a barrier of some sort that the party must bypass or cross before they can proceed. Common obstacles include natural barriers such as chasms, mountains, rivers of molten lava, and the like. Passive wards and protective spells, such as *walls of force* can be considered obstacles.

Obstacles are not usually effective when high-level characters are involved, because they usually have access to enough spells and abilities to deal with them quickly. Obstacles, however, serve to use up a party's resources and are very effective when combined with a combat encounter. A mile-deep chasm might not pose much of a threat to a party of 15th-level characters all by itself, but it could prove quite a hassle if the far

side were occupied by a tribe of stone giants hiding behind cover while they hurl rocks at the PCs. A pair of beholders lurking in the chasm effectively negate magical means to cross the crevasse, though the first character who makes the attempt is likely to discover this the hard way.

**Puzzle:** This is a noncombat encounter that tests the players' mental skills in some fashion. Most puzzles involve logic, memory, or creativity. The riddle game included in J.R.R. Tolkien's novel, *The Hobbit*, represents one kind of puzzle encounter.

Puzzles are an excellent way to make players rely on themselves rather than on their characters' abilities. The best puzzles fit your game's atmosphere; word plays on pop music lyrics or Disney movie titles aren't a good approach to puzzle making unless you are playing the adventure for laughs.

You can add some tension to a puzzle encounter by combining it with a trap—the characters suffer damage or a magical effect if they give an incorrect response—or guardian—which attacks if the correct answer is not provided.

**Skirmish:** A short combat encounter (20–30 minutes of play time) is designed to consume time and inflict minor damage. Skirmishes are best used to break up dull stretches and to keep players on their toes.

Intelligent foes employ skirmishes to soften up the party and get a clearer picture of their abilities before committing themselves to a major combat encounter.

**Surprise:** This is typically a combat encounter that tests the party's ability to react quickly to an unanticipated situation. Surprises usually are difficult to avoid because the player characters don't know where or when they are going to occur.

Surprises should be used very sparingly; player frustration sets in quickly if the heroes are constantly getting ambushed. When planning a surprise encounter, consider a few things the player characters might do to uncover the surprise before they blunder into it. For example, if an ogre mage and its band of mercenary trolls await the PCs around a bend in a forest road, an alert party might spot the group's gargoyle scouts hiding in the trees and signaling to their comrades.

**Trap:** This is a noncombat encounter that employs a magical or mechanical device (or both) designed inflict damage or impede the party in some fashion.

When designing any trap, consider how the device is triggered, how potential victims might detect the trap before triggering it, and what parties can do to deactivate it. You should also consider what happens when an attempt to deactivate the trap fails.

When designing traps for high-level player characters, it is best to avoid devices that inflict large amounts of damage. Damage often can be ignored—an 18th-level fighter with 120 hit points often doesn't have to worry about suffering 20 or 30 points of damage from a trap. In any case, damage is usually easily healed if there is a priest or paladin in the party. Also, keep in mind that hit point totals can vary widely within an adventuring party. A trap that can inflict enough damage to make a high-level fighter or cleric take notice can be deadly if the party thief or mage stumbles into it.

Instead of dealing out damage in large doses, concentrate on special effects that hinder victims in some fashion. For example, a collapsing staircase that dumps the PCs

into individual, sealed chambers might cause great consternation and should force at least some characters to think hard before they can get free. A magical trap that turns the victim into a small elephant might resist the party's attempts to dispel the effect for quite some time. Meanwhile, the character suffers from a fear of rodents and must eat and drink prodigiously. Clever players might discover that the elephant's trunk is useful for wielding tools or weapons, but not for spellcasting.

## Linking Adventures

The best way to establish an epic flavor to your campaign is to create adventures that are related, one flowing from another.

Linked adventures give the impression of unseen forces at work at work in the campaign. They also give player characters chances to help determine their own fates as their accomplishments—or lack thereof—carry forward from one adventure to the next.

All that is required to link adventures together is an overall theme or extended plot that runs through all the adventures. A careful look at any set of adventures usually reveals several such themes or plots. Likewise, there are several different methods you can use to turn separate adventures into a series.

**Chained Adventures:** The easiest way to create a continuing series of adventures is to find ways to connect two or more of them. Chained adventures don't require continuing plots, just some kind of superficial relationship that can lead the player characters from one adventure to another. Usually, it is not important how or where the player characters enter the chain, as one adventure's outcome rarely impacts on another.

The links can be clues that point the group in the right direction, such as maps showing another adventure's location or statements from NPCs who have information to impart. A link between two adventures can be purely incidental. Perhaps the site of one adventure just happens to be close by or the group stumbles upon an adventure while traveling on another errand. Here's an example of how three otherwise unrelated adventures might be linked in a chain:

A fabled magical sword (perhaps a holy sword) lies in an extra-dimensional labyrinth filled with deadly traps, puzzles, and ever-vigilant guardians. The labyrinth can be entered only at certain times, and then only by heroes who know the secrets of the portal. If the PCs find their way in, they battle their way into the heart of the labyrinth using steel and reasoning to claim the sword.

The home of a semi-retired wizard has recently been burglarized. The thieves made a colossal mess, smashing and looting everything. Several valuable magical items have obviously been stolen, but the place is in such disarray that the wizard isn't exactly sure what has been taken and what is lost in the current mess. If the PCs investigate, they discover that a rival wizard employed a gang of dopplegangers to infiltrate the house and strip it. The rival took the magical items and the dopplegangers got the money and jewels.

Two noble families are conducting a feud in a remote mountain valley. Commoners who let themselves get involved often disappear, and even those who lie low often suffer due to the incessant raids the families conduct against each other. The situation flares into a

full-scale war when the PCs arrive in the valley, as each family concludes that the party has arrived to help the other side.

Each adventure can be superficially linked to the other two as follows:

The entrance to the labyrinth is not far from the town where the burglary took place. If the player characters enter town, they hear plenty of rumors and speculation about the crime. Even if they don't enter the town, groups of would-be detectives harass the party because they are suspicious strangers.

The sword is an intelligent weapon and expresses a desire to slay an evil creature living nearby. The creature is a vampire masquerading as the head of one of the warring families.

One of the items stolen from the wizard's home is a map of the area surrounding the town; the thieves took it because it radiated magic. When examined with a true seeing spell, the location of the labyrinth's entrance is revealed along with clues to opening the portal.

Among the papers scattered around the wizard's library are two sets of letters, one from each of the warring families. Both groups wish to purchase the magical map.

Members of one of the warring families tell the PCs about a legendary magical weapon whose appearance in town is reputed to signal the downfall of the opposing family.

A search of either family's headquarters reveals several copies of letters drafted to the wizard. Both families also have received letters reporting the map's theft.

An adventure chain has the advantage of allowing players considerable freedom of action. They can ignore the hooks that link the adventures together or follow them up as suits their fancy. The freedom goes a long way toward making the players feel as though they are the masters of their characters' fates. Because the adventure's plots are not intertwined in any serious fashion, the DM need not take steps to force the group back into the story line.

**Ripples in a Pond:** Every adventure changes the world in some fashion, even if the only change is a temporary reduction in the orc population. Sometimes, however, even a simple adventure can have far-reaching effects. Chapter One explored this concept in some detail.

This method uses the consequences that arise logically from one adventure as a springboard for further adventures. Often, the linked adventures occur in a specified order, but it is possible to create a set of adventures that can be played in any order. The latter task can be difficult, and it usually requires the DM to make alterations in the plot to account for what the party already has accomplished. The three adventures from the previous example might be linked in the following ripple sequence:

The player characters discover a clue to the sword's whereabouts. With help from an NPC wizard, they enter the labyrinth and recover the sword.

As part of the price for his help, the PCs have agreed to allow the wizard a chance to examine the blade. On the way to his home, however, they are ambushed and nearly lose the weapon. When they arrive at the wizard's home, they discover it has been burglarized.

The burglars are a group of dopplegangers hired by the vampire whose downfall the sword's reappearance is supposed to herald. False clues implicate the family opposing the vampire, and the PCs must determine the truth before the villains can be defeated.

A more complex ripple sequence might begin with any of the three adventures. For example, if the PCs recover the sword first, they draw quite a bit of attention to themselves. The wizard approaches them and offers to pay handsomely for a chance to examine the weapon.

Meanwhile, the two families are anxious to get their hands on the sword. One family would like to buy it or to convince the PCs to attack their rival with it. The other family wants to make sure the blade is not used against them under any circumstances. They might try to buy it, steal it, or exile the PCs to a distant world or another plane.

The wizard is impatient to examine the sword, but he waits until the party is finished with their other business. Nevertheless, the vampire's family is anxious to learn all it can about the sword and helps arrange the burglary at the wizard's home. If the PCs visit the wizard first, both families harass the wizard and the PCs while they try to unravel the mystery of the burglary.

**Interlocking Adventures:** It is possible for one or more adventures to take place entirely within the context of another, larger adventure. It also is possible for a single adventure to leave enough loose ends laying around that one or more subsequent adventures are required before they are all tied up. The three adventures from the previous examples might be interlocked as follows:

The player characters become embroiled in the feud, perhaps as mediators. In the process of defending themselves, they discover the legend of the sword.

The party seeks out the wizard to get more information about the weapon. Before they can learn anything, however, they must solve the mystery of the burglary. The crime might be related to the overall plot, or it might be incidental.

The party ventures into the labyrinth to recover sword. If they are successful, they can return and settle the feud.

**Multi-layered Adventures:** In this type of series, the adventures are arranged like the layers of an onion. When the player characters complete one adventure, they peel back a layer and reveal another, deeper layer. The party gets closer and closer to resolving a final, ultimate conflict as they continue to peel away layers. Usually, the final conflict's true nature is not obvious at the beginning, and the player characters might stumble across several hints and clues before they realize where their adventures are leading. The three adventures from the previous examples could be arranged in layers as follows:

The player characters learn about a series of daring raids and burglaries in which the criminals wreak havoc. Perhaps a home of one of the heroes is raided.

A particularly methodical wizard who is a burglary victim notes that a set of maps and commentary about a legendary sword are among the items taken from his home. If the PCs follow up the lead, they discover that the gang of dopplegangers responsible for the crimes have been turning over information about the sword to their mysterious employer. The PCs also encounter an NPC who also is seeking the sword, but is not implicated in the burglaries.

With the NPC's help, the heroes locate the labyrinth where the sword is hidden. After enduring the puzzles and traps that guard the sword, and several hit-and-run raids by mysterious attackers, the PCs recover the blade. There are several attempts to steal the weapon, maybe even one from the PCs' erstwhile ally.

Information gathered from captured foes—and from the sword itself—indicates that an ancient vampire fears the sword, which has remained hidden for centuries. The PCs and the vampire become locked in a deadly struggle that continues until the party destroys the vampire or gives up the blade.

**Revisited Adventures:** Some adventure sites offer potential for continuing play even after the player characters have resolved the original conflict. Two or three adventures from the previous examples might offer sites that can be used over and over again. The city where the wizard lives and its criminal underworld—with its den of dopplegangers—could generate many other adventures, especially if a player character rogue decides to operate the local thieves' guild. Likewise, the valley—with its simmering feud—could spawn additional adventures as the feud flares up from time to time. Perhaps the defeated family's vampire leader has hidden a few servitor vampires in the opposing family.

## Planning Combats

Nothing takes the joy out of a rousing adventure more quickly than an important combat in which the bad guys go down with a whimper rather than a snarl. All of the careful thought and brilliant inspiration used in creating an interesting plot is lost when the characters mow down the opposition without even raising a sweat. Like creating a good plot, there are proper ways to plan for a confrontation with high-level heroes.

Chapter One included suggestions for getting the most out of a foe by considering the creature's intelligence, maximizing its strengths, and minimizing its weaknesses. This section looks at some additional elements that you should consider when planning and conducting a battle.

How much combat planning you ought to do depends on two factors: the opposition's intelligence and how important the encounter is to your plot.

Plan less when dealing with unintelligent creatures. These creatures tend to react rather than to plan ahead. Quickly run through the five points outlined, noting obvious things, such as the terrain, the foe's general situation (hungry, fearful, etc.), and its major combat abilities.

Always carefully plan encounters with major foes, even fairly stupid ones—your plan

can take the foe's lack of intelligence into account. Pay attention to each point and carefully look ahead to make sure your villains don't make silly mistakes; for example, a vampire starting a melee combat over a rushing river or giants crawling on their hands and knees through corridors less than 10 feet high. As this chapter's first section pointed out, it is best to avoid giving your players gifts in the form of combat victories they haven't earned.

Likewise, if you're hoping for a special result from a combat, prepare accordingly. For example, if you intend to reveal information to the player characters via a prisoner, you should plan the battle so that it is likely that the player characters take prisoners. Perhaps a creature misinterprets its orders and is forced to surrender when it finds itself surrounded by the heroes.

A combat plan should consider the following elements: attack power, mobility, organization, information, and terrain.

**Attack Power:** The purpose of combat is to kill or incapacitate the opponent before he can escape or do the same thing to you. An effective combat plan finds a way to use whatever forms of attack are available in the most efficient manner.

It usually is best to concentrate whatever attacks are available against as few enemies as possible. Wounding an opponent has little effect in the AD&D game, because creatures generally function just as well when reduced to a fraction of their original hit points as they do when completely healthy. It is better to reduce the opponent's numbers quickly and in turn reduce the opponent's ability to counterattack. Note, however, that being under attack tends to interfere with spell casting. Neutralizing spellcasters by disrupting their spells is a great way to limit counterattacks, even if the spellcasters are only wounded. Also, don't overlook nonlethal attack forms, such as magical charms, wrestling, entanglement, disarming, and the like. These modes of attack often limit counterattacks more effectively than raw damage. The party's lead fighter might be a terror, but the character becomes considerably less terrifying when deprived of a weapon.

**Mobility:** The ability to move freely is an asset that is often under appreciated. Creatures that are free to move or make ranged attacks can concentrate their offensive power where they wish, provided they are more mobile than the enemy. Freedom of movement also allows for some tactical flexibility, especially when dealing with the unexpected or fleeing from a bad situation.

Superior mobility can bring all manner of advantages. Simply running around a slower opponent's front line and attacking a weak spot can have tremendous impact.

A foe does not necessarily have to be faster than the player characters to have superior mobility. If the heroes are attacked from two or three directions at once, the party is faced with staying put or risking leaving someone behind if they move. Spells such as the various walls, *slow, entangle,* and *transmute rock to mud* can hinder or even stop a party dead in its tracks. Spells such as *darkness, stinking cloud,* and *fog cloud* can disrupt and confuse a party at least temporarily.

Creatures do not willingly give up natural mobility advantages unless they are exceedingly stupid or have been cleverly tricked. A tribe of lizard men, for example, is probably not going to emerge from a river or swamp to attack player characters on a paved road. Likewise, a dragon is not going to make it's lair in a cavern too small to

allow it to fly.

Mobility is not always a function of an opponent's movement rate. As noted above, the ability to fire missiles is a great enhancement to mobility. Superior numbers also enhance mobility, especially when a small group—such as a party of adventurers—faces a single creature. The group is inherently more mobile than their lone opponent because the task of concentrating their attacks is already done for them (there is only one enemy to fight), and any single form of attack does not immobilize the whole group.

A lone creature facing an adventuring company is at a severe disadvantage unless it can stay out of the party's reach, isolate individual characters, or deliver attacks that affect all the characters at once. A monster engaged in melee with the party's lead fighter has very few movement options. The fighter's movement is restricted, too, but the rest of the characters are under no such limitations.

**Organization:** If a combat involves multiple foes, decide who is in charge and how the group works together. Even disorganized groups usually contain one individual that the rest of the group looks up to. Remember that you don't have to have legions of Einsteins to fight well, just one clever or experienced leader.

Groups without strong leaders tend to have difficulty working together, though they still can be effective in combat if the individuals are fairly bright and spirited. Coordinated actions usually give better results than individual actions. For example, pairs of creatures or small subgroups can watch each other's backs and divide up tasks such as guarding against flanking maneuvers and keeping the pressure on the foe's commanders, spellcasters, and missile users.

**Information:** This element of combat planning is the one DMs most frequently ignore or misuse. Opponents should fight based on what they know and what they can discover about the heroes' numbers, abilities, and plans.

Obviously, it is inappropriate for the DM to ignore what an opponent knows. It is equally inappropriate, however, to assume that every opponent knows as much about the player characters as the DM does. Note that attack is not a natural reaction to the unknown. An opponent who does not have any clear knowledge of the enemy is apt to retreat or negotiate.

Start by considering what the opponent can reasonably know about the party. If the opponent has never fought the player characters before and didn't notice them approaching, then he knows almost nothing about the party. The opponent might guess each PC's class by observing the characters and their equipment. A vampire, for example, might have a great attack plan, and if he is observant he might note any elves or half elves in the party and avoid directing his *charm* at those characters. He probably does not know which characters have received *negative plane protection* spells from the party cleric.

On the other hand, bad guys remember player character drills. Any opponent who has fought groups of adventurers has a basic idea about how parties generally act. An opponent who has seen the player characters fight—or who has survived a previous encounter with the heroes—is bound to have a very clear idea about how a party functions.

In any case, plans for a combat are not complete until you consider how the foe is

gathering information. Everyone except the supremely stupid—or supremely confident—keeps an eye out for trouble. The information-gathering effort need not be elaborate; foes who have no particular reason to expect a fight might simply observe things as they go about their business. More careful groups might employ scouts or divination spells. Anyone can pick up quite a bit of information just by questioning the locals. Note that the locals can include animals and plants if the right spells are available.

Don't overlook the possibility that a foe's efforts to gather information might reveal something about the foe to the player characters. If a vampire assumes bat form to observe a party, the player characters should have a chance to notice the bat, especially if it remains near the party for any appreciable amount of time. Likewise, *crystal balls* create magical sensors that creatures can detect.

Remember that information is only as good as the opponent's ability to assess it. A giant bird of prey might be able observe a party for a long time as it soars over an open plain, but its animal intelligence doesn't allow it to analyze what it sees very well. On the other hand, a high-level wizard or druid in bird form might deduce a great deal from a long look at a party.

It's also worth remembering that most careful groups also take pains to conceal information about themselves; after all, the PCs are going to be gathering information, too. For example, there's no reason why a band of villains has to look like an evil horde. They might choose to pose as merchants or pilgrims, which makes it harder for player characters to trace their movements by questioning creatures about who they have seen recently. Spells such as *invisibility* and *change self* can be quite effective in keeping player characters guessing about exactly what they're up against.

**Terrain:** Most foes try to make some use of the local terrain, even if all they do is hide behind trees. However, the lay of the land determines what is possible during a combat and what's not. A forest choked with thick undergrowth offers lots of cover and concealment, which generally makes it a good place for ambushes. A forest's trees and undergrowth also tends to restrict movement—especially mounted movement—and missile fire. Likewise, a group of 10 archers can't line up shoulder-to-shoulder and deliver a devastating volley if the battle is taking place in a five-foot-wide dungeon corridor.

Terrain is usually beyond the control of the participants, except that magic can alter terrain or appear to alter it. A *move earth* spell, for example, can allow a commander to create just about any battlefield layout desired. A *hallucinatory terrain* spell can prompt opponents to do foolish things, such as maneuvering to avoid a marsh that really isn't there or coming to a halt behind a pile of illusory boulders that appear to offer good cover.

Even without magic, creatures who are prepared for a battle can choose where to fight. The best possible defensive terrain offers the defenders cover while forcing the attacker to approach in the open, preferably to spend a long time exposed to attack before they can attack themselves. Castles are built the way they are to exploit this concept: The cleared area around the castle offers little or no cover. The castle's moat and walls keep the attackers outside where there is no cover, and the walls provide cover for the defenders.

Smart foes stay alert for opportunities that the terrain creates. The old trick of hiding

atop a cliff and rolling boulders down upon hapless travelers below is a good example of this type of tactic. Player actions often create less-obvious opportunities, however. For example, characters who decide to climb to a canyon's rim—to avoid having rocks dropped on them later—just might find themselves attacked while they literally hang on for dear life.

### World Hopping

A visit to a foreign land, long or short, is seldom routine. Dealing with strange customs, unfamiliar laws, and unusual foods can give even hardened travelers fits. Now imagine what it might be like to visit a place where the very underpinnings of reality are different from home. That's what world hopping is like.

Staging adventures on unfamiliar worlds is a great way to keep a high-level campaign fresh and challenging. Players become very attentive once they find they can take nothing for granted, and even fairly weak creatures can challenge the party when the PCs' spells and magical items begin to act in unanticipated ways. This section presents some quick guidelines for creating alternate worlds for your adventures. This section is by no means complete—the possibilities are limited only by your imagination.

## Types of Worlds

For purposes of this discussion, a world is any place in the multiverse with its own form of reality separate from the rest of the multiverse. A world can be as large as a universe or as small as a single room. Worlds in the current AD&D game fall into one of three different types:

**Plane:** A plane is an infinitely large space. A plane has no clear form or dimensions, though there are border areas where it meets other planes. As explained in Chapter 15 of the *Dungeon Master Guide*, there are three types of planes and two planes that defy categorization.

*Inner Planes* are places filled with the fundamental components of the multiverse. There are 18 inner planes. They are subdivided into elemental (basic matter), para-elemental (compound forms of matter), energy (positive and negative), and quasi-elemental (where planes of matter and energy meet). If there are any undiscovered inner planes, they likely exist between known planes.

*Outer Planes* are places where the powers (deities) reside. A certain philosophy holds sway on each outer plane, and that philosophy influences everything on the plane, including reality itself. There are 17 known outer planes, each corresponding to a major division in the AD&D alignment system. Sixteen of these planes form a great ring, with the plane of Concordant Opposition—the neutrality plane known as the Outlands—in the middle. New outer planes would probably form between two existing planes on the great ring or as additional "layers" on an existing plane.

*The Prime Material Plane* is where the base campaign and many similar worlds are located. There is a widespread misconception that there are multiple Prime Material Planes, sometimes referred to as Parallel Primes or Alternate Primes. In fact, there is only one Prime Material Plane. Within that plane, there are an infinite number of discrete worlds, each contained within a crystal sphere. A crystal sphere can contain a single planetary body, a whole solar system, or anything in between.

*The Astral* and *Ethereal Planes* act as highways between the other planes.

The Ethereal Plane connects the Prime Material with the Inner Planes. It resembles an infinite ocean whose "shores" lap against other planes. Curiously enough, ethereal travelers always find themselves moving toward the Inner Planes or their home world in the Prime Material. There is no known method of using the Ethereal Plane to travel from one Prime Material World to another.

The Astral Plane is an infinite, silvery void that connects the Prime Material Plane to the Outer Planes. Astral travel between Prime Material Worlds is possible.

Both the Astral and the Ethereal contain bits of solid matter in their depths. On the Astral, these form islands similar to asteroids floating in deep space where creatures make their homes. The Ethereal also contains islands, but they are called Demiplanes (see below) that exist as worlds in their own right.

For more information on the known planes, see the *Planescape*™ boxed set.

**A Pocket Dimension** is a discrete world attached to another world. These are usually very small, and most of their properties mirror those of the parent world. A Pocket Dimension can be created artificially.

**A Demiplane** is a discrete world floating in the depths of the Ethereal Plane. Like Pocket Dimensions, Demiplanes can be created artificially. Conditions on Demiplanes vary widely, and it is believed that large and well-populated Demiplanes can become full-fledged planes. The exact process for accomplishing this feat is not known to any mortal.

## Properties of Worlds

Each world has four different aspects that combine to define its own unique reality. These are chronology, magic, technology, and environment. Each aspect is rated on a scale ranging from 2 to 20. Ratings can be generated randomly by rolling 2d10. The lower the rating, the weaker the aspect is; ratings from 10–12 reflect conditions on typical AD&D campaign worlds. Though a rating of 10 is weaker than a rating of 12 the differences between the two are imperceptible to player characters. Ratings higher than 20 and lower than 2 are possible, but all known planes fall within these extremes.

A world's rating is usually fixed, but the ratings on some worlds shift slowly over time. These shifts are so gradual that the residents don't realize they are occurring. An abrupt shift—even for the better—brings cataclysmic change to a world.

## Chronological Aspect

Time flows at the same rate throughout the known multiverse. This section, however, deals with newly discovered worlds. Table 2 shows the rate of local time flow compared to that of the base campaign world. In worlds with ratings of 9 or less time flows more quickly than in the base campaign, allowing travelers to make extended visits and return home to find that almost no time has passed at all. In worlds with ratings of 13 or more time flows more slowly than in the base campaign, and travelers might return home to find their world greatly changed after even a short visit.

### Chronological Notes

Characters are governed by the local time no matter where they are or what world they call home. For example, characters who visit a C2 world and stay a year return home to find that less than a minute has gone by, but they are still a year older. Characters who visit a C18 world and stay two weeks return to find that 20 years have passed, even though they have aged only two weeks. Likewise, the durations of magical effects are governed by local time, a spell that lasts 10 rounds on a C11 world also lasts 10 rounds on a C20 or a C2 world.

There is no simple way to judge the local time flow—it always seems to be normal. Time is pervasive; even the interiors of closed extra-dimensional spaces (such as *portable holes*, *bags of holding*, and *rope trick* spells) experience local time. The shift from one time flow to another is imperceptible by itself, but clues are sometimes obvious—such as when a character steps through a portal at noon and steps out into a moonlit night.

## Magical Aspect

A world's magical rating determines many of its characteristics, including how much sway scientific laws have over reality. The higher the rating, the less relevant the laws of science are. Magic becomes more readily available as the magical rating rises, increasing the likelihood that fantastic creatures exist on the world. Psionics are also more common and work better on high-magic worlds. Table 3 shows relative levels of magical power; a rating of 2 indicates no magical power, a rating of 10–12 indicates the level of power in a typical AD&D campaign. The most magical of the known planes (the Abyss, the Outlands) have ratings of 17. No known plane has a rating of 18 or higher.

**Table 2:**
**Chronological Ratings**

| World Rating | Local Time | Base Campaign Time |
|---|---|---|
| 2 | 1 Week | = 1 Second |
| 3 | 1 Week | = 15 Seconds |
| 4 | 1 Week | = 1 Minute |
| 5 | 1 Week | = 10 Minutes |
| 6 | 1 Week | = 30 Minutes |
| 7 | 1 Week | = 1 Hour |
| 8 | 1 Week | = 6 Hours |
| 9 | 1 Week | = 1 Day |
| 10–12 | 1 Week | = 1 Week |
| 13 | 1 Week | = 1 Month |
| 14 | 1 Week | = 3 Months |
| 15 | 1 Week | = 6 Months |
| 16 | 1 Week | = 1 Year |
| 17 | 1 Week | = 5 Years |

| | | |
|---|---|---|
| 18 | 1 Week | = 10 Years |
| 19 | 1 Week | = 30 Years |
| 20 | 1 Week | = 100 Years |

**Table 3:**
**Magical Ratings**

| Rating | Magical Effects |
|---|---|
| 2 | No spell, spell-like ability, magical item, artifact, or psionic power functions, and travel into or out of the area is possible only through a pre-existing gate. Land creatures are not more than 10 feet tall, and there are no flying creatures. Demihuman and fantastic creatures do not exist. |
| 3 | Potions, wands, rings, and miscellaneous magic is ineffective, and from 6–9 schools of magic are modified in some way. Spell casting times and PSP requirements are quintupled, and 4th–10th level spells can't be cast. Land creatures are not more than 10 feet tall, and flight is limited to creatures less than six inches tall. There are no demihumans or fantastic creatures. |
| 4 | Potions, wands, and rings are ineffective and from 4–9 schools of magic are modified in some fashion. Spell casting times and PSP requirements quintupled; 5th–10th level spells impossible; land creatures are not more than 10 feet tall; flight is limited to creatures less than 1-foot-tall. There are no demihumans or fantastic creatures. |
| 5 | Potions and wands ineffective; 3–9 schools of magic modified. Spell casting times and PSP requirements are quintupled, and 6th–10th level spells can't be cast—native spellcasters are almost unknown. Land creatures are not more than 10 feet tall, and flight is limited to size T creatures (two feet tall or less). There are no demihumans or fantastic creatures. |
| 6 | Potions are ineffective and from 3–9 schools of magic are modified. Spell casting times and PSP requirements quadrupled, and 7th–10th level spells can't be cast. Native spellcasters are very rare and have supra-genius Intelligence. There are no land creatures more than 15 feet tall, no bipedal creatures more than 10 feet tall, and flight is limited to size S or smaller creatures. |
| 7 | Most spells, magical items, and psionics function normally, but 2–7 schools of magic are modified. Spell casting times and PSP requirements are tripled, and 8th–10th level spells cannot be cast. With long and difficult training, a few creatures of at least genius Intelligence can learn to cast spells. There are no land creatures more than 20 feet tall, no bipedal creatures more than 15 feet tall, and flight is limited to size M or smaller creatures. |
| 8 | Most spells, magical items, and psionics function normally, but 2–5 schools of magic are modified. Spell casting times and PSP requirements are doubled, and 9th–10th level spells can't be cast. With training, a few creatures of at least exceptional Intelligence can learn to cast spells. There are no land creatures more than 25 feet tall, no bipedal creatures more than 20 feet tall, and flight is limited to size L or smaller creatures. |
| 9 | Most spells, magical items, and psionics function normally, and only 1–4 schools of magic are modified. True Dweomers (10th-level spells) are not available, but creatures with at least average intelligence can learn to cast spells if properly trained. There are no |

land creatures more than 30 feet tall, no bipedal creatures more than 25 feet tall, and flight is limited to size H or smaller creatures.

10-12 Spells, magical items, and psionics function normally, and most creatures of at least average Intelligence can learn to cast spells with adequate training. There are no practical limits on the size of land or of flying creatures, and demihumans and fantastic creatures are fairly common.

13 Spells, magical items, and psionics function normally, and major races have minor spell-like abilities or psionic wild talents. Some individual spells are modified.

14 Most spells, magical items, and psionics function normally, and major races have minor and major spell-like abilities or multiple psionic powers. Some elemental spells and from 1–4 schools of magic are modified.

15 Most spells, magical items, and psionics function normally, and major races have minor, major, and extraordinary spell-like abilities or full psionic powers. Some elemental spells are modified. From 2–5 schools of magic are also modified with possibly catastrophic effects.

16 Same as above, except that from 2–7 schools of magic are modified with possibly catastrophic effects.

17 Same as above, except that from 3–9 schools of magic are modified with possibly catastrophic effects.

18 Same as above, except that most beings of at least average Intelligence have minor spellcasting abilities.

19 Same as above, except that beings of average Intelligence have minor spellcasting abilities, and those with at least high intelligence have major spellcasting abilities. Wizard characters do not need to study spellbooks.

20 Same as above, except that beings of average intelligence have major spellcasting abilities, and those with at least high Intelligence have extraordinary spellcasting abilities. Wizard characters do not need to study spellbooks, and no spellcaster needs to memorize spells.

## Magical Aspect Notes

Characters using magic or psionics are often at great risk until they learn the rules governing magic locally. Strongly magical worlds can be more dangerous than worlds where magic is weak.

**Spell Casting:** Any spellcaster can attempt spells on worlds rated M3 or higher, but he is limited to what is possible locally or what is possible on their home worlds, whichever is *less*. For example, characters from M10–12 worlds must study their spellbooks even on M20 worlds, where the natives have no such restrictions. Characters from an M19 world visiting a M10–12 world cannot regain spells unless they return to their home world or acquire spellbooks. No character can cast a 9th-level spell on a world rated M8 or lower.

Low magic worlds impose a multiplier (x2 to x5) on casting times. Most casting times are given as simple numbers that are added to the caster's initiative roll (see *Player's Handbook*, Appendix 2). If the adjusted casting time is 10 or more, the spell requires one

or more full rounds to cast. A casting time of 10 means the spell is completed at the end of the round when it is begun. A casting time of 20 means the spell is completed at the end of the second round after it has begun, and so on. If the adjusted casting time is not an even multiple of 10, subtract the nearest multiple of 10 from the adjusted casting time. The spell requires that many full rounds of casting, and is completed on the next succeeding round with an initiative modifier equal to the remainder. For example, a *fireball* spell (which has a normal casting time of 3) has an adjusted casting time of 12 on an M6 world. The spell requires one full round and is completed during the second round with an initiative modifier of 2.

Worlds rated M8 and lower restrict the levels of spells available. When a spell level becomes impossible, no spell of that level can be cast. Magical items and stored spells are an exception (see below).

Spells are modified on some worlds. Modifications can apply to individual spells, entire schools of spells, or classes of elemental spells. Possible modifications include:

*Enhanced:* The spell or school functions as though the caster were one level higher than he actually is. Spells are never enhanced on worlds rated M9 or lower.

*Diminished:* The spell or school functions as though the caster were one level lower than he actually is.

*Nullified:* The spell or school does not function at all. This is a fairly common modification on worlds rated M9 or lower. It is rare on Prime Material Worlds rated M10 or higher, but it often occurs on even highly magical outer planes, demiplanes, and pocket dimensions.

*Altered:* The spell or school of spells functions differently on this world. Changes can be superficial, minor, or catastrophic.

Superficial alterations usually change a spell's form, but not the way it works. For example, *fireballs* might create scalding steam or intense light on some planes.

Minor alterations are more spectacular and potentially dangerous but do not change the way the spell works. For example, a *clairaudience* spell might cause the caster's ears to grow very large and sensitive, causing the caster to suffer a saving throw penalty vs. sound-based attacks (harpy songs, *shout* spells, etc.) until the spell ends.

Catastrophic alterations cause the spell to go completely awry, and their effects are totally unpredictable. Conjured or summoned creatures might go berserk, a *meteor swarm* might center itself on the caster, or a *death spell* might target other player characters or their henchmen.

In many cases, native spellcasters are not subject to the alterations because their magic is naturally compatible or because they take special precautions. Player characters might learn to use the latter.

It is possible for the same alteration to affect several types of spells in the same way. For example, on Limbo, an outer plane of pure chaos, a spellcaster must pass an Intelligence check or any spell attempted is negated, a catastrophic alteration that affects all types of spells.

Any change to a spell or school of spells should reflect some local characteristic. For example, an *unseen servant* spell cast on an M13 world that also has a high technological rating might suffer a minor alteration and create a visible creature with a mass of robot-like arms (in keeping with the world's technological nature).

Priests depend on their deities for their spells and suffer some extra difficulties when leaving their home worlds. Any priest spell is subject to whatever local modifications apply to the spell's school. In addition, a priest's ability to cast spells depends on his position in the multiverse relative to his deity.

Priest spells work best when the caster is on the plane where his deity resides because the deity has undisputed influence over priest magic on his own plane. Deities that keep multiple residences make things a lot easier for their priests. When priests go traveling through the multiverse, however, they enter realms where the interests of several deities might conflict. One of four things happen to a priest's spells when the character enters a new world:

On an *open* world, the priest loses caster levels according to the distance to the deity's home plane (see page 49). All the Outer Planes are open.

On a *closed* world, the priest can use any spell he has memorized but cannot regain spells higher than 2nd level. Many Prime Material Worlds, Pocket Dimensions, and Demiplanes are closed.

On a *restricted* world, the priest loses all spells. Restricted worlds are very rare.

On an unrestricted world, all priests function at full power. The Astral, Ethereal, and all known Inner planes are unrestricted, as are many Prime Material worlds and Demiplanes.

By general divine agreement, priests on open worlds lose one level of spell casting ability for every plane they are removed from their deity's home plane. For example, a 10th-level priest one plane from his deity's plane can cast spells only as a 9th-level priest, although he still functions as a 10th-level character in every other way.

Figuring the distance between a priest and his deity can be a little tricky, because priest spells use different rules for counting depending on the priest's location. A priest whose deity resides on an Inner Plane is four planes removed when he visits an Outer Plane (Inner Plane to Ethereal to Prime to Astral to Outer Plane). Priests on the Outer Planes, however, must trace the path to their deity along the great ring (see below), but only planes between the priest and deity's home plane count.

For example, if a priest whose deity resides on Mount Celestia visits The Abyss, the character loses seven levels of spellcasting ability. This effect has nothing to do with the properties of the planes themselves, it arises from a mutual agreement that prevents the entire multiverse from erupting into an interplanar war.

There are numerous divine agreements of a more limited nature that govern specific locations on the planes. The Prime Material Plane is subject to many such agreements. Each Prime Material world is the focus of one or more deities; these deities are allowed to treat the world as if it were home (at least insofar as granting spells is concerned). This

gives any priest who worships these deities full powers on that world, though outsiders might find the world closed or restricted.

Demiplanes also are notorious for operating under their own rules, though most of them are either closed or unrestricted.

A priest's granted abilities generally function at full power by general divine agreement, but local conditions prevail, especially for spell-like granted abilities. Calling down a *flame strike* just doesn't work on the Plane of Elemental Water.

Note that divine agreement can circumvent a world's magical rating. If a deity wants to grant priests a full range of spells, then that's what happens, even if magical items, psionics, and wizards spells are weak. Such worlds are extremely rare, but possible.

Intelligent creatures native to high-magic worlds have natural spellcasting abilities as spellcasters of the indicated level:

*Minor Spellcasting:* 1st–3rd

*Major Spellcasting:* 4th–7th

*Extraordinary Spellcasting:* 8th–11th

Natural spellcasting abilities are retained if the creature visits worlds with lower magical ratings, but casting times are still extended and high-level spells still become unavailable as shown on Table 3. Natural spellcasting abilities are in addition to any abilities the creature has due to class and level and can be freely combined with other class abilities. For example, a fighter from an M20 world could cast natural spells even in metal armor; a wizard from the same world is still restricted from wearing armor but might enjoy extra wizard spells or have the ability to cast priest spells.

On worlds rated M19 or higher, wizards don't require spellbooks. After a good night's sleep, spellcasters can meditate and acquire any spell of a level normally available to them, just as priests do.

On worlds rated M20, wizards and priests do not require study time at all. If they get a good night's sleep, they can call their spells to mind as needed, though they are still limited to the number of spells they can employ each day. Casting time and required components for spells remain unchanged. For example, an 11th-level wizard from an M20 world could call a *lightning bolt* to mind if he wished, but not if he had already cast four 3rd-level spells that day. The wizard would also need to have the proper material components on hand.

**Psionics:** Psionicists generally suffer less than spellcasters when traveling between worlds. Psionics depend on the character's personal energies, which the character carries with him wherever he goes. On high-magic worlds (M13 or greater), psionics are unaffected, though some worlds—such as the Demiplane of Ravenloft—have quirks that affect even psionics. On low-magic worlds (M9 or less), psionics work normally, but PSP costs increase because more personal energy is required to manifest a particular effect.

Increased PSP requirements apply to both initiating and maintaining powers. If a psionicist does not have enough PSPs to pay the local cost for a power, he cannot use that power. Local conditions only increase the PSP cost, never the damage dice, duration, range or any other factor associated with a PSP expenditure. In other words, increased psionic cost is never an advantage for the character using the power.

A major race dominates the world in the same fashion that humans and demihumans dominate standard campaign worlds. The tanar'ri of the Abyss and the githyanki of the Astral Plane are major races in their home worlds. Members of major races native to high-magic worlds always have one or more spell-like abilities, as follows:

*Minor abilities:* Similar to 1st–2nd level spells, each of these abilities is usable 1–3 times a day. They function on worlds rated M7 or higher.

*Major abilities:* Similar to 3rd–5th level spells, each ability is usable 1–3 times a day. The creature also has 4–6 minor abilities each usable once a turn or once an hour. The abilities function on worlds rated M8 or higher.

*Extraordinary abilities:* Similar to 6–7th level spells, each is usable once a day. The creature also has 6–10 minor abilities usable at will and 4–6 major abilities usable once a turn or once an hour. The abilities function on worlds rated M9 or higher.

Spell-like abilities are subject to whatever magical modifications prevail locally, except that natives always ignore any detrimental effects their home world might have on their abilities.

**Magical Items:** Because they are portable containers for magical power, enchanted items can often function in low-magic worlds where the spell effects they duplicate cannot be cast. Otherwise, magical items are subject to the same limitations and modifications as spells. For example, a *staff of the magi* can produce a *wall of fire* effect, even on M3 worlds where 4th-level spells are impossible. However, the staff cannot produce a *wall of fire* on a world where evocation spells are nullified or on a world where fire spells don't work.

If a school of spells is modified on a world, all magical items that duplicate or simulate effects from that school are affected as well. For example, if conjuration/summoning spells are catastrophically altered on a world, items such as *Bucknard's everfull purse* and a *bag of tricks* can be dangerous to use.

Magical weapons, armor, and protective devices, such as *rings of protection* and *bracers of defense*, are attuned to the world where they were made. They lose one plus per plane removed from home, but remember that all Prime Material worlds are on the same plane. The Astral and Ethereal planes are one plane removed from the Prime Material. The Inner and Outer Planes are two planes removed from the Prime Material. Demiplanes are part of the Ethereal Plane and Pocket Dimensions are part of the plane to which they are attached. The maximum distance between planes is four (Inner Plane to Ethereal to Prime Material to Astral to Outer Plane). For example, a *cloak of protection +3* made on a Prime Material world functions normally everywhere on the Prime Material Plane. The cloak's bonus falls to +2 in the Astral or Ethereal planes, and falls to +1 on any Outer or Inner plane. Unlike priest spells, magical items always trace the shortest possible path to their home planes.

Magical items that become inert because of the local magical rating or because of the distance between planes cannot produce any magical effects but still function as normal items—an inert suit of magical armor is still armor. The items continue to have a magical aura that can be discerned with a *detect magic* or similar spell, and they function normally again once brought to a world where conditions are more favorable.

**Creatures:** A world's magical factor determines what kinds of fantastic creatures can be found within it, as noted on Table 3. The local magical factor can make a world untenable for some visitors.

Humans, normal animals, and other non-fantastic creatures are not directly affected by the local magical rating.

Other creatures are dependent on their home world's magical nature and can suffer from deprivation when visiting low-magic worlds.

*Demihumans*, such as elves, gnomes, dwarves, orcs, ogres, and similar humanoid creatures, must save vs. death magic immediately when entering worlds rated M5 or less, failure results in death. Even if the saving throw succeeds, the creature loses one hit point per hit die—but each hit die still gives the creature a minimum of one point—and suffers a –1 penalty on all attacks, saving throws, and ability score checks. These penalties increase an additional point for every magical rating below 5, to a maximum penalty of –4 on an M2 world.

*Fantastic creatures*, such as centaurs, dragons, chimeras, pixies, tanar'ri and others, have similar penalties beginning at M6 and increasing to a maximum of –5 on M2 worlds.

## Technological Aspect

A world's technological rating determines its general level of cultural development, scholarship, and practical application of knowledge and invention. The lower a world's technological rating, the less obvious the trappings of civilization are. A rating of 2 indicates no technology at all. A rating of 10–12 indicates a medieval technology common to most AD&D campaigns. Ratings of 13 or higher indicate worlds that are progressively more urban, institutional, and mechanized. It is entirely possible for a world to have both a high magical rating and a high technological rating. On such worlds, magical devices replace machines.

**Table 4:**
## Technological Ratings

| Rating | Elements of Civilization |
|---|---|
| 2 | Tools are unknown; fire has not been harnessed. |
| 3 | Simple stone tools and weapons; campfires. |
| 4 | Complex stone tools, some soft metal tools and weapons (copper); domesticated animals; simple agriculture; ovens; pottery. |
| 5 | Soft metal tools and weapons (copper and bronze); arithmetic; complex agriculture and irrigation; hieroglyphic writing; boats; cities; sundials and water clocks; coins. |
| 6 | Hard metal tools and weapons (iron); small ships; alphabetic writing; small |

land vehicles; simple locks; siege machines.

| | |
|---|---|
| 7 | Water mills; furnaces; cast iron; large oared ships; advanced mathematics and philosophy. |
| 8 | Civil engineering; roads; blown glass; wagons; medicine. |
| 9 | Compass; windmills; universities; surgery. |
| 10–12 | Steel tools and weapons; coal mining; trade and craft guilds; small, slow sailing ships, feudal governments; extensive trade. |
| 13 | Cannons; ocean-going sailing ships; mechanical clocks; national governments. |
| 14 | Firearms; printing; intercontinental trade. |
| 15 | Steam engines; blast furnaces; mechanical calculating machines. |
| 16 | Internal combustion engines; light aircraft; steamships; railroads; labor unions. |
| 17 | Nuclear power; civil and military aircraft; electronic computers. |
| 18 | Fusion power; commercial spacecraft; laser weapons; genetic engineering; intercontinental governments. |
| 19 | Sentient robots and computers; solar power; portable nuclear power. |
| 20 | Faster-than-light space travel; matter transmission; matter replication; interplanetary governments. |

## Technological Notes

Sample items appear on the table when they become affordable or are in common use. Some items may be present, but very rare, on worlds with technological ratings too low to support their widespread use. For example, some brilliant thinker might be busy inventing algebra on a T5 world, but she might be the only one who understands it. Likewise, items on the table are not necessarily household items. For example, not everyone on a T17 world owns a jet airliner, but they are common enough to be in general use.

Technological devices cannot be carried freely between worlds. Devices from low-technology worlds function normally when carried to worlds with higher technology ratings. Devices carried from high-technology worlds to low-technology worlds do not operate if they have moving parts, electronic circuitry, or depend on chemical reactions. Even simple devices suffer somewhat. For example, a flashlight (T16) carried to a T8 world becomes inert. A stainless steel hand ax (also T16) carried to a T8 world still functions as an ax, but it loses its extra hardness and resistance to rust. A club (T2) remains a club no matter where it is.

Sufficiently advanced technology, however, works just like magic. If an item's technological rating exceeds the local technology rating it still works if it also exceeds the local magical rating by at least five. For example, steam engines require a local technology rating of T15 or higher or a magical rating of M10 or lower. A steam engine would not work on a world with a magical rating of M11 or more *and* a technological rating of T14 or less.

## Ecological Aspect

A world's ecological rating determines how benign or hostile the overall environment is as well as the similarities of landscape, flora, and fauna as compared to the base

campaign. A rating of 2 indicates a completely hostile environment while an E20 world represents a paradise. A rating of 10–12 indicates a generally earth-like environment that may contain hazardous extremes, such as deserts, ocean depths, low air pressure at high altitude, etc.

**Ecological Notes**

Worlds rated E6 or less inflict one of more of the effects (DM's choice) from the table below upon visitors from the base campaign. The type of effect should reflect the nature of the environment. For example, one world's acidic atmosphere might inflict damage and another world's polluted air might reduce Constitution.

| **Condition** | **Severe** | **Hostile** | **Deadly** |
|---|---|---|---|
| Constitution Loss | 1d6/Day | 1d6/Hour | 1d6/Round |
| Damage | 2d4/Day | 2d4/Hour | 2d4/Round |
| Poison Save* | 1/Day | 1/Hour | 1/Round |

* The saving throw must be attempted at the end of each exposure period; failure results in immediate death.

**Severe Conditions:** The environment poses a danger if exposure lasts too long. The intensity is similar to a desert or polar ice cap. Mundane precautions—drinking extra water, wearing a heavy coat—can negate or reduce the damage.

**Hostile Conditions:** The environment poses an immediate threat to normal humans. The intensity is similar to immersion in arctic water or exposure to volcanic gases. Mundane precautions might reduce the effects to severe or be entirely ineffective. Minor protective magic, such as an *endure cold/heat* spell, *ring of fire resistance*, or *ring of warmth*, negates the effects.

**Deadly Conditions:** The environment can kill normal humans within minutes. Intensity is similar to the surface of the moon or the interior of a volcano. Mundane precautions are ineffective, and some magical items or spells might prove too weak to provide effective protection. The deadly effects listed on the table are the minimums, and they can be much greater if conditions are particularly intense. For example, the flames on the Plane of Elemental Fire require unprotected creatures to save vs. breath weapon or die immediately. A successful save still inflicts 5d10 points of damage each round.

Worlds rated E18 or higher seem like paradises to visitors from worlds rated E12 or less. At the DM's option, certain actions can be perilous on such worlds. For example, characters who go to sleep on such worlds may slumber until attacked or awakened. Smelling a flower might produce a state of euphoria similar to a *confusion* spell, although random actions tend to be non-violent; if the dice roll indicates an attack the affected character sings and dances, perhaps urging other nearby creatures to join in.

Natives of worlds rated E16 or higher generally cannot tolerate conditions on less benign worlds. They suffer the effects from severe conditions on worlds rated five less than their home worlds, hostile penalties on worlds rated six less, and deadly penalties on

worlds rated seven or more less.

**Table 5:**
## Ecological Ratings

| Rating | Ecological Elements |
|---|---|
| 2 | The ecology is wildly different from the base campaign in almost every way; the environment is deadly (poisonous, airless, acidic, etc.). Living creatures, if they exist at all, are barely recognizable as such. |
| 3 | The ecology is different from the base campaign in most ways; the environment is hostile (very cold, waterless, flooded with x-rays, etc.). Living creatures have completely alien forms. |
| 4 | The ecology is similar to the base campaign. The environment is fairly livable, but some vital element is absent or incompatible. The PCs cannot survive over the long term without a large stock of supplies from their home world or magical aid (can't eat the food, water makes PCs drunk, etc.). Overall conditions may be hostile, such as boiling daytime temperatures, subzero nighttime temperatures, acid rain, etc. One or more intelligent races resemble some nonhumanoid or monstrous species (insects, serpents, fungi, etc.). |
| 5 | The ecology is similar to the base campaign. The environment is livable, but some vital element is absent or incompatible. The PCs cannot survive over the long term without a large stock of supplies from their home world or magical aid (can't eat the food, water makes PCs drunk, etc.). Overall conditions may be severe, such as a global desert, ice age, endless rain, etc. One or more intelligent races resemble some nonhumanoid or monstrous species (insects, felines, fungi, etc.). |
| 6 | The ecology is similar to the base campaign. The environment is livable, but some important element is absent or incompatible. The PCs may find the conditions inconvenient, but their long-term survival is not in jeopardy (little or no metal, thin atmosphere, sunless sky, etc.). Overall conditions may be severe, such as a global desert, ice age, endless rain, etc. One or more intelligent races resembles some nonhumanoid or monstrous species (insects, felines, dragons, etc.). |
| 7 | Ecology is similar to the base campaign. Some familiar races and species are present, though they have slightly different appearances and abilities. Races and species entirely unknown in the base campaign are present. At least one intelligent race resembles some nonhumanoid species (lizards, felines, avians, etc.). |
| 8 | Ecology is very similar to the base campaign, and the environment is generally benign. Many familiar races and species are present, though they have slightly different appearances and abilities. Races and species entirely unknown in the base campaign are present. |
| 9 | Ecology is very similar to the base campaign. Most familiar races and species are present, though some may have slightly different appearances or abilities. |
| 10–12 | Ecology, environment, and inhabitants are almost identical to the base campaign. |

13 Ecology and environment is almost identical to the base campaign. All major races and species are present, but the world is ruled by elves, gnomes, dragons, or other race that is not dominant in the base campaign.

14 Ecology and environment is almost identical to the base campaign. All major races and species are present, but not all races have the same level of Intelligence and culture as they do in the base campaign (humans with only animal intelligence, talking horses, ogre artists, etc.).

15 Ecology and environment are almost identical to the base campaign. All major races and species from the base campaign are present, but some general characteristic is vastly different worldwide (everything is giant-sized, colors are reversed, world is flat, etc.).

16 Ecology is very similar to the base campaign, and the environment is generally favorable (completely tropical, rains according to a predictable schedule, most plants edible, etc.). Most races and species from the base campaign are present, but local species tend to be exotic, such as flightless giant parrots, feathered snakes with iridescent plumage, or birds who sing highly musical songs.

17 The ecology is similar to the base campaign, and the environment is favorable (tropical with temperate nights, never rains, all plants edible, etc.). At least one intelligent race resembles some nonhumanoid species, such as elves that look like felines.

18 The ecology is slightly similar to the base campaign, and the environment is favorable (drinking the local water provides nourishment, sleeping is not necessary, equipment grows on trees, etc.). One or more intelligent races resemble some nonhumanoid or monstrous species (insects, serpents, fungi, etc.).

19 The ecology is different from the base campaign in most ways, and the environment is very favorable (constant temperature, breathing supplies nourishment, sunlight heals wounds, etc.). Living creatures have completely alien forms.

20 The ecology is wildly different from the base campaign in almost every way, and the environment is completely favorable (eating, sleeping, and drinking unnecessary). Living creatures exist, but are barely recognizable (pure energy, rocklike, microscopic).

## Quirks

In addition to the four aspects—chronological, magical, technological, and environmental—some worlds have additional properties that help make them unique and unpredictable. These properties—quirks—are not easily categorized. Quirks can be part of a world's essential makeup, completely serendipitous, or temporarily imposed from outside. In the latter two cases, the player characters might be able to change them. The local rules governing priest spells described on page 49 can be considered essential quirks. A few known quirks are listed below:

The world is infused with some overwhelming force or energy that twists everything,

including magic and psionic abilities. For example, the Demiplane of Ravenloft is infused with evil. No spell, granted ability, or psionic power can distinguish the alignment of any creature or object on Ravenloft, and many magical effects and psionic powers are corrupted.

Other worlds might be infused with good, light, magic, electricity, or anything else that can be detected or manipulated under the AD&D game rules.

If this quirk exists on a Prime Material world, it's probably a temporary effect that can be removed if the source is destroyed. Otherwise, it cannot be altered or removed except by destroying the entire world.

A particular type of material is difficult or impossible to magically conjure or duplicate on the world. For example metal is very rare on Athas, the world of the Dark Sun™ setting. Metal cannot be permanently created on Athas, and the normally permanent *wall of iron* spell quickly falls to pieces.

Spells that have been named after their creators (such as *Melf's minute meteors*) are unknown and unavailable unless brought in from outside or researched from scratch.

Leaders of the world's dominant race are able to detect and immediately retaliate against magical or psionic attacks directed against members of the race. This quirk is possible only on worlds rated M14 or higher. Retaliation can take whatever form the DM feels is appropriate: a simple spell turning effect, one large venomous insect attacks the offender for every point of damage inflicted on the target, a random spell is directed at the offender, etc.

Magical items brought into the world are not affected by the distance to their home planes but are subject to other local effects. Such worlds usually are unrestricted (see page 49) and have a magical rating of 13 or higher.

The world traps visitors. Exit is possible only through pre-existing gates. This quirk is possible only in Demiplanes and Pocket Dimensions.

The world and some or all of its residents are analogs to beings in the base campaign. If the two world's ratings are generally similar, analogous beings from the two worlds are virtual twins, having appearances, occupations, skills, and alignments similar to their twins'. The more the two world's aspects diverge, the more dissimilar the analogs are.

Worlds that contain player character analogs present all sorts of difficulties and opportunities for the PCs:

**Same Book, Different Cover:** Analogs have completely different appearances, but identical mannerisms and similar histories. How long does it take the group to realize that the arrogant lizard man they are dealing with is just another version of a PC wizard?

**Don't Judge a Book by its Cover:** Analogs look and act pretty much like their counterparts, but they have different dispositions and skills. Perhaps the player character analogs on this world are notorious villains or perhaps the PCs' chief rival is a great and revered hero here.

**Déjá Vu:** The world might contain analogs whose counterparts have died in the base

campaign, both foes and allies. Also, the current situation on this world might mirror an adventure the PCs have already completed, but the villains have made different plans this time.

The world parallels the base campaign and is actually a version of the base campaign's past or future.

Some mundane item from the base campaign is the focus for power on this world. For example, powdered dragon horn explodes like gunpowder, gold jewelry grants a spell-like power, etc.

The world is isolated from other dimensions. Extradimensional spaces, such as those created by *portable holes*, *rope trick* spells, and *bags of holding*, cannot be opened.

## Monsters

An AD&D campaign is not complete without hordes of monsters to battle. No other foe is as useful for giving player characters violent and implacable foes whose savage and often alien natures make their complete and utter defeat a necessity. Monstrous foes are good for keeping characters guessing about exactly what they're up against, and monsters come pre-equipped with arrays of natural weaponry that the PCs cannot carry off with them after a battle.

High-level characters can easily defeat most standard monsters, because the monsters usually have been designed with weaker characters in mind. The **Planning Combats** section in this chapter and the notes on getting the most out of a foe in Chapter 1 can help make sure PCs treat monsters with respect, but even the cleverest planning can come to nothing if the characters can obliterate every enemy as soon as blows and spells are exchanged in an encounter.

A high-level campaign shouldn't be so overrun with super monsters that low-level characters and commoners have no chance to survive, but sometimes it is helpful to give the monsters a party meets a little bit of an edge. Perhaps you have introduced an unexplored continent or plane where life is hard and everything is a little tougher than usual. Or perhaps you simply need bigger, nastier version of a standard monster to lead a band of lesser creatures.

There might also be times when you wish to introduce a monster that is a little *weaker* than a typical specimen. Just how nasty are the baby bulettes in that nest (and how much of a fight can they put up before mom arrives)? The sections below offer a few methods for doing so without going to the drawing board and inventing a host of brand new creatures.

## Altering Monsters the Easy Way

Some monsters, like some people, are just a little bigger, stronger, or smarter than most. Other creatures might be smaller, weaker, or dumber. You can create these creatures fairly quickly by applying a modifier to a creature's basic statistics, as follows:

**Modifiers:** To make a monster weaker, apply a –1, –2, or –3 to its key statistics (see below). To make a monster stronger, apply a +1, +2, or +3. Once you start altering a

monster, use the same modifier throughout the process.

**Hit Points:** Weaker monsters subtract the modifier from each hit die, but the creature always receives at least one hit point from each hit die. Stronger creatures add the bonus to each hit die.

**THAC0:** Weaker creatures add the modifier to their THAC0 numbers—not attack rolls—while stronger creatures subtract the modifier from their THAC0.

**Saving Throws:** Weaker creatures add the modifier to their base saving throws, but no saving throw can be increased above 20. Stronger creatures subtract the modifier from their saving throw numbers, but no saving throw can be reduced below 3.

**Damage Dice:** Weaker monsters subtract the modifier from each damage die, but the creature inflicts at least one point of damage with each die. Stronger creatures add the bonus to each damage die.

**Armor Class:** Weaker creatures add the modifier to their Armor Class values. Stronger creatures subtract the modifier from their Armor Class values.

**XP Value:** Weaker creatures subtract the modifier from their adjusted hit dice (see *Dungeon Master Guide*, Chapter 8). No creature can have a value lower than 1–1. Stronger creatures add the modifier to their adjusted hit dice.

**Other Characteristics:** A creature's movement rate, Intelligence, alignment, morale, and other statistics remain unchanged under this system, A modifier of +3 can increase the creature's size to the next higher class. For example, a large creature might become a huge creature, but that's optional. Likewise, a modifier of –3 can reduce a creature's size class one step.

**An Example**

A group of scrags (freshwater trolls) have taken up residence in a river near an important ford. The bulk of the colony has normal statistics, but the DM decides that the chief/shaman and her two mates have extraordinary statistics and also decides to throw in an immature scrag. The chief is very powerful (+3), her two mates a little less so (+2), and the youth is just a baby (–3).

The modified statistics (with the original in parentheses) look like this:

**Scrag Chief:** AC 0 (3); MV 3, Sw 12; HD 5+20 (5+5, +3 per hit die); hp 51; THAC0 12 (15); #AT 3; Dmg* 1d4+4/1d4+4/3d4+9 (+3 per die); SZ L (the DM decides that she is about 12 feet tall); ML Elite (14); Int Low (7); AL CE; XP 2,000 (base 650).
**Chief's Mates:** AC 1; MV 3, Sw 12; HD 5+15; hp 35 each; THAC0 13; #AT 3; Dmg* 1d4+3/1d4+3/ 3d4+6; SZ L; ML Elite (14); Int Low (7); AL CE; XP 1,400 each.
**Baby:** AC 6; MV 3, Sw 12; HD 5–10 ; hp 13; THAC0 18; #AT 3; Dmg* 1d4–2/1d4–2/3; SZ M (the DM decides the baby is about 4 feet tall); ML Elite (14); Int Low (7); AL CE; XP 175.

* The scrag racial modifier to claw damage is added after the adjustments to the dice. In the case of the baby, the +1 bonus offsets part of the –3 penalty to the creature's claw attacks, but the –3 modifier to each die of bite damage reduces each die to its minimum value of 1.

Even with their enhanced statistics, the chief and her mates wouldn't last long in a direct fight with high-level characters, but it helps to explain why characters of lesser stature haven't dealt with the scrag colony. Furthermore, the DM plans to make use of the scrags' superior mobility in the water when the PCs encounter them, and the extra damage the trio of more powerful scrags can inflict should prove to be an unpleasant surprise.

**Table 6:**
Monster Strength Scores

| Score | T | S | M | L | H | G |
|---|---|---|---|---|---|---|
| 3 | 2 | 4 | 6 | 13 | 15 | 18 |
| 4 | 3 | 5 | 7 | 14 | 17 | 18/01 |

## Ability Scores for Monsters

Another way to modify standard monsters is to assign ability scores to them. This method is more time consuming than applying a simple modifier to make the monster bigger or stronger, but it allows for greater variety. Generating ability scores for a monster also makes it possible for the creature to undertake actions during an encounter that might require an ability check, and it makes opposed checks between monsters and characters possible. (How likely is that fighter to win a tug-o-war with a giant toad?)

The system presented here is intended for use with nonhumanoid creatures (humanoids are best treated as characters, see *The Complete Book of Humanoids* for extensive examples), but it can be used with any creature in a pinch. Start by noting the Size and Intelligence ratings from the creature's description. These two ratings determine

the range of ability scores the creature can have (see Tables 6–11).

To generate an ability score, roll 3d6 on the appropriate table and read the result from the applicable column. For example, a rust monster is a man-sized creature with animal Intelligence. To generate a Strength score for a rust monster, roll 3d6 on Table 5 and read the result from the M column; a roll of 10 yields a Strength score of 12. To generate the rust monster's Intelligence score, roll 3d6 on Table 8 and read the result from the A column; a roll of 18 yields an Intelligence score of 4—an Einstein among rust monsters. The creature gains all the bonuses and penalties associated with its actual ability score as listed in the Player's Handbook. The notes below contain additional information.

When you have finished generating the creature's ability scores, it might be necessary to recalculate its XP value according to the rules in the *Dungeon Master Guide*, Chapter 8. For example, a creature with high Constitution score probably has greater than average hit points and should have a higher XP value than its less robust cousins.

**Strength:** Except as noted, all modifiers apply to creatures in the same way they do for characters. Creatures gain the warrior combat bonuses for high scores.

*Damage Adjustment:* The bonus or penalty applies to the creature's natural attacks. If the creature rolls multiple dice to determine damage, the bonus or penalty applies to the total, not to each die.

*Weight Allowance:* Add 35 pounds to a creature's weight allowance if it is large, 70 pounds if it is huge, and 105 pounds if it is gargantuan. If published rules list a carrying capacity for a creature, use either the listed capacity or the modified weight allowance from the creature's Strength score, whichever is higher.

*Open Doors:* Size L and larger creatures can use this ability to batter down or smash holes in simple wooden walls.

*Bend Bars/Lift Gates:* A creature that can bring its full bulk to bear on an object gains the following bonuses by size category: S or M, 0; L, +5%; H, +10%; and G, +20%. Exceptionally sturdy objects built to handle heavy loads or restrain large creatures negate the bonus. For example, a griffon would get the bonus when straining against a normal rope but not when pulling against a rope made to anchor a ship.

**Dexterity:** All modifiers apply to creatures in the same way they apply to characters, except that a creature's *Reaction Adjustment* also increases its movement rate. For example, a griffon with a Dexterity score of 16 has a movement rate of 13, Fl 31.

**Constitution:** All modifiers apply to creatures in the same way they do for characters. Monsters gain hit point bonuses for high scores as a warrior.

**Intelligence:** Creatures that are normally unable to speak do not gain that ability simply by virtue of a high Intelligence score. Any creature with a score at least three points higher than the normal value for its race can understand one or more languages. For example, a horse with an Intelligence score of 4 might know the common tongue and be able to give limited responses in the form of hoof taps, whinnies, and shakes of its head. Other than this limitation, Intelligence functions for creatures in the same way it does for characters.

**Wisdom:** All modifiers apply to creatures in the same way they do for characters.

**Charisma:** Reaction and loyalty adjustments apply only to creatures who are able to communicate with each other in meaningful ways. Otherwise, Charisma functions for creatures in the same way it does for characters.

**Table 12:**
## Legendary Monsters

| Rank | AC Mod. | HD Mod. |
|---|---|---|
| Lesser Scion | –4 | +5/1.5 |
| Scion | –6 | +10/2 |
| Elder | –8 | +15/2.5 |
| Great Elder | –10 | +20/3 |
| Paragon | –12 | +25/3.5 |

The **Armor Class Modifier** is subtracted from the creature's base armor class. This modifier is in addition to any Dexterity bonus.

The **Hit Die Modifier** is added to the monster's hit dice. The creature gains all the benefits of the increased hit dice, including reduced THAC0, better saving throws, and more hit points. If the monster is normally given a fixed hit point total, add five hit points per additional hit die.

The number after the slash is for monsters that have hit points divided between different areas of their bodies, such as hydras and beholders. Multiply each area's hit points by the number. For example, an elder hydra's heads would have 20 hit points each (8 [hp for each head] x 2.5 [elder multiplier] = 20).

## Legendary Monsters

Just like high-level heroes, some monsters have progressed in power to the point where they are the most fearsome of their kind. Legendary monsters are not just large or strong specimens, but instead they are a superior strain of their race. The rules that follow are designed for non-humanoid monsters and can also be combined with the **Ability Scores for Monsters** section.

A legendary monster has the same movement rate, number of attacks, damage per attack, morale rating, and special abilities as its normal counterpart. The creature has increased Hit Dice, an improved Armor Class, and some additional powers that the DM assigns. Table 12 details typical Hit Dice and Armor Class variances. When creating a legendary monster, don't forget to recalculate the creature's experience point value.

**Rank** is simply a convenient way to categorize and assign powers to legendary monsters. Tables 12–22 use the following terms to identify the various types of legendary monsters.

*Lesser Scion:* The creature is slightly more powerful than normal members of its race.

It comes from an exceptional bloodline, but the line has become diluted over the generations. There can be anywhere from several hundred to several thousand lesser scions of a given race on a world, depending on the races' overall population. Lesser scions have two or three powers from Tables 13–22. When generating ability scores for lesser scions, roll 3d4+4.

*Scion:* The monster is superior to normal members of its race. There are only a few hundred to perhaps a thousand scions of a given race on a world. Scions have three or four powers from Tables 13–22. When generating ability scores for scions, roll 2d6+6.

*Elder:* The creature is considerably more powerful than normal members of its race. It comes from an exceptional bloodline, barely diluted by time. There are not more than a few hundred Elders of any race on a world. Elders have three to five powers fromTables 13–22. When generating ability scores for Elders, roll 1d10+8.

*Great Elder:* The creature is vastly more powerful than normal members of its race. It comes from an exceptional and undiluted bloodline or is an outstanding member of an elder bloodline. There are not more than several dozen great elders of a given race on a world. Great elders have four to six powers from Tables 13–22. When generating ability scores for elders, roll 1d10+8.

*Paragon:* The creature represents the pinnacle of its race's strength and vitality. It is an extraordinary member of an elder bloodline, or perhaps the progenitor of its entire race. There are not more than and a handful of paragons of a given race on a world, and a paragon often is a unique creature. Paragons have five to seven powers from Tables 13–22. When generating ability scores for paragons, roll 1d8+10.

## Powers

A few extra Hit Dice and an Armor Class bonus are not enough to make a legend. This section contains suggestions for the extraordinary powers that legendary creatures possess; feel free to create more.

Not all powers are the same. Just like a dragon's fear radius is based on its age, the potency of a legendary monster's power is based upon its overall rank. For example, the lethality of an elder's breath weapon is noticeably different than that of a lesser scion.

**Table 13:**
### Breath Weapons

| **Rank** | **Damage**[1] | **Save Mod.**[2] |
|---|---|---|
| Lesser Scion | 26–35 | –2 |
| Scion | 36–45 | –3 |
| Elder | 46–55 | –4 |
| Great Elder | 56–65 | –5 |
| Paragon | 66–75 | –6 |

[1] The numbers indicate the average damage inflicted. Any number of dice or combination of dice and a modifier that produces an average that falls within the listed range is acceptable. For example, a scion might have a breath weapon that inflicts 10d8

points of damage (average 45) or 10d6+10 points of damage. See below for average results from commonly used dice.

[2] *Saving Throw Modifier:* This is used *only* for breath weapons that do not inflict damage. For example, a gorgon's petrifying breath.

## Averages

| Die Type | Average Result |
|---|---|
| 1d4 | 2.5 |
| 1d6 | 3.5 |
| 1d8 | 4.5 |
| 1d10 | 5.5 |
| 1d12 | 6.5 |
| 1d20 | 10.5 |

## Breath Weapon Sizes

| Rank | Cloud | Cone | Line |
|---|---|---|---|
| Lesser Scion | 30' | 40' | 60' |
| Scion | 40' | 55' | 80' |
| Elder | 50' | 70' | 100' |
| Great Elder | 60' | 85' | 120' |
| Paragon | 70' | 100' | 140' |

*Cloud:* The effect is 50' wide, 40' tall, and 30–70' long.

*Cone:* The effect is 5' in diameter at the creature's mouth, 30' in diameter at its apex, and 40–100' long.

*Line:* The effect is 5' wide, 5' tall, and from 60–140' long.

### Breath Weapon

The creature has a breath attack it can use three to five times each day. Typically, the creature must wait one or two rounds between breaths. The creature can move normally during a round when it breathes, but it cannot make melee attacks, cast a spell, or use a spell-like power.

The breath weapon can take any form the DM desires: a cloud of scalding steam, cone of searing flame, gout of acid, petrifying mist, and so on. A quick look through the Monstrous Manual and the various Monstrous Compendiums™ should provide plenty of ideas. Basic statistics for breath weapons are provided below.

If the creature already has a breath weapon, use the values for the next higher rank instead. If the creature is a paragon, its breath weapon uses the paragon dimensions from Table 13 and the breath weapon inflicts an average of 4.5 points of damage per hit die of the creature. For example, a paragon dragon turtle has 39 hit dice and has a breath weapon that inflicts an average of 175 points of damage. For all damage-causing breath weapons, a successful saving throw versus breath weapon reduces damage by half.

**Table 14:**
## Disease

| Rank | Onset[1] | Fatality[2] |
|---|---|---|
| Lesser Scion | 1d4 Weeks | 2d4 Months |
| Scion | 1d4 Days | 2d6 Weeks |
| Elder | 1d4 Hours | 2d6 Days |
| Great Elder | 1d4 Turns | 2d4 Hours |
| Paragon | 1d4 Rounds | 1d4 Turns |

[1] This is the amount of time that passes before the first symptoms appear. Until then, the victim feels fine. If a victim has been infected multiple times during an encounter, roll an onset time for each infection and use the shortest one. Multiple infections of the same disease have no other effect.
[2] This is the amount of time before the victim finally succumbs to the disease. The victim has no chance to recover on his own and dies if not cured.

### Cause Disease

Even a scratch from a legendary monster can infect a character with a fatal malady. Each time a monster with this power makes a successful physical attack, secretly roll 1d100. If the result is equal to or less than the damage inflicted during the attack, the opponent contracts a disease. If the creature strikes an opponent multiple times in a single round, check for disease only once and use the total damage inflicted for the check. For example, if a creature strikes an opponent twice for 17 points of damage with the first hit and 21 points of damage with the second blow, the opponent contracts a disease on a roll of 38 or less.

### Disease Effects

In addition to just feeling rotten—and facing death if not cured—the victim also suffers one to four of the following effects. Other effects are possible.

*Ability Score Reduction:* One or all of the character's ability scores are reduced by one to five points.

*Blindness:* The victim's vision blurs or the characters eyes swell shut. The character cannot cast spells or use missile weapons, and he suffers the standard penalties for blindness when moving or engaged in melee. A *cure blindness* spell has no effect,

*Chills:* The character shivers uncontrollably for 2d4 rounds. During this time, the character cannot move, attack, or cast spells. All saving throws and ability checks suffer a –4 penalty. The chills recur from time to time; roll again on the onset column to see how soon.

*Delirium:* The victim's head spins with weird visions and confused thoughts. The character acts as though afflicted by a *confusion* spell. Once each turn, the victim can snap out of the delirium by rolling a 9 or less on 1d20. The victim's hit point adjustment (from Constitution/Health) applies as a bonus or penalty to the roll. Non-warrior characters with Constitution scores of 17 or higher can claim the warrior hit point

adjustment for purposes of this roll.

*Fever:* The character must rest in bed. If forced into action, the character's stamina is severely tested and he must roll a 9 or less on 1d20 each hour to stay conscious. The character's hit probability adjustment applies as a bonus or penalty to the roll. If the character has a Stamina statistic, use that score to determine the character's adjustment to the roll, otherwise use Strength. If the roll fails, the character suffers *delirium* (as above) for 2d4 rounds and then falls into a stupor for 2d4 hours.

*Paralyzation:* The character loses the use of one appendage or becomes totally immobile.

*Slow healing:* The character cannot benefit from healing spells and heals naturally at 10% of the normal rate.

**Table 15:**
## Fear Effects

| Rank | Radius | Saving Throw Mod. |
|---|---|---|
| Lesser Scion | 30' | 0 |
| Scion | 35' | –1 |
| Elder | 40' | –2 |
| Great Elder | 45' | –3 |
| Paragon | 50' | –4 |

### Cause Fear

A legendary monster with this power sends creatures with less than 4+1 hit dice and characters of 4th level or less fleeing in panic on sight if the creature is attacking or charging. Panicked creatures flee for 2d4 turns, as though affected by the 4th-level wizard spell *fear*.

More powerful characters are affected only if they are within the creature's fear radius, and then only if the creature consciously employs its fear power. Opponents who do not automatically flee are allowed a saving throw vs. spell to avoid the effect, but there is usually a penalty to the roll.

**Table 16:**
## Crush Attacks

| Rank | Radius | Damage |
|---|---|---|
| Lesser Scion | 10' | 3d8 |
| Scion | 15' | 4d8 |
| Elder | 20' | 5d8 |
| Great Elder | 25' | 6d8 |
| Paragon | 30' | 7d8 |

## Crush

Some legendary monsters can use their strength and body mass to literally grind opponents underfoot. To make a crush attack, a creature expends its full movement allowance for the round, taking no other actions. However, if the creature is flying or jumping down from a height of 30 feet or more, the creature can make a crush attack at the end of its movement.

Opponents larger than the attacker cannot be crushed. When a monster makes a crushing attack, it makes one attack roll for every creature within the area of effect. An unsuccessful attack roll inflicts no damage. Any creature within the radius must save vs. death if it is at least one size smaller than the attacker, even if the creature suffered no damage from the crush attack. If the defender is two sizes smaller than the attacker, the save is made at –4, three sizes smaller warrants a –8 adjustment, and so on. If the save fails, the opponent is knocked down and can take no actions until he can stand up again.

If the overrun rule from the *Player's Option: Combat & Tactics* book is in play, a crushing attack does not provoke an attack of opportunity, and creatures who are knocked down after a crush attack can be trampled if they are smaller than the attacker. Creatures with the crush power can perform overruns, but not during rounds when they make crush attacks. Note that unlike crush attacks, overruns can be used only against creatures smaller than the attacker.

## Wounding

Attacks from creatures with this power inflict damage that cannot be healed by regeneration, first aid, or by any magical means (short of a *wish*, 10th level healing spell, or a *periapt of wound closure*). Wounds caused by more powerful legendary monsters bleed freely, inflicting additional damage each round until the wound is bound or a healing spell is applied. Healing spells used in this manner don't restore any lost hit points, they just prevent additional bleeding damage.

**Table 17:**
### Wounding Effects

| **Rank** | **Damage*** |
|---|---|
| Lesser Scion | 0 |
| Scion | 1/Round |
| Elder | 1d4/Round |
| Great Elder | 1d8/Round |
| Paragon | 2d6/Round |

* This is the amount of additional damage the opponent suffers each round after suffering the wound. If the attacks inflicts several wounds, each one bleeds and causes additional damage.

## Innate Magic

A legendary monster can have minor, major, or extraordinary spell-like abilities, as

defined on page 49. The higher the creature's rank, the more often it can use its abilities.

### Invulnerability (Physical)

Not every weapon can harm a legendary monster. This power can work in several different ways:

*Weapon Type:* The creature suffers no damage from a single type of weapon (bludgeoning, piercing, or slashing).

*Normal Weapon:* The creature suffers no damage from ordinary weapons and is harmed only by weapons made from a special material (silver, cold-wrought iron, stone, wood, etc.).

*Nonmagical Weapon:* The creature can be harmed only by enchanted weapons. Lesser scions with this power usually can be harmed by +1 or better weapons. Scions and elders are harmed by +2 or better weapons, and great elders and paragons by +3 or better weapons.

### Invulnerability (Elemental)

The creature is immune to attacks based on one of the four elements: air, earth, fire, or water.

### Invulnerability (Magical)

The creature is immune to specific magical effects or classes of magical effects, such as charms, cold, holds, aging, energy drains, etc. Most legendary creatures have this power.

### Enhanced Movement

Some legendary monsters are faster than their lesser cousins. Some also might have special modes of movement such as blinking, leaping, or climbing. Bonuses are given on Table 19.

### Gaze Weapon

A legendary monster with a gaze attack can affect an opponent simply by making eye contact. A gaze attack requires no special effort, and the creature can freely combine it with other attacks or abilities.

The gaze attack can have any effect the DM desires: instant death (save vs. death to avoid), stoning (save vs. petrification to avoid), charm (save vs. spell to avoid), and so on. As with breath weapons, a quick look through descriptions of existing monsters should provide plenty of ideas.

If the creature already has a gaze weapon, use the next highest ranking; if the creature is a paragon, the penalty is –8. Adjustments are detailed on Table 20.

### Magic Resistance

Most spells fail when used against a legendary monster with this power. The creature's resistance can be continuous or conditional. For example, a creature might be resistant to spells only while the moon is full or for a short time after it eats a certain food. Similarly, a creature's resistance might be ineffective against a certain class of spells or ineffective against opponents who have found a specific item or performed a special task.

**Table 18:**
## Enhanced Melee Damage

| Rank | Damage Bonus [1] | Size [2] |
|---|---|---|
| Lesser Scion | +1/die | — |
| Scion | +2/die | +20% |
| Elder | +3/die | +30% |
| Great Elder | +3/die +1 die | +40% |
| Paragon | +3/die +2 dice | +50% |

[1] The creature receives the listed bonus per die of damage inflicted in addition to any bonus it receives from a high Strength score. Great elders and paragons receive extra dice in addition to the bonus per die. For example, a great elder chimera's attacks inflict 2d3+6/2d3+6/2d4+6/2d4+6/3d4+9/ 4d4+12.

[2] The creature derives part of its damage bonus from increased size. The creature's size increases by the listed amount (round fractions up), which might place it in a larger size class. For example, a great elder chimera is seven feet tall at the shoulder with a corresponding longer body that probably makes it a huge creature.

**Table 19:**
## Enhanced Movement

| Rank | Bonus* |
|---|---|
| Lesser Scion | +20% |
| Scion | +30% |
| Elder | +40% |
| Great Elder | +50% |
| Paragon | +60% |

* The creature's normal movement increases by the listed amount (round fractions up). For example, a scion displacer beast has a movement rate of 20 (15 [base] + 4.5 [30% of 15] = 19.5).

The bonus also helps define any unusual movement powers the creature gains. For example, a scion displacer beast with the ability to leap would make leaps of 50 feet.

**Table 20:**
## Gaze Weapons

| Rank | Bonus* |
|---|---|
| Lesser Scion | –2 |
| Scion | –3 |

| | |
|---|---|
| Elder | –4 |
| Great Elder | –5 |
| Paragon | –6 |

* *Saving Throw Modifier:* Opponents suffer the listed penalty when trying to avoid the gaze.

**Table 21:**
Magic Resistance

| Rank | Resistance |
|---|---|
| Lesser Scion | 60% |
| Scion | 70% |
| Elder | 80% |
| Great Elder | 90% |
| Paragon | 100% |

**Table 21:**
Magic Resistance

| Rank | Resistance |
|---|---|
| Lesser Scion | 60% |
| Scion | 70% |
| Elder | 80% |
| Great Elder | 90% |
| Paragon | 100% |

**Regeneration**

A scion or lesser scion with this power eventually regenerates any damage it suffers unless attacked with fire, acid, or magical wounding, such as a *sword of wounding* or a legendary monster's wounding power (damage from the subsequent bleeding can be regenerated, however). If the creature is killed by a *disintegrate* or death magic spell it cannot regenerate back to life. Nor can it regenerate back to life if killed by an attack that does not allow regeneration. If killed by normal attacks, a scion or lesser scion cannot regenerate back to life if its remains are destroyed by fire, acid, disintegration, or a 10th-level destroy spell at double difficulty (see page 123).

An elder or great elder can regenerate almost any form of damage if it survives the attack that inflicted the damage. These monsters cannot regenerate damage from a wounding effect, but they can heal themselves of the bleeding damage associated with such attacks. Once killed, an elder or great elder can be prevented from regenerating by destroying their remains as noted previously.

A paragon's regeneration power is all but unstoppable—the creature can regenerate any type of damage. If completely disintegrated or slain outright by death magic, the

creature returns to life after the amount of time required to regenerate 20 hit points and keeps right on regenerating until it reaches full hit points. The only way to permanently kill the creature is to reduce it to –20 hit points and use a *wish* or a 10th-level destroy spell at triple difficulty. The DM also might decide that some exotic process (see page 91) or special weapon can also kill the creature permanently. For example, a paragon gorgon might be killed permanently if a noble genie eats its heart or if the killing blow is delivered with an ancient king's sword.

## A Sample Legendary Monster

An elder gorgon might have the following statistics (without adjustments for ability scores):

**Elder Gorgon:** AC –5; MV 17 (enhanced movement power); HD 23; hp 105; THAC0 –3; #AT 3; Dmg 2d6+6/2d6+6 (enhanced melee damage power); SA petrification breath; SD immune to blunt weapons, effected only by magical weapons of +2 or better (physical invulnerability power, twice), immune to earth-based attacks, including petrification (magical invulnerability power); MR 80%; SZ H (10' tall at the shoulder); ML average (10); Int animal (1); AL N; XP 24,000.
Notes: SA—Four times per day, the elder gorgon can breath a cone of petrification 85' long, 5' in diameter at the base, and 30' in diameter at the far end. All creatures within the area of effect are turned to stone unless they make a successful saving throw versus petrification at –5 (breath weapon at great elder rank).

# Chapter 3: Spells and Magical Items

Magic is important to any AD&D campaign, but it is critical to a high-level world. Chapter 1 discusses the role of magic in more detail. This chapter contains expansions and clarifications to help DMs keep magic manageable and wondrous.

### Daily Recovery of Spells

Wizards and priests cannot simply stop anywhere and regain spells they have cast or change the spells they have memorized. Memorizing a spell is a difficult task that requires a clear head from a good night's sleep and 10 minutes of effort per level of the spell (see the *Player's Handbook*, Chapter 7). Memorizing a spell is an arduous mental task, and it is helpful to consider exactly what a character must do to accomplish it.

The basic requirement to memorize spells is a good night's sleep. The character must awake feeling fresh and rested. The DM must decide if a character is rested well enough to regain spells, but about eight hours spent in reasonable comfort—one cannot regain spells after a night spent in a saddle—is the minimum.

The spellcaster must also have enough peace, quiet, and comfort to allow proper concentration on the character's studies or devotions. Spellcasters do not necessarily have

to be sitting in the lap of luxury to regain spells, but their minds must be free from overt distractions, such as combat raging nearby, exposure to inclement weather, or fatigue. Of course, wizards need plenty of light to read their spellbooks by.

Priests don't use spellbooks but must have all the trappings required for solemn prayer and meditation. Such trappings include some token of the deity being petitioned for spells, such as a holy symbol, or perhaps prayer at a site that reflects the deity's nature—petitioning a war deity from an ancient battlefield is going to get the deity's attention.

Characters who do not require sleep (due to a magical item, racial ability, or other special circumstance) can acquire spells only once each day and only after eight hours of restful calm; the spellcaster cannot acquire spells immediately after movement, combat, spellcasting, or other distractions.

If a character is disturbed while studying or praying for a spell (by combat, injury, loud noise, or other distraction), the caster must begin work on the spell again and any time already spent on the spell is lost. For example, Rozmare is poring over her spell books to memorize a *fly* spell. She is seated in a forest glade where her party has spent the night. The sun is shining and the forest is fairly quiet, so all Rozmare needs to do is study her books for 30 minutes to memorize the spell. Unfortunately, after Rozmare has been studying for 20 minutes, the local pixies decide to play a prank, pitting Rozmare and her companions against an illusory band of goblin acrobats. When the confusion finally dies down, Rozmare has to begin studying her *fly* spell all over again, requiring another 30 minutes of uninterrupted study.

**Limited Study Time:** It is difficult to keep a clear head during a prolonged mental effort. A spellcaster can spend a maximum of eight hours a day acquiring spells. After that much effort, the character can no longer concentrate sufficiently to regain any spells, though the character suffers no other disadvantages.

## Additional Comments on Spells and Magical Items

This section contains new and updated information for adjudicating magic use in your campaign. Items marked with a † are from the *Tome of Magic*, spells marked with a ‡ are from *The Complete Wizard's Handbook*, and all other spells and items are from the *Player's Handbook*. Some of the entries contain optional material, presented in a separate paragraph on a gray background.

## Wizard Spells

*Abi-Dalzim's Horrid Wilting†:* The maximum damage is 16d8.

*Alacrity†:* This spell can be very useful for reducing spell casting times on low-magic worlds (see page 47). Apply the local multiplier to a spell's casting time before calculating the *alacrity* spell's effect.

*Antimagic Shell:* This spell temporarily suppresses magic within its area of effect, but it does not destroy or dispel enchantments or kill magical creatures. The spell has no effect on golems, *simulacrums*, *clones*, or other constructs which are imbued with magic during their creation process and are thereafter self-supporting. Most undead creatures are

likewise unaffected. Some of these creatures' special abilities may be temporarily nullified, however (see below). Any creature, including a golem or other construct, that is conjured, summoned or from another plane of existence is hedged out of an *antimagic shell*.

An *antimagic shell* suppresses any spell or spell effect brought into or cast into the area of effect. A hasted character, for example, is not hasted while he remains in the area of effect. Permanent spells are not removed, but cannot be used to produce magical effects within the area of effect. For example, a character who has been resurrected is not harmed by an *antimagic shell*, but a character with a permanent tongues spell loses the ability to converse in an unknown language while within the area of effect.

An *antimagic shell* suppresses special attacks and innate abilities that function over a distance, including breath weapons, gaze attacks, sonic attacks, and psionics, but not touch-delivered special attacks such as energy draining or the corrosive effects of green slime. A lich, for example, cannot employ spells within an *antimagic shell* and its ability to cause fear is suppressed, but its paralyzing touch is still effective. Note that holy water is not magical and is fully effective within an *antimagic shell*.

An *antimagic shell* suppresses most potions and their effects; see the note at potions for details.

*Astral Spell:* This spell sends a projection of the caster's body into the Astral Plane. If the caster elects to take other characters along, the spell creates projections of them, too. An astral traveler can enter other planes while projecting, but forms a new physical body, identical to the original, to do so.

Only magical items are projected along with a traveler's body, but normal equipment can be rendered temporarily magical by casting *Nystul's magical aura* , *continual light*, and other spells that temporarily imbue objects with magical properties. See page 51 for a brief discussion of the effects planar travel has on magical items. (The *Planescape* boxed set contains more details.)

A traveler's physical body falls into a deathlike trance and requires no food or water while the caster is projecting. The physical forms of projected magical items become inert on the Prime Material Plane. Damage to a traveler's physical body does not affect the projected form, but the character dies immediately if his physical body is killed. Projected equipment vanishes if its physical form is destroyed.

Damage inflicted on an astral traveler's projected form affects the character normally. If a traveler is damaged when returning to his body the damage must be healed normally.

If an astral traveler dies, the character must attempt a system shock roll. If the roll fails, the character dies and any items projected along with him dissolve into nothingness. If the roll succeeds, the traveler is drawn back to his original body and wakes up with one hit point. The process is debilitating and the character cannot cast or memorize spells. The character can move at half speed and fight and use proficiencies and other skills, but at a –4 penalty to dice rolls. The restrictions and penalties remain until the character regains at least half of his hit points.

A successful *dispel magic* cast on a traveler's physical body ends the spell, drawing the traveler back to the Prime Material Plane without being otherwise harmed; any companions accompanying the caster are likewise forcibly returned.

While traveling through the Astral Plane, a projected form can move by pure thought;

a character's astral movement rate is 30 times his Intelligence/Reason score.

*Blink:* Spellcasting is not possible while blinking.

*Clairvoyance:* The spellcaster must describe where the sensor this spell creates is to appear. Once created, the sensor cannot be moved.

When placing the sensor, the caster must be precise and state the location in terms he knows or are fairly obvious. For example, the caster cannot place the sensor six inches from Ren the wizard's left ear if he has no idea where Ren is at the moment. He can place the sensor in the exact center of Ren's laboratory if he has a reasonable idea where the laboratory is located. A general location for the sensor is permissible if the location is based on something known or obvious to the caster. For example, the caster could specify the exact center of the chamber beyond a closed door nearby.

*Clairaudience:* The caster must describe where the sensor this spell creates is to appear, see the clairvoyance spell for details.

*Color Spray:* The area of effect for this spell is a plane five feet wide at the caster's hand, 20 feet long, and 20 feet wide at the far end.

*Cone of Cold:* The maximum damage from this spell is 10d4+10 points.

*Continual Light:* This wizard spell is not reversible, though the priest's version is.

*Delayed Blast Fireball:* This spell inflicts up to 15d6+15 points of damage.

*Dispel Magic:* A *dispel magic* spell cast directly upon an unattended magical item automatically renders the item inoperable for 1d4 rounds. If *dispel magic* is cast upon an item that is in the possession of another creature, the item is unaffected by the dispelling attempt if the creature makes a successful saving throw versus spell. If the creature fails its saving throw, the item is rendered inert for 1d4 rounds.

Temporary effects from potions can be dispelled, see the section on potions for details.

Permanent spells must be individually targeted to be dispelled, requiring a separate *dispel magic* for each permanent effect. Unlike a magical item, a permanent spell is destroyed, not temporarily rendered nonoperational, by a successful *dispel magic*. A creature or item never gains a saving throw to avoid a dispelling attempt against its permanent effects, but the *dispel magic* is not automatically successful either. The caster of the *dispel magic* must still be of higher level than the caster of the *permanency* spell, and he must still make a successful dispelling roll. More detailed information is found at the *permanency* spell description.

Casting *dispel magic* on a creature or object does not radiate an area of effect. Thus, spells such as *stoneskin, minor globe of invulnerability,* and *barkskin* could not be dispelled as the result of trying to negate the magic of a *wand of lightning*.

Spells and potions whose basic durations are permanent cannot be dispelled. A *cure light wounds* spell or *potion of extra-healing,* cannot be dispelled after their healing

properties have occurred. A *potion of heroism* could be negated while its effects were in operation, however.

A successful *dispel magic* versus a 10th-level spell temporarily negates the spell's effect for 1d4 rounds. It has no effect against a permanent 10th-level spell cast on a creature.

*ESP:* The caster perceives the subject's surface thoughts—that is, whatever the subject happens to be thinking about at the time. Note that close interrogation might bring buried thoughts to the surface, but wary individuals can fight off the probe and gain a saving throw against the spell. The subject's Wisdom bonus (or penalty) always applies to the saving throw, along with an additional bonus of up to +4, at the DM's option.

The bonus depends on how closely the subject wants to guard the sought-after information. In addition, even seemingly innocuous questions could reveal information that the target of the spell desires to keep secret. In cases where there is a conflict between the bonuses listed, always grant the higher bonus.

Trivial matters merit no bonus. These include questions related to general knowledge (What flag flies over the keep?) and personal questions whose answers are obvious (What color is your hair?).

A +1 bonus to the saving throw is warranted when the subject dislikes the interrogator or if the questioner is asking non-threatening but potentially embarrassing requests. For example, the subject is being prompted to reveal a minor transgression, such as overcharging a customer, or admit a minor shortcoming, such as fear of a spouse or military commander.

A bonus of +2 is warranted if the interrogator is hostile to the subject or is asking damaging questions. For example, the subject is prompted to reveal indirectly harmful information, such as where personal treasure is hidden, or is asked to betray a trust.

A +3 bonus is granted if the interrogator has attacked the subject or is asking seriously damaging questions. For example, the subject is being prompted to reveal a secret vital to his future, such as military plans or trade secrets.

A +4 bonus to the save is warranted if the interrogator has killed one of the subject's companions or is asking deeply personal or damaging questions. For example, the subject is being prompted to reveal information vital to himself or to someone important to him, such as the location of a family heirloom, an employer's daily routine, or a carefully guarded password.

*Feather Fall:* This spell can be cast in reaction to a fall or a missile attack, provided the caster has not already made an attack or cast a spell in the current round. In the case of an attack, the caster must win initiative to complete the spell before the missile arrives; use the normal initiative procedure from the *Player's Handbook*. In the case of a fall, the caster can be assumed to automatically cast this spell at the beginning of any fall of 10 feet or more provided he is not prevented from casting spells (silenced, gagged, etc.).

If the caster is falling an extreme distance (in excess of 120 feet/level), the caster can opt to delay the *feather fall* spell so that its duration does not expire before the caster lands. When in doubt about the caster's ability to complete the spell before impact, roll initiative. The caster makes a normal roll, adding +1 for the spell's casting time, and the

DM rolls for the fall, adding +1 for each 120 feet of free fall. If the caster loses the initiative roll, impact occurs before the spell is completed.

This spell does not provide any method by which the spellcaster can determine the length of a fall. Thus, a wizard falling into a lightless pit has no way to determine if the fall is going to be 10 feet or 1,000 feet.

*Fly:* It is important to remember that this spell bestows Maneuverability Class B upon the recipient, which limits the user to turns totaling 180 degrees or less per round. This might make it difficult for the user to negotiate a twisting corridor at full speed. Once the flying character has completed his allowable turns, he must either finish the round flying in a straight line or stop.

*Fear:* If made permanent, a fear spell causes the recipient to continually radiate a fear aura.

When cast on an area, a permanent fear effect creates a cone as described in the spell description. The caster can orient the cone in any direction, but the direction cannot be changed thereafter. Creatures entering the cone must save vs. spells or flee for one round per level of the caster at the time the spell was cast.

When cast on an object or creature, the recipient radiates a cone of fear that can be pointed in any direction the recipient desires once per round as though wielding *a wand of fear*. Even though this attack requires no casting time or command word, it still counts as an action for that round and has an initiative modifier of +3.

In the permanent version, the caster is granted a limited ability to shape the spell's parameters to suit his needs. For example, a creature with a permanent fear aura might be granted a gaze attack with a range of 10–60 feet, a touch, or a continuous globe of fear with a radius of 5 to 20 feet.

An object with a fear aura might cause fear when handled, shed continuous fear in a 5- to 20-foot radius, or inspire fear when viewed clearly.

Permanent fear on an area might affect creatures passing though a portal or opening up to 60 by 60 feet, a cube of up to 30 feet per side, a sphere with a radius of up to 20 feet, or a hemisphere with a radius of up to 25 feet. The shape and dimensions of this spell cannot be changed once set.

*Haste:* A creature who has been subjected to two or more *haste*-type effects gains the benefit of only the best of the group. A *haste* spell never magnifies the effects of magical items, such as *boots of speed* or a *potion of speed*.

The one year of magical aging inflicted upon the recipients of this spell requires the recipient to make a system shock roll (see *Player's Handbook*, Chapter 1); failure results in death. This magical aging only occurs during the first round of the spell's effect, and multiple *haste* spells do not cause additional aging unless their effects overlap. For example, casting an additional *haste* spell one round before an existing *haste* spell ends would cause another year of magical aging once the new spell took effect.

*Identify:* Characters seeking to purchase magical items might employ this spell to get some idea what they are buying. Remember that the spellcaster must spend the eight

hours preceding the casting of this spell purifying the items to be identified. Most NPCs do not allow anyone to keep an item for that long; at least not without a substantial advance payment. Dishonest sellers might pocket the advance and disappear, leaving the PCs with a cursed or bogus item.

The spell also requires the caster to handle the item, and a good way to keep magic under control in a campaign is to require the caster to actually wear or wield the item as it was intended. This requirement means some cursed items are going to affect the caster.

Be sure to impose the eight-point temporary Constitution loss the spell inflicts (which provides enemies with an excellent opportunity to attack the weakened spellcaster). Note that there is a limit to the number different magical properties this spell can reveal during a single casting and that the exact number of charges and magical pluses are never revealed.

*Invisibility:* If this spell is made permanent, the recipient gains the ability to become invisible and remain so indefinitely. Any attack breaks the invisibility, but the recipient can become invisible again during the next round. The return to invisibility has an initiative modifier of +3, and the recipient can take no action other than normal movement during a round in which he becomes invisible.

*Light:* The wizard's version of this spell is not reversible.

*Limited Wish:* The magical aging inflicted by this spell is a function of the caster's natural life span. Typical aging is one year for a human, two years for a halfling or half-elf, three years for dwarf, four years for a gnome, and five years for an elf.

This spell functions as a *wish* spell in most respects, but it cannot produce wealth or magical items. A *limited wish* can mimic the function of most other spells of 7th level or less. If used to alter reality, the changes must be minor. For example, a single creature automatically hits on its next attack, all opponents currently attacking the caster's party suffer a –2 attack penalty for the duration of the encounter, a single creature regains 20–50% of lost hit points, or a single creature fails its next saving throw are all possible uses for the spell.

Major changes in reality persist for a limited duration, such as a single creature regaining all lost hit points for 24 hours, a hostile creature becoming cooperative for an hour, or an alert sentry falling asleep at his post.

*Magic Mirror:* This spell creates an invisible sensor similar to the one created by a *clairvoyance* spell; the sensor has the same visual capabilities as a *clairvoyance* sensor, but the spellcaster can also employ other spells to enhance the effect (see spell description). As with the *clairvoyance* spell, the user must state where the sensor is to appear; however, the user is free to state the sensors location with respect to the subject without knowing the subject's exact location. No matter what the spell's actual duration, the user's knowledge of the subject limits how long this spell can be safely used; see the *crystal ball* description in the *Dungeon Master Guide* for details.

*Magic Staff†:* Spells stored in the staff are unusable on worlds rated M4 or less (see page

47). A low-magic world does not dispel the stored spells, however, and the spells can be used again if the staff is taken to a world with a higher rating before the *magic staff* spell's duration ends.

*Otiluke's Dispelling Screen‡:* This spell has no effect on permanent spells unless those effects are in operation at the time the individual walks through the screen. For example, a creature made permanently invisible would become visible when walking through the screen and then disappear again on the other side. The screen must still successfully *dispel magic* against the spell in order to even briefly negate it. Magical items are likewise unaffected by exposure to a dispelling screen.

Since this spell cannot focus its *dispel magic* effect, it cannot destroy permanent spells or negate the powers of magical items.

*Permanency:* The caster can use this spell to make another spellcaster's spell permanent. The *permanency* must be cast simultaneously with the spell to be made permanent and the *permanency* caster must touch the other caster.

A permanent spell cast upon the caster himself or upon a living creature can be dispelled only by a spellcaster of a level greater than the *permanency* caster at the time he cast the spell. Further, the dispel effect must be targeted solely upon the caster to be effective (see *dispel magic* spell description and the note on *dispel magic* in this section).

The following spells can be made permanent if the caster uses the spell on himself:

*comprehend languages*
*detect disease‡*
*detect evil*
*detect invisibility*
*detect life‡*
*detect magic*
*infravision*
*past life†*
*protection from evil*
*protection from hunger and thirst‡*
*protection from normal missiles*
*protection from paralysis†*
*read magic*
*tongues*
*unseen servant*

The following spells can be made permanent if cast on a creature other than the *permanency* caster:

*enlarge*
*fear**
*invisibility**

The following spells can be made permanent if cast on an object or area:

*alarm*
*audible glamer*
*dancing lights*
*distance distortion*
*enlarge*
*prismatic sphere*
*solid fog*
*stinking cloud**
*teleport**
*Von Gasik's refusal†*

| | |
|---|---|
| *fear** | *wall of fire* |
| *gust of wind* | *wall of force* |
| *magic mouth* | *web* |
| *Otiluke's dispelling screen‡** | |

A permanent spell cast upon an object or area can be dispelled by any caster, but the dispel effect must be targeted solely upon the object or area carrying the permanent spell. A *dispel magic* cast against a permanent effect can only dispel one effect per casting. See the notes at the *dispel magic* entry for more information.

* See this section for further notes on this spell.

*Polymorph Any Object:* The DM usually must determine how long this lasts. If employed as a simple *polymorph other* or *stone to flesh* spell, the duration is permanent. If employed to turn a creature into an object or an object into another object, the duration is measured in hours or turns, as noted in the spell description.

Generally, the duration should not be less than two hours or turns. A change whose duration is measured in turns should not last more than a week, and a change whose duration is measured in hours will not last more than a day. The more radical the change, the shorter the duration. For example, turning a human into a teacup involves a change of kingdom (animal to mineral), plus a change in size and shape: This change might last 1d4+1 turns.

*Polymorph Other:* This spell causes the target to assume the form of another creature of the caster's choosing. The caster cannot turn a creature into a plant or object. If the recipient fails the saving throw against the spell, there is an immediate system shock check to see if the creature survives the change. If the recipient survives, the creature gains all the new form's purely physical abilities, but no abilities based on magic, agility, or intelligence. If the recipient's mentality changes to match the new form, the creature gains all the form's abilities.

If the caster chooses a form that cannot survive under the local conditions, the recipient suffers 1d4 to 1d8 points of damage each day, hour, turn, or round it is exposed to such conditions. For example, a goldfish in a desert might suffer 1d8 points of damage every round from heat and dryness. The same goldfish might suffer 1d6 points of damage every turn on a dungeon floor or 1d4 points of damage every day in a frigid mountain pool. Some creatures might be immune to environmental damage as long as their mentality remains intact. For example, a mummy turned into a goldfish does not suffer from the desert heat.

*Polymorph Self:* When the caster assumes a new form, the caster gains only the new form's normal mode of movement and breathing. The caster does not gain any special attacks or unusual abilities. The spell description uses the form of an owl as an example—the caster gains the ability to fly but not an owl's extraordinary night vision (which is a special ability).

When deciding what abilities are gained, the DM can immediately rule out any ability that does not arise from the form's physical characteristics. For example, a quickling's speed comes from its magically accelerated metabolism and is not derived purely from its

physical form.

In general, the DM should consider any non-flying movement rate of greater than 24 or flying movement rate of greater than 36 as a special ability.

The caster can assume the forms of creatures he has personally seen. For example, a caster who has never seen an ochre jelly cannot change into one.

*Power Word, Stun:* Creatures affected by this spell are unable to take any meaningful actions. They cannot communicate, employ spells, use magical items, initiate psionic abilities, use spell-like abilities, fight, or move freely. Movement is limited to one third the creature's current movement rate, or a rate of 3, whichever is less. Attacks against stunned creatures gain a +4 bonus.

*Protection from Evil:* Contrary to popular belief, this spell does not hedge out undead creatures (except ghouls, see the *Monstrous Manual* accessory) unless they have been brought to the scene by a conjuration/summoning spell (such as *monster summoning III*) or have come from another plane.

*Rope Trick:* A *rope trick* can support about 1,000 pounds, but the DM is free to assign a higher or lower limit. A frayed or rotten rope might break before the spell's limit is exceeded.

Placing another extradimensional space inside the area created by a *rope trick* spell has catastrophic effects, see the note at extradimensional spaces in the magical items section (page 80).

This spell is ineffective in the Astral Plane and in any locale where extradimensional spaces are inaccessible or nonexistent (see page 56). Creatures within the space created by a *rope trick* can breathe normally for the duration of the spell.

*Shape Change:* This spell functions in much the same way as a *polymorph self* spell except that the caster can assume non-animal forms and there are no size limitations. Unlike the *polymorph self* spell, the caster gains any ability the assumed form has provided the ability is not magical or mental in nature. For example, a character who changes into an owl gains its night vision, but changing into a cockatrice does not grant the monster's petrifying touch. The spell does not bestow magic resistance.

*Stinking Cloud:* A permanent *stinking cloud* remains where it is created and generally is not disturbed by minor effects. If dispersed by a strong breeze or a *gust of wind* spell, the vapors return one round after the breeze or wind ceases. Even hurricane force winds cannot destroy the cloud, though the vapors are dispersed and ineffective while the winds last.

*Stoneskin:* This spell is subject to considerable abuse by player characters. Multiple *stoneskins* placed on a single creature are not cumulative. If two or more *stoneskin* spells are cast on the same creature, roll normally for the number of attacks each spell protects against. If a new spell protects against more attacks than the present spell does, the recipient gets the benefit of the increased protection; otherwise there is no effect. The

caster does not necessarily know how many attacks the spell can shield him from.

*Stoneskin* protects only against blows, cuts, pokes, and slashes directed at the recipient. It does not protect against falls, magical attacks, touch-delivered special attacks (such as touch-delivered spells, energy draining, green slime, etc.), or nonmagical attacks that do not involve blows (such as flaming oil, ingested or inhaled poisons, acid, constriction, and suffocation). *Stoneskin* lasts for 24 hours or until the spell has absorbed its allotment of attacks.

*Teleport:* Regular use of this spell is very dangerous, as there is a slim chance that there can be an error even if the caster travels to well-known locations. Additional notes regarding the definition of a well-known location are found under the *teleport without error* listing.

Even minor alterations to a site can affect the caster's knowledge of a location. For example, Rozmare has spent many hours in her study, and the DM allows her to use the "very familiar" category when determining how accurate her teleport spells are when her study is the destination. If a rival breaks in and rearranges the furniture, however, Rozmare's knowledge falls to "studied carefully" or worse because she is not as familiar with the way things are currently arranged. If the intruder removed all the furniture and filled the study with boulders, Rozmare's knowledge falls to the "never seen" category.

Some players might attempt elaborate precautions to protect their characters from the disastrous effects of failed *teleport* spells; as the DM, you should not discourage such efforts, but keep the following in mind:

A *teleport* spell requires a firm surface as a destination. The caster cannot choose to appear in the air or in a pool of water to avoid teleporting low. It is possible, however to teleport to a firm surface with a space or water underneath. If a teleporting character arrives low, roll 1d100 to see how many yards below the surface the caster's feet land. Note that a low *teleport* is always fatal if the caster arrives within any solid object no matter how thin or flimsy the object is; teleporting low into a pile of feathers is just as deadly as teleporting into rock. Teleporting low into water is not immediately fatal, but the character still might drown if he can't hold his breath until he reaches the surface.

A permanent *teleport* spell affects a single object with a volume of no more than 1,000 cubic feet (a 10-foot cube) or an area no larger than 400 square feet (20 feet square). The caster names the destination and rolls once for accuracy. The destination cannot be changed once set. The caster can assign a command word or non-verbal triggering device if he desires. This can be as simple or complex as the caster desires; see the *magic mouth* spell description in the *Player's Handbook* for limitations. If no command or trigger is set, anyone passing through the area or touching the object is teleported.

Usually, only one creature can be teleported each round. It is possible to have several creatures teleport simultaneously provided they are touching the first creature to trigger the teleport and the additional creatures and their equipment do not exceed the spell's weight limit, which is the same as the caster's weight limit at the time the original spell was cast.

If a permanent *teleport* spell is inaccurate, both the *permanency* and the *teleport* spell fail, but the caster can attempt a system shock roll to avoid losing a point of Constitution. If

this option is in play, the caster also might be allowed to set multiple destinations with the same permanent *teleport* spell. The caster must name a different trigger for each destination and roll for accuracy each time a trigger is set.

*Teleport Without Error:* As with *teleport*, this spell only allows travel to known locations. To know a location, the caster must learn what the place looks like or must be able to surmise where it is. For example, if the caster has been blindfold, carried into a chamber, then allowed to look around, the character could use *teleport without error* to return to the chamber even though he has no idea where the chamber is. The caster also could *teleport without error* into the courtyard of a castle visible in the distance even if he had never seen the courtyard before. Note that in both cases the caster could employ a normal *teleport* spell, but the caster's lack of knowledge about the destination would make the attempt dangerous.

A *teleport without error* spell has no chance for error if the destination lies in the same world as the caster. If the caster accidentally specifies a destination already occupied by a solid object, the character is automatically displaced a sufficient distance to allow for a safe arrival.

*Teleport without error* also allows travel between world (planes, crystal spheres, and pocket dimensions) but there is a chance for error, see the spell description for details.

*Unseen Servant:* The force this spell creates does not possess any senses or powers of reason. It is incapable of any action except following its instructions to the letter. For example, an unseen servant can be sent to the bottom of a pool to grab whatever objects it encounters, but it cannot be directed to grab any coins or gems that it finds.

The permanent version of this spell creates an invisible servant that always hovers within 30 feet of the caster. If destroyed, it reforms in 2d10 rounds.

A permanent *unseen servant* can be cast on an area and instructed to endlessly perform a single task, such as forever cleaning a room. Once a task is set, it cannot be changed.

*Web:* *Webs* must be properly supported if they are to be made permanent. Permanent webbing remains where it is created, if torn away, new webs spring into existence to take its place. Chunks of webbing carried out of the area of effect dissolve in seconds. Creatures can break through the webbing at the rates given in the spell description, but the webs immediately fill in behind them. Creatures who blunder into permanent webbing (or who are thrown in) can be trapped and suffocated if they fail to save vs. spell just as they can if caught in normal webbing.

Permanent *webs* can be burned away with fire, but they spring back into being one round after the flames die away.

*Wish:* Most uses of this spell lower the caster's Strength/Stamina score by three points and force the caster to take to his bed for 2d4 days. Lost Strength/Stamina returns at the end of the rest period. If the caster's Strength score falls to 0 or less, he loses consciousness until he has rested.

A *wish* essentially allows the user to change reality to suit his tastes. The alteration,

however, can have unintended consequences, especially if the wish is poorly worded or the caster gets greedy. Generally, the more local and personal the effect, the less chance there is for complications. Adjudicating this spell is tricky, as the DM must be sure to give the players results that reflect the power of the *wish*, but not so much that the players come to rely on *wishes* to solve all their problems. A *wish* can always duplicate any spell of 9th level or less.

To avoid the bed rest and Strength/Stamina loss associated with a *wish* spell, the caster must effect a change that does not leave him better off than before the events that preceded the *wish*. For example, if the wizard's party was defeated by a powerful monster, the caster could *wish* that they had never met the creature. This change in reality brings his companions back to life as if the encounter had never occurred. The caster ages five years, but he does not have to rest for 2d4 days from the *wish* since he is not in a better position than before the events occurred.

If the caster wished for his party to return but the monster to remain dead, he would be subject to the debilitative effects, since the creature being dead is considered an advantage that the spellcaster did not have before the events occurred. Any time a *wish* creates an advantage for the caster the loss of Strength and the 2d4 days of bed rest occurs.

The effective power of a *wish* is based upon the availability of money and magical items in your campaign world. If these are in abundance, the power of the wish is enhanced. Likewise, in a world where money and magical items are scarce, the power of a wish is reduced. As DM, you need to determine the relative power of a *wish* in your world. Here are a few guidelines for a world that has a moderate amount of wealth and magical items:

A *wish* can produce a magical item but not an artifact. To avoid suffering bed rest and Strength loss, the caster should place a limit on the length of time the item is kept, typically about one hour. The item isn't actually created, it's just borrowed and goes back where it came from when the duration expires. If the item is particularly rare or valuable, or has been borrowed before, the true owner might resent the loan.

A *wish* can bring the user wealth. The DM should decide how much a character can *wish* for without trouble. The amount gained should be significant but not so great as to disrupt the game. For most campaigns, a random amount of 5,000 to 40,000 gp (5d8x1,000) shouldn't cause problems.

A *wish* can change a character's race permanently, allowing an elf to become a human and advance without level limitations. Alternatively, that same elf could *wish* to advance in level like a human, but he could at most gain one level per *wish*. Each time he wanted to advance in level, he would have to cast another *wish* to allow it to occur.

A *wish* can usually negate or change events that the user finds undesirable—this is why *wishes* are part of the AD&D game. A *wish* used to alter a campaign's history should be immediate—made on the spot or very soon after the event to be altered took place. *Wishes* that allow player characters a second chance to achieve a goal after an unlucky failure or disastrous mistake should be allowed, as long as the terms of the wish don't guarantee success.

When assigning consequences to poorly worded or inappropriate *wishes*, it is best to follow two guidelines: First, the errant *wish* should follow the player's wording to the letter. Second, the result should follow the path of least resistance; that is, the result

should involve the simplest and least complex warping of reality. For example, a greedy character who tries to *wish* for a *staff of the magi* might very well find himself standing naked and alone, staff in hand, in front of the staff's former owner (perhaps a dragon or lich). Escaping from the former owner and returning home is the character's problem.

As with *limited wish*, the unnatural aging caused by the spell is dependent upon the race of the caster; five years for a human, 10 years for a halfling or half-elf, 15 years for a dwarf, 20 years for a gnome, and 25 years for an elf. The aging requires a system shock roll, and failure results in death for the caster.

Chapter 1 of the *Dungeon Master Guide* discusses the effects of *wishes* on ability scores, and additional information can also be found in *The Complete Wizard's Handbook*.

## Priest Spells

*Age Creature†:* The reverse of this spell, *restore youth*, negates most sorts of magical aging, provided the aging is the magic's primary effect. It negates aging from *age creature* spells, *staffs of withering*, and attacks by ghosts. It does not reverse incidental aging effects, such as those inflicted by casting a *wish* or receiving a *haste* spell.

*Breath of Life†:* The reverse of this spell, *breath of death*, produces a nonmagical disease that *breath of life* can cure.

*Combine:* The central priest gains a boost to the spells and granted abilities he already has. The central priest gains no extra spells or granted abilities from this spell.

*Dispel Evil:* In addition to driving away evil extra-planar and summoned creatures, this spell is effective against evil enchantment/charm spells and all forms of domination and possession.

*Dispel Magic:* Refer to the wizard's version of this spell.

*Dragonbane†:* This spell can be the subject of a site focus†.

*Draw Upon Holy Might†:* This spell cannot increase an ability score beyond 25.

*Extradimensional Pocket†:* The extradimensional space created by this spell functions as a *bag of holding* in all respects while its duration lasts.

*Imbue with Spell Ability:* If the recipient dies before the imbued spells are cast, the *imbue with spell ability* caster regains the ability to cast the imbued spells.

*Know Time†:* This spell reveals the correct local time in terms the caster can most readily understand. If the caster has just arrived on a new world where he is unfamiliar with the names of hours, days, months, and years, the spell reveals a generic result that might not be immediately useful until the caster gets more information. For example, the spell might reveal that it is the 10th hour of the 23rd day of the 7th month in the 2,345th year.

The hour is always given in relation to local midnight.

If the world where the *know time* spell is cast has a time flow different from that of the base campaign, this spell has a 2% chance per caster level of giving an estimation of the difference. The caster can learn if time flows faster or slower and the general degree of difference; great, moderate, or minor. When using table 2 (page 46), ratings of 2–4 and 18–20 are great; ratings of 5–7 and 15–17 are moderate, and ratings of 8–9 and 13–14 are minor.

*Magic Font:* This spell requires a specially prepared font for creating holy water (see page 96). The spell's maximum duration depends on the font's capacity, but the actual time the caster can scry depends on the caster's knowledge of the subject, as given in the *crystal ball* description in the *Dungeon Master Guide*. For example, a magic font spell cast on a basin with a capacity of 60 vials remains active for one hour, but the actual time the caster can safely use the font is 30 minutes if the subject being viewed is known slightly.

Several other spells can make a *magic font* more useful, see the *crystal ball* description in the *DMG* for the list. See the notes on the *magic mirror* and *clairvoyance* spells for more information on scrying.

*Mind Read†:* This spell functions just like the wizard spell *ESP* in most respects. Each time a *mind read* spell is cast, however, the priest can conduct a deep probe of a single creature, possibly gaining additional information as detailed in the spell description.

*Mistaken Missive†:* This spell can affect any document written in ink. For purposes of the spell, ink is any substance that is artificially compounded or altered to render it suitable for use in writing. Documents written with substances that have not been artificially prepared are not subject to this spell. For example, a note written in chalk cannot be altered by this spell, neither can a letter or agreement written in blood.

*Music of the Spheres†:* A successful saving throw against this spell negates only the entrancing effect. An opponent who successfully saves is free to attack the caster but still suffers the –3 penalty to charm-based saving throws for as long as he can hear the music.

*Nap†:* This spell does not reduce the study time (10 minutes per spell level) required to memorize spells. The spell has no effect if the recipient is unwilling or has received a *nap* spell in the previous 18 hours.

*Plane Shift:* This spell sends the caster and up to seven other creatures on a one-way trip to another plane. This spell also allows travel between crystal spheres on the Prime Material Plane (though conditions within a particular sphere might prevent the spell from working). Each sphere requires a unique forked rod made of metal, just as each plane or dimension does. The travelers can return home via a second *plane shift* spell if they have a rod attuned to their home plane or world.

Two-way travel is possible with a single *plane shift* spell if the DM chooses to allow it. To return home without a second spell, the travelers need the same rod that was used

in the original spell, and they must be on the same plane as their original destination. For example, a group of travelers who *plane shift* to the Outlands and then pass through a gate to the Abyss cannot use the original rod to return home unless they return to the Outlands first. They also cannot return home without another spell if they lose the original rod.

*Acquiring rods:* When a priest gains access to this spell, he usually discovers the type of rod required to reach his home world and to reach the plane where his deity resides. The DM must decide how easy or difficult it is to discover additional rods. The surest way to obtain a rod attuned to a specific plane is to find a priest who has been there before. Otherwise, the priest must conduct his own research to discover what sort of rod is required to reach a particular place. The table of suggested costs assumes that planar travel is intended to be fairly rare, but not unknown. The DM should adjust costs up or down as appropriate.

The priest must be in good heath and refrain from adventuring while researching a rod. If the priest has access to *commune* spells, the required research time is reduced one step (one year of research time is reduced to one month), but costs are not reduced. At the end of the research time, the priest must attempt a Wisdom/Intuition check. If failed, the research is unsuccessful but may be conducted again. If the check succeeds, the priest discovers the type of rod required to reach the plane he was researching; the priest knows the rod's shape and what materials are required to make it. Finding the materials and a craftsman to make the rod are another problem.

The DM is free to decide what rods look like (there are many possible objects that can be described as forked rods). See volume two of the *Encyclopedia Magica* for examples.

*Protection from Evil:* Refer to the wizard version of this spell.

*Reflecting Pool:* This spell requires a natural pool—a small body of water fed by a natural water source and contained in a setting generally free of artificial constructions. A naturally occurring puddle of rainwater could be considered a pool if it lies in a meadow but not if it lies in a city street.

See the notes on the wizard spells *magic mirror* and *clairvoyance* for more information on how this spell functions.

*Speak With Dead:* This spell has a range of one yard. The dead do not lie, but they can be evasive, misleading, or obtusely literal if they answer the caster's questions at all (some creatures are allowed saving throws, see the spell description).

*Unceasing Vigilance of the Holy Sentinel†:* A priest recovering from this spell must rest unless compelled to act by some external cause. Generally, the priest cannot respond to threats that he cannot perceive (though the priest always perceives a threat to himself if he suffers damage). A *nap* spell grants the priest 48 turns of rest.

*Weighty Chest†:* The weight increase created by this spell is activated only when a creature other than the caster attempts to move or lift the protected chest. It is not possible to use a *weighty chest* as a weapon. For example, the caster cannot cast this spell on a small coffer and then toss it at an opponent, hoping the foe will be bowled over or

unbalanced by the coffer's great weight. Note, however, that a foe could be tricked into attempting to lift or move the chest.

**Planar Travel**
## Research Time and Costs

| **Plane Type**[1] | **Research Cost**[2] | **Research Time**[2] | **Rod Cost**[3] |
|---|---|---|---|
| Inner Plane | 500/1,500 | 1 Week/6 Weeks | 100 |
| Outer Plane | 1,000/3,000 | 2 Weeks/3 Months | 300 |
| Demiplane | 5,000/15,000 | 2 Months/1 Year | 400 |
| Pocket Dimension[4] | +2,000 | +1 Month | — |
| Prime Material World | 750/3,000 | 3 Weeks/9 Weeks | 250 |

[1] The Astral and Ethereal Planes are treated as known Inner Planes for purposes of research.

[2] The numbers before the slashes are the cost and time requirements for planes that are generally known by the campaign's spellcasters. The numbers after the slash are the cost and time requirements for destinations about which little is known in the home campaign. All prices are in gold pieces.

[3] The number is the typical cost in gold pieces for constructing one rod, provided that the proper materials are available. Rods made of extremely rare materials can cost considerably more.

[4] Add these modifiers to the type of plane the Pocket Dimension is attached to. For example, researching a Pocket Dimension that is attached to the Ethereal Plane would cost 2,500 gp and take five weeks. The cost for the rod would remain 100 gp.

## Magical Items

*Amulet of Life Protection:* A character whose psyche is held in the amulet does not truly die until seven days have passed. Until that time, any healing the character receives revives the character as long as the healing is sufficient to give the character a positive hit point total.

The wearer can be raised or resurrected no matter how the character died. The *raise dead* or *resurrection* spells can be cast upon the amulet if the character's body has been destroyed.

*Bag of Holding:* Living creatures can be placed within a *bag of holding* provided they don't exceed the bag's volume and weight restrictions. If the bag is left open, living creatures kept inside can breathe normally. The space inside a *bag of holding* is airtight, and if the bag is sealed, the air inside runs out quickly. It is possible to carry water in a *bag of holding*. See the general note under extradimensional spaces for more information.

| Bag Capacity | Air* | Water** |
|---|---|---|
| 250 lbs. | 4 minutes | 30 gallons |
| 500 lbs. | 6 minutes | 60 gallons |
| 1,000 lbs. | 8 minutes | 120 gallons |
| 1,500 lbs. | 10 minutes | 180 gallons |

* This is the amount of time a single creature in a sealed bag remains comfortable. After the listed time, the air becomes foul and the creature begins gasping; a –2 penalty applies to all attack rolls and ability checks until the creature gets fresh air. If the creature remains in the bag for twice the listed time, it must save vs. poison or fall unconscious until the creature gets fresh air. The save must be repeated each turn. Unconscious creatures also must save vs. poison every turn, and they die if they fail a second time.
** This shows the amount of water the bag can hold. Note that water is heavy and a bag carrying the listed amount of water only appears to be about 10% full as far as its cubic capacity is concerned. This makes it very easy to exceed the bag's weight limit and destroy it.

*Books/Tomes:* The baneful effects from all books, tomes, manuals, and librams are triggered by perusing even a small passage. Magical books cannot be distinguished from other types of normal or magical books.

A character who studies a book to find out what's in it triggers the book's effects. Magical books always vanish once they bestow a beneficial effect but usually remain behind if they inflict a harmful effect. Multi-classed characters get only the best possible result—other helpful results (and harmful ones) are ignored. For example, an elf fighter/mage/thief glances at a *manual of puissant skill at arms*, a book that is normally harmful to wizards. Because the elf is a fighter, he can ignore the harmful effect and gain one fighter level instead.

*Cloak of Displacement:* The cloak's displacement power is ineffective against creatures or devices that cannot see the cloak's wearer. For example, an invisible character does not receive the cloak's power to make opponents miss their initial attack or the cloak's armor class bonus; likewise, most traps never "see" their targets and displacement does not foil them.

Displacement is not effective against attacks that are not aimed, such as an avalanche or cave-in, and does not affect aimed attacks that cover an area, such as catapult shots or dragon tail slaps.

Displacement is only partially effective against spell attacks. If a spell actually requires an attack roll, such as any touch-delivered spell, the cloak works normally and can cause the spell attack to miss if it is the first attack in an encounter. If the attacking spell does not require an attack roll, it can never be caused to "miss," though the cloak's +2 saving throw bonus applies.

For example a *fireball* spell never misses, but the cloak wearer gains a +2 saving throw bonus. If a spell allows no saving throw, displacement has no effect on it; for example, a *magic missile* or *death spell* is never affected by displacement.

Under normal conditions, the first melee or missile attack against a displaced creature

automatically misses. The opponent is assumed to note the displaced creature's correct position and can keep track of it thereafter. If an opponent has multiple attacks, only the first one automatically misses. If there are multiple opponents, only the first attack by the first creature automatically misses. The remaining opponents are assumed to observe the failed attack and make the appropriate adjustments. If the DM determines that one or more creatures did not observe the initial attack, their first attacks automatically miss, too. Note that intelligent opponents who have reason to suspect a character is displaced might launch some type of probing attack to test the character's defenses, such as hurling a rock. Such attacks count as a combat action for the creatures attempting them.

*Contract of Nepthas:* A *mistaken missive* spell alters the words written on the a *contract of Nepthas* but does not free characters who have signed the contract from their obligations.

*Crystal Balls:* See the notes under the *magic mirror* and *clairaudience* spells.

*Daern's Instant Fortress:* A creature attacking the fortress's walls with a magical weapon inflicts one point of damage for every three rounds spent attacking the walls. If the escalade rules from the *Player's Option: Combat and Tactics* book are in play, the fortress can be attacked by bombardment engines or sapped by attackers equipped with magical weapons. In either case, all damage is subtracted from the fortress's total hit points.

Deck of Many Things: Baneful effects from this item cannot be removed through *wishes* or lesser means, although a *wish* might indirectly help the PCs in dealing with the difficulties the cards inflict. For example, a *wish* can reveal where a victim of the void or the donjon is imprisoned. A *wish* also could reveal the identity of an enemy produced by the flames or the rogue.

10th-level magic is effective against a *deck of many things* in the same way a *wish* is, but there are certain exceptions. 10th-level divination spells cannot be used to determine the identity of a particular card nor can magical wards negate a card's effects, but they can reveal the location of a creature trapped by the void or donjon card. There is no way to shield a creature from the harmful effects of the *deck of many things* while allowing the benefits to occur by using 10th-level spells.

*Extradimensional Spaces:* These items tend to produce spectacular effects when one is placed within another. The following items contain extradimensional spaces: *bag of holding, bag of transmuting, flatbox†, girdle of many pouches, Heward's handy haversack, portable hole*, and *pouch of accessibility.* The following spells produce extradimensional spaces: *extradimensional pocket†, Mordenkainen's magnificent mansion*, and *rope trick*.

In most instances, placing one extradimensional space inside another opens a rift to the Astral Plane, casting both the items and their contents through the rift. The items and anything contained within them are scattered randomly in the infinite depths of the Astral Plane. A *wish* can recover the contents of the extradimensional spaces, and it is possible that creatures held in the items might eventually find their way off the Astral Plane. Since

all objects within the extradimensional space are scattered randomly, a creature cast into the Astral Plane through a rift does not have any better chance of recovering lost items than any other creature. A creature carried to the Astral Plane through a rift retains its possessions, but other loose items within the extradimensional space are randomly scattered.

For example, a party of adventurers decides to cast a *rope trick* spell to create a safe haven where they can rest and sort a huge pile of coins they have found. Unfortunately, one of the characters has a *bag of holding* which contains several pieces of equipment and treasure. When the *bag of holding* enters the *rope trick*, both spaces are sucked into the Astral Plane. The characters occupying the *rope trick* are dumped in random locations in the Astral Plane (if the DM is feeling kind, they might arrive within sight of each other). The *bag of holding* is torn from its holder's grasp and its contents are spewed randomly across astral space.

*Portable holes* can produce more dramatic effects. If another extradimensional space is placed within a *portable hole*, an astral rift opens, as described above. However, if a *portable hole* is placed within another extradimensional space, a gate to a random plane opens and all creatures within a 10-foot radius are drawn through it, no saving throw. The process destroys the *portable hole* and the other extradimensional space.

*Flatboxes* are notoriously unstable. If a *flatbox* contacts any other extradimensional space it explodes, see the item description for details. The other item is sucked into the Astral Plane. A *portable hole* reacts as detailed above.

Most extradimensional spaces contain only a finite amount of air, which limits how long living creatures can be kept inside. Refer to the *bag of holding* entry for the amount of air contained within these items.

Creatures drawn through the gate created by a *portable hole* arrive in a random location and fall in a heap within a 10-foot radius. Items in the extradimensional spaces are either lost on the Astral Plane (50%) or scattered randomly about the circle where the creatures land (50%). The DM makes the roll and can decide to check the items singly or in groups.

*Flatbox:* The box can hold 60 gallons of water. A creature inside one of these items can breathe normally for six minutes if the lid is closed. Additional information can be found at the *bag of holding* and extradimensional spaces entries.

*Flight Items:* Characters using magical items that grant flight have a daily movement rate in miles equal to twice the item's flight speed. For example, characters aboard a 4-person *carpet of flying* travel 48 miles a day in clear weather.

The daily movement rate assumes 10 hours of flying time with ample rest stops; it is not an altogether pleasant experience to fly (consider the effects of rough air, unsteady seating, awkward body positioning, and exposure to weather). Characters in a hurry can eliminate most rest periods and stay aloft longer, spending 18–20 hours in the air and doubling the daily movement rate, but this subjects the riders to the effects of a forced march (see *Player's Handbook*, Chapter 14). Riders who stay aloft for 24 hours a day move at 2 1/2 times their normal daily rate and suffer double force march penalties.

When a party has access to magical items that grant flight, the DM should take

special care to plan adventures that take this capability into account. Flying characters can easily evade most land-based encounters, so the adventure should include encounters with flying creatures or those that entice the characters to land. The DM should also determine the prevailing weather conditions in advance, as they affect both flying conditions and the party's ability to see and be seen while aloft.

*Gem of Insight:* A character can benefit from one of these items only once, no matter how many gems are found over the course of the character's lifetime or how long a single *gem of insight* is kept.

*Girdle of Many Pouches:* Though intended to hold equipment, this item's small pouches can hold about one gallon of water or a single tiny creature. If belted around a character's waist, the pouches are sealed and the creatures inside them have about four minutes of air. Additional information can be found at the *bag of holding* and extradimensional spaces entries.

*Heward's Handy Haversack:* Though intended to hold equipment, this item's compartments can hold water or creatures. The side pouches can hold two gallons of water or one tiny creature each. The central compartment can hold eight gallons of water or a single small creature. If strapped around a character's back and closed, creatures inside the haversack have about four minutes of air. Additional information can be found at the *bag of holding* and extradimensional spaces entries.

*Iron Bands of Bilarro:* There is no saving throw against this item, though the user must make a successful attack roll to trap a target. A failed attack roll never entraps a creature. An entrapped victim's companions can attempt a bend bars/lift gates roll to break the bands if the victim cannot get free. Spells such as *free action, wraithform, antimagic shell*, and *duo-dimension* are all effective means of escape, but teleportation magic merely transports the trapped creature from one place to another with the bands still trapping him. Magical items such as a *potion of slipperiness* or *ring of free action* are also effective against the magic of the bands.

*Javelin of Lightning:* This item has a maximum range of 90 yards. The lightning created is a single bolt that extends from the target toward the thrower. Thus, a javelin of lightning should not be used if the target is within 30 feet.

*Librams and Manuals:* See note at books.

*Medallion of ESP:* Refer to the wizard spell *ESP*.

*Mirror of Mental Prowess:* This item's thought-reading power works just like the wizard spell *ESP*. See the notes at the wizard spells *clairvoyance, clairaudience*, and *magic mirror* for information on the mirror's scrying powers.

Travel through the portal created by the mirror is instantaneous. A *detect invisibility* or *true seeing* spell reveals the portal.

The mirror's power to answer a question each week is similar to the priest spell

*commune* in most respects, but the user is limited to questions about a creature whose reflection is being cast in the mirror.

*Periapt of Proof Against Poison:* This item has three basic functions, but only one can be active at any given time. First, the periapt can allow a saving throw against poisons that normally do not allow one. The required number for the saving throw varies with the periapt's strength as shown in the *Dungeon Master Guide*. Other magical protections are added to the roll. For example, a character with a *periapt of proof against poison +1* and a *ring of protection +1* would gain a saving throw of 18 against a toxin that normally allows no saving throw. The bonus for the periapt does not apply in cases where no saving throw is normally allowed.

Second, the periapt negates any penalty a particularly strong toxin might impose. Note that the penalty is entirely negated, not merely subtracted from the periapt's bonus. For example, a particularly virulent poison might have a –4 penalty to all saving throws. Even a *periapt of proof against poison +1* completely negates the penalty. Likewise, a poison with a –1 penalty to saving throws completely negates the bonus of a +4 periapt.

Third, the periapt grants a general bonus to normal saving throws against poisons. The bonuses are cumulative with other magical protections (but see the automatic failure rule on page 142).

*Portable Hole:* This item has a capacity of about 280 cubic feet. It has no weight limit, and about 2,100 gallons of water or 100,000 standard coins can be held inside. A creature in a *portable hole* has enough air for 10 minutes. See the note at *bag of holding* for the effects of depleted air, and see the general note on extradimensional spaces for more information.

*Potions:* Once a potion, elixir, oil, or ointment takes effect on a creature, any effects that apply only to the imbiber cannot be removed unless a *dispel magic* is targeted directly at the creature. If the potion's effects extend to other creatures (such as the various potions of control) it can be dispelled normally. All potion effects are treated as magic cast at 12th level for purposes of dispelling.

Potions consumed within an *antimagic shell* do not activate until they leave the area of effect. If a potion has been consumed, an *antimagic shell* suppresses its effects unless they are permanent in nature (such as a *potion of healing*). Temporary effects made permanent by a roll on the potion compatibility table from the DMG can be suppressed by an *antimagic shell*.

Tasting a potion gives the character a minor clue as to the potion's effects. For example, a *potion of levitation* or a *potion of flying* might make the character feel light. Often the effect from tasting a potion is not immediately obvious, and the character must attempt some action before any effects are revealed. In the previous example, the taster might feel nothing initially but might walk with a bouncing gait or feel light-footed when walking. A potion's taste, smell, and texture might help identify it, but this tends to be unreliable because potions with identical effects can look, feel, smell, and taste differently if they were made in different laboratories or concocted at different times.

*Potion of Vitality:* A character drinking this potion increases his body's natural healing

ability to the rate of one hit point recovered every four hours. Damage that cannot be healed by magical means—such as from a *sword of wounding*—is restored. Damage that can be healed only by magical means—such as wounds from a chasme tanar'ri's claws or the fists of a clay golem—is not restored.

*Pouch of Accessibility:* Though intended to hold equipment, this item's internal pouches can hold about one gallon of water or a single tiny creature. Closing the pouch seals all the internal compartments, and the creatures inside them have about four minutes of air. See the note at *bag of holding* for the effects of depleted air, and refer to extradimensional spaces for more information.

*Quiver of Ehlonna:* Only long, thin objects such as arrows, javelins, and bows can be placed in this item. Creatures cannot be placed inside, nor does the quiver hold water.

*Ring of Blinking:* See note at the wizard spell *blink*.

*Ring of Contrariness:* This cursed item always makes the wearer do things that run counter to what others desire. The wearer does not necessarily do the exact opposite of what is suggested. For example, if someone says "keep that ring on," the wearer wholeheartedly agrees. He might also suddenly become fearful that others desire the ring and attack the speaker. The ring's enchantment makes the wearer difficult to be around, always selecting the response that is most troublesome.

*Ring of Regeneration:* Wearers killed by fire, acid, disintegration, or death magic cannot regenerate back to life. However, damage inflicted by such attacks can be regenerated if the wearer survives the attack.

A *ring of regeneration* only repairs damage inflicted on the wearer after the character puts on the ring. Damage inflicted before the character wore the ring is not regenerated, so placing a *ring of regeneration* on a dead or unconscious character has no effect.

A *ring of regeneration* does not remove the need to eat, sleep, or breathe, nor does it prevent natural or unnatural aging.

*Rod of Absorption:* Spell levels stored in the rod can be used to power spells on low-magic worlds, even when local conditions would not normally allow the spell to be cast. For example, if the rod-wielder had a *wall of force* spell memorized, the character could use five levels of stored energy even on an M4 world, where 5th level spells normally don't work (see page 47).

When used to absorb spells, the rod can absorb any spells directed at the wielder for the entire round, as selected by the rod-wielder. Absorbing spells counts as an action for the character, but initiative has no bearing on when a spell can be absorbed. The wielder can never absorb a spell that is not targeted specifically at him.

For example, if the wielder is caught in the blast of a *fireball*, the rod cannot be used to absorb the spell because the wielder was not the target—the actual target was a point in space. If, however, the *fireball* was set to detonate directly on the wielder, it could be absorbed. Some spells, such as *hold person* and *slow*, are individually targeted on multiple creatures within an area. If the rod-wielder is one of those targets, he can absorb

the entire spell.

Absorbed spells have no effect whatsoever; their power has been stored in the rod. Thus, if a *hold person* is directed at the rod-wielder, the magic is totally negated—even for other targets. 10th-level spells cannot be absorbed.

*Rod of Beguiling:* The beguiling effect has a 20-foot radius. There is no saving throw, though magic resistance applies, as does resistance to mental attacks or control. Racial resistances to charm effects also apply. Affected creatures remain beguiled for the full one-turn duration even if they leave the radius.

*Rod of Resurrection:* Specialty priests require two charges instead of the usual one charge when resurrected. The racial charge requirement remains unchanged.

Specialty priests dedicated to deities of healing, protection, warfare, endurance, and similar areas of influence require only one charge to resurrect.

*Rod of Rulership:* Creatures being ruled need not remain within the rod's 150-foot radius once they have been affected. Most creatures get no saving throw, but magic resistance and resistance to mental attack or control applies. Racial resistances to charm effects also apply.

*Rod of Security:* This item transports creatures into a pocket dimension (see page 45) attached to the world where the rod was activated.

*Rope of Entanglement:* Use of this item does not require an attack roll. In addition to the size limitations included in the item description, all the rope's targets must fit within a single area of 200 square feet or less (eight 5-foot squares in any contiguous configuration). Targets who save vs. breath weapon can move 10 feet each round and can attack nearby creatures (but not the *rope of entanglement*).

If other creatures fail their saving throw versus the rope, those who succeeded in their save can only move if the combined weight of those who failed is less than their maximum press. For instance, a fighter wearing a *girdle of hill giant strength* could drag up to 640 lbs. of weight along with him. Of course, groups of creatures must move generally the same direction to initiate an attack.

Entwined creatures suffer a +2 initiative penalty and attacks against them are at +2. Targets who fail the save are held completely immobile and cannot perform any actions that require movement; attacks against immobile creatures are made with a +4 bonus.

*Spell Scrolls:* A scroll is a temporary magical writing that stores spell energy in a portable form; it is essentially a pre-cast spell waiting to be triggered. The level at which a priest spell read from scroll functions is never diminished due to planar distances (see page 49), but all scroll spells are subject to local conditions. For example, a *fireball* read from a scroll is ineffective on the Plane of Elemental Water—the spell creates a harmless bubble of vapor and the writing fades. Scrolls become inert if taken to a world rated M2 (see page 47) or lower, but are not otherwise harmed.

Spell scrolls come in two types, priest and wizard. Priests cannot use wizard scrolls

and vice versa. High-level thieves and bards have a chance to employ either type. A character who can use spell scrolls can read any spell of the appropriate type regardless of other restrictions. For example, an illusionist, who is normally barred from casting abjuration spells, can *read a dispel magic* spell from a scroll. Likewise, a priest can read priest spells from spheres normally unavailable. Note that the reader could still suffer the effects of spell failure by attempting to cast a spell that is too high a level (see *Dungeon Master Guide*, Appendix 3).

*Sphere of Annihilation:* A wizard's maximum chance to control a *sphere of annihilation* without the aid of a *talisman of the sphere* is 92% for a wizard of 21st level and an 18 Intelligence/Reason. There are no additional bonuses for being higher level or having an Intelligence/Reason score grater than 18.

A *talisman of the sphere doubles* a wizard's Intelligence bonus for controlling the sphere. Adjusted control scores of 100% or more indicate automatic success, but other wizards trying to usurp control reduce the control chance; see the *sphere of annihilation in the DMG* description for details.

*Staff of the Magi:* The staff's plane travel ability is similar to the priest spell *plane shift*, but no forked rod is required. The staff-wielder must be generally familiar with the destination plane either by making a previous visit or having information about the plane from a traveler who has been there. If a character wishes to research details on an unknown plane, refer to the note at *plane shift* for cost and time requirements.

The absorption power of the staff works just like that of the *rod of absorption* except that the level of absorbed spell is not communicated to the staff-wielder. The decision to absorb must be made based on the appearance of the magic or, in the case of invisible effects, blind luck.

*Staff of Withering:* The withering effect from this item makes one of the victim's limbs shriveled and useless; it has no effect on a creature's head or body. The withering effect requires three charges from the staff and must be announced at the beginning of the round. If the staff hits, roll randomly to see which limb is struck.

If the victim is humanoid, roll 1d4 to determine which limb is struck: 1=right arm, 2=left arm, 3=right leg, and 4=left leg. A shriveled arm cannot wield a weapon or shield or be used to make unarmed attacks. The character suffers a –2 penalty to Dexterity for each shriveled arm. A humanoid cannot stand up or walk without a crutch if even one leg is shriveled. The character is reduced to a crawl and cannot make any physical attacks. The character suffers a –6 penalty to Dexterity. Getting two legs shriveled has no appreciable additional effect.

If the target is a quadruped, the staff-wielder can usually reach only two of the opponent's limbs. Roll 1d6 to see which one is hit: 1–3=right, 4–6=left. Quadrupeds with one shriveled leg move at 2/3 their normal rate and cannot make attacks with the shriveled limb. A quadruped with two shriveled limbs cannot move or physically attack.

Insectoid or multi-limbed creatures should be handled like quadrupeds, but their movement is unaffected as long as they have at least two functioning limbs on each side of the body.

Attacks on flying creatures can hit the wings. For example, roll 1d6 to determine

which limb on a flying humanoid is struck: 1=right arm, 2=left arm, 3=right leg, 4=left leg, 5=right wing, and 6=left wing. Creatures with even one shriveled wing cannot fly.

Limbless creatures have no appendages to be withered and suffer no ill effects from withering except damage and aging.

If the staff-wielder chooses to make a called shot and succeeds, do not make a random roll; the staff hits the selected area instead.

If the critical hit rules from *Player's Option: Combat and Tactics* are in use, ignore all of the foregoing and use the hit location system from that book. The area struck suffers a "destroyed" result if the saving throw fails, even if it is not a limb (do not roll for severity). The staff-wielder does not need to score a critical hit to roll for hit location. If the staff-wielder does score a critical hit, the target suffers double damage and must roll saving throws vs. both the withering and the critical hit.

There are several ways to repair withered limbs, but *regenerate* and *restoration* are the most common methods. Creatures that regenerate (through an innate ability or magical item) regain the use of a shriveled limb after regenerating the equivalent of 20 points of damage. For example, a character wearing a *ring of regeneration* would recover from a shriveled limb in 20 turns, and a troll would recover in seven rounds.

*Stone of Good Luck:* The stone's +1 (or +5%) bonus applies whenever dice are rolled to see if the character (not the character's equipment) avoids an adverse happening. The bonus applies to saving throws, ability checks used as saving throws, system shock rolls, resurrection survival rolls, and any other event in which chance, not skill, is the determining factor. The bonus does not apply to spell failure, magical item creation, learning spells, or to most proficiency checks.

The character's good luck applies to rolls for party treasure distribution and to proficiency checks involving luck or dodging, such as gaming and tumbling.

*Wand of Negation:* The wand temporary renders magical devices unable to create spell-like effects. When a device's spell-like function is negated, any charges expended to produce the effect are lost, but the device is not otherwise harmed. A *wand of negation* has no effect on cast spells or a creature's spell-like abilities. The wand has an initiative modifier of +1.

# Chapter 4: Creating Magical Items

## Holy Water

The *Complete Priest's Handbook* gives rules for creating holy water. This section contains more detailed rules for high-level campaigns.

Any cleric or specialty priest with access to the required spells can create holy water once a week, provided a suitable font is available. The required spells are: *create water*, *purify food & drink**, *bless**, *chant*, and *prayer*. The spells marked with an asterisk are used in reversed form to create unholy water.

The priest must spend at least eight hours praying and meditating before casting the spells in the listed order. Any delay between finishing the casting of one spell and starting the next ruins the ceremony. The character must maintain the *chant* spell for one turn.

Afterward, the cleric must rest at least eight hours before casting any spells. If forced into combat during this time, the character suffers a –4 penalty to all attack rolls, saving throws, and ability checks.

A font is a specially blessed (or cursed) basin made of precious metals contained inside an elaborate case or pedestal fitted with a cover. A particular font can be used only once a week, and a temple or other religious building can contain only one font. Particularly large buildings might contain one font per wing or floor, at the DM's option.

A font's maximum capacity for creating holy water depends on its cost—the more rare and expensive the font, the more favorably the deity to which it is dedicated looks upon it.

The *create water* spell normally produces more water than a basin can hold; the extra water is either channeled away or assumed to be magically dissipated.

## Holy Water Font Costs

| Capacity | Basin | Pedestal |
|---|---|---|
| 6 vials | 1d6x10+120 gp | 200 gp |
| 8 vials | 1d6x50+1,000 gp | 350 gp |
| 10 vials | 1d6x100+1,800 gp | 500 gp |
| 14 vials | 1d4x500+5,200 gp | 750 gp |
| 18 vials | 1d4x1,000+8,000 gp | 1,000 gp |
| 24 vials | 1d4x1,000+15,000 gp | 1,250 gp |
| 32 vials | 1d4x1,000+18,000 gp | 1,500 gp |
| 40 vials | 1d6x10,000+50,000 gp | 1,750 gp |
| 50 vials | 1d10x10,000+100,000 gp | 2,000 gp |

The basin and pedestal must be specially designed and fashioned; the process requires 2d4+2 weeks.

Holy water loses its potency if removed from the font for more than one turn unless it is placed in a specially blessed crystal or leaded glass vial. Each vial holds a quarter pint of liquid and costs 5 gp. (Copper-pinching characters can sell empty vials on the open market for 1d4+1 gp each.)

A font can be defiled and made useless for creating holy water (and for *magic font* spells) by touching it and casting a *curse* spell. Fonts can be nonmagically defiled by placing anything repugnant to the deity to which the font is dedicated to within its confines.

A defiled font must be entirely remade. The font cannot be cleansed or restored, except by a *wish*, though the materials in the basin can be recycled and used in a new basin for 1d4+1x10% of the original cost. For example, Delsenora's temple has a font that can hold 32 vials of holy water. The initial cost was 21,000 gp for the basin plus 1,500 gp for the pedestal. If the font is defiled, the replacement cost is 1,500 gp for the pedestal and 20–50% of the original basin cost. Delsenora rolls a 2 and must pay 30% of the original cost—6,300 gp.

## Creating Magical Items

Sooner or later, players in high-level campaigns start thinking about how their characters can manufacture their own enchanted items. The

sheer difficulty involved in item creation should be sufficient to deter characters driven by simple greed, especially if the DM follows the advice on controlling magic in Chapter 1. In a well-run campaign, creating magical items not only consumes more resources than it generates, it keeps the characters busy trying to find what they need to complete the process.

Characters with a true interest in creating magical items shouldn't find the effort too costly; some things are more important than money or power. They may be driven by a thirst for fame or a desire to create magical items they have never found in a treasure hoard. They might even be required to create a magical item to achieve a particular goal, which creates a variety of adventuring possibilities as the character struggles to gather the required material components in time to complete his goal.

This section presents a system that allows the DM to quickly determine how long creating a magical item takes, how much it costs, and how likely the attempt is to fail. This system is more detailed and complex than the one detailed in the *Dungeon Master Guide*, and it is intended for high-level campaigns in which several player characters wish to create standard magical items.

This material is generally compatible with the rules for creating magical items presented in the *Book of Artifacts*; this system is a little simpler but doesn't give the DM as much control over how difficult items are to make. If your players are content to create only a few standard items, this book's system should work better for you.

## Requirements

To create a magical item, a character needs the appropriate level of skill, a suitable place to perform the work, the correct materials and processes to complete the item, and often the *enchant an item* and *permanency* spells.

### Character Level

Wizards can create potions and scrolls at 9th level and other items at 11th level, provided that the necessary spells are available.

Priests can create scrolls at 7th level, potions at 9th level, and other items at 11th level.

Warriors and rogues cannot create magical items, even if they have spellcasting ability.

Priests and wizards can use spells on scrolls, stored in items, or cast by other characters to get the spells necessary to create magical items.

### Who Can Make Which Items?

No character can make a magical book, libram, manual, tome, or artifact. Artifacts are a campaign-shaking occurrence, reserved to the discretion of the DM. Magical writings that increase levels and ability scores are likewise unbalancing.

Racial items, such as *boots of elvenkind* and *girdles of dwarvenkind*, can be created only by priests of the indicated race. High-level elf priests, for example, can create *cloaks of elvenkind*. If the *Exceeding Level Limits* optional rule (from the DMG) is not in play, only NPC demihuman clerics who have achieved the maximum level can make these items.

Mages can make any other item if they meet the level requirements and have the

necessary spells.

Priests and specialist wizards can make only those items that they can use. A cleric, for example, cannot make a magical long sword, and a transmuter can't make a *wand of fire*, which employs evocation magic. Specialist wizards, however, receive a +5% bonus to their success chances when creating items that possess abilities from their school of specialization. For example, a transmuter gets the bonus when creating a *wand of polymorphing*.

### Working Space

A wizard needs a laboratory to make magical items. The laboratory must have at least 500 square feet of floor space (20 x 25 feet), and more is preferable. Basic furnishings and supplies cost 5,000 gp, and the character must spend an additional 500 gp a month to keep the laboratory properly equipped.

A priest must create magical items on an altar specially dedicated to his deity. There is no basic size requirement, although a deity whose portfolio includes magic might impose one. An item to be enchanted must fit on the altar, so it benefits the priest to make the altar as large and sturdy as is practical. The minimum cost for building the altar and properly consecrating it is 2,000 gp. The altar requires no special maintenance, but only the priest who performed the consecration can use the altar to enchant items—no other creature can use it while the priest lives. If the altar is defiled, the priest must consecrate it again. Before consecrating the altar, the priest must please his deity with some extraordinary service connected with the deity's portfolio or sphere of control. A deity of wisdom, for example, might look favorably upon a priest who writes a book of philosophy or who solves a mystery using superior judgment instead of divination spells.

After the service is complete, the priest must pray and meditate over the altar for one week. The vigil occupies all the character's waking hours. If interrupted, the vigil must be started over again.

**Table 23:**
Magical Item Creation

| **Potion** | **Material** | **Process** | **Cost** | **Time** |
|---|---|---|---|---|
| Single Use | 1 Rare | 1 Common | XP value | 1 day/100 gp |
| Limited Use | 1 Exotic | 1 Rare | XP value | 1 day/100 gp |
| **Scroll** | | | | |
| Spell | 1 Rare and 1 Common | Variable | 1/2 XP value | 1 day/spell level |
| Protection | 1 Exotic | 1 Rare | 1/2 XP value | 6 days |
| **Ring** | | | | |
| Single Function | 1 Exotic | 1 Common | XP value | 1 week/100 gp |
| Multiple Function | 1 Exotic/Function | 1 Exotic/Function[1] | 2 x XP value | 1 week/100 gp |
| Limited Use | 1 Exotic | 1 Exotic[1] | 2 x XP value | 1 week/100 gp |
| **Rod** | | | | |
| Single Use | 1 Exotic | 1 Rare | 1/5 XP value | 1 week/1,000 gp |
| Single Function | 1 Exotic | 1 Rare | 1/5 XP value | 1 week/100 gp |
| Multiple Function | 1 Exotic | 1 Exotic/Function | 1/5 XP value | 2 weeks/100 gp |
| Limited Use | 1 Exotic | 1 Exotic/Use | 1/5 XP value | 4 weeks/100 gp |
| **Staff** | | | | |

| | | | | |
|---|---|---|---|---|
| Single Function | 1 Rare | 1 Rare | 1/5 XP value | 1 week/100 gp |
| Multiple Function | 1 Exotic | 1 Exotic/Function | 1/5 XP value | 2 weeks/100 gp |
| Limited Use | 1 Exotic | 1 Exotic/Use | 1/5 XP value | 4 weeks/100 gp |
| **Wand** | | | | |
| Single Function | 1 Rare | 1 Rare | 1/5 XP value | 1 week/100 gp |
| Multiple Function | 1 Exotic | 1 Exotic/Function | 1/5 XP value | 2 weeks/100 gp |
| Limited Use | 1 Exotic | 1 Exotic/Use | 1/5 XP value | 4 weeks/100 gp |
| **Miscellaneous Magic** | | | | |
| Single Use | 1 Exotic | 1 Exotic | 2 x XP value | 1 week/100 gp |
| Single Function | 1 Exotic | 1 Exotic | 3 x XP value | 1 week/100 gp |
| Multiple Function | 1 Exotic/Function | 1 Rare/Function[2] | 4 x XP value | 1 week/100 gp |
| Limited Use | 1 Exotic/Use | 1 Exotic/Use[2] | 2 x XP value | 3 weeks/100 gp |
| **Armor** | | | | |
| Single Function | 1 Exotic | 1 Rare and 1 Common | 2 x XP value | 3 weeks/1,000 gp |
| Multiple Function | 1 Exotic/Function | 1 Exotic/Function[3] | 2 x XP value | 4 weeks/1,000 gp |
| Limited Use | 1 Exotic/Use | 1 Exotic/Use[3] | 2 x XP value | 2 weeks/1,000 gp |
| **Weapon** | | | | |
| Single Use | 1 Rare | 1 Common | XP value | 1 week/100 gp |
| Single Function | 1 Exotic | 1 Rare and 1 Common | 2 x XP value | 3 weeks/1,000 gp |
| Multiple Function | 1 Exotic/Function | 1 Exotic/Function[3] | 2 x XP value | 4 weeks/1,000 gp |
| Limited Use | 1 Exotic/Use | 1 Exotic/Use[3] | 2 x XP value | 2 weeks/1,000 gp |

*Footnotes:* [1] One common process also is required; [2] One exotic process also is required; [3] One rare and one common process also are required.

### Approval

Characters who have the required skills and equipment are not necessarily free to begin churning out magical items as they see fit. The DM must approve any new magical item that enters the campaign. The player should explain exactly what powers the proposed item will have. In the case of items already described in rule books, this is simply a matter of having the DM review the description and decide if the item is appropriate to the campaign. Once approved, the player is free to have the character begin work.

## Creating the Item

Every item that is to be imbued with magic must be of the finest quality, specifically created for the purpose of placing enchantments upon it. An item must be created from one or more special materials, each of which must undergo a certain number of special processes. A character creating a sword, for example, must first commission a rare and unusual blade to be crafted. A regular sword from the local smithy cannot become a *sword +3 frost brand*. Creating a magical item is not a matter of picking up a few household articles and muttering an incantation.

Table 23 lists the materials and processes various types of items require. Some of these are more difficult to complete or acquire than others, as explained in the notes to the table. Table 23 gives the suggested number of materials and processes each item requires as well as a few suggestions. It is up to the DM to decide exactly what materials and processes are necessary; this requires a great deal of creativity on the DM's part. In any case, the character does not automatically know what the requirements are.

Gathering all the necessary materials can take a lot of time. Ideally, the DM should create a series of adventures that allows the character to obtain everything. The character is free to get help from any other character who can be persuaded to join the hunt.

## Enchanting the Item

Wizards generally begin with the *enchant an item* spell to focus their magical energy and then cast additional spells to create the enchantment. If the item has a power that duplicates or closely resembles a known spell, that is the spell cast to create the enchantment. If the item has an effect that does not duplicate a known spell, the wizard must either research a new spell or cast some combination of spells that approximates its effects. The DM must decide which spells are necessary. See the *enchant an item* spell description and the Notes to Table 23 section for more details. Most items also require a *permanency* spell to complete the enchantment.

Wizards lose a point of Constitution when casting the *permanency* spell most magical items require. Priests do not normally suffer this loss, but the DM can rule that the long process that a priest must undertake is so physically taxing that it drains a point of Constitution. This loss applies only to items that would require a *permanency* spell if the item was created by a wizard.

Priests do not have the *enchant an item* spell, and they must petition their deities to instill power into their items. The procedure is described in Chapter 10 of the *Dungeon Master Guide*.

### Notes to Table 23

**Item:** The type of item being created. These are divided into the same general categories as used in Appendix 3 of the *Dungeon Master Guide* and are further subdivided by how they can be used.

*Single use:* Using the item once completely consumes its magic, often consuming the item itself. Examples include virtually all potions, scrolls, dusts, oils, and elixirs.

*Limited use:* The item can be used a fixed number of times before it is consumed. Some limited-use items can be recharged, and some have multiple functions (see the **Item Details** section). This includes most rods, staves, and wands as well as some rings and miscellaneous magical items.

*Single Function:* The item has only one power, which usually functions continuously or on demand. Some single-function items expend charges when used. An *amulet of proof against detection and location, cloak of displacement*, and *ring of multiple wishes* are all examples of this type of magic.

*Multiple Function:* The item has more than one power. Some multiple function items are charged (and also are limited-use items) and some are not. Noncharged items of this nature include *scarabs of protection, crystal balls*, and *hammers of thunderbolts.*

**Material:** The more powerful the item, the more unusual the material from which it is made. Materials are classified by their rarity.

*Common:* The material is fairly plentiful under normal circumstances. Steel, oak staves, copper, and wool are common materials.

*Rare:* The material is expensive and difficult to find. Silk, diamonds, roc feathers, and ebony are rare materials. Common materials gathered under unusual circumstances are also considered rare. Wood taken from a lightning-struck oak, wool made from fleece taken at a lamb's first shearing, and steel made in a furnace tended by a dwarven elder are rare materials.

*Exotic:* The material is unique or unusual and cannot be purchased—the character must undertake an adventure to obtain it. Exotic materials often exist only in a metaphorical sense. Steel smelted from the ore of a fallen star, the moon's tears, the largest scale from a great wyrm's tail, and a lock of a goddess's hair are exotic materials. Common or rare materials gathered in extraordinary circumstances are also considered exotic. Cloth spun from phase spider silk under the new moon, a diamond freely given from a dragon's belly, and wood taken from a lightning-struck treant are exotic materials.

**Processes:** A process is a prescribed method for accomplishing a specific task that is performed in addition to the normal steps necessary for making the item. Like materials, processes are classified according to rarity. For example, making a mold to cast a ring is not a process because creating a mold is a typical step in ring-making. However, making the ring's mold from a wax model fashioned from beeswax taken from a hive of giant bees is a process because it is unusual. It's not always easy to distinguish processes from materials, but the distinction is not important as long as the item is created using the required number of special elements.

*Common:* The process is fairly simple and straightforward, requiring only special care or some unusual preparations. Quenching a sword in snow from a spring storm, encrusting a ring with ornamental gems, and tempering a helmet in a furnace heated with lava are common processes.

*Rare:* The process requires extra effort or extraordinary expense. Quenching a sword's blade in snow gathered at the top of the world, honing a sword blade with a *stone of good luck*, and etching an amulet with acid from a giant slug's spittle are rare processes.

*Exotic:* The process is unique or unusual and cannot be purchased—the character must undertake an adventure to complete it. Exotic processes often exist only in a metaphorical sense. Quenching a sword blade in a lover's sigh, heating a ring in burning ice, and bathing a shield in a knight's courage are exotic processes.

**Cost:** This is what the character must spend for unusual fuels and other supplies when making the item. This cost is in addition to whatever the character spends on workers' salaries, travel, professional fees, and purchasing the materials and processes necessary for making the item.

**Time:** This is the time required to actually manufacture the item once the material components have been gathered. It does not include time spent acquiring the materials and placing enchantments on the item. Time cannot be reduced by hiring extra workers, getting help from another character, or spending additional money.

## Item Details

This section contains additional information about creating various types of items, including required spells and the chance to create the item.

## Potions

A potion requires no spells, but the caster must first have the formula. Determining a formula from scratch requires 1d3+1 weeks and costs 100 gp a week. Time and costs are reduced to the minimum if the caster has access to *commune* or *contact other plane* spells. If the caster has a potion to analyze or a formula from another caster, the research is free and requires one week. A character must have a full dose of the potion to analyze, but the dose is not consumed in the research. The time requirement listed on Table 23 is the time the character actually spends brewing the potion. Once a potion's formula has been personally researched and recorded, the character need not research it again unless the record is lost.

The chance to successfully brew a potion is 70%, +1% for every two levels of the creator, and –1% for each 100 gp the potion costs (detailed on Table 23).

## Scrolls

The common material required is the paper, parchment, or papyrus as detailed in Chapter 10 of the *Dungeon Master Guide*. The rare material is the quill; a new quill must be used for each spell written on the scroll.

Blending the ink is the most important process. Ink for spells of levels 1–3 require a rare ingredient, spells of levels 4–6 require an exotic ingredient, and spells of levels 7+ require one rare and one exotic ingredient. Blending the ink takes one day, and the ink must be used within two weeks.

No spells are actually cast when writing a scroll, but the character must know the relevant spell and have any required material components on hand. If normally consumed in the casting, the material components are consumed in writing the scroll. If casting the spell normally imposes a penalty on the caster, such as magical aging, creating the scroll carries the same penalty.

The chance to successfully write a scroll is 80%, +1% for every level of the creator, and –1% for each level of the written spell. There are additional adjustments for the materials used (see *DMG*, Chapter 10). The DM must roll for success separately for each spell on a scroll. A scroll can hold 1d6 spells, determined secretly by the DM, but the character knows when the scroll is full. A failed attempt to write a spell fills the scroll but usually doesn't affect spells already written on it (see the **Failure** section).

Compare protection scrolls to the level of the spell that approximates their effects to determine the success chance and type of ink required. A *protection from magic* scroll, for example, is similar to *antimagic shell*, a 6th-level spell.

## Rings

Any ring requires one common process in addition to any extra materials or processes needed for multiple functions or limited use. Discovering all the steps required to make a ring requires 1d6+1 weeks of research and costs 200 gp a week. Access to *contact other plane* or *commune* spells automatically reduces the required time to two weeks.

A ring also requires the *enchant an item* and *permanency* spells—or the equivalent

priest ceremony—in addition to whatever spells are needed to create the ring's powers (see page 90). Multiple-use rings require one spell per use, and multiple-function rings need one set of spells for each function.

The chance to successfully create a ring is 60%, +1% for every level of the creator, and –1% for each spell and special process required (except for the *enchant an item* spell). Priests, though they do not actually cast any spells, still suffer the penalty for spells. The more complex the enchantment, the more difficult it is to successfully petition the deity to imbue the item with power.

### Rods, Staves, and Wands

These items require *enchant an item* spells—or the equivalent priest ceremonies—and whatever spells are needed to create their powers. Multiple-function rods, staves, and wands need one spell (or set of spells) for each function. A *permanency* spell is required.

The base chance to successfully create one of these items is the same as for a ring. If the item is rechargeable, it is created with one charge and then additional charges are added using the recharging procedure detailed below.

A rod, staff, or wand loses all its magical properties if it is ever drained of all its charges, even if it is normally rechargeable. Once drained of charges, the item can never be enchanted again.

### Miscellaneous Magic, Armor, and Weapons

These items require *enchant an item* spells—or the equivalent priest ceremonies—and whatever spells are needed to create their powers. Each plus for a weapon or protective device requires a separate spell. Single-use and limited-use items do not require *permanency* spells, but other items do.

The chance to successfully create one of these items is the same as for a ring. Rechargeable items are created with one charge to reduce the chance for failure.

## Recharging Items

Any spellcaster can recharge items, provided the character has access to the required spells and the character can use the item. Mages can also recharge items usable only by fighters or rogues.

To begin recharging, the character casts *enchant an item*—or performs the equivalent priest ceremony—to prepare the magical device and then casts spells that the item absorbs to create charges.

The spell used to provide a charge must duplicate or nearly duplicate the item's power. If no spell duplicates the power, the character must research a new spell or cast some combination of spells that resembles the power. If the item has multiple functions, the spell must duplicate the item's most powerful function. For example, it takes a *cone of cold* spell to recharge a *wand of frost*.

Once the preparatory spell or ceremony is complete, the character has 24 hours to create charges. Each spell used requires its normal casting time (not 2d4 hours per spell level as required by the *enchant an item* spell). When the initial enchantment fades, the character can prepare the item again, but every time an item is prepared to receive charges it must save vs. spell at the caster's level with a –1 penalty. If the save fails, the

item falls into useless dust.

## Success and Failure

Magic is tricky and involves many constantly changing variables, causing each enchantment to differ slightly from prior attempts. No matter how many times a character has created a particular magical item, the chances for success remain the same. A character's general level of expertise can improve, but particular enchantments cannot be mastered.

Each attempt to create a magical item requires a roll for success. The DM secretly rolls the dice to see if the attempt to create a magical item succeeds. Any roll of 96–00 fails automatically.

Most failed attempts ruin the item, melting it into useless slag or destroying it in some other dramatic fashion. A failed attempt to write a spell on a scroll fills the remaining space with a useless blob of ink, leaving spells already successfully written intact.

If the failure roll was a 96–00, the item appears to have been created normally but has a cursed or reversed effect instead. The DM decides the nature of the curse, using the cursed items from the magical item lists in the *Dungeon Master Guide* and *Tome of Magic* as a reference.

**Table 24:**
## Typical Experience Values

| Item | XP Value Range |
|---|---|
| **Potion** | |
| Single Use | 200–1,000 |
| Limited Use | 250–1,000 |
| **Scroll** | |
| Spell | 100/spell level |
| Protection | 1,000–2,500 |
| **Ring** | |
| Single Function | 1,000–4,000 |
| Multiple Function | 3,000–5,000 |
| Limited Use | 1,000–5,000 |
| **Rod** | |
| Single Use | 4,000–10,000 |
| Single Function | 5,000–10,000 |
| Multiple Function | 6,000–10,000 |
| Limited Use | 4,000–10,000 |
| **Staff** | |
| Single Function | 5,000–8,000 |
| Multiple Function | 7,000–15,000 |
| Limited Use | 2,500–5,000 |
| **Wand** | |
| Single Function | 2,000–4,000 |

| | |
|---|---|
| Multiple Function | 4,000–7,000 |
| Limited Use | 4,000–6,000 |
| **Miscellaneous Magic** | |
| Single Use | 200–2,000 |
| Single Function | 2,000–10,000 |
| Multiple Function | 2,500–10,000 |
| Limited Use | 500–2,500 |
| **Armor** | |
| Single Function | 250–800/plus |
| Multiple Function | lower value+ higher value |
| Limited Use | 3,000–5,000 |
| **Weapon** | |
| Single Use | 20–50/plus |
| Single Function | 400–600/plus |
| Multiple Function | lower value plus 20-40%of higher value |
| Limited Use | 1,000–5,000 |

## Values for Cursed & Nonstandard Items

If a character decides to create a cursed item, the DM should determine the cost and difficulty by comparing the cursed creation to useful items of similar power. A *cursed sword –2*, for example, is as difficult to make as a *sword +2*. If an attempt to create a cursed item fails, it is destroyed. If the attempt fails on a roll of 96–00, a curse of the DM's choice falls on the creator—the character does not wind up with a useful item instead.

If a character attempts to create an item not found in any rule book, the DM should assign it an experience point value by comparing it to similar items that already exist. Like choosing materials and processes for items, this task requires imagination and common sense. If difficulties arise, stop to consider what spells are needed to make a scroll with the same powers. Table 24 gives the typical range of experience values for items. If the maximum value for the category seems too low for the proposed item, the item probably is too powerful. When in doubt, try to err on the high side; characters attempting to create items no one else has heard of are entering uncharted territory and are more likely to fail than characters who stick to standard items.

## Examples of Magical Item Creation

*Rozmare wants to duplicate a* potion of speed *she has found. Because she has a dose of the potion to analyze, she can determine its formula in one week of study and doesn't need to spend any money except for normal maintenance on her laboratory. She determines that the potion's main ingredient is the essence of speed. After some deliberation, Rozmare decides that the heart of a swift animal should suffice (it could*

*easily be sweat from a fast horse or a shoe worn by a fleet-footed elf). Rozmare also decides it would be best to get a fresh heart, so she hires a huntsman and goes searching for deer.*

*The DM smiles inwardly at this plan, remembering several stories about Robin Hood and how touchy some people can get when it comes to deer hunting. Fortunately, Rozmare pays her respects to the local baron and agrees to deal with some brigands before going hunting.*

*Once she has the heart, Rozmare begins working. Additional materials cost 200 gp (equal to the potion's experience point value) and brewing takes two weeks. At the end of that time, the DM secretly rolls the dice and gets a 71. Rozmare is 13th level, so her success chance is 94% (70% +26% for her level and –2% for the potion's cost of 200 gp). Rozmare has successfully created a* potion of speed.

*Some time later, Rozmare gets hints from the baron that a magical gift would be appreciated. Since the baron has been having some problems with trolls lately, Rozmare agrees to provide him with a* long sword +1, +3 vs. regenerating creatures.

*To create the sword, Rozmare needs the* enchant an item *spell (which she knows), a* permanency *spell (which she cannot cast herself), and a list of the required materials and processes. The baron reluctantly agrees to provide a ring with one wish, which Rozmare can use to duplicate the* permanency *spell. Rozmare is in no hurry, so she begins researching the required steps without magical aid. After three weeks (and an expenditure of 600 gp), she discovers that the sword must be forged of metal taken from a blazing fallen star and nails from a slumbering vampire's coffin (two exotic materials). The sword must be heated in coals strewn with a troll's ashes (rare process), quenched in acid (common process), set with a gem wrested from an ogre magi's hand (exotic process), and polished with a tooth from a living lernaean hydra (exotic process). Rozmare has quite a series of adventures ahead of her.*

*Rozmare thought she would have to find a meteorite that just struck the ground; she got a break when she found a meteorite with the rays of the setting sun playing across it like firelight. The coffin nails were fairly simple to get—her group forced a vampire into gaseous form and pried loose the nails from its coffin while the monster was recovering. Acquiring a gem wrested from an ogre magi's hand proved frustrating, as the creature's invariably turned gaseous and escaped before Rozmare could get the gem. Eventually, a successful confusion spell allowed the task to be accomplished. Getting a tooth from a lernaean hydra wasn't difficult—the tooth didn't have to be alive, just the monster—but making sure the hydra was still alive when it came time to polish the sword required her to keep the creature caged. Troll ashes proved fairly easy to get, and the smith Rozmare hired to actually make the blade suggested that cooling that sword in a vat of vinegar would qualify as quenching the sword in acid without endangering the blade.*

*Additional materials for the task cost 1,600 gp (double the sword's 800 experience point value) and preparations took eight weeks (four weeks per 1,000 gp of cost, rounded up to the nearest 1,000).*

*With the sword made, all that remained was to enchant the weapon. The arduous task of enchanting the blade required the* enchant an item, enchanted weapon *(for the sword's basic bonus—the DM decides the extra steps required for the sword's multiple functions make additional* enchant an item *spells unnecessary) and* permanency *spells. Since Rozmare does not have access to the* permanency *spell, she uses the wish from the*

*baron's ring as a replacement.*

*Rozmare has a 65% chance to succeed (base 60% +13% for her level –8% for processes and spells). The DM secretly rolls the dice and gets a 54, a success.*

# Chapter 5:
# Magical Duels

When two spellcasters have a disagreement that can't be solved amicably, a magical duel is often the best way to resolve the dispute. Duels are also fought to prove who is more proficient in the magical arts, and many apprentices enter magical duels with their peers to demonstrate their skills. The duel is a highly refined form of combat, more subtle than simply squaring off and hurling spells until an opponent fails a saving throw and infinitely more subtle than physical combat.

To conduct a magical duel, the opponents must seek out a third spellcaster who agrees to oversee the event and assist with the construction of the arena where it is to take place. It often helps bring a few friends along to the duel site to help guard against treachery or unwelcome interventions from third parties.

## Creating the Arena

The arena is a magical construct that the combatants must forge cooperatively. To form the arena, the two opponents must participate in a protocol similar to casting a spell. They begin by standing at arm's length, then circle each other, chanting and gesturing for a full turn. If the combatants' concentration is disturbed before the arena is completed, the preparations must begin again. Typical disturbances include anything that would normally prevent spellcasting, but even loud noises can ruin the creation process.

The mediator then casts some kind of protective spell over the combatants. *Wall of force* is the usual choice, but any protective spell that encompasses the two combatants is sufficient. The combatants now have the option of contributing their own spells. The spells contributed need not be protective spells, but they must be currently memorized. A contributed spell disappears from the character's memory as though it had been cast; the spell does not have its normal effect but instead helps determine how large the arena is, which combatant has the advantage, and how severe the consequences of defeat are (see below). Unscrupulous characters might contribute multiple spells or spells stored in scrolls or other devices to increase their chances of gaining the initial advantage and to raise the stakes beyond what the opponent would willingly undertake.

Spells contributed to the arena are recorded secretly by the players involved. The characters involved in the duel cannot tell how many spells their opponent is contributing or how long the opponent spends casting them, but the mediator is aware of the spells contributed by both sides.

### Balance of Power (Optional)

If the two opponents are not the same level, the number of spell levels each character contributes to the arena cannot exceed the weaker opponent's level. For example, if

Calvin, a 7th-level wizard, is dueling Delsenora, a 12th-level priest, neither character could contribute a spell higher than 7th level or multiple spells totaling seven levels or more. There is no limit to the number of spells that can be contributed if both opponents are the same level.

When the arena is complete, the two combatants are standing still with a ball of shimmering force hovering between them. A close look at the ball reveals tiny images of the two combatants floating opposite each other. The images are mental constructs that represent the combatants in the duel.

Characters must willingly cooperate to form an arena and conduct a duel. A character under a magical or psionic compulsion, such as a *charm person* or *suggestion* spell, cannot be forced to give consent. A character can be intimidated into giving consent in any number of ways, including a *geas* or *quest* spell. Consent given under threat is still consent for purposes of a magical duel as long as the character in question is free to think for himself. In the case of a *geas* or *quest* spell, the subject is free to ignore the request for a duel and face the consequences.

## Arena Physics

Although the arena looks like a sphere from the outside, it has a weird geometry all its own. It is best pictured as a rectangle 12 to 30 spaces long and one space wide, resembling a long, narrow corridor more than anything else. The opponents stand on opposite ends of the corridor facing each other.

The number of spaces between them depends on the highest level of spell each opponent contributed to the arena. If neither opponent contributed a spell, there are 10 intervening spaces. The highest level spell contributed by each opponent adds its level. For example, if one opponent contributed a 5th-level spell and the other contributed a 3rd-level spell, there would be 18 spaces between the duelists. There are never more than 30 spaces between the opponents, and only the single, highest-level spell contributed by each side of the duel is factored for determining the distance between the spellcasters.

The space occupied by the duelists in the arena does not count as far as the length of the corridor is concerned. Thus, the largest arena would consist of 32 spaces, but each combatant would occupy one space at opposite ends of the corridor, leaving 30 spaces between them.

## Conducting the Duel

When the arena is complete, the opponents fight by casting spells. The spells emanate from the characters' images, and their effects become mental constructs that move across the arena and battle opposing spells along the way.

To help keep track of spells cast during a duel, it is helpful to use some kind of large grid. The reusable sheets used for conducting combat encounters with miniature figures are ideal. Place a miniature or counter for each combatant on the grid with the appropriate number of spaces between them.

A duel is fought in rounds, just like a normal encounter. The sequence of actions in each round is as follows:

1. The advantaged caster's spells move and any resulting combats are conducted.

2. The disadvantaged caster's spells move and any resulting combats are conducted.

3. Both casters cast new spells.

4. Steps 1–3 are repeated until the duel ends.

   On the first round of the duel, there is no spell movement because there are no spells in the arena.

## Determining Advantage

Throughout the duel, one opponent has the advantage—the upper hand—while the other caster is disadvantaged. When the duel begins, the advantage lies with the spellcaster who contributed the highest level spell to the arena (not the highest combined level of multiple spells). If neither opponent contributed any spells, or if neither opponent contributed a higher level spell than the other, each opponent rolls 1d10 and the character with the highest roll has the advantage. The opponent with the advantage retains it until one of his spells is destroyed in combat. At that point, the advantage shifts to the other opponent. Each time a spell destroys another spell in combat, the advantage shifts to the opponent who cast the victorious spell. The advantage does not shift if a character defeats a spell through use of his power rating (PR) or making a successful saving throw.

## Spells in the Arena

Once cast, a spell acquires a physical form and moves across the space between the combatants, taking effect only when it reaches the opponent. Spells are not readily identifiable, but detect magic and the spellcraft proficiency can identify them. To help keep track of spells, players should secretly record the spells their characters cast. Writing the spells' names on a piece of folded cardboard creates a marker that can easily be moved across the grid (3" x 5" index cards cut in half, then folded are ideal).

A spell never leaves the arena or affects creatures outside the arena. Remember that the combatants themselves are not in the arena—magical constructs represent them. It is not possible for combatants to cast spells upon themselves. For example, a priest involved in a duel can cast *cure light wounds*, but the spell appears in the arena—it does not heal any damage the caster has suffered. Likewise, a wizard can use a *teleport* spell, but the spell merely travels across the arena toward the opponent—it does not whisk the caster away to another place. Spells also do not truly affect the opponent. A *charm person* or *imprisonment* spell might fight its way to the opponent's space, but when the spells take effect, the caster neither controls nor imprisons his opponent. Instead, the opponent's actions are restricted until he can throw off their effects (see the **Characters vs. Spells** section for details).

If a spell encounters an opposing spell on its way across the arena, the two spells might struggle to annihilate each other before continuing on or they might pass each other. Each spell has three characteristics that govern its behavior in the arena: Type, Movement, and Power Rank. The Appendix contains dueling characteristics for spells

included in the *Player's Handbook* and the *Tome of Magic*.

**Table 25:**
## Spell Interactions

| Type | A | D | AD | L | M |
|---|---|---|---|---|---|
| A | — | C | C | A | — |
| D | C | — | C | A | G |
| AD | C | C | C | A | A |
| L | A | A | A | C | — |
| M | — | G | A | — | — |

**A** = The opponent with the advantage decides if the spells fight or pass each other with no effect.

**C** = Combat must take place between the spells when they meet.

**G** = Generally, these types of spells ignore each other, but there are some defense spells that conduct combat with missiles; see the **Special Dueling Characteristics for Spells** section for details.

**—** = The spells pass each other with no effect.

**Table 26:**
## Spell Movement

| Spell Range* | Movement Rate |
|---|---|
| Touch or 0** | 1 |
| 1–20 yards | 2 |
| 21–50 yards | 3 |
| 51–100 yards | 4 |
| 101+ yards | 5 |

* If the spell's range varies with the caster's level, its movement rate increases with the increased range. For example, a *fireball* cast by a 5th-level wizard has a range of 60 yards (MV 4), but a *fireball* cast by a 15th-level wizard has a range of 160 yards (MV 5).

Some spells, such as *prismatic spray*, have ranges listed as 0, but areas of effect that allow them to reach distant targets. These spells' movement rates are a function of their areas of effect, not their basic ranges. Spells that allow instantaneous movement or that affect huge areas have movement rates of 5. See the Appendix for examples.

** Also includes spells with a range of less than one yard.

**Type:** A spell's type determines what it can do and which opposing spells it must attempt to destroy. For dueling purposes, there are five types of spells:

*Attack (A):* The spell's normal function in the AD&D game is to harm the target in some way. In a duel, an attack spell is used to damage or temporarily incapacitate the opponent. Spells such as *charm person, web*, and *disintegrate* are attack spells. An attack spell must conduct combat with any opposing defensive spell it meets and can conduct combat with opposing leech spells (the advantaged spellcaster decides, see below). It ignores missile and other attack spells.

If an attack spell reaches the opposing spellcaster's square, it takes effect (see the **Characters vs. Spells** section for details).

*Defense (D):* The spell's normal function is to protect or fortify the recipient in some fashion. In a duel, these spells are used to destroy attack spells before they cross the arena. Spells such as *protection from evil, cure light wounds*, and *minor globe of invulnerability* are defense spells. A defensive spell must conduct combat with any opposing attack spell it meets and can conduct combat with opposing leech spells. It generally ignores missiles, but some defensive spells are specifically designed to stop missiles (refer to the **Special Dueling Characteristics for Spells**) Defensive spells always ignore each other, and, upon reaching the opposing spellcaster's square, vanish without affecting the opponent.

*Leech (L):* Outside of a duel, the spell normally does not cause harm or provide a defense. In a duel, leech spells are used to destroy other spells and to damage the opponent. Spells such as *teleport, detect invisibility*, and *haste* are leech spells. A leech spell must conduct combat with any opposing leech spell it meets and can conduct combat with opposing attack or defense spells. It ignores missiles.

If a leech spell reaches the opposing spellcaster's square, it inflicts 1d6 points of damage per spell level. The opponent is allowed a saving throw vs. spell to reduce the damage by half.

*Attack/Defense (AD):* The spell's normal function is to create a solid barrier or summon a creature. In a duel, an attack/defense spell creates a barrier that most spells cannot bypass without a battle and has the ability to inflict damage upon the opponent. The various wall and monster summoning spells as well as *dispel magic* are attack/defense spells. An attack/defense spell must conduct combat with any opposing defensive or attack spell it meets, and it can conduct combat with opposing leech or missile spells, as chosen by the advantaged spellcaster (see below).

If an attack/defense spell reaches the opposing spellcaster's square, it usually inflicts 1d6 points of damage per spell level. The opponent is allowed a saving throw vs. spell or a spell combat roll to avoid the damage.

*Missile (M):* The spell creates or propels a physical or magical projectile that streaks toward the target, inflicting damage. In a duel, a missile spell is used to damage the opponent. Spells such as *fireball, magic missile*, and *flame arrow* are missile spells. A missile spell can conduct combat with opposing attack/defense spells. It ignores other missile, leech, attack, and most defense spells.

If a missile spell reaches the opposing spellcaster's square, it takes effect (see the **Characters vs. Spells** section for details).

**Power Rank (PR):** The higher a spell's power rank, the more likely it is to defeat

another spell in combat. A spell's power rank is its level plus nine. For example, a *fireball* is a 3rd-level spell and has a PR of 12.

**Movement (MV):** A spell's movement rate determines how quickly it moves across the arena. A spell need not move its full rate but can never exceed its movement rate in a single round. Most spells must move at least one space every round (unless locked in combat with another spell). The only exception is defensive spells; a defensive spell can remain in the caster's space instead of moving across the arena, but only one such spell can remain with the caster at any given time. If the caster leaves the space, the spell stays behind.

A spell's movement rate is based on its range, as shown on the Table 26.

### Requirements for Spellcasting

All spellcasting during a duel is simultaneous. Spells cannot be disrupted as they can during a normal encounter. Spellcasting is not always possible, however.

To cast a spell in a duel, a character must be free from the effects of hostile spells and not engaged in personal combat with his opponent. The character must have the intended spell memorized and must have any required material components in his possession. Additional components are not required, however, as the arena itself makes up for the lack. For example, the *pyrotechnics* spell normally requires a fire source. In a dueling arena, the spell still works.

## Spell Movement and Combat

When a spell is cast, it appears in the space immediately ahead of the caster; if it is a defensive spell, it can appear in the caster's space instead. No spell moves on the round when it is cast. If an opponent's spell already occupies the space, the two spells must check for combat.

**Movement:** A spell already in the arena when a round begins moves one or more spaces toward the opponent. The spell must move at least one square forward unless it is locked or it is a defensive spell occupying the caster's square; the latter type of spell has a movement of 0 and remains where it is until it is destroyed in combat or the duel ends. A spell need not move its full movement rate.

All of the advantaged caster's spells move first, even if combat causes the advantage to shift to the other caster. When spells move, the spell closest to the opponent always moves first, then the next closest, and so on until all the character's spells have moved.

It is possible for two or more spells to occupy the same space. All spells cast by one character can freely move through each other or stop in the same space. When two friendly spells begin a round in the same space, the spell with the fastest movement rate moves first.

Spells from different casters also can move through each other or stop in the same space if they are not required to conduct combat. Spells never move backward unless forced to do so by an opposing spell's special ability.

**Combat:** When two opposing spells meet, the disadvantaged caster must announce his

spell's type (A, D, AD, L, or M). The advantaged caster then checks his spell's type against Table 25 to determine if the spells battle or if they pass each other. The advantaged caster is not required to reveal his spell's type, and neither caster is required to reveal what the spells actually are. Note that some spells must battle each other even if their types don't require them to (see the notes on special abilities). It is the disadvantaged opponent's responsibility to announce special abilities that might be relevant.

If combat occurs, it is conducted immediately, and all spell movement temporarily stops until the combat is resolved.

To conduct combat between spells, each player rolls 1d20 and compares the result to his spell's power rank. If the roll is higher than the power rank, the spell fails. If the roll is equal to or less than the power rank, the spell succeeds.

If one spell fails and the other succeeds, the failed spell is destroyed. If other opposing spells exist in the same space, battle is conducted with them as well. If the winning spell was moving when the combat occurred it can finish its move after the battle. It is possible for one spell to fight several different battles in a single round, but combat between any one pair of spells is conducted only once each round.

If both spells fail, the two spells lock. Failure can occur when both spells roll higher than their power scores or when two spells with the same power scores tie each other. Locked spells prevent other spells from passing; refer to **Locked Spells**, below.

If both spells succeed, the spell with the higher roll destroys the spell with the lower roll.

For example, Rary casts a *charm person* spell (A, PR 10) that meets Serten's *cure light wounds* spell (D, PR 10). The two spells must battle. Rary rolls a 12 and Serten rolls a 1. Rary's *charm person* spell is destroyed because it failed its roll and Serten's *cure light wounds* spell succeeds. If Rary had rolled a 9 instead of a 12, the *charm person* would have destroyed the *cure light wounds* spell because it succeeded with a higher roll. If Serten had rolled a 20 and Rary had rolled a 12 (or if both had rolled a 10), the two spells would have locked.

If an opposing spell occupies the space in front of a character during step 3 and the character casts his own spell into that space, the two spells immediately check for combat.

**Table 27:**
Character Power Scores

| Ability Score* | Bonus | Power Score |
|---|---|---|
| 14 or less | 0 | 9 |
| 15 | 1 | 10 |
| 16 | 2 | 11 |
| 17 | 3 | 12 |
| 18+ | 4 | 13 |

* Wizards and bards use Intelligence/Reason. Priests, paladins, and rangers use Wisdom/Intuition.

**Locked Spells:** When two spells lock, they remain in place until another spell enters the space and destroys the opposing spell. No spell can move through a space containing locked spells, even if it normally could ignore the opposing spell. Once the opposing spell is destroyed, all the blocked spells are free to move normally.

For example, the *charm person* and *cure light wounds* spells from the previous example are locked. There is no further combat between the two spells until a third spell moves into the space. The next spell to move is a *magic missile* that belongs to Rary. *Magic missile* is a type M spell that normally ignores type D spells, so it cannot destroy the *cure light wounds* spell and is blocked until the lock is cleared. The next spell to move is Serten's *dispel magic*. *Dispel magic* is an AD spell that normally fights the type A spell *charm person*. If the *dispel magic* spell destroys the *charm person* spell, the lock is cleared. If not, the lock continues and spells are still blocked from advancing past the lock.

It is possible to have multiple locked spells in the same space. When this occurs, each spell that enters the space must check against all locked spells in the area. Once all opposing spells are defeated, the lock is cleared.

**Combat Between Multiple Spells:** If a spell enters a space containing more than one opposing spell, all the spells must be checked for combat.

If there is a lock in the space, the opposing spell that caused the lock is checked first. If the incoming spell cannot battle the locking spell, the incoming spell is blocked and no combat occurs between it and any other spell in the space until the lock is removed.

If there is no lock in the space, the opposing spell with the highest movement rate is checked for combat. If there is no combat or the incoming spell wins the combat, the spell with the next highest movement rate is checked. This process continues until the incoming spell is destroyed or all opposing spells have been checked. If a lock occurs during the process, all combat stops until the lock is cleared.

If there are multiple locks in the space, the incoming spell checks the opposing locked spell with the highest movement rate for combat. If the incoming spell cannot conduct combat with that spell, no combat occurs and all the locks remain in place. If the incoming spell defeats the first locking spell, it checks for combat with the next fastest locking spell and so on until all the opposing locks are checked or until the incoming spell is locked or defeated.

When all locks are removed from a space containing multiple opposing spells, there is no further combat until another spell enters the space. The spell entering the space checks the opposing spell with the highest movement rate and continues checking until all the opposing spells have been checked or the spell is locked or defeated.

## Character Movement and Combat

The characters involved in a duel have power ranks and can move across the arena and conduct combat just as spells do.

A character can move one space each round instead of casting a spell. Unlike a spell, characters can move forward or backward. If the character enters a space containing an opposing spell, the spell takes effect just as though the spell entered the character's space.

A character has power rank of 9 plus a bonus for high Intelligence/Reason or Wisdom/Intuition. Characters use their power ranks for conducting combat between themselves and sometimes for resisting spells.

**Characters vs. Spells:** Opposing spells are immediately revealed when they enter a character's square; when a spell hits, the character knows exactly what it is. Spells have varying effects according to their type:

*Attack Spells:* These take effect just as if they were cast upon the character during an adventure. However, it is important to remember that the character is not affected directly, only the mental construct that represents the character in the duel is affected.

If the spell normally allows a saving throw, the character is entitled to one in the duel. The saving throws by caster level optional rule (see page 143) is always used in duels; bonuses for high ability scores never apply during a duel. Refer to the individual spell description for the spell's effects.

If the spell normally requires the caster to make an attack roll, such as *Melf's acid arrow* and all touch-delivered spells, the two characters conduct a combat to see if the incoming spell takes effect (see the **Character vs. Character** section).

If the spell inflicts damage, the appropriate number of hit points are deducted from the character's total. Characters reduced to zero hit points or less lose the duel and suffer the effects indicated under the **Spoils of Victory** section (page 105).

If a spell has any lingering effects that hinder or incapacitate the target in any way—loss of mental control, immobilization, or any other effect that keeps the character from casting spells or acting freely—the character cannot move or cast spells into the arena, but he can cast counter spells or conduct combat with the spell. This represents the character's struggle to regain control over his mental construct. A character with a positive hit point total can never be removed from the arena or forced to end the duel by a spell cast as part of the duel, such as a *suggestion* that tries to convince him to quit.

Combat between a character and a spell is conducted just like combat between spells except that the affected character uses his power score. If a lock occurs, the attacking spell is destroyed instead. Characters cannot opt to use their power scores instead of attempting saving throws when spells first enter their spaces.

When a spell first enters the same space occupied by their magical construct, the attacking spell is revealed and the character has the option of either making a saving throw or employing a counter spell. To cast a counter spell, the character selects a spell that can normally conduct combat with the spell (this can be affected by who has the advantage). The combat between spells is conducted normally, but both the attacking spell and the counter spell are destroyed if the counter spell wins or if there is a lock. If the counter spell is defeated, the attacking spell affects the character. A character can cast any number of counter spells during a round provided he has an appropriate spell memorized, but he can only cast a single counter spell against each incoming spell. Casting a counter spell does not prevent a character from casting a spell later in the round.

*Defense Spells:* These vanish when they enter the opponent's space. A defense spell—not an AD spell—can also be cast in the character's own space. A spell cast in this manner remains in the space until destroyed or the duel ends. Any attack or attack/defense spell that enters the space must defeat the spell before it can affect the

character, and some defense spells can also combat missiles in this manner.

*Attack/Defense Spells:* Unless the spell has a special ability that states otherwise, an attack/defense spell inflicts 1d6 points of damage per spell level when it reaches an opponent's space. The opponent is allowed a saving throw vs. spells to negate the damage.

*Leech Spells:* Unless the spell has a special ability that states otherwise, a leech spell inflicts 1d6 points of damage per spell level when it reaches an opponent's space. The opponent is allowed a saving throw vs. spells to reduce the damage by half.

*Missile Spells:* These spells follow the same procedures as attack spells.

**Characters vs. Multiple Spells:** If several hostile spells enter a character's space at once, the character deals with all of them simultaneously, making saving throws, conducting combat and casting counter spells; it is possible for a character to cast multiple counter spells in a single round.

The character must deal with any spell that began the round in his space first and then with the fastest opposing spell, and so on until he conducts combat with every spell in the space. If some of the spells in the space do not allow counter spells, such as creature summoning spells, the character can use counter spells against any spells in the space that do allow counter spells.

**Character vs. Character:** Combat between characters occurs whenever two characters occupy the same space as well as when a spell that requires an attack roll enters a character's space. Character combat is conducted just like spell combat, except that locks are treated differently.

If a spell causes character combat, the attacker uses his power score or the spell's, whichever is higher. The spell takes effect if its caster wins the combat. The spell is destroyed if it is defeated or locked. The defender can respond with his power score or a counter spell.

If two characters are engaged in combat, the winning character can choose to inflict 1d6 points of damage or send the loser 1d4 spaces away in either direction, but in no case can the loser be moved out of the arena. If the forced movement takes the character into a space containing an opposing spell, the spell takes effect.

It is not possible to cast spells while engaged in character combat. Counter spells cannot be used against another character.

**Identifying Spells:** Spells are not readily identifiable when they are moving across the arena. However, a spell is always revealed when it is in the same space as the opponent.

A character with the spellcraft proficiency can try to identify opposing spells instead of moving or casting a spell. The character chooses any spell currently in the arena and rolls a power check. If the roll succeeds, the spell is revealed. This can be particularly useful for targeting specific enemy spells.

## Special Notes

The DM should find the following information useful when characters engage in magical duels.

## Magical Items and Preexisting Spells

Because a dueling arena is a mental construct, it is not possible to carry any sort of equipment into it; the opponents enter the arena only in their minds. Certain items, however, can affect the course of a duel.

Items that actually store spells or spell energy can be employed to create spells during a duel. Such items include *rings of spell storing*, magical scrolls, and *rods of absorption*. A *scroll of protection* creates a defensive effect with a power rank of 15 and a movement of 1.

Items that create spell-like effects usually cannot be used in a duel. Such items include all wands, staves, potions, and miscellaneous magical items, as well as most rods. The combatants, however, can agree in advance to incorporate such items into a duel. The arena must be altered to allow the items to function, and an additional turn of preparation time is required for each class of item to be allowed. If only one particular item is to be allowed, an extra turn of preparation is required.

For example, Delsenora and Calvin decide to have a friendly spellcasting contest, but Calvin wishes to employ his *wand of conjuration* in the duel. If the pair spends two turns creating the arena, either character could use any wand. If the pair spends three turns preparing, only Calvin's *wand of conjuration* can affect the duel—the extra time might be well worth Calvin's patience.

A spell-like effect from an item works just like the spell it simulates. When in doubt, the item creates a leech effect that inflicts a maximum of 6d6 points of damage. A leech from a staff drains a maximum of 8d6 dice of damage, while other items inflict a maximum of 9d6 points of damage. An effect from a device uses the device level to determine the saving throw, not the wielder's level (see page 144).

Magical bonuses for protective devices, such as enchanted armor and *rings of protection*, increase the wearer's power score against spells, but not for personal combat. For example, a priest with a power score of 11 wearing plate *armor +2* and a *ring of protection +1* has an adjusted power score of 14 against spells. Armor class has no effect on a duel; items such as *bracers of defense* do not help the wearer. Defensive bonuses to saving throws apply to any saving throw the character makes in the duel. Magical armor can provide saving throw bonuses against missiles and attack/defense spells (see *DMG*, Chapter 9).

Attack bonuses from magical weapons increase the character's power score for personal combat, but not against spells. In other words, magical weapons only help when the two magical constructs engage in melee combat instead of casting spells at each other.

Effects from other magical items and spells that are activated and in place on a character when an arena is constructed usually have no effect on a duel. However, the arena can be constructed to allow them to operate. An extra turn of preparation time is required for each effect to be incorporated. Once incorporated, an effect remains in place until it is dispelled or its duration expires.

A preexisting effect can profoundly influence on a duel. For example, a *minor globe of invulnerability* makes the protected character immune to all 1st- through 3rd-level spells. The globe can be dispelled, but a dispel magic spell would have to reach the character's space before it could take effect. A simple *protection from evil* spell renders the recipient immune to any attack/defense spell that summons creatures. Characters

should exercise considerable care before agreeing to allow an opponent to enter the arena with a magical effect already in place. The durations for all preexisting conditions begin on the first round of a duel, not when the spell is initially cast during the arena creation process.

Certain magical effects prevent an arena from being formed; these include the spells *antimagic shell*, *prismatic sphere*, *Otiluke's resilient sphere*, *Otiluke's telekinetic sphere*, any wall spell, and *scrolls of protection from magic*. None of these effects can be incorporated into an arena, even if both opponents agree.

## Specialist Wizards

Specialist wizards' saving throw adjustments for spells within their schools of specialization apply during duels unless the characters choose to forgo them. Such adjustments require an extra turn of preparation when building the arena. Specialists are free to use any available bonus spells during a duel.

Specialists also suffer from a disadvantage in duels; spells from their opposition schools gain an extra power rank. For example, *dispel magic* spells have a rank of 13, not 12, when used against illusionists because Abjuration is opposed to Illusion. The bonus represents the specialists' lack of experience when dealing with magic from their opposition schools.

A dueling arena provides a stable magical environment, and wild surges and level variations never occur within them. It is possible to construct an arena that allows level variations, but both combatants must be wild mages and wild surges still are impossible. In a duel, level variations raise or lower a spell's power rank.

For example, Johan the Rat casts an *unseen servant* spell, which normally has a power rank of 10. If Johan rolls a level variation of –5, that particular unseen servant spell has power rank of 5.

A spell's other dueling characteristics and effects can also be altered by a level variation. For example, if Johan were a 13th-level wild mage and cast a *fireball* spell with a level variation of –5, the *fireball* spell's power score would be reduced to 7 and the spell could inflict only 8d6 points of damage. The spell's movement also would be reduced from 5 to 4.

Elementalists' saving throw adjustments apply during duels. The elementalist ability to cast a spell at higher level than normal does not apply unless both combatants are elementalists. If used, the casting level increase boosts the spell's power score and other characteristics in the same manner as described above.

## The Spoils of Victory

The combatants are free to decide when a duel ends and what happens to the character who loses the duel, but the general terms must be set in advance. A magical duel always ends when one combatant runs out of spells or runs out of hit points; the combatants choose one or both conditions to apply. The combatants can choose additional conditions for ending the duel, such as when an opponent reaches half hit points or when an opponent casts a certain type of spell. Preparing the arena requires an extra turn for each extra condition and two extra turns if the condition does not apply

equally to both opponents.

For example, if Calvin and Delsenora wish to conduct a duel in which the first character to cast an Evocation spell loses, they need one extra turn to build the arena. If they wish to end the duel only when Delsenora casts an evocation spell—leaving Calvin free to use them throughout the duel—they need two extra turns to complete the arena.

Once conditions for ending the duel are set, the duel automatically ends when the condition is met, even if the opponents change their minds. A character can always end a duel early by surrendering and accepting defeat.

The extent of the duel's consequences depends on the combatants' resolve and how many levels of spells the combatants invest when forming the arena. Some common terms are listed below:

**Friendly Competition:** The spellcasters are more interested in who can win than in harming each other. There is little risk to either character, but a treacherous opponent could use the duel to delay his adversary and perhaps gain the upper hand in a future confrontation.

*0–6 Spell Levels:* All spells cast during the duel remain in the characters' memories. The opponents' hit point totals return to normal when the duel ends, though the loser looks a little worse for the wear.

*7–12 Spell Levels:* The winner retains all spells cast during the duel, and the winner's hit point total returns to normal when the duel ends. The loser suffers 2d6 points of temporary damage and forfeits 2d4 levels of spells.

*13–18 Spell Levels:* The winner loses 1d6 levels of spells used during the duel. The winner's hit point total returns to normal when the duel ends. The loser suffers 4d6 points of temporary damage, which automatically returns an the rate of one hit point per round, and forfeits 4d4 levels of spells.

*19+ Spell Levels:* The winner loses 4d6 levels of spells used during the duel. The winner's hit point total returns to normal when the duel ends. The loser suffers 8d6 points of temporary damage and loses 8d4 levels of spells.

**Death:** The opponents intend to inflict harm upon each other. Timid characters might contribute very few levels of spells to the arena to avoid serious harm.

*0–6 Levels of Spells:* All spells cast during the duel remain in the characters' memories. The loser suffers 2d6 points of damage and must save vs. death or die.

*7–12 Levels of Spells:* The winner loses 1d6 levels of spells cast during the duel. The loser suffers 4d6 points of damage, loses 4d4 levels of spells, and must save vs. death or die.

*13–18 Levels of Spells:* The winner loses 2d6 levels of spells cast during the duel and suffers 1d6 points of temporary damage. The loser suffers 6d6 points of damage, loses 8d4 levels of spells, and must save vs. death or die. Even if successful, the character must pass a system shock roll or fall unconscious for 2d6 turns.

*18–22 Levels of Spells:* The winner loses 4d6 levels of spells cast during the duel and suffers 2d6 points of temporary damage. A magical explosion envelops the loser, inflicting 8d6 points of damage. The losing character must save vs. breath weapon. If the save fails, the character dies and all of his equipment must save vs. magical fire or be destroyed. If the save is successful, the character loses consciousness for 2d6 turns. In

either case, there is 20% chance the character is blown to another plane. The character also loses 12d4 levels of spells.

*23+ Levels of Spells:* The winner loses 2d6 levels of spells cast during the duel and suffers 4d6 points of temporary damage. An intense magical explosion envelops the loser and inflicts 10d6 points of damage. The character must save vs. breath weapon. If the save fails, the character dies and all his equipment must save vs. lightning or be destroyed. If successful, the character loses consciousness for 2d6 turns. In either case, there is a 40% chance that the character is blown to another plane. The character also loses 18d4 levels of spells.

**Service:** The combatants agree to perform some task if they are defeated. The tasks to be performed can be agreed upon before the duel begins or left to the victor's discretion. The duel has the same effects on the combatants as a friendly competition, with the following additional effects:

*0–6 Spell Levels:* The loser is charmed (as a charm person spell) by the winner. If a service has been agreed upon in advance, any orders not related to the task allow the charmed character a saving throw to negate the spell. If no task has been agreed upon in advance, the charm functions normally.

*7–12 Spell Levels:* The loser is charmed as above, and the winner can implant a suggestion (as the 3rd-level wizard spell). If a service has been agreed upon in advance, there is no saving throw vs. the spell if it pertains to the service. If the loser resists the suggestion, the charm remains in place.

*13–18 Spell Levels:* The loser is charmed and subject to suggestion as above, and the winner may place a geas (as the 6th-level wizard spell) on the loser. If a service has been agreed upon in advance, there is no saving throw vs. the spell if it pertains to the service. Resisting the geas has no effect on the charm or the suggestion.

*19+ Spell Levels:* The loser falls completely under the winner's will and can be dominated (as the 5th level wizard spell domination). If the domination is broken, the winner can immediately geas the loser. The winner is free to issue any commands he wishes within the limits of the domination and geas spells. Even if a service has been agreed upon in advance, the winner may alter the deal. The geas can be lifted only by a wish, dispel magic, or remove curse spell cast by a character of higher level than the winner.

**Prize:** The combatants are vying to possess some tangible object. In most cases, the character monitoring the duel holds the object and presents it to the winner. The duel itself can be fought to the death, for service (particularly useful if the item being fought over is not present at the dueling site), or can be friendly.

**Spell Loss:** Spells lost after a duel are gone from the character's memory as though cast normally. Spells contributed to the arena are always lost. If a character loses a random number of spell levels, he must lose as many spells form memory as are required to meet the total.

For example, Delsenora loses a friendly contest to Calvin. She loses the *fireball* spell she contributed to the arena and the die roll indicates she must lose four more levels of spells. Delsenora chooses spells from her list of memorized spells to meet the

requirement; she can lose four 1st-level spells, two 2nd-level spells, or any other combination of spells that equals or exceeds four levels.

When a character loses spells after a duel, any material components required to cast the spells are consumed, but the character can regain the spells normally.

The winner cannot lose more levels of spells than were cast during the duel, but the loser can. If a character loses more levels of spells than were memorized before the duel, he loses one point of Intelligence/Reason (if a wizard) or one point of Wisdom/Intuition (if a priest) for each excess level lost. The loss is permanent if the duel was being fought to the death. Otherwise, one point is restored for each full day the character rests. A *restoration* spell can restore permanently lost points, and a *heal* spell can restore temporarily lost points.

**Damage:** The temporary damage a character suffers after a duel automatically returns at a rate of one hit point per round. If temporary damage reduces the character's hit point total to –10 or less, the character dies. If the character's hit point total is 0 to –9 he is unconscious until his hit points rise to at least 1.

A victorious character cannot suffer more temporary damage than was suffered in the duel. The loser, however, can suffer more normal damage than was suffered during the duel—the shock of defeat is what inflicts the damage. The Death From Massive Damage rule does not apply in duels (see *DMG*, Chapter 9).

**Charm:** The mental effects from a duel fought for service are unaffected by any form of special resistance, including magic resistance, racial resistance to charm effects, and resistance due to high ability scores. The winner bores directly into the loser's psyche and takes control.

**System Shock:** The force of the defeat can overwhelm the loser's body and knock the character out for a short time. A *heal* spell restores the character to consciousness. Anyone with a weapon can kill an unconscious character with a single blow.

**Blown to Another Plane:** The loser is hurled through a dimensional rift, leaving behind a pile of dust. The DM can randomly determine which plane the character is blown to or can choose a plane appropriate to the campaign. Any equipment destroyed in the blast remains behind. A wish can recover the lost character.

**Death:** The force of the defeat kills the character outright. If the character is not blown to another plane, there is a 50% chance the body disintegrates, leaving only a pile of dust. If not disintegrated, the character can be raised, resurrected, or reincarnated normally, but regeneration is ineffective. Only a wish can restore a disintegrated character to life.

### Outside Interference

Any kind of attack, successful or not, on a character involved in a magical duel disrupts the arena and ends the duel. Both characters are assumed to be the victor for purposes of the duel's aftereffects, but the duel's other terms and conditions are rendered invalid.

It is possible for onlookers to shout advice to combatants, provided that the protective

spell surrounding them allows communication. Touching the combatants, handing them equipment, or casting spells on them automatically ends the duel.

Attacks against the mediator of the duel and attempts to breech the protective spell cast by the mediator have no effect on the duel.

## The Role of the Mediator

The character engaged to oversee a magical duel is the person who decides how isolated the combatants are. A fairly impenetrable defensive spell, such as *prismatic sphere* or a hemispherical *wall or force*, insures that no one can easily disrupt the proceedings. A fairly weak spell, such as *protection from evil 10' radius*, offers the combatants very little protection.

The mediator's secondary roll is keeping things honest. It is his responsibility to make sure the combatants do not employ magical items in an attempt to gain an unfair advantage. It is traditional for the mediator to search each combatant for contraband before construction of the arena begins. Prohibited items are usually confiscated and held until the duel is completed. Careful mediators usually insist on physically searching each combatant to foil *nondetection* spells and *amulets of proof against detection and location*, which can defeat divination spells.

The mediator can end the arena construction process just by touching one of the combatants. The mediator can end the duel itself in a similar manner. A dedicated mediator resists attempts to disturb the combatants, but mediators with less resolve have been known to flee when challenged.

The mediator knows how much time each caster spends contributing spells to the arena, and some judges have been known to intervene, ending the duel for good or for ill.

The mediator is under no special compulsions toward fairness or honesty unless duelists take precautions. A *geas* spell can help insure a mediator's fairness, but powerful characters can usually avoid the worst effects of violating the *geas*. It is best if both combatants agree on a mediator they can trust.

If the protective spell the mediator casts over the duelists is large enough, the character can include himself in the spell and be protected along with the combatants. Some spells, such as *prismatic sphere*, allow the caster free passage in and out, which makes them ideal for mediators who want to keep an eye on the situation outside the arena as well as the battle taking place in the arena.

## Special Dueling Characteristics

Many spells behave in unusual ways within a dueling arena. This section provides the necessary details for both individual and groups of spells.

## Groups of Spells

Certain groups of spells share common characteristics as outlined below.

### Mental or Debilitating Attacks

Spells such as *charm person, command, confusion, domination, forget, grease, hold person, suggestion taunt, web*, and other spells that make the target respond to the

caster's commands, force an unwanted action, or render the target unable to act freely have only a temporary effect in a duel. The affected character is unable to move or cast spells—but counter spells are allowed—until the hostile spell is destroyed through combat or a counter spell.

Duelists can never be compelled to leave the arena or perform unwanted actions. Instead, control over their mental constructs are temporarily limited.

### Creature-Summoning Spells

Spells such as *monster summoning* and *conjure elemental* can be especially vulnerable to defensive spells such as *protection from evil*. These spells are very potent in a duel, forming constructs that conduct character combat upon reaching the opposing spellcaster. The opponent cannot cast any spells except counter spells while a summoning spell occupies his space. He must fight using his power score. Some spells, however, have special abilities that allow them to be used as counter spells against this type of magic.

The summoning spell uses its power score in the battle, and if it succeeds it inflicts 1d6 points of damage per spell level and remains to fight again. If the opponent wins, the summoning spell is destroyed. If a lock occurs, the character suffers no damage, but the summoning spell remains and attacks again the next round—a lock does not destroy a summoning spell as it does in normal character vs. spell combat.

### Illusions

Spells such as *phantasmal force* that allow the caster to create an image of almost anything imaginable are highly flexible in a duel. The spells can be used to duplicate any type of spell. The caster chooses the type when casting the spell. Once cast, the spell type cannot be changed. If employed as an attack, attack/defense, or missile, the opponent and the caster conduct character combat when the illusion reaches the opponent's space, but the defender is allowed to cast counter spells. If the caster wins the combat, the opponent suffers 1d6 points of damage per level of the illusion. If the defender wins, no damage is inflicted. When employed as a leech, the spell follows the normal rules for leech spells. When employed as a defense, any lock destroys the illusion unless the opposing spell summons a creature.

### Reversible Spells

Spells such as *cure light wounds* cast in their reversed forms create effects that usually function in the opposite fashion from their basic forms. For example, a reversed defensive spell is an attack spell. A reversed leech, however, is still a leech. A spell's reverse always counters itself and vice versa. For example, a character attacked by a *cause critical wounds* spell can use a *cure critical wounds* as a counter spell and automatically destroy the *cure critical wounds*.

### Teleportation

Spells that allow instantaneous travel cannot be locked by spells that create physical barriers, such as the various wall spells. If a lock occurs, the two spells ignore each other instead. If a teleportation spell is used as a counter spell, a lock still destroys both spells.

## Individual Spells' Special Abilities

There are several special abilities common to several spells.

*Automatic Defeat:* If a spell automatically defeats another spell, it always wins a combat with the listed spell or spell group. This applies when it is used as a counter spell as well.

*Cannot be Locked:* When a spell cannot be locked by another type of spell, any lock result destroys the opposing spell unless some other special lock effect is specified.

*Counter:* When a spell is listed as a counter to another spell or type of spell, it can be employed as a counter spell against the listed type even if combat between the two spells is not normally possible. When a spell is listed as an automatic counter to another spell, it destroys the listed spell without a die roll when cast as a counter spell.

*Advanced Illusion:* See the note on illusions, above.

*Antianimal Shell:* This spell cannot be locked by spells that summon creatures. It counters creature-summoning spells.

*Antimagic Shell:* Missiles and leeches must battle this spell, and it cannot be locked by any opposing spell. The spell dissipates when it reaches the opponent's square.

*Antiplant Shell:* This spell cannot be locked by spells that employ living plants or summon plant creatures, such as *entangle* or *changestaff*. It automatically counters plant-based spells.

*Barrier of Retention†:* This spell cannot be locked by spells that summon creatures.

*Bigby's Hand/Fist Spells:* These spells conduct character combat when they reach the opponent's square, just as if they were summoned creatures. *Bigby's interposing hand* inflicts no damage, but prevents the opponent from casting any spells until it is destroyed. Other spells inflict damage as listed in their descriptions.

*Blade Barrier:* This spell cannot be locked by spells that summon creatures.

*Blessed Warmth†:* This spell cannot be locked by cold-based spells. It automatically counters cold-based spells.

*Blindness:* A blinded character cannot cast spells or counter spells (except *cure blindness or deafness*).

*Call Lightning:* This spell produces a single stroke of lightning when it reaches the opponent's space.

*Caltrops†:* This spell cannot be locked by spells that summon creatures.

*Chant:* This requires two rounds to cast and cannot be used as a counter spell. The spell is

disrupted if the caster fails a saving throw or loses a combat roll during the first round of casting—an exception to the general dueling rule—and the caster cannot cast counter spells during that time.

*Chaotic Commands†:* When used as a counter spell, chaotic commands always defeats spells that allow the caster to command or control the recipient, such as *command*, *charm person*, and *suggestion*. Whenever victorious against such a spell, the two opponents must conduct character combat. If the caster of *chaotic commands* wins, the opposing spell reverses direction and moves toward the original caster, functioning as one of the victorious caster's spells. If the caster of *chaotic commands* loses the personal combat, the spell is negated.

*Circle of Privacy†:* This spell cannot be locked by spells that summon creatures.

*Cloak of Bravery:* This spell cannot be locked by any spell that causes fear or panic, such as *emotion*, *fear*, or *scare*. It automatically counters fear effects.

*Cloudkill:* This spell cannot be locked by a lower level spell that summons creatures.

*Compulsive Order†:* Duelists afflicted by this spell are unable to move, attack, or cast spells until the spell is defeated, but counter spells are allowed.

*Contact Other Plane:* Casting this spell in a duel does not cause insanity. This spell cannot be locked in spell vs. spell combat. If a lock occurs, the two spells ignore each other instead. A lock still destroys this spell if the combat takes place in a character's space.

*Continual Light:* When employed as an attack spell, this spell blinds the opponent (save vs. spell negates), preventing movement, attack, or spellcasting until the spell is defeated.

*Control Temperature, 10' Radius:* This spell can be cast to raise or reduce the temperature; the caster chooses which one at the time of casting. Once the caster chooses which version to cast, it cannot be changed. The spell cannot be locked by any spell employing the opposite effect (the cold version cannot be locked by heat- or fire-based spells, and the hot version cannot be locked by cold-based spells). This spell automatically counters its opposing effect.

*Courage†:* This spell cannot be locked by any spell that causes fear or panic, such as *emotion*, *fear*, or *cloak of fear*. It automatically counters fear effects.

*Crushing Walls†:* This spell cannot be locked by a lower level spell that summons creatures; the opposing spell is destroyed instead.

*Crystalbrittle:* This spell automatically defeats *wall of iron* and any other spell that creates a mass of metal, both in combat and when used as a counter spell.

*Cure Blindness or Deafness:* This spell counters any spell that obscures vision. If locked in combat by a *blindness* spell, both spells are destroyed instead.

*Cure Disease:* The reversed form of this spell, cause disease, renders characters unable to move, attack, or cast spells until they defeat the spell.

*Cure Wounds Spells:* These spells counter any attack or missile spell that inflicts damage. They are counters against leech or attack/defense spells.

*Demishadow Magic:* When this spell reaches the opponent's space, the opponent must roll a saving throw vs. spell before casting any counter spells. If the save fails, the spell inflicts 10d6 points of damage, but the caster can attempt a counter spell or a save vs. spell to reduce the damage to 5d6 points. If the initial save succeeds, the spell inflicts 4d6 points of damage, and the caster is free to employ a counter spell or attempt a second saving throw to reduce the damage to 2d6 points.

*Demishadow Monsters:* This spell functions as any other creature-summoning spell. When it reaches the opponent's space, the opponent rolls a saving throw vs. spells. If the save succeeds, the creatures inflict 2d6 points of damage with a successful attack instead of 5d6 points of damage.

*Detect Magic:* The opposing spell is revealed even if the *detect magic* spell is locked or destroyed in combat. A priest must roll a power check, using the character's power score, to discover what the opposing spell is. The wizard version does not require a power check.

*Detect Scrying:* This cannot be locked by spells that extend the caster's perception over a distance, such as *clairvoyance*, *clairaudience*, and *wizard eye*.

*Dimension Door:* See the note at teleportation on page 108.

*Dimensional Folding†:* See the note at teleportation on page 108.

*Disbelief†:* This counters any other spell, including spells that summon creatures.

*Disintegrate:* This spell always defeats spells that create solid barriers, such as wall spells.

*Dispel Magic:* If locked or defeated in combat, this can destroy the opposing spell. A normal dispel roll is required (see spell description). Note that some spells cannot be dispelled. The spell dissipates when it reaches the opponent's space.

*Duo-Dimension:* Missiles must battle this spell.

*Earthquake:* When this spell enters the opponent's space, it whips the arena into crushing and grinding frenzy. The cataclysm forces the opponent to make a successful saving

throw vs. death magic or die. If the save succeeds, the opponent still suffers 5d10 points of damage. The only counter spells that are effective against *earthquake* are *antimagic shell, disbelief, dispel magic, elemental aura, fly,* and *levitate*. Character combat is ineffective against this spell.

*Efficacious Monster Ward†:* This spell can be used as a counter spell against *monster summoning I* and any other spell of 4th level or less that summons creatures.

*Elemental Aura†:* The caster chooses the type of *elemental aura* that is created (air, earth, fire, or water). An *elemental aura* battles every spell from its element that it meets, regardless of type, and cannot be locked by any spell employing its element—this spell is destroyed instead. If employed as a counter spell, *elemental aura* automatically destroys spells of its own element.

*Elemental Forbiddance†:* This spell cannot be locked by a conjure elemental spell. *Elemental forbiddance* counters conjure elemental spells.

*Emotion:* The caster chooses this spell's effect at the time of casting. As a defensive spell, *emotion* cannot be locked by spells that alter emotions, such as *fear, cloak of fear*, or *emotion control*. It automatically counters such spells when they are used as attack or leech spells. If employed as an attack spell, *emotion* renders the opponent unable to move or cast spells until the spell is defeated.

*Emotion Control†:* The caster chooses this spell's effect at the time of casting. As a defensive spell, *emotion control* cannot be locked by spells that alter or read emotions, such as *ESP, fear,* and *emotion*. It automatically counters such spells when they are used as attack or leech spells. If employed as an attack spell, *emotion control* renders the opponent unable to move or cast spells until the spell is defeated.

*Endure Heat/Endure Cold:* This spell can be cast to protect against heat or cold; the caster chooses which one at the time of casting. Once the caster chooses which version to cast, it cannot be changed. The spell cannot be locked by any spell employing the opposite effect (the cold version cannot be locked by fire-based spells, and the hot version cannot be locked by cold-based spells). This spell counters its opposing effect.

*Energy Drain:* If the target's combat roll or counter spell fails, the character loses two levels. The level loss persists until the duel ends. The target loses hit points and spell slots commensurate with the level loss, but empty spell slots can be used to satisfy the loss. The target's power score is unaffected, but saving throws are adjusted accordingly.

*Enervation:* If the target's saving throw or counter spell fails, the character loses one level for every four levels of the caster. The level loss persists until the duel ends. The target loses hit points and spell slots commensurate with the level loss, but empty spell slots can be used to satisfy the loss. The target's power score is unaffected, but saving throws are adjusted accordingly.

*Enthrall:* If employed as an attack, this spell renders opponents unable to move, attack, or cast spells until they defeat the spell. *Enthrall* affects only creatures of 4 or less Hit Dice or levels and is usually employed as a leech.

*Eyebite:* All the versions of this spell conduct character combat. If the spell succeeds, the opponent cannot take offensive action until the spell is defeated.

*Fire Purge:* This spell requires a full turn (10 rounds) to cast and is seldom employed in duels. The spell is disrupted if the caster fails a saving throw or loses a combat roll during the first nine rounds of casting (an exception to the general dueling rule), and the caster cannot cast counter spells during that time. It is useless as a counter spell.

*Fire Seeds:* This spell conducts combat when it enters the opponent's square. The opponent can employ a counter spell or use his power score. If the *fire seeds* win the combat or defeat the counter spell, it inflicts 8d6 points of damage. If the opponent uses his power score and wins the combat, he must save vs. spells or suffer 4d4 points of damage. If the opponent successfully employs a counter spell, he suffers no damage.

*Fire Shield:* This spell creates a sheath of hot or cold flames; the caster chooses which at the time of casting. Once the caster chooses which version to cast, it cannot be changed. The spell cannot be locked by any spell employing the opposite effect (the cold version cannot be locked by fire-based spells and the hot version cannot be locked by cold-based spells). If such a lock is indicated, the opposing spell is destroyed instead. The spell counters its opposing effect. If employed in the caster's space, this spell destroys attacking spells that summon creatures if a lock occurs.

*Flame Walk:* This spell cannot be locked by fire-based spells, and it counters fire-based spells.

*Fly:* This spell always counters *transmute rock to mud*.

*Forcecage:* This spell cannot be locked by spells that summon creatures.

*Foresight:* This spell counters any other spell.

*Free Action:* This spell cannot be locked by any spell that restricts movement, such as *entangle*, *hold person*, or *slow*. It automatically counters such spells.

*Fumble:* Characters affected by this spell cannot move, attack, cast spells, or cast counter spells until they defeat the spell.

*Globe of Invulnerability:* This spell cannot be locked by spells of 4th level or less. Missiles and leeches of 4th level or less must battle this spell.

*Glyph of Warding:* This spell cannot be locked by spells that summon creatures.

*Goodberry:* This spell counters any attack or missile spell that inflicts damage.

*Grounding†:* This spell cannot be locked by spells that employ electricity, such as *lighting bolt* or *call lightning*. It counters any electrical-based spell.

*Gust of Wind:* This spell cannot be locked by spells that create magical clouds such as *stinking cloud*, *cloudkill*, and *fog cloud*. If a lock occurs, both spells are destroyed instead. *Gust of wind* can be employed as a counter spell to any spell that creates a magical cloud, even if the attacking spell's type would not normally allow combat.

*Haste:* This spell automatically destroys—and is automatically destroyed by—*slow*.

*Heal:* This spell counters any attack or missile spell that inflicts damage.

*Heat Metal:* This spell can be employed as an attack spell only against characters who are entitled to wear armor (but can be used even if the character is not actually wearing armor). Characters affected by the attack version of this spell cannot take offensive actions until they defeat the spell, and they suffer three points of damage each round they are affected.

The spell can be used as a missile against any opponent, but the caster must choose how it is to be used before the duel starts. The missile conducts character combat when it enters the opponent's space. If successful, it inflicts one point of damage each round until defeated. The opponent cannot move, attack or cast spells until *heat metal* is defeated.

The caster can choose at the time of casting whether the spell is the heat- or cold-based version of the spell.

*Holy Word:* Characters affected by this spell cannot take offensive actions until the spell is defeated. While affected, both character and spell power scores are reduced by two, but the reduction does not apply to combat against the holy word itself.

*Hornung's Baneful Deflector†:* Missiles must conduct combat with this spell.

*Improved Phantasmal Force:* See the note at illusions.

*Insect Plague:* This spell requires a full turn (10 rounds) to cast and is seldom employed in duels. The spell is disrupted if the caster fails a saving throw or loses a combat roll during the first nine rounds of casting (an exception to the general dueling rule), and the caster cannot cast counter spells during that time. It is useless as a counter spell.

Characters afflicted by *insect plague* cannot take offensive actions until they defeat the spell in combat.

*Land of Stability†:* This spell counters any spell that summons or manipulates winds, weather, or earthquakes, such as gust of wind, weather summoning, and earthquake. Land of stability cannot be locked by these spells; both spells are destroyed instead. Energy effects, such as lightning bolt and fireball, are not considered weather manipulations for purposes of this spell.

*Levitate:* This spell always counters transmute rock to mud.

*Light:* When employed as an attack spell, this spell blinds the opponent (save vs. spell negates), preventing movement, attack, or spell casting until the spell is defeated.

*Limited Wish:* In a duel, this spell can be used as any other type of spell. When used as an attack, attack/defense, missile, or leech spell, it inflicts 10d6 points of damage (save vs. spells for half). When used as a defense spell, limited wish cannot be locked by any spell of 6th level or less. As a counter spell, *limited wish* automatically counters any spell of 6th level or lower and can serve as a counter to all other spells. Using *limited wish* in a duel does not age the caster unless the spell is actually lost from memory in the aftermath (see the **Spoils of Victory** section).

*Liveoak:* A character can have only one *liveoak* effect active in the arena at any given time.

*Magical Stone:* This spell requires a character combat roll when it reaches the opponent's square. If it succeeds, it inflicts 3d4 points of damage.

*Meld Into Stone:* Missiles must conduct combat with this spell.

*Melf's Minute Meteors:* The caster must launch five missiles per round. Characters entitled to more than five missiles can launch their remaining missiles the next round or forgo the extra missiles and take another action instead. Extra missiles can counter creature-summoning spells that enter the character's square. Each group of missiles launched functions as a separate spell in the arena. When a group of missiles reaches the opponent's square, the group conducts character combat. If it succeeds, it inflicts 1d4+1 points of damage for each missile in the group.

*Mind Blank:* This spell cannot be locked by any spell that attacks the mind. It counters all leech spells and mental attacks.

*Minor Globe of Invulnerability:* This spell cannot be locked by spells of 3rd level or less. Missiles and leeches of 3rd level or lower must conduct combat with this spell.

*Minor Spell Turning†:* Missiles and leeches must conduct combat with this spell. This spell cannot be locked; if a lock occurs, the *minor spell turning* spell is destroyed, and the opposing spell reverses direction and attacks the original caster. If employed as a counter spell, a lock result also causes the opposing spell to reverse direction.

*Mirror Image:* Missiles must conduct combat with this spell.

*Moment†:* When this spell reaches the opponent's square, the spell conducts character combat with a +4 bonus. The actual number rolled determines success or failure, but a successful roll is treated as four higher when comparing rolls. For example, a caster with

a PR 13 rolls 12, and the opponent, who also has a PR of 13 rolls a 13. The caster wins because his roll of 12 is treated as a 16.

*Mordenkainen's Disjunction:* This spell cannot be locked. When used as a counter spell, it automatically destroys the opposing spell. If defeated in combat, the victorious spell is automatically destroyed. The spell dissipates when it reaches the opponent's space.

*Negative Plane Protection:* This spell counters spells that drain life energy, such as *energy drain*, *vampiric touch*, and *enervation*.

*Neutralize Poison:* This spell automatically counters spells with poisonous effects, such as *stinking cloud* and *cloudkill*.

*Otiluke's Freezing Sphere:* The caster can choose this spell's form at the time of casting. As a missile, the spell conducts character combat when reaching the opponent's space and inflicts 6d6 points of damage. As an attack spell, *Otiluke's freezing sphere* inflicts 1d4+2 points of damage per level of the caster (maximum 10d4+20), save vs. spell for half.

*Otiluke's Resilient Sphere and Otiluke's Telekinetic Sphere:* These spells cannot be locked by spells that summon creatures. When they reach the opponent's space, the spells conduct character combat. If they succeed, the opponent cannot take offensive actions until the spells are defeated. Missiles must conduct combat with these spells.

*Permanency:* When used in a duel, this spell does not drain the caster's Constitution score, even if it is subsequently lost from memory.

*Permanent Illusion:* See the note at illusions.

*Phantasmal Force:* See the note at illusions.

*Physical Mirror†:* Missiles and leeches must conduct combat with this spell. If this spell succeeds against or achieves a lock with any missile, leech, or attack spell, the opposing spell reverses direction and attacks the original caster. If employed as a counter spell, a lock result also causes missiles, leeches, and attacks to reverse direction.

*Produce Fire:* The reversed form of this spell is a defensive spell that counters any fire-based spell.

*Protection From Evil and Protection From Evil, 10' Radius:* These spells cannot be locked by spells that summon creatures.

*Protection From Fire:* This spell automatically counters any fire-based spell.

*Protection From Lightning:* This spell automatically counters any electrical-based spell.

*Rainbow:* This spell can be cast in one of two versions, which the caster chooses at the time of casting. The bridge version is a leech. The bow version creates four missiles on the round of casting, plus three more missiles that the caster can loose on the second round or forgo the extra missiles and take another action instead. The extra missiles can counter creature-summoning spells that enter the character's square. Each group of missiles functions as a separate spell in the arena. When a group of missiles reaches the opponent's square, the spell conducts character combat. If it succeeds, it inflicts 1d6+2 points of damage for each missile in the group. Missiles from this spell cannot be locked by spells that summon elemental creatures.

*Raise Dead:* This spell counters any spell that inflicts damage.

*Reincarnate:* This spell counters any spell that inflicts damage.

*Remove Curse:* Characters afflicted by this spell's reverse cannot take offensive actions until they defeat the spell. This spell automatically counters its reverse and can counter any attack spell that does not inflict damage.

*Remove Fear:* This spell automatically counters any spell that causes magical fear.

*Remove Paralysis:* This spell automatically counters all hold spells and any spell that causes paralysis.

*Repel Insects:* This spell cannot be locked by any spell that summons or controls insects, such as insect swarm, creeping doom, and giant insect. This spell counters all such spells.

*Resist Fire/Resist Cold:* This spell protects against either fire/heat or cold. The caster chooses which at the time of casting. The spell cannot be locked by the type of effect it protects against.

*Restoration:* This spell cannot be locked by any spell that drains life energy or causes insanity. It automatically counters such effects. This spell does not age the caster unless actually lost from memory in the aftermath (see the **Spoils of Victory** section).

*Resurrection:* This spell can counter any spell that inflicts damage. This spell does not age the caster unless actually lost from memory in the aftermath (see the **Spoils of Victory** section).

*Reverse Gravity:* Characters afflicted by this spell cannot take offensive actions until they defeat the spell.

*Sanctuary:* Missiles and leeches must conduct combat with this spell.

*Screen:* This spell cannot be locked by spells that extend the caster's senses, such as *ESP*, *clairaudience,* or *clairvoyance*. It automatically counters such spells.

*Shadowcat:* This spell dissipates upon reaching the opponent's space.

*Shadow Magic:* When this spell reaches the opponent's space, the opponent rolls an immediate saving throw vs. spell before casting any counter spells. If the save fails, the spell inflicts 10d6 points of damage, but the caster can attempt a saving throw vs. spell to reduce the damage to 5d6 points or attempt a counter spell. If the initial save succeeds, the caster is free to employ a counter spell or attempt a second saving throw to reduce the damage to 1d6 points. If the saving throw is failed or the counter spell is defeated, the spell inflicts 2d6 points of damage.

*Shield:* Missiles must conduct combat with this spell. This spell always defeats *magic missile*.

*Shillelagh:* When this spell reaches the opponent's square, the spell conducts character combat and inflicts 1d6 points of damage and can attack again if successful.

*Shrieking Walls†:* This spell cannot be locked by spells that summon creatures.

*Silence, 15' Radius:* Characters afflicted by this spell cannot take offensive actions until they defeat the spell.

*Slow:* Characters afflicted by this spell cannot take offensive actions until they defeat the spell. This spell always defeats—and is defeated by—*haste*.

*Snare:* When this spell reaches the opponent's square, the spell conducts character combat. If the spell succeeds, the opponent cannot take offensive actions until the spell is defeated.

*Spectral Force:* See the note at illusions.

*Spell Immunity:* Missiles must conduct combat with this spell.

*Spell Turning:* Missiles and leeches must conduct combat with this spell. This spell cannot be locked; if a lock occurs, the spell turning is destroyed, and the opposing spell reverses direction and attacks the original caster. If employed as a counter spell, a lock result also causes the opposing spell to reverse direction.

*Spike Growth and Spike Stones:* These spells cannot be locked by spells that summon creatures.

*Spiritual Hammer:* When this spell reaches the opponent's square, the spell conducts character combat and inflicts 1d6 points of damage if successful. The spell continues attacking each round until defeated or its duration expires.

*Stabilize†:* This spell is ineffective within a dueling arena.

*Stone to Flesh:* Characters afflicted by this spell cannot take offensive actions until they defeat the spell.

*Stoneskin:* This spell can counter any spell that inflicts damage.

*Succor:* See the note at teleportation.

*Tanglefoot:* This spell cannot be locked by spells that summon creatures.

*Telekinesis:* When this spell reaches the opponent's square, the spell conducts character combat and inflicts 1 point of damage per caster level if successful.

*Teleport:* See the note at teleportation.

*Teleport Without Error:* See the note at teleportation.

*Transmute Rock to Mud:* This spell always defeats wall of stone. Characters afflicted by this spell cannot take offensive actions until they defeat the spell.

*True Seeing:* This spell always defeats illusions.

*Unluck:* Characters afflicted by this spell cannot take offensive actions until they defeat the spell.

*Wall of Fog:* Missiles must conduct combat with this spell.

*Wall of Force:* Missiles must conduct combat with this spell. *Wall of force* can be defeated in combat only if it fails its combat roll or by another spell's special ability. If the roll succeeds, it locks the opposing spell, including *dispel magic*. The spell dissipates when it reaches the opponent's space.

*Watery Double†:* This spell conducts character combat when it reaches the opponent's space. If it succeeds, it inflicts 3d6 points of damage and can continue to attack each round until defeated or its duration expires.

*Wildwind† and Wildzone†:* These spells are ineffective in a dueling arena.

*Wish:* This spell can be used as any other type of spell. When used as an attack, attack/defense, missile, or leech spell, it inflicts 10d6 points of damage (save vs. spells for half). When used as a defense spell, wish cannot be locked by any spell. As a counter spell, *wish* automatically counters any spell. Using wish in a duel does not age the caster unless the spell is actually lost from memory in the aftermath (see the **Spoils of Victory** section).

*Withdraw:* Missiles and leeches must conduct combat with this spell.

*Word of Recall:* See the note at teleportation.

*Zone of Sweet Air:* This spell cannot be locked by spells that create noxious gases, such as *stinking cloud* and *cloudkill*.

## Magical Duels in the Campaign

A magical duel allows player characters to test their spellcasting prowess in any number of ways. For example, if a party finds a valuable magical item suitable for either of the group's two wizard PCs, the two characters could conduct a friendly duel to see which one gets the item.

Magical duels can be a useful tool for the DM as well. A nonlethal duel is an excellent way for a rising druid to match wits with an NPC rival when advancing a level. In a similar vein, an NPC wizard might refuse to cooperate by sharing a new spell or some other bit of magical knowledge with the PCs until one of the party spellcasters defeats one of his apprentices—or perhaps the NPC himself—in a duel.

A magical duel can also make an excellent climactic encounter in an adventure. For example, a lich might offer to duel a PC wizard or priest to the death, providing a real challenge to the character. Of course, the rest of the party might have their hands full beating off a sneak attack by the lich's minions while the duel proceeds, but a duel might give the heroes a better than normal chance to actually slay the lich and still escape the lair with their skins intact. Don't forget the problem of finding a mediator for the duel. (Do the PCs trust the lich's sinister necromancer apprentice, or does another party spellcaster step forward, which commits two player characters to the duel?)

## An Example of Magical Dueling

*Calvin and Delsenora decide to conduct a friendly duel. Tarrant, a local wizard, agrees to mediate.*

*Calvin and Delsenora agree that the first character to run out of spells or hit points is the loser. Calvin has a* ring of spell storing*, which the two characters agree should count toward Calvin's total spells. Both characters agree that no other magical items are going to be used in the duel, and Tarrant looks them over to check for any scrolls or other items.*

*The trio finds a secluded spot, and Calvin and Delsenora begin creating the arena. When they finish the first step, Tarrant encloses the pair in an* Otiluke's resilient sphere*; he chooses to remain outside the sphere.*

*When Tarrant casts his spell, Delsenora and Calvin consider adding their own spells. Both characters decide not to contribute spells, and the arena is completed. There are 10 spaces between the characters (see figure M1). Because neither character cast a spell, both characters roll 1d10 to see who has the advantage—Calvin wins the roll.*

*During the first round of the duel, there are no spells to move, so both characters cast spells. Calvin decides to try to get a lick in quickly and casts* clairvoyance *(L, PR 12, MV 5). The spell appears in the space in front of Calvin and does not move. Delsenora decides to cast withdraw (D, PR 11, MV 1) in her own square as a stationary defense.*

*On the second round, Calvin moves his* clairvoyance *spell five spaces toward*

*Delsenora. Because Delsenora cast withdraw in her own square, it doesn't move at all. Now Calvin casts* monster summoning II *(AD, PR 13, MV 3) from his* ring of spell storing. *Delsenora casts* dispel magic *(AD, PR 12, MV 4). Both spells appear in the squares in front of their casters.*

*On the third round, things really start hopping. Calvin has the advantage, so his spells move first. His* clairvoyance *spell is closest to Delsenora, so it moves first. The spell has enough movement to reach Delsenora's space, but her* dispel magic *spell is in the way. When the spells meet, Delsenora must announce that her spell is an attack/defense because she is disadvantaged. Calvin checks Table 25 and sees that the advantaged caster decides if combat is going to occur. Calvin decides not to fight; he is not required to reveal anything about his spell.*

*The* clairvoyance *spell finishes its move and enters Delsenora's square. The* clairvoyance *spell is revealed, and it must check for combat with the withdraw spell before it can affect Delsenora. Because he has the advantage, Calvin could normally decide his leech spell would ignore the defense spell. But, withdraw has a special ability that forces leeches and missiles to fight it.*

*Both characters roll 1d20. Calvin rolls a 20 and curses his luck. Delsenora rolls a 9. The* clairvoyance *spell is destroyed, and the advantage shifts to Delsenora, but Calvin still finishes moving his spells; he moves his* monster summoning III *ahead three spaces. Delsenora moves her* dispel magic *ahead four spaces, and the two characters cast spells again.*

*Calvin casts* magic missile *(M, PR 10, MV 5), and Delsenora casts* animate object *(AD, PR 15, MV 3).*

*The duel continues, with Calvin trying to breech Delsenora's defenses and strike a telling blow before she can crush him under the weight of her more plentiful spells. Calvin could be in trouble if the* animate object *spell reaches his space, which it might very well do with the* dispel magic *leading the way.*

# Chapter 6:
# True Dweomers

**Spells Beyond 9th Level** It is commonly supposed that the 9th-level *wish* spell is the most powerful and difficult enchantment known to mortals. The supposition is only partially true, however. The *wish* spell's ability to literally change reality to match the caster's desires is indeed mighty. Nevertheless, extremely powerful spellcasters have discovered a whole new class of magic that, while more time consuming to cast than a *wish* spell, can create stupendous effects without a *wish's* attendant dangers (five years of magical aging, possible weakness and incapacitation, and the possibility of failure due to poor wording). The difference between these new spells, often called 10th-level spells or true dweomers, is the approach to magic the caster takes when employing them.

Standard AD&D game spells depend on painstakingly derived formulae that produce fairly predictable effects when properly used. Characters who know how to complete the formulas correctly can cast spells even though they don't know why the formulas work. Most spells involve laboriously building mental patterns that channel and release external

energies, often with the help of complex gestures and material components. Wizards do the job all by themselves, and priests get divine help.

Other approaches can also produce extraordinary effects. Psionics employ intense mental discipline to tap internal energies that can be just as potent as the universal energies spellcasters use. Some individuals have natural talents that allow limited use of these personal energies (wild talents).

Very high-level spellcasters begin to understand how magic really works, and they become aware of their personal energies. With enough attention and labor, a spellcaster can manipulate universal and personal energy directly, without building a mental pattern or developing a rigid discipline first. The process is time consuming and often costly, but very flexible. On Athas, the process has been formalized into a class of high-level spells called psionic enchantments, but it works in essentially the same manner.

Because a true dweomer directly manipulates universal and personal energies whose flows are constantly changing, every true dweomer is a little different each time it is cast. The character is fully aware of exactly why the spell works the way it does, but no spell works the same way twice.

A true dweomer can never be written onto a scroll, fully recorded in a spellbook, or stored in a magical device.

### Requirements

Among mortals, only high-level wizards and priests have sufficient knowledge of magic to cast true dweomers; other spell-casting characters lack the profound understanding of magic that true dweomers require. The character also must select a material to help focus the magic and spend time preparing and casting the spell.

### Knowledge

Wizards must be at least 20th level and have Intelligence scores of 18 or higher. Priests must be at least 20th level and have Wisdom scores of 18 or higher. Only characters with this level of experience and mental capacity understand the processes involved in creating a true dweomer.

Wizards can cast any true dweomer that uses schools available to the character (Table 28 lists spell types by school). Priests can cast true dweomers that use any school, but the spells they create must produce effects that reflect their deity's portfolio or sphere of control.

Although a true dweomer is not actually memorized the way a standard spell is, the process of preparing and casting one is taxing. No mortal can prepare, cast, or have ready to cast more than four true dweomers in a single day, and most characters cannot manage that many (see Table 44, page 157). When characters reach their limits, their minds are too drained and befuddled to attempt any more true dweomers, though they are free to pursue any other activities they are normally able to undertake.

### Materials

Every true dweomer requires some object or group of objects to assist in casting the spell. The rarer and more difficult a material component is, the easier it is to complete the enchantment. To be effective, however, a material component must be symbolic of what

the spell does. For example, destroying a large diamond is costly but ineffective unless the spell has something to do with protecting or destroying something of value (the caster literally pays the price for the item that is effective), overcoming resistance (gem-quality diamonds don't exactly grow on trees, so finding one and destroying it represents a small triumph of sorts), or command over the element of earth (because a diamond is a rare mineral). There is no easy way to choose a material component for a spell; like choosing materials for a magical item (see page 90), the process requires a great deal of imagination and guesswork. The various spell descriptions in the *Player's Handbook* provide examples to follow.

Wizards do not need spellbooks to cast true dweomers, although a set of written notes about how to go about creating the spell can be helpful.

Priest true dweomers require holy symbols in addition to other components. Holy symbols are not consumed when a true dweomer is cast, but other material components are. Priests can benefit from written notes in the same manner as wizards.

## Preparation

Casting a powerful spell without memorizing it first requires the character to spend considerable time thinking, meditating, and arranging materials. The more powerful the magic, the more difficult it is to complete the preparations.

## Approval

Characters who have the required level and ability score are not necessarily free to gather up materials and begin creating super-magical effects as they see fit. The DM must approve a spell before it is used. The player should explain exactly what the spell does, just as if the character were researching a new spell or inventing a new magical item. There is no cost for creating a true dweomer, however, other than what the character spends on materials.

### Creating the Spell

The first step in creating a true dweomer is deciding what it does. Table 28 and the accompanying notes lists the basic spell types and their functions. The player and the DM must decide which types are needed to construct the proposed spell. Types can be freely combined to create the effect the player wants. Once the enchantment's parts are selected, the difficulty ratings are added up.

A spell's basic area of effect, range, and duration is very limited, but all three can be augmented by increasing the spell's difficulty.

Table 29 (page 130) gives areas of effect; the larger the area, the more difficult the enchantment. It is possible to create a spell that affects the entire plane where it is cast. The type of magic determines which column to use (this information is given on Table 28). If several types of magic are being combined, the DM and player must agree on the spell's primary effect. All secondary magic types function at the area of effect and range assigned to the basic magic.

Table 31 (page 131) gives ranges; the longer the range, the greater the difficulty. It is possible to create an enchantment that can affect a target anywhere on the plane where the spell is cast, and some spells can reach into other planes of existence. Selecting a

fairly short range makes the magic easier to cast, but might make the spell difficult to use when it is finally ready to cast.

Table 32 (page 131) gives durations. The longer the duration, the more difficult the enchantment. It is possible to make a spell permanent, but this usually drains a point of Constitution from the caster.

Once the spell is created, all difficulty factors for type, area of effect, range, and duration are added together. The caster's level is subtracted from the total. If the caster is a specialist wizard, subtract an extra five points. If the caster has used the spell before—all the elements must be exactly the same—or has a set of written notes from someone who has used the spell before, subtract 10 more points from the total. The result is the spell's adjusted difficulty.

The caster can further reduce the adjusted difficulty by incorporating unusual material components or adding special conditions, see Table 34 and the accompanying notes. The spell's preparation time and casting time depend on the adjusted difficulty, as given on Table 33.

**Table 28:**
## True Dweomers

| Type[1] | Base Diff.[2] | Base Duration[3] | Effect[4] |
|---|---|---|---|
| **Abjuration** | | | |
| Banish | 30 | Instantaneous | Crea./Ob.[5] |
| Dispel | 30 | Instantaneous | Area |
| Reflect | 25 | 1 Round | Area |
| Ward | 35 | 1 Round | Area |
| **Alteration** | | | |
| Animate | 25 | 1 Round | Object |
| Destroy | 45 | Instantaneous | Object |
| Fortify | 30 | 1 Round | Crea./Ob.[5] |
| Transform | 35 | 1 Round | Crea./Ob.[5] |
| Transport | 35 | 1 Round/Inst. | Crea./Ob.[5] |
| **Conjuration/Summoning** | | | |
| Afflict | 40 | 1 Round | Crea./Area[6] |
| Bind | 35 | 1 Round | Creature |
| Conjure | 40 | 1 Round | Object |
| Summon | 50 | 1 Round/Inst. | Creature |
| **Enchantment/Charm** | | | |
| Charm | 20 | 1 Round | Creature |
| Compel | 30 | 1 Round | Creature |
| Fortify | 30 | 1 Round | Crea./Ob.[5] |
| Imbue | 45 | 1 Round | Crea./Ob.[5] |
| **Divination** | | | |
| Foresee | 25 | 1 Round | Area |
| Reveal | 20 | 1 Round | Area |
| **Illusion/Phantasm** | | | |

| | | | |
|---|---|---|---|
| Conceal | 20 | 1 Round | Crea./Area[6] |
| Delude | 30 | 1 Round | Crea./Area[6] |
| Shadow Shape | Var. | -Variable- | -Variable- |
| Phantom | 40 | 1 Round | Area |
| **Invocation/Evocation** | | | |
| Create | 35 | 1 Round/Inst. | Area |
| Imbue | 45 | 1 Round | Crea./Ob.[5] |
| Strike | 25 | Instantaneous | Area |
| **Necromancy** | | | |
| Animate | 25 | Instantaneous | Area |
| Slay | 50 | Instantaneous | Creature |
| Tap | 40 | Instantaneous | Creature |

**Notes to Table 25**

[1] Spell effects are arranged according to the eight schools of magic listed in Chapter 7 of the *Player's Handbook*. Individual effects are explained below.

[2] *Base Difficulty:* A spell's difficulty number determines the spell's preparation time, casting time, and other miscellaneous characteristics, such has how powerful the magic appears to be when a detect magic spell is used. Other factors, such as caster level, range, duration, and area of effect, influence a spell's final difficulty number (see page 133).

[3] *Base Duration:* A spell uses its base duration unless the caster increases the difficulty (see Table 32). Some spells have a base duration of either one round or instantaneous (1 round/Inst.), depending on how they are used.

[4] This is what the spell usually affects, see Table 29 for details.

[5] *Creature or Object:* The spell works on creatures or objects.

[6] *Creature or Area:* The spell works on creatures or areas.

## Abjuration

**Banish:** The spell takes something that is out of place and returns it to its proper location. It is important to remember that a character can create many different types of banishments. Sending an extra-planar creature back to its home plane is a classic example. However, banishment-type magic can also drive away a psyche that has used a *magic jar* spell to invade another mind, return a restless spirit to its grave, or even restore a stolen object to its rightful owner. All other types of magic described in this section are similarly versatile.

The main difference between a banishment and a dispel is that a banishment works even if there is no magic operating on a target. For example, a tanar'ri who has come to the Prime Material Plane of its own free will can be returned to the Abyss. A banishment only returns something to its proper place; it cannot undo a transformation or affliction.

A banishment's duration cannot be extended. At base difficulty (30), a banishment

spell performs one action on one creature or object.

The distance a banished target must travel to return to its proper place is not a factor in a banishment, but the distance between the caster and where the target is when the spell is cast is a factor (see Table 31).

**Dispel:** The spell ends or undoes other magic. Unlike banishment, a dispel is ineffective unless there is magic currently operating on the target. A dispel can send a summoned tanar'ri back to the Abyss as long as the magic that brought it here is still operating, but it can't send the tanar'ri away if it left the Abyss on its own or arrived on the Prime Material Plane through the use of instantaneous magic, such as *teleport without error* or *plane shift*.

When pitted against other 10th-level spells, a dispel's area of effect must be large enough to cover the entire target; if not, the dispel automatically fails. A dispel always works against the caster's own magic; otherwise, the chance to dispel depends on the difference in level between the caster and the targeted magical effect.

At base difficulty (30) the chance to destroy an opposing spell is 50%; the check is made on 1d20, and a roll of 11 or higher indicates success. If the dispel caster is higher level than the character who created the targeted effect, the caster adds the difference in levels to the die roll. If the caster is lower level than the character who created the targeted effect, the caster subtracts the difference in levels from the roll. The caster rolls once for each 10th-level effect present.

If directed against spells or spell-like effects of 9th level or lower, the base chance for success is 100% instead of 50%, and the dispel's area of effect is irrelevant—dispelling any portion of the effect unravels the whole spell.

A successfully cast dispel destroys a permanent effect or magical item if the caster is of higher level than the creator of the magical item or spell effect. If the caster of the dispel is of lower level, the permanent effect or magical item merely ceases to function for 1d4 rounds. A successful dispel also destroys a permanent effect or magical item if the dispel caster is of higher level than the spell caster or item creator. If the dispel fails, or the dispel caster is of lower level, the permanent effect is rendered nonoperational for 1d4 rounds.

The permanent item or effect must be individually targeted, and the dispel has no other effect when so used. Note that a magical item resists this spell at its creator's level. If the creator's level is unknown, the DM should assign one or use the values listed in the *dispel magic* spell description from the *PHB*.

Augmenting a dispel can have varied effects. The caster receives a+1 bonus to the die roll for every five points of difficulty added to the spell, making it easier for a lower level caster to dispel a higher level caster's magic. If a dispel's duration is extended, the spell creates a zone of antimagic that prevents spellcasting and disrupts any magic brought into the area. See *Nazzer's nullification*.

**Reflect:** The spell reverses or redirects actions within the area of effect. A spell that forces a group of workers to demolish a wall they are building is a reflection. A spell that reflects hostile actions back upon the aggressor is a reflection coupled with a ward.

One specific action, such as brick laying, by one creature can be reversed at base difficulty (25). The reversal can affect several creatures if the caster chooses a larger area

of effect. If a limited class of actions, such as movement or physical attacks, is reversed, the base difficulty is doubled (50). If a general class of actions is reversed, such as all attacks, the difficulty is tripled (75).

**Ward:** The spell foils a specific type of attack or discourages hostile actions.

At base difficulty (35), a ward provides complete immunity to the normal form of a specific type of attack (fire, edged weapons, poison, etc.) and grants a +4 bonus against magical attacks (or a –4 attack penalty if a saving throw is not applicable). Even if the save fails, damage from the warded attack is reduced by half.

If the difficulty is increased further, the ward can negate damage from the warded form of attack by one point of damage for every two points of difficulty. The protection lasts until exhausted or the spell duration ends. Reduced damage is computed after applicable saving throws.

A ward can provide protection against attacks that do not inflict damage (charms, petrifaction, etc.). At base difficulty (35), a ward provides a +4 saving throw bonus against the specified attack. At a difficulty of 105, a ward grants a 50% resistance to the attack form in addition to the saving throw bonus. At a difficulty of 210, the ward provides 100% resistance to the attack. This resistance can be reduced if the attack is a true dweomer that has an increased difficulty (see the notes to Table 34). If a ward spell is applied to a creature that already enjoys magic resistance, the creature is entitled to two resistance rolls when attacked, once for the ward and once for the creature's magic resistance—the two values are not added together.

A ward can also be used as a hedge to keep a specific creature (Razortooth the orc, Infyrana the red dragon, etc.) from entering the area of effect unless it saves vs. magic. If a type of creature is hedged out (orcs, red dragons), the base difficulty is doubled (70). If a general class of creature is hedged out (humanoids, dragons), the difficulty is tripled (105).

A ward can be combined with another type of spell—usually a strike, reflection, or charm. An active ward can be triggered by a creature entering the area or by a specific action performed within the area. The more general the condition, the greater the difficulty, as above. For example, a ward that triggers a blast of fire if Razortooth the orc enters the room has a difficulty of 35. A similar ward that is triggered when a certain gem is moved also has a difficulty of 35 (because only one specific action triggers it), even though any creature could be affected.

## Alteration

**Animate (Object):** The spell causes inanimate objects—not dead creatures—to move. The object's shape and general physical characteristics are not changed. At base difficulty (25), the spell causes an object weighing 50 pounds or less to move at a speed of 12 over normal surfaces. The spell is often combined with a transport spell to improve the object's movement rate.

If directed to fight, an animated object can strike once a round using the caster's THAC0 (see the notes to Table 30 for damage ratings). An animated object can be imbued with an improved THAC0 or the ability to make extra attacks.

**Destroy:** The magic wrecks inanimate objects. At base difficulty (45), the target object is smashed or crumpled; the object cannot be repaired, but it can be remade at 10–60% of its original cost. Doubling the difficulty (90) shatters or disintegrates the object, destroying it utterly.

Objects in a creature's possession gain the creature's saving throw to resist the effect. Unattended objects must save vs. disintegration or be destroyed.

An object does not have to be totally destroyed to be adversely affected by a destroy spell. It is possible ruin objects larger than the area of effect by destroying their key parts, such as disintegrating the arms and legs of an attacking giant statue.

**Fortify:** The spell increases the target's natural potency in some fashion. One of a character's ability scores can be enhanced, a beverage might become sweeter, a rope might become stronger, etc.

At base difficulty (30), the fortified attribute is increased 10% for the duration of the spell. Doubling the difficulty (60) results in a gain of 10–40% (1d4x10). Tripling the difficulty (90) results in a gain of 20–60% (2d3x10). Quadrupling the difficulty (120) results in a gain of 30–120% (3d4x10). Each additional multiple of the base difficulty adds another 1d4x10% gain.

If used to enhance an ability score, each 10% gain equals a +1 bonus if the enhanced score is 15 or less. If the score being enhanced is 16 or higher, each 100% gain equals a +1 bonus. An ability score cannot be fortified beyond the recipient's racial maximum unless the fortify is combined with an imbue spell.

**Transform:** The spell changes the target's form or nature. An object's shape might change or the object might become another object altogether. A creature might grow extra limbs or become an entirely different creature. A transformation spell cannot affect a single object weighing more than 50 tons.

At base difficulty (35), an object can be bent or shaped into a new form for the duration of the spell. The object does not break, but it is most likely rendered useless for its original purpose. Some examples include shaping a sword into a very thin shield, changing a dagger into a candelabra, or blunting the tips of arrows to make them useless.

Doubling the difficulty (70) allows the spell to transform a living creature (similar to a *polymorph other* spell) or change one type of material into another similar material. For example, leather could be changed into wood, a fire giant could be transformed into a rust monster, or a section of a castle's stone wall could be changed into iron. This form of the spell can also purify tainted food and water.

Tripling the difficulty (105) allows the caster to transform a creature into an object (similar to a *polymorph any object* spell) or change one type of material into a wholly different type of material of approximately the same value. Wood can be converted into glass, a fire giant changed into a small catapult, or emeralds can be converted into rubies or star sapphires. A material can be transformed into a more valuable material if the transformation is combined with an imbue spell.

A simple transformation spell—one not combined with another type of spell—can be made permanent without the loss of a point of Constitution if the material transformed is not magical.

**Transport:** The spell enhances a creature's movement abilities. The recipient can move faster, acquire a new mode of movement, or travel instantaneously.

At base difficulty (35), the recipient's normal movement rate increases by 12 or the recipient receives a new mode of travel for the duration of the spell. For example, a land-based recipient could fly or swim at a rate of 12, burrow through normal ground or jump at a rate of 3, or move across difficult terrain (webs, treetops, quicksand, etc.) at a rate of 6.

Doubling the difficulty (70) doubles the speed bestowed or allows extraordinary movement at a rate of 3. A character could walk on water, burrow through solid rock or ice, or travel through difficult terrain at a movement rate of 6.

Tripling the difficulty (105) allows teleportation with no chance for error, but the distance teleported increases the difficulty (use Table 31 on page 131 to determine the modifier). Teleportation has an instantaneous duration. The caster could also increase movement over difficult or extraordinary terrain by 3.

## Conjuration/Summoning

**Afflict:** The spell imposes some ill effect on a target creature. The caster states what sort of affliction the victim suffers and the affliction's duration, which can be conditional (see below). An affliction can be dispelled only by a caster of equal or higher level.

A harmless affliction, such as the victim's hair turning white, can be created at half difficulty (20), and modifiers for duration are halved as well. Such an affliction can be made permanent without the loss of a point of Constitution.

At base difficulty (40), the victim is afflicted in some minor way: shaking hands reduce Dexterity by one point and impose a –5% penalty on thieving skills, clouded vision imposes a –1 penalty to missile attacks, etc.

At double difficulty (80), the victim suffers a major, but not life-threatening, affliction: one type of weapon always breaks when the victim uses it in combat, the character suffers a terrible disfigurement that reduces Charisma to 3, the sight of treasure drives the character insane, a farmer's field is blighted so that the crop loses 10–20% of its value, etc.

At triple difficulty (120), the target is afflicted badly enough to ruin the character's life: a warrior's weapon arm withers, a rogue is struck blind when violating a law, a wizard is rendered speechless, a blight in a field reduces the crop to bare subsistence level, etc.

At quadruple difficulty (160), the target's life is imperiled: wounds never heal, saving throws fail, every word spoken provokes violence, a field bears no crop at all, etc.

The spellcaster can specify a duration or state a condition that ends the affliction. In either case, use Table 32 to determine the additional difficulty. When a condition is imposed, the DM must set an effective duration based how much time might be required to fulfill the condition and what lasting effects fulfilling the condition might have.

For example, if a character is struck blind until he apologizes to the caster for an insult, the effective duration is one round if the caster is present. However, if the character must crawl to the caster's tower 10 miles away, the effective duration is a day.

Conditions that are extremely difficult to fulfill or that require a major change in the victim's life are effectively permanent. For example, having hands that shake until a

rogue gives up his thieving ways—thus retiring or assuming a new character class—is an effectively permanent affliction. Such an affliction would not cost the caster a point of Constitution, however, as it is within the victim's power to end the affliction.

**Bind:** The spell imposes an agreement upon a creature. It differs from charm and compel (see below) in that the subject agrees to undertake, or refrain from, a single action but otherwise retains its own will. Any type of creature can be bound, even those normally immune to charm effects. A binding is often combined with a summoning spell to insure that the summoned creature obeys the caster—this is the only form of binding a conjuration specialist can cast.

A binding can have either a fixed or conditional duration, just as an affliction can. A summoning combined with a conditional binding ends when the condition is met, sending the summoned creature back where it came from.

If a binding lasts a year or more, the target is allowed a saving throw each year to break the spell. If the binding was combined with a summoning, the creature returns to the locale from which it came if the saving throw is successful. If the saving throw fails, it remains bound by the spell.

No binding is effective if it is impossible to honor or requires a suicidal action. For example, trying to force a creature to stop breathing or eating is an invalid binding.

**Conjure:** The spell brings forth matter from somewhere else, usually one of the elemental planes. Conjurations can produce valuable materials when combined with an imbue spell, and those conjurations with a base difficulty of 80 or less can be made permanent without a loss of constitution.

At base difficulty (40), the spell produces a block of simple elemental material. Doubling the difficulty (80) produces simple objects made from a single common material, such as wooden tables or iron spikes. Tripling the difficulty (120) produces complex objects made from multiple common materials, such as weapons, wagons, and castles.

**Summon:** The spell brings forth creatures from somewhere else, usually one of the outer planes.

At base difficulty (50), the spell summons a single creature whose Hit Dice does not exceed the caster's level. The caster can choose to summon multiple creatures, but there is a difficulty modifier (see Table 29). The caster can choose to summon a specific creature if its name is known. Doubling the base difficulty (100) doubles the total Hit Dice of creatures that can be summoned, tripling (150) the base difficulty triples the Hit Dice, and so on.

A summoned creature whose Hit Dice are less than the caster's level automatically attacks the caster's foes for the duration of the spell or until the caster commands it to cease. If the caster has no enemies to fight, the creature can be commanded to perform other actions for the duration of the spell. The spell does not grant the ability to communicate with a summoned creature, so additional magic may be required. Any summoned creature returns to the locale from which is was summoned if it is dispelled, banished, or slain.

If a summoned creature's Hit Dice are greater than the caster's level, or if the creature

was specifically named in the summoning, the caster has no special control over it, though it can be bound, charmed, or compelled.

The initial distance between the caster and the summoned creature is not a factor, but the distance between the caster and where the summoned creature appears is.

## Enchantment/Charm

**Charm:** The spell causes a target creature with an Intelligence rating to abandon its own thoughts and feelings and adopt a specified emotional response toward the caster. The caster might inspire fear, love, loyalty, friendship, or any other purely emotional state. The emotional state remains for the duration of the spell; however, creatures are periodically allowed new saving throws based on their Intelligence scores as noted in the *charm person* spell.

If communication between the caster and the charmed creature is possible, the caster can exercise limited control over the subject. Charmed creatures that are asked to perform obviously suicidal actions are typically freed from a charm, see the *charm person* spell for details.

Casting this spell on an undead creature triples the difficulty (60). Golems, automatons, and animated objects cannot be charmed.

**Compel:** The spell forces the target creature to take an immediate action of the caster's choosing. The action must be something the target could normally do, and the action must not be suicidal.

At base difficulty, a compulsion lasts a single round. If the action requires more time, the duration must be extended appropriately, with a corresponding increase in difficulty.

**Fortify:** See the notes under Alteration.

**Imbue:** The spell grants the target a quality or ability—other than movement—that it did not have before. An imbued ability cannot change the target's basic nature.

At base difficulty (45), the target can be imbued with a common, non-offensive, ability that does not extend beyond the target's touch. An animal can be taught a simple trick, an unskilled person can be given a general proficiency, or an object can be given a simple, physical quality it does not normally possess, such as a bit of cloth becoming abrasive.

At double difficulty (90), the target can be given unusual abilities that do not extend more than 30 feet from the object and are nonmagical in nature. Characters can be granted proficiencies outside the general category or racial abilities such as infravision. Similarly, a sword can be given the ability to harm creatures normally harmed only by magical weapons or the ability to float in water.

Targets can be imbued with magical abilities or extraordinary properties, but the spellcaster must combine the spell with another type of magic. For example, giving a sword a true magical bonus requires a strike spell (one multiple of difficulty per plus).

Transmuting lead into a more valuable metal requires a transform spell at a difficulty of 105. In addition, the extent of the transmutation increases the imbue difficulty one multiple. At base difficulty (45+105), lead can be transmuted into copper. Transmuting

lead into silver doubles the imbue difficulty (90), and transmuting lead into gold triples the imbue difficulty (135). If the original material was nonmetallic, the imbue spell requires an extra multiple of difficulty—turning wood into gold has a difficulty of 285.

Granting a creature the ability to *detect magic* by touch requires a reveal spell at base difficulty (20). Granting the same creature the ability to inspire fear on sight requires a charm spell at an adjusted difficulty of 60 (base 20 + 40 for a line-of-sight effect).

Imbue can also be used to create an effect that lasts until triggered. The caster begins by creating the imbue spell with a permanent duration (this does not cause a loss of Constitution) and then follows immediately with the effect to be triggered. If more than a day passes between the completion of the imbue spell and the effect, the second spell must be combined with another imbue spell. Such effects can be combined to produce an effect that can be triggered multiple times.

## Divination

**Foresee:** The spell reads the future. The caster poses a single question and receives an answer. The spell's final difficulty depends on the how far into the future the caster delves (use Table 32) and the actual range to the subject. The answer is truthful, but often cryptic and always literal. For example, a spell that asks the fate of a king has an adjusted difficulty of 125 (base 25 plus 100 for an unspecified time frame) and is likely to reveal only that the king eventually dies. Careful wording of a question can produce clearer results.

By tripling the base difficulty (75), the caster can extend one normal sense (sight, hearing, touch, taste, and smell) into the future, with additional modifiers for the temporal and actual distance, as above.

There is no saving throw vs. a foresee spell unless the spell is used to predict an unwilling creature's alignment, intentions, or mental state.

**Reveal:** The spell shows what is hidden or not readily apparent. The spell reveals information about the present or the past.

At base difficulty (20), the caster can project one normal sense to the limit of the spell's range. For the duration of the spell, the caster can see, hear, smell, feel, or taste as though standing in the target area. If the target area is larger than the five-foot-square default area, the caster's point of view can be freely shifted within the area. If the caster wishes to employ an enchanted sense (microscopic vision, *ESP*, infravision, etc.), the base difficulty is doubled (40).

A reveal spell can also detect auras. At base difficulty (20), the caster can perceive one aura, effect, or substance (magic, evil, invisibility, charm, gold, etc.) by touch for the duration of the spell. Increasing the spell's range extends the caster's detection ability in a 10-foot path that is as long as the range. If the caster concentrates for one round, a ranged detection can penetrate one yard of earth or wood, one foot of stone, or one inch of steel or other metal. A thin sheet of lead blocks the detection. The caster—and only the caster—perceives the aura through feedback to his senses (hands tingling, throbbing headache, light intensity, etc.) and can tell where the source lies and how powerful it is (faint, moderate, strong, or overwhelming).

Doubling the difficulty (40), doubles the penetration (up to one inch of lead) and

allows the caster to analyze what is detected (the type of magic, how much gold, etc.). If there are multiple sources, only that fact is revealed; analysis takes one round.

Tripling the difficulty (60) triples the penetration and allows complete analysis. The caster can determine the subject's alignment, all types of magic in operation, etc. Each additional multiple of difficulty extends the penetration range. At quintuple difficulty (100), a reveal spell bestows the power of *true seeing* (as the 5th-level priest spell).

A reveal spell allows the caster to sense or ask questions about the past just as the foresee spell provides insights into the future. The past is easier to divine that the future—divide the time periods on Table 32 by 10 when determining difficulty. For example, looking 10 years into the past adds 70 to the difficulty.

A single use of the spell produces one effect (sense extension, aura reading, or divining the past), though an ambitions caster could combine all three functions into one very difficult spell.

There is no saving throw vs. a reveal spell unless the spell is used to examine an unwilling creature's alignment, thoughts, or mental state.

## Illusion/Phantasm

**Conceal:** The spell hides objects or creatures, rendering them undetectable for the duration of the spell.

At base difficulty (20), the target becomes undetectable to one ordinary sense for the duration of the spell. The spell's area must be large enough to cover the entire target, and each multiple to the base difficulty eliminates one additional sense. Concealment from magical senses, such as ESP and detection spells, double the difficulty (40). A single type of detection counts as one sense. For example, a spell that conceals a target from both *ESP* and magical detection has a difficulty of at least 40. A *true seeing* spell always defeats a conceal spell, but a target can be warded against detection.

If a concealed creature makes an attack, the spell is broken unless the conceal is combined with an imbue with the same duration as the conceal spell—this is an exception to the general rule about combining spells. Damage from a successful attack is never concealed, even if the attacker is concealed from the sense of touch. Magical items that produce visible effects, such as a *fireball* from a *wand of fire*, are not concealed along with a creature.

**Delude:** The spell confounds or distorts the senses, making the target seem like something else.

At base difficulty (30), one of the target's sensory aspects can be changed for the duration of the spell. The target does not actually change, but it looks, feels, smells, sounds, or tastes like something else. Changing the target's apparent size more than one category (see Tables 29 and 30) doubles the difficulty, and each additional multiple of difficulty allows one additional category of change.

Doubling the base difficulty (60) changes the way the target appears to extraordinary senses such as ESP. For example, making an astral deva seem mindless or an agitated storm giant appear calm doubles the difficulty. This is in addition to any multiplier for changing the target's apparent size. For example, making a 30-foot-tall storm giant look like an unintelligent halfling has a minimum difficulty of 150.

**Phantom:** The spell creates a sensory or mental image that can effect any thinking creature if the creature believes the image.

At base difficulty (40), the image impacts one sense—smell, sound, sight, taste, or touch—or exists solely as a mental image in the target creature's mind. Each multiple added to the base difficulty adds one sensory attribute to the image. If a sensory image is given a mental attribute, the image appears to have thoughts or emotions. Adding a specific thought or emotion adds 40 to the difficulty.

If the image's duration is instantaneous, the image lasts only as long as the caster concentrates. If a duration is specified, the image follows a simple program of action, as specified by the caster, for the duration of the spell. A programmed illusion can be made to activate itself in response to a specific trigger if combined with an imbue spell. A programmed illusion can react logically any situation it encounters if combined with an imbue spell at triple difficulty (135).

Unlike a shadow shape, an image cannot inflict real damage, even if the target believes it is real (see *Player's Handbook*, Chapter 7).

An image can be used to kill, however, by drawing on the target's fears. Such images are purely mental and function just like slay spells.

**Shadow Shape:** The spell allows the user to manipulate material from the Demiplane of Shadow, creating partially real illusions that retain their effectiveness even if disbelieved. The caster can employ a shadow shape as a conjure, summon, or strike spell. A shadow shape's base difficulty is the same as the spell it mimics.

If disbelieved, the shadow shapes retain an Armor Class of 4 and 80% of their hit points and damage potential. Special attacks, such as petrifaction and level draining, generally persist for as long as the spell lasts or until dispelled or disbelieved, but there is a 50% chance that they remain even after the spell fades.

## Evocation/Invocation

**Create:** The spell creates something out of nothing. The caster can create a wall or block of material.

At base difficulty (25), the caster creates a wall of energy (fire, lightning, or cold) five feet square and hair thin. Anything passing through the wall suffers 2d8 points of damage plus one point per caster level. Anything within 10 feet of the sheet suffers 1d8 points of damage, save vs. spells for half.

The caster can orient a wall of energy in any direction and shape it in any fashion. Once created, the wall remains in place and retains its shape for the duration of the spell. The wall can be cast upon a creature without difficulty, but the target suffers the lesser amount of damage unless the sheet is combined with a strike spell—in which case a save vs. spells for half damage applies. At the caster's option, one side of the wall can be harmless, inflicting no damage even to things that pass through it.

If the caster increases the difficulty to get a wall larger than the minimum size, use the area column from Table 29. The wall is five feet high and as long as the area's base dimension. For example, adding five points to the difficulty makes a wall five feet high and 50 feet long. The caster can increase the height by reducing the length. For example,

a 50-foot wall becomes 10 feet high and 25 feet long.

Doubling the base difficulty (50) creates a wall of soft material (such as wood, clay, or ice) five feet square and six inches thick. The caster can double the thickness by halving the area.

The caster can orient a physical wall in any direction and shape it freely. Once created, the wall retains its shape for the duration of the spell. If not properly supported, either by previously existing material or by virtue of a self-supporting shape (see the *wall of stone* spell description in the *PHB* for guidelines), the wall falls over, inflicting 3d10 points of damage on any creature caught underneath (save vs. death magic to avoid). If the wall is created in the same space as a target, it appears with a hole large enough to allow the target to remain unharmed.

At triple the base difficulty (75), the caster can create a wall of a hard substance, such as granite or iron. The wall has the same general characteristics as a wall of soft material, but if it falls, it crushes and kills creatures caught underneath (save vs. death magic to avoid).

At quadruple the base difficulty (100), the caster creates a wall of pure force that duplicates the effects of the 5th-level wizard spell *wall of force*.

At base difficulty (35), the caster can create a 50-pound block of simple elemental matter, such as water or dirt, or a pile of smaller blocks whose total weight does not exceed 50 pounds. At double difficulty (70) the caster can create soft, compound materials, such as brick or wood. At triple difficulty (105), the caster can create common, pure metals, such as iron or lead. The caster can combine a creation spell with an imbue spell to create valuable metals as detailed in the transform spell.

A creation spell that produces matter—not force or energy—can be made permanent without the loss of a point of Constitution.

**Imbue:** See the notes under Enchantment/Charm.

**Strike:** The spell directs energy or force against a target.

At base difficulty (25), the caster inflicts 2d8 points of damage plus one point per caster level by touch. The damage can be delivered through a burst of energy (fire, electricity, or cold) or force. The target is allowed a saving throw vs. spell for half damage. Energy bursts can damage objects, but force bursts cannot. A touch-delivered strike requires an attack roll, but a ranged strike does not. For every five points of additional difficulty, the caster can add 1d8, to a maximum of 30d8.

Adding a duration to a strike creates a static effect that can damage anything that blunders into it while the spell lasts.

If a strike is combined with a wall of energy, the resulting spell inflicts wall damage or strike damage, whichever is greater. The combination spell effect can be imbued with an animate spell to create an effect that moves at the caster's command. The mobile spell has an Armor Class of 0 and as many hit points as the caster. The spell effect can be harmed only by magical weapons and magical attacks; an effect is immune to its own form of energy.

A strike combined with a force wall can trap a target for the duration of the spell provided it is large enough to surround the creature. The target is not otherwise harmed and may escape by destroying the wall or teleporting away. The combined spell can be

imbued with an animate spell and move at the caster's command, grasping, crushing, or smashing objects. The effect is similar to the 9th-level spell *Bigby's crushing hand* spell except that it has an Armor Class of –2 and twice the caster's hit points.

**Table 29:**
## Areas of Effect

| Creature | Area | Object | Difficulty |
|---|---|---|---|
| 1 | 5 | 200 lbs. | 0 |
| 1d4+1 (3) | 50 | 500 lbs. | 5 |
| 1d6+5 (6) | 500 | 1,000 lbs. | 10 |
| 1d8+6 (9) | 5,000 | 1 ton | 15 |
| 1d10+7 (12) | 10,000 | 5 tons | 20 |
| 1d12+8 (15) | 25,000 | 10 tons | 25 |
| 2d8+8 (18) | 50,000 | 50 tons | 30 |
| 3d10+8 (21) | Province | 100 tons | 40 |
| 4d12+8 (24) | Region | 200 tons | 80 |
| 5d20+8 (27) | Plane | 500 tons | 160 |

**Creature:** The spell affects the indicated number of creatures or less. If the caster does not wish to roll dice, use the number in parentheses instead.

All creatures to be affected cannot be farther apart than the distance listed in the area column. For example, if a spell affects six creatures, they must all be within 500 feet of each other.

A spell can affect all creatures in a designated area, but the difficulty modifier is 10 times the value listed. For example, a spell that charms every creature in a 10,000 square feet area has a difficulty modifier of 200.

**Area:** The spell effect fills a square area five feet high. Numbers indicate the length of the square's sides in feet. A province is an area 20 miles square. A region is an area 100 miles square. A planar effect fills the entire plane where the spell is cast. An area can be angled or reshaped to fill whatever volume the caster desires, but the volume's minimum height is always considered to be five feet.

**Object:** The spell affects a number of objects whose weight does not exceed the listed value. If multiple objects are affected, they cannot be farther apart than the distance listed in the corresponding area column.

**Table 30:**
## Animated Objects

| Size[1] | Weight[2] | Damage[3] |
|---|---|---|
| Tiny | 50 lbs. | 2 |
| Small | 100 lbs. | 5 |

| | | |
|---|---|---|
| Man | 200 lbs. | 10 |
| Large | 500 lbs. | 15 |
| Huge | 1,000 lbs. | 20 |
| Gargantuan | 1 Ton | 25 |

[1] Size categories are taken from the Monstrous Manual and the various Monstrous Compendium tomes.

[2] Use the object column from Table 29 to calculate how difficult the object is to animate. Use this table to determine how much damage the object can inflict in combat. Objects weighing more than one ton cannot move if animated, but portions of them can move. For example, animating a castle has a difficulty of 80. The castle itself cannot move, but individual parts can.

[3] The figure given is average damage from a single blow. Any combination of damage dice and bonuses that produces the listed average is acceptable. For example, a stool or chair might inflict 1d3 points of damage with a single blow, a table might inflict 1d6+1 or 1d8 points of damage, and a castle's drawbridge might inflict 4d4+8 or 3d10+10 points of damage.

**Table 31:**
## Ranges

| **Range**[1] | **Difficulty** |
|---|---|
| Touch or 0 | 0 |
| 20 yards | 5 |
| 50 yards | 10 |
| 100 yards | 15 |
| 500 yards | 20 |
| 1,000 yards | 25 |
| 1,500 yards | 30 |
| Line of Sight[2] | 40 |
| Plane[3] | 60 |
| Trans-Planar[4] | 100 |

[1] A spell's range is either the distance between the caster and the portion of the spell's area of effect closest to the caster or between the caster and the center of the area of effect; the choice is the caster's. Spells with touch range are always centered on the target the caster touches.

[2] A spell with line-of-sight range can affect any target the caster can see, regardless of the range.

[3] A spell with planar range can affect a target anywhere on the plane where the spell is cast. Use this category for any spell where the target's location is not known.

[4] A spell with trans-planar range actually reaches across planar boundaries. Only transport and reveal spells work at this range.

**Table 32:**
## Durations

| Duration | Difficulty |
|---|---|
| Instantaneous[1] | 0 |
| 1 round | 1 |
| 1 turn | 3 |
| 1 hour | 5 |
| 6 hours | 7 |
| 12 hours | 10 |
| 1 day | 15 |
| 1 week | 30 |
| 1 month | 50 |
| 1 year | 70 |
| Permanent[2] | 100 |

[1] Spells with instantaneous durations have permanent effects. For example, a strike occurs in an instant, but the damage it inflicts remains until healed. Spells with longer durations cease to affect their targets once their durations expire.

[2] Making a spell permanent usually drains a point of Constitution from the caster, see the individual spell descriptions for exceptions.

**Table 33:**
## Preparation and Casting Times

| Adjusted Difficulty | Preparation Time[1] | Casting Time |
|---|---|---|
| –1 or less | None | 1 round |
| 0 | 1 round | 1 round |
| 1–5 | 1 turn | 1 round |
| 6–10 | 1 day[2] | 1 turn |
| 11–20 | 1 week | 1 turn |
| 21–30 | 2 weeks | 1 hour |
| 31–50 | 1 month | 1 hour |
| 51–100 | 2 months | 1 day |
| 101–150 | 6 months | 1 day |
| 151+ | 1 year | 1 week |

[1] The figure given is the minimum preparation time.

[2] Preparation and casting times of one day or more require a maximum of eight hours of effort per day.

**Table 34:**
## Difficulty Adjustments

| **Condition** | **Modifier** |
|---|---|
| Material Component | |
| Common | None |
| Rare | –10 |
| Exotic | –20 or 1/2 |
| Special Condition | |
| Common | None |
| Rare | –10 |
| Exotic | –20 or 1/2 |
| Caster Level | –1 per Level[1] |
| Specialist[2] | –51 |
| Caster has cast this spell before | –10[3] |
| Saving Throw or MR modifier[4] | Variable |

[1] The caster's level applies to adjusted difficulty before any other modifiers for material components and conditions.

[2] Specialist wizards receive this modifier when casting true dweomers that use a type of spell from their schools of specialization.

[3] This adjustment only applies if the spell is cast the same way it was previously. If range, duration, or other attributes are changed, the –10 reduction does not apply.

[4] If the true dweomer normally allows a saving throw, the caster can alter the spell's adjusted difficulty to increase or decrease the target's saving throw as explained below (see the **True Dweomers in Play** section for more information).

Each +5 added to the difficulty imposes a –1 saving throw modifier on the target; each –5 subtracted from the difficulty gives the target a +1 saving throw bonus. A difficulty modifier of 100 eliminates any saving throw.

A true dweomer's adjusted difficulty can be increased to reduce the target's magic resistance, including resistance provided by a ward spell. Each +1 added to the difficulty reduces magic resistance by –1. It is not possible to reduce a spell's difficulty by increasing the target's magic resistance. If the resistance penalty lowers the target's magic resistance to 0 or less, there is no further effect other than negating the roll.

## Necromancy

**Animate (dead):** The spell restores movement to dead creatures.

At base difficulty (25), the spell animates one Hit Die of skeletons or zombies for each level of the caster's experience. Doubling the base difficulty (50) doubles the Hit Dice of creatures animated, tripling the difficulty (75) triples the Hit Dice of creatures animated, and so on. All the remains to be animated must be intact and within the spell's area of effect. See the 5th-level wizard spell *animate dead* for details.

The current condition of the remains can affect the spell. If the remains have been scattered, but not destroyed, the spell's base difficulty increases by 25. If the remains are scattered and ancient, such as buried and broken up by time and natural forces, the difficulty increases by 75.

**Slay:** The spell destroys life, utterly and irrevocably slaying living creatures.

At base difficulty (50), the caster can slay a single creature whose Hit Dice do not exceed his own. If the spell is extended over an area, the total Hit Dice of the creatures slain cannot exceed the caster's level.

A touch-delivered slaying requires an attack roll, but ranged slayings do not. Targets with 9 Hit Dice or more gain saving throws vs. death to negate the effects. For every five points of additional difficulty, the Hit Dice affected increases by 1 die. There is no maximum.

**Tap:** The spell manipulates a creature's life force. Priests (and only priests) use this spell to heal injuries.

At base difficulty (40), this spell drains 1d8 hit points from living targets by touch. A touch-delivered tap requires an attack roll, but ranged taps do not. Targets with 9 Hit Dice or more gain a saving throws vs. spells to negate the effects. For every five points of additional difficulty, the damage increases by one die to a maximum of 30d8. A damage-inflicting tap always has an instantaneous duration which cannot be increased.

At double difficulty (80), a tap can transfer hit points drained from a victim to the caster for the duration of the spell or until the caster loses the hit points through combat or other means. Any damage the caster suffers is deducted from the stolen hit points first. In any case, the target does not automatically regain the lost points when the spell ends, though the damage can be restored through rest or magical healing just as most other forms of damage.

Alternately, the caster can employ a tap at double difficulty (80) to drain one point from an ability score. The loss persists for the duration of the spell (the ability score is suppressed, not drained away). At a difficulty of 160, the caster can transfer the stolen ability score to himself for the duration of the spell.

At triple difficulty (120), the caster can drain one energy level for the duration of the spell. At a difficulty of 240, the caster can transfer the stolen level to himself.

## Material Components

As explained on page 119, the caster must employ some object or material to create a true dweomer. The caster can use combinations of common, rare, and exotic components to make a true dweomer easier to prepare and cast, according to the limitations outlined

below. The caster must have a common material component on hand to begin preparing a spell.

*Common:* The component is something fairly plentiful and easy to get under normal circumstances. The caster might use a butterfly's cocoon for a transformation spell, a handful of nails to create an iron wall, or a magnifying glass for a reveal spell. Every true dweomer requires at least one common material component. There is no reduction in the spell's adjusted or final difficulty for multiple common components.

*Rare:* A rare component is normally expensive and difficult to find. The caster might use a legal document or writ issued by a court against the target of a banishment spell, a packet of expensive herbs in a compel spell, or a live electric eel in a strike spell that employs electricity. A character can employ as many as three rare components to reduce a spell's adjusted or final difficulty by –30. The limit applies once per spell. That is, the caster can use three rare components to reduce the spell's adjusted difficulty by 30, the final difficulty by 30, the adjusted difficulty by 20 and the final difficulty by 10, or vice versa.

If the caster does not have a rare component on hand during the entire preparation time for a spell, the modifier can be applied only to the spell's final difficulty number.

*Exotic:* An exotic component is unique or unusual and cannot be purchased—the character must undertake an adventure to get it. The caster might use a fragment of an ancient sundial in a destroy spell, a displacer beast's hide in a delude spell, or sand taken from the track an iron golem left after taking its first step in an animate spell. A character can employ any number of exotic components to reduce a spell's adjusted or final difficulty. When an exotic component is used in a spell, the adjusted or final difficulty is reduced by half or by 20 points, whichever is greater. It is usually to the caster's advantage to apply the modifier for an exotic component before any modifiers for rare components, but the caster is not required to do so.

A single exotic component reduces either the spell's adjusted difficulty or final difficulty, but not both. If an exotic component is not available for the spell's entire preparation time, the modifier for it can be applied only to the final difficulty.

## Special Conditions

Any technique or unusual restriction that the caster imposes on himself during the spell's preparation time can reduce the spell's adjusted or final difficulty. Similarly, the caster can limit the way the spell is used and make the spell easier to prepare and cast. Like material components, special conditions are classified according to rarity.

*Common:* This is the minimum condition for preparing or casting a spell (see page 119).

*Rare:* The condition requires some extra effort or extraordinary expense on the caster's part. The caster might remain in a locale that is particularly appropriate for casting a spell; for example, staying in school or library when preparing a reveal spell. The caster might refrain from taking a certain action during a spell's preparation time, such as never answering a question truthfully while preparing a delude spell. The caster might specify a limited use for the spell, such as a dispel that only works against afflictions that have been unjustly laid.

A rare condition is not effective unless the character is exceptionally clever or

undergoes some hardship or sacrifice. Only one rare condition can apply to any given spell, affecting either the adjusted or final difficulty. The DM must be very careful when assigning limitations, as players tend to specify limitations that only apply to the situation immediately at hand. A limitation reduces difficulty only when it actually makes the spell harder for a player character to use.

*Exotic:* The condition is unique, and the character must undertake an adventure to complete it. An exotic condition often exists only in a metaphorical sense. Shielding the innocent from a tyrant's wrath might be useful in preparing a ward spell. Carrying an idea to the four corners of the world might help with a transport spell. Freeing a village from fear might help with a dispel, especially if the target of the dispel and the source of the fear are one in the same. Only one modifier for an exotic condition can apply to a single spell. The caster can apply it to either the adjusted or final difficulty, but not both.

### Preparing the Spell

Once a true dweomer's adjusted difficulty has been calculated, the caster can begin preparing to cast the spell. To prepare a spell, the caster must spend time in quiet study or meditation. The caster cannot fight, cast spells, move faster than a walk, or engage in any other activity that requires intense physical effort or mental concentration. If the preparation time is one day or more, the caster must spend eight hours a day preparing for the endeavor, although he is free to pursue other activities during the remaining 16 hours. Keep in mind that there is a limit to the number of true dweomers a character can prepare at once (see page 119 and Table 44).

If the caster wishes to reduce the spell's preparation time, material components or special conditions can be added to reduce the adjusted difficulty, which in turn reduces preparation and casting times.

If the caster is interrupted or ceases the preparations, the spell is disrupted. Preparations that require one day or less are completely disrupted and must be restarted. If the preparations require one week or more, the caster loses any preparation time already spent on the day when the disruption occurs and loses another day's worth of preparations as the caster makes the readjustments to continue the spell.

For example, Pharjis, a 25th-level diviner, is preparing a spell with an adjusted difficulty of 15, which requires a week's worth of preparations. He prepares for three days without incident, but in the middle of the fourth day an explosion in his laboratory keeps him busy well into the night. Pharjis loses the preparation time he completed on day four and must backtrack another day, so he must prepare for five more days before he can cast the spell.

If an interruption lasts more than one day, the caster must either begin preparations again or backtrack that many days when resuming preparations. For example, if Pharjis were preparing a spell with an adjusted difficulty of 55 , he would need to prepare for two months. If he were to be interrupted for a full week, he loses not only that week but another seven days worth of preparations.

When the caster completes the required preparation time, the spell may or may not be ready to cast. The character must roll a final difficulty check to conclude the preparations.

### Final Difficulty

A spell's final difficulty number is usually the same as its adjusted difficulty. When

the caster has spent the required preparation time, roll 1d100. If the number rolled is equal to or higher than the spell's final difficulty number, preparations are complete. If the roll is lower than the final difficulty, the caster must continue preparing the spell and can check again when another period of preparations are complete.

If the spell's adjusted difficulty is higher than 100, or if the caster simply wishes to reduce the difficulty number, the caster can apply a modifier for a material component to the final difficulty instead of the adjusted difficulty. This does not affect the spell's preparation or casting time.

The caster can also extend or reduce a spell's preparation time by adjusting the final difficulty. If the caster increases the preparation time to the next higher category, the final difficulty is reduced by half or –10, whichever is higher. The spell's casting time is unchanged. If the spell's adjusted difficulty is 151 or higher, increasing the preparation time doubles it to two years. The caster can also shorten a spell's preparation time to the next lower category by doubling the difficulty. Each of these modifications can be made only once. If the adjusted difficulty is 0 or less, the difficulty cannot be doubled.

For example, if Pharjis decides to spend six months preparing his difficulty 55 spell, the final difficulty is reduced to 28 (fractions are rounded up), but the spell still takes one hour to cast. Similarly, if Pharjis wished to spend only one day preparing his difficulty 15 spell, its final difficulty would rise to 30.

### Casting the Spell

Once preparations are successfully concluded, the character is free to cast the spell. Casting a true dweomer is just like casting any other spell. The caster must be free to speak and move, and any material components used in the spell must be at hand. If the caster's concentration is broken during the casting time, the entire spell is ruined and any material components used vanish in a fizzle of useless energy.

If the casting time is a day or longer, the character need spend only 8 hours actually casting and is free to pursue other activities during the remaining 16 hours. When the caster is not actually working on the spell, attacks on the character do not disrupt the spell. However, once the caster begins the spell, casting must continue daily. Any breaks ruin the spell.

For example, Pharjis is working on a particularly difficult spell. The adjusted difficulty is 160, which Pharjis has reduced to 80 by extending the preparation time to two years. Once preparations are complete, Pharjis must spend one week casting the spell. He must spend eight hours a day on seven consecutive days to cast the spell. If he misses a day, the spell is lost, though he does not have to begin his eight hours of casting at the same time each day.

Once prepared, a spell can be held only as long as its minimum preparation time. In the preceding example, Pharjis could wait as long a full year before casting his difficulty 160 spell. Because Pharjis is only 25th level, he can prepare or cast only one other true dweomer per day until he casts the spell he has prepared.

### An Example of True Dweomer Creation

Pharjis, the 25th-level diviner from the previous examples in this section, is concerned about a horde of marauding orcs that has been ravaging the countryside. He decides to take a look at the orcs from the safety of his tower.

The type of magic is reveal (base difficulty 20). Pharjis only wants to look, so there is

no modifier to the base difficulty. Pharjis is extending his sight so he can see the horde as though he were standing in a five-foot square area somewhere within it. This doesn't suit Pharjis particularly well, so he decides to expand the default area of effect to a 100-mile square area immediately to the west of his tower—if the orcs are farther away than that, he isn't worried about them. The range is effectively zero, so there is no difficulty modifier. The modifier for a region-sized area (100 miles square) is 80. Pharjis wants to keep watch for half a day, adding 10 to the difficulty. The spell's difficulty from its combined elements is 110 (20+80+10). Pharjis subtracts 25 for his level, 5 because he is a diviner, and 10 because he has done this before for an adjusted difficulty of 70.

The basic preparation time is two months—the orcs would be gone by then, so Pharjis must do something to decrease the preparation time. He throws in a golden spyglass, a pair of spectacles, a detailed map of the area to be observed, and a feather given freely by a giant eagle. The spyglass, spectacles, and map are rare material components, and the eagle feather is an exotic—giant eagles don't usually go around giving feathers away. The exotic component reduces the difficulty by half to 35. The three rare components reduce the difficulty to 5, which requires a turn's preparation.

At this point, Pharjis doubles the final difficulty to 10, which reduces the preparation time to a round (the spell still requires a turn to cast). After one round of preparation, Pharjis rolls the dice and gets 02%, a failure. He must spend another round in preparation. At the end of the second round, Pharjis rolls 81%, a success. The next round, Pharjis casts the spell—no further die rolls are required.

Pharjis searches the entire area of effect for 12 hours, moving his point of view around at will. The orcs are in the area, and Pharjis quickly locates them. He carefully notes their numbers and equipment and then sends a message to an old adventuring buddy of his—a high-level ranger with a special interest in orcs.

### True Dweomers in Play

True dweomers follow most of the standard rules for spells, with the following exceptions:

**Saving Throws:** Most true dweomers allow a saving throw vs. spell, check the descriptions for the individual spell types for details. The saving throws by character level optional rule (see page 144) is always used for true dweomers; bonuses for high ability scores apply normally.

If a true dweomer's difficulty has been lowered, the target's saving throw improves; however, the automatic saving throw failure rule (page 142) still applies.

Creatures with magic resistance are entitled to a normal resistance roll against a true dweomer, according to the limitations explained in Chapter 9 of the Player's Handbook.

**Protective Devices:** Items such as *rings of protection* work normally against 10th-level spells. True dweomers cannot be stored or absorbed. Pale lavender and lavender and green *ioun stones* are ineffective against true dweomers, as are *rods of absorption* and the absorption powers of *staffs of the magi*.

**Dispel Effects:** The 3rd-level *dispel magic* spell is of limited use against 10th-level spells. To be effective, *dispel magic* must be directed solely against the true dweomer to be dispelled. If it succeeds, the true dweomer is rendered nonoperational for 1d4 rounds.

A *dispel magic* spell cannot disrupt a true dweomer whose area of effect is larger than the *dispel magic* spell's area of effect.

*Mordenkainen's disjunction* has a 1% chance per caster level of disjoining any true dweomer. If any portion of the enchantment is disjoined, the entire true dweomer is disjoined.

A *wish* automatically dispels a true dweomer, but that is the only effect the *wish* has. A *limited wish* spell can temporarily negate a true dweomer for 1d8 hours.

Also, see the explanation of the dispel true dweomer on page 122.

**Magical Barriers:** A dispel true dweomer instantly destroys any wall spell or magical barrier created by a 1st-9th level spell or magical device if it succeeds, including *wall of force*, *prismatic wall*, *prismatic sphere*, *antimagic shell*, and the *cube of force*.

A destroy true dweomer eliminates a *wall of force*, *prismatic wall*, or *prismatic sphere* if its area of effect is large enough to encompass the whole spell effect.

If not destroyed or dispelled, any barrier that keeps out magic keeps out a true dweomer unless the true dweomer's area of effect is large enough to circumvent the barrier. For example, a flat *wall of force* cannot keep out a province-sized true dweomer. Spherical barriers cannot be circumvented in this manner.

## True Dweomers in Magical Duels

Duelists can attempt to employ true dweomers, but they usually are not useful because they take too long to prepare and cast. Each round of preparation or casting time for a true dweomer requires one round in the duel. Both preparation and spellcasting can be disrupted if the caster fails a saving throw or loses a character combat roll. Any true dweomer with a casting time of more than one round is useless as a counter spell.

In all other respects, true dweomers function like normal spells. All true dweomers have PRs of 19 and move at a rate based on their ranges. A true dweomer's default area of effect and duration is always sufficient to send it moving across a dueling arena, though in some cases the caster might wish to increase the difficulty to enhance the spell's effect once it reaches the opponent's square or to give the spell a better movement rate. Use Table 35 to determine a true dweomer's spell type in a duel.

**Table 35:**
### True Dweomer Spell Types for Duels

| True Dweomer Type* | Dueling Type |
|---|---|
| **Abjuration** | |
| Banish | Attack |
| Dispel | Attack/Defense |
| Reflect | Defense |
| Ward | Defense |
| **Alteration** | |
| Animate | Attack/Defense |
| Destroy | Leech |
| Fortify | Leech |

| | |
|---|---|
| Transform | Attack |
| Transport | Leech |
| **Conjuration/Summoning** | |
| Afflict | Attack |
| Bind | Attack |
| Conjure | Leech |
| Summon | Attack/Defense |
| **Enchantment/Charm** | |
| Charm | Attack |
| Compel | Attack |
| Fortify | Leech |
| Imbue | Leech |
| **Divination** | |
| Foresee | Leech |
| Reveal | Leech |
| **Illusion/Phantasm** | |
| Conceal | Leech |
| Delude | Leech |
| Phantom | Any |
| Shadow Shape | Attack/Defense or Missile |
| **Invocation/Evocation** | |
| Create | Attack/Defense |
| Imbue | Leech |
| Strike | Missile |
| **Necromancy** | |
| Animate | Attack/Defense |
| Tap | Attack |
| Slay | Attack |

### True Dweomers and Quest Spells

As powerful as a true dweomer is, it is still mortal magic. Quest spell effects, which represent a deity's direct intervention in the world, generally cannot be countered by true dweomers. A dispel true dweomer is ineffective against a quest spell effect.

If a quest spell produces a creature, object, or other effect that can be attacked or destroyed by normal means or spells, a true dweomer can be used to attack it. For example, a banish true dweomer cannot remove the creatures summoned by a wolf spirits quest spell, but a slay or strike true dweomer can harm the individual *wolf spirits*.

Ward true dweomers can work against quest spell effects if the protection is relevant. For example, a ward that provides protection from electrical attacks is effective against the lightning bolts generated from a *storm of vengeance* quest spell, but not the spell's other effects.

If the quest spell allows a saving throw, the ward works normally. If the quest spell does not allow a saving throw, anything protected by a ward gains a saving throw of 18. If the ward provides magic resistance, its value is halved vs. quest spell effects.

## Known True Dweomers

Players and DMs can use the system outlined above to create an endless variety of spells. Here is a brief sampling of true dweomers that have been documented in one or more worlds.

The spells are presented in standard AD&D game format, as described in Appendix 2 of the *Player's Handbook*, except as noted below. Additional information specific to true dweomers is also included.

The *Type* entry identifies all the kinds of magic (from Table 28) used in the spell.

The *Difficulty* entry gives the spell's difficulty rating before any reductions.

The *Final Difficulty* rating gives the spell's difficulty as if it were being cast by a nonspecialized caster of 20th level using all the material components and special conditions listed in the spell description. An additional –10 for casting a previously recorded spell is also applied.

The *Preparation and Casting Time* are based on the spell's unmodified final difficulty rating.

The *Range* entry works as described in the notes to Table 31.

## Hurd's Obligation

**(Conjuration/Summoning)**

Type: Bind
Range: Touch
Duration: Conditional
Adjusted Difficulty: 180
Final Difficulty: 45
Preparation Time: 1 Month
Casting Time: 1 Hour
Area of Effect: 1d6+5 Creatures
Saving Throw: Neg (–8 penalty)

A covetous wizard invented this spell to ensure that adventurers in his employ honored their agreements. Hurd worked diligently to discover hidden caches of treasure and regularly dispatched teams of heroes to recover them. The spell was normally completed with a handshake between the caster and the group's leader. A typical venture could take six months to a year to complete, but the spell remained until the verbal contract was carried out.

Creatures subjected to this spell are forced to carry out the terms of their agreement with the caster. They are incapable of fighting the effects of the spell to try and escape the agreement. In Hurd's case, adventuring parties returned back to his tower with all of the treasure they found and gave him his agreed-upon share. Only a 10th-level dispel, such as *Nazzer's nullification*, cast directly upon an affected creature can dispel its effects.

The material components are a sheet of vellum inscribed with the adventurers' names (common), a permanent magical item given to the group's leader (exotic), a small ruby (100 gp value) given to each creature affected, one pound of giant bee honey, and a few drops of *oil of slipperiness* (rare components). The items given away are not consumed,

but become the recipients' property.

## Kolin's Undead Legion

**(Necromancy)**

Type: Animate
Range: Plane
Duration: Instantaneous
Difficulty: 325
Final Difficulty: 45
Preparation Time: 1 Month
Casting Time: 1 Hour
Area of Effect: 5,000-foot square, 5 feet high
Saving Throw: None

This spell animates 200 Hit Dice of skeletons or zombies from intact remains in an area up to 5,000 feet square anywhere on the same plane as the caster. The caster can give the legion one brief, simple command when the spell is cast, but he must be present to give detailed orders. The wizard Kolin typically dispatched an undead lieutenant to the scene to take command of the troops.

The material components are an unbroken bone (common), dust from an undead spellcaster's lair, a horn that has been played over a warrior's grave, a copper dagger that has been bloodied in battle (rare), mold from a general's shroud, and a battle standard carried into an ambush (exotic).

## Kreb's Flaming Dragon

**(Illusion/Phantasm)**

Type: Shadow Shape
Range: 50 yards
Duration: 1 Hour
Difficulty: 65
Final Difficulty: 5
Preparation Time: 1 Turn
Casting Time: 1 Round
Area of Effect: 1 Creature
Saving Throw: Special

This spell produces a single red dragon of very old age or younger. Opponents who suspect the dragon is not real can save vs. spell to disbelieve it. Even if the save succeeds, however, the dragon still has an Armor Class of 4 and retains 80% of its damage potential and hit points. If the dragon is disbelieved, its non-damaging special powers, such as its fear aura and *suggestion* ability, have a 20% chance to fail before any saving throws are rolled.

The material components are a sealed metal container full of pebbles (common), a red dragon's tooth, two long, silver needles with gold or gem-studded heads (75 gp each), and a ball or red yarn spun from a ram's fleece (rare).

## Kreb's Stately Veil

**(Illusion/Phantasm)**

Type: Delude
Range: Touch
Duration: 1 Week
Difficulty: 120
Final Difficulty: 5
Preparation Time: 1 Turn
Casting Time: 1 Round
Area of Effect: 1 Creature
Saving Throw: Neg.

This spell makes the recipient appear vigorous, attractive, and wealthy. The recipient's basic features remain unaltered, however, and characters can readily be identified as themselves (a rare condition). The recipient appears to be clothed in costly garments of the caster's choosing. These look and sound genuine (silks rustle, spurs jingle, etc.), but anyone touching the recipient feels the character's actual clothing. The recipient is surrounded by a pleasant scent appropriate to the character's altered appearance (rare perfume, new leather, wildflowers, etc.).

The material components are a bar of scented soap (common); an uncut gem worth at least 100 gp; a fresh, unopened blossom from a deadly plant; a serpent's shed skin collected by the caster's own hand (rare); and a handful of mud gathered from a hot spring at sunrise (exotic).

## Nazzer's Nullification

**(Abjuration)**

Type: Dispel
Range: 50 yards/1,500 yards
Duration: Instantaneous
Difficulty: 55/90
Final Difficulty: –5/13
Preparation Time: None/1 Week
Casting Time: 1 Round/1 Turn
Area of Effect: 70' x 70'/220' x 220'
Saving Throw: None

This is essentially the 10th-level version of *dispel magic*. As noted in the spell statistics, there are two different versions of this spell; the second is referred to as

*Nazzer's nullification cloak*. Both spells share some common elements, however.

Once cast, all spells and spell-like effects in the area of effect have a chance to be dispelled. Unless noted otherwise, it functions as the 3rd-level wizard spell *dispel magic*.

Spells of levels 1–9 have a base 100% chance to be dispelled. True dweomers have a base chance of 50% to be dispelled (a roll of 11 or higher on a d20). If the caster of the effect is of higher level than the caster of *Nazzer's nullification*, subtract one from the chance of success for each level of difference. If the caster of the effect is of lower level, add one to the chance of success for each level of difference. For example, a 25th-level wizard's *stoneskin* that is the target of this spell cast by a 21st-level wizard would reduce the chance for success to a roll of 15 or higher on a d20. No matter what the adjustments, a roll of 1 is always a failure, and a roll of 20 is always a success.

*Nazzer's nullification* can be cast on a magical item to permanently render the item nonmagical. Most standard magical items are susceptible to this spell, since their effective level is 12th in most instances. Even if not successful, the item is rendered nonoperational for 1d4 rounds. Artifacts are not subject to this effect.

The material components for this spell are dust from a burned out *ioun stone* that has been ground to powder, a fire opal worth precisely 1,200 gp, and a dagger of the finest quality (an exceptional weapon). All are rare components.

*Nazzer's nullification cloak*: The secondary version of this spell remains in operation for one full turn after it has been cast, disrupting all magic entering it. Magic within the area of effect at the time the spell is cast is dispelled as described above, but magical items continue to function.

If a spell succeeds in resisting the dispel, it is immune to the remaining nine rounds' worth of dispelling unless it somehow exits the area of effect and then reenters. All magic that enters the area of effect after the initial round is subject to dispelling.

Spell and spell-like effects cannot be used within the area for the duration of the spell. If the caster is within the area of effect, his spells also fail. Neither version of this spell has a visible effect.

In addition to the material components detailed above, this spell also requires the dust gathered from an awakened demilich's lair.

## Neja's Irresistible Plea

**(Enchantment/Charm)**
Type: Compel
Range: 20 Yards
Duration: Variable
Difficulty: 60
Final Difficulty: 0
Preparation Time: 1 Round
Casting Time: 1 Round
Area of Effect: 1 Creature
Saving Throw: Neg. (–3 to saving throws)

The wizard Neja didn't like to take "no" for an answer when requesting help with a problem. When this spell is cast, the victim is compelled to perform some task that takes 12 hours or less to complete. Anything that the victim can reasonably do, from ferrying

the caster across a lake to searching a river bottom for a lost trinket, is fair game.

The material components are a whiff of perfume (common), a piece of sweetcake made with the caster's own hands, a tear of sorrow, and a small, silver replica of any stringed instrument.

## Neja's Toadstool

**(Alteration)**

Type: Transform
Range: 20 yards
Duration: 1 Day
Difficulty: 120
Final Difficulty: 3
Preparation Time: 1 Turn
Casting Time: 1 Round
Area of Effect: 1 Creature
Saving Throw: Neg.

A vengeful wizard is reputed to have favored this spell to teach people who insulted her a lesson. If the saving throw fails, the victim becomes a small toadstool (a rare condition, since the result is always a toadstool), retaining only their hit points for the duration of the spell.

*Nazzer's nullification* can—if successful—transform a character back into his original form. A system shock roll is required, with failure indicating death. A crushed toadstool—perhaps one that has been stepped on by an angry archmage—produces a likewise mangled character if successfully dispelled.

The spell requires a chunk of dead wood (common material component); a bit of dung from an unfettered, uncaged werebeast gathered by the caster in the dark of the moon; a wild moth's egg, live but unhatched; and a bit of truffle (two exotic components and one rare component).

## Neja's Unfailing Contempt

**(Conjuration/Summoning)**

Type: Afflict
Range: 20 yards
Duration: Variable
Difficulty: 220
Final Difficulty: 3
Preparation Time: 1 Turn
Casting Time: 1 Round
Area of Effect: 1 Creature
Saving Throw: None

Not always satisfied with turning others into toadstools, Neja devised this spell to insure her point of view prevailed in any discussion. When this spell is cast on a creature who has made a remark detrimental to the caster or opposed to the caster's interests (this limitation qualifies as a rare condition), the target creature becomes irritating to all intelligent creatures whose alignment is similar to the caster's. The spell persists until the victim retracts the statement.

Creatures with the same alignment as the caster find the victim loathsome in the extreme and cannot bear the victim's presence. They flee, drive away, or belittle the victim as fits the situation. The victim is not actually attacked unless the surrounding creatures would ordinarily be hostile.

The effect is less severe if the creature's alignment only partially overlaps the caster's. For example, a lawful good caster generates a reduced effect in creatures whose alignments are lawful neutral, lawful evil, neutral good, and chaotic good. Such creatures tend to view the victim as a moronic windbag, and they generally refuse to take anything the victim says seriously unless there is overwhelming evidence that the victim is speaking the truth.

The spell's components are a bud of crushed garlic (common), a vial of giant skunk musk, a lump of harpy dung, the tongue from any giant, poisonous amphibian (rare), the intact pelt of an aurumvorax, and a lock of hair, freely given, from a succubus or lamia (exotic).

## Ratecliffe's Deadly Finger

**(Necromancy)**

Type: Slay
Range: 1,500 Yards
Duration: Instantaneous
Difficulty: 190
Final Difficulty: 0
Preparation Time: 1 Round
Casting Time: 1 Round
Area of Effect: 40 HD of creatures in a 50-foot square area
Saving Throw: Special

This spell allows the caster to slay living creatures simply by pointing a finger. If the spell is insufficient to slay all the creatures in the area of effect, creatures closest to the caster are affected first. Creatures with less than 9 Hit Dice are not entitled to a saving throw. Creatures with 9 Hit Dice or more are allowed saves vs. death magic to avoid the effect. Creatures who succeed with their saving throws count toward the Hit Dice affected by the spell.

Creatures slain by this spell cannot be magically revived except by a wish, another true dweomer, or a deity's intervention.

The material components are an adder's head (common), a mummy's finger, a rusty nail drawn from a coffin or gallows (rare), the skull from a creature killed by a catoblepas hunting in its natural habitat, two copper coins surrendered by a will o' wisp, and a shard

from a lich's phylactery or a demilich's skull (exotic).

## Tenser's Telling Blow

**(Evocation/Invocation)**

Type: Strike
Range: Line of Sight
Duration: Instantaneous
Difficulty: 160
Final Difficulty: –7
Preparation Time: None
Casting Time: 1 Round
Area of Effect: 50-foot square, 5' high (1,250 cubic feet)
Saving Throw: 1/2

This spell creates a blast of force that inflicts 20d8+20 points of damage to all creatures within the area of effect. At least one target creature must already be engaged in some form of combat (missile, melee, or offensive spellcasting); the spell cannot be used preemptively (a rare condition).

The material components are any weapon (common), a tooth or claw from a huge or gargantuan creature, a horseshoe worn into battle by a warhorse (rare), the shards of a diamond shattered by a single blow from a titan, and a bit of cloth dampened with a widow's tears (exotic).

## Wulf's Erasure

**(Abjuration)**

Type: Dispel, Destroy
Range: 20 Yards
Duration: Instantaneous
Adjusted Difficulty: 85
Final Difficulty: 8
Preparation Time: 1 Day
Casting Time: 1 Turn
Area of Effect: 50-foot square, 5 feet high
Saving Throw: Special

The high priest Wulf used this spell to obliterate normal and magical writings such as *explosive runes, glyphs, symbols, illusory script,* and even spell scrolls (a rare condition). Normal writings—including spellbooks—save vs. disintegration or they are erased. Magical writings use the procedure for a 10th-level dispel effect. Items in a creature's possession cannot be affected unless the creature first fails a saving throw vs. spell.

When cast, all writings in the area of effect are subject to erasure unless protected by a 10th-level ward spell or similar construct. It makes no difference if writings are stored

in dimensional devices, such as *bags of holding, portable holes*, or other items.

The material components are ashes from a burned parchment that once bore writing (common) a platinum mirror, a hardened lump of sap gathered by the caster's own hand from a tropical tree, and a quill used by an unfriendly archmage of 20th level or higher to scribe a spell onto a scroll or spellbook. (Two rare and one exotic). The caster catches the reflection of one of the writings to be erased in the mirror, rubs the image with the hardened sap, then breaks the quill.

## Wulf's Rectification

**(Abjuration)**

Type: Banish
Range: Touch
Duration: Instantaneous
Difficulty: 155
Final Difficulty: 2
Preparation Time: None
Casting Time: 1 Round
Area of Effect: 1d4+1 Creatures within a 50-foot diameter
Saving Throw: None, –20% to Magic Resistance

The high priest Wulf used this spell to remove extra-planar impostors and usurpers. Wulf is known to have employed reveal spells to identify potential targets. The spell is effective only against extra-planer creatures that have secured a title, property, or office that rightfully belongs to some other being (a rare condition).

The material components are a mirror (common), a sunstone worth at least 500 gp, a document signed or sealed by the original owner or title holder, a document signed or sealed by the usurper, a sworn accusation against the usurper recited by a character loyal to the original owner and recorded by a character who has benefited from the usurper's actions since the seizure, and a jewel, badge, or medal freely given by the usurper to the caster. (Three rare and two exotic components.) The caster bundles the material components together and strikes a creature to be banished with it.

## Yunni's Herald

**(Alteration, Enchantment/Charm, Illusion/Phantasm)**

Type: Animate, Imbue, Image
Range: Touch
Duration: 1 Week
Difficulty: 140
Final Difficulty: –2
Preparation Time: None
Casting Time: 1 Round
Area of Effect: One object or group of objects weighing 50 pounds or less
Saving Throw: None

This spell creates an animated messenger that moves at a speed of 12 to the location specified by the caster and delivers a spoken message of any length in a loud, clear voice. If sufficient duration remains after the herald delivers its message, the caster can instruct it to return with a written reply, which some person must attach to the herald. The herald can be programmed to perform specific actions at certain times, subject to the spell duration.

If more than one object is affected by the spell, they all must be given the same message and instructions. Only total destruction of the object, by a *disintegrate* or similar spell, can stop the herald from delivering its message.

The material components are a seashell (common), a feather from a bird gifted with speech, a clock or other machine capable of independent operation, a powdered onyx worth at least 50 gp (rare), blood taken from a mimic while in an assumed form, and a leaf or seed from a tree animated by a treant and freely given (exotic).

# Chapter 7: High-Level Characters

Chapter 1 explained that high-level characters are unusual and heroic. This chapter includes rules for giving high-level characters abilities that allow them to function as epic heroes that are truly different from lesser mortals. It also explains some limitations that even epic heroes must face.

### Saving Throws

All characters have the ability to resist hostile magic by rolling saving throws. This ability is quite potent at high levels. Chapter 1 discusses some of the problems this can cause in the campaign. This section includes rules to help ease some of those problems.

**A Reminder:** Every character group has a level beyond which saving throws cannot be further improved. Priests reach this limit at level 19, rogues reach it at level 21, warriors reach it at level 17, and wizards reach it at level 21. See Table 60 in the *Player's Handbook* for details.

### Automatic Saving Throw Failure

Barring some special circumstance that makes a saving throw unnecessary, such as a successful magic resistance roll or immunity to a particular attack form, there is always a chance that a character can fail a saving throw. All characters and most other creatures fail their saving throws on rolls of 3 or less on 1d20, no matter how many bonuses they receive to the roll from magical items, spells, ability scores, and the like.

Some beings have lower failure numbers: Lesser deities fail their saving throws on rolls of 2 or less, intermediate deities fail on rolls of 1, and greater deities need not roll at all—they never fail their saving throws.

**Table 36:**
## Saving Throws by Caster Level or Hit Dice

| | | Attack to be Saved Against | | |
|---|---|---|---|---|
| **Target's** Character Group | **Target's** Level[1] | **Paralyzation** or Death Magic | **Petrification** or Polymorph | **Spell*** |
| **Priest** | –7 or more | 10 | 13 | 15 |
| | –4 to –6 | 9 | 12 | 14 |
| | –1 to –3 | 7 | 10 | 12 |
| | 0 | 6 | 9 | 11 |
| | +1 to +3 | 5 | 8 | 10 |
| | +4 to +6 | 4 | 7 | 9 |
| | +7 or more | 2 | 5 | 7 |
| **Rogue** | –9 or more | 13 | 12 | 15 |
| | –5 to –8 | 12 | 11 | 13 |
| | –1 to –4 | 11 | 10 | 11 |
| | 0 | 10 | 9 | 9 |
| | +1 to +4 | 9 | 8 | 7 |
| | +5 or more | 8 | 7 | 5 |
| **Warrior** | –7 or more | 16 | 17 | 19 |
| | –5 to –6 | 14 | 15 | 17 |
| | –3 to –4 | 13 | 14 | 16 |
| | –1 to –2 | 11 | 12 | 14 |
| | 0 | 10 | 11 | 13 |
| | +1 to +2 | 8 | 9 | 11 |
| | +3 to +4 | 7 | 8 | 10 |
| | +5 to +6 | 5 | 6 | 8 |
| | +7 to +8 | 4 | 5 | 7 |
| | +9 or more | 3 | 4 | 6 |
| **Wizard** | –6 or more | 14 | 13 | 12 |
| | –1 to –5 | 13 | 11 | 10 |
| | 0 | 11 | 9 | 8 |
| | +1 to +5 | 10 | 7 | 6 |
| | +6 or more | 8 | 5 | 4 |

* Excluding those that cause death, petrification, or polymorph.

[1] Subtract the spellcaster's level or hit dice from the defender's level or hit dice. For example, a 15th-level priest resisting a *charm person* spell cast by a 16th-level wizard uses the –1 to –3 row of the priest table and has a base saving throw number 12.

In a few cases, Table 60 from the *Player's Handbook* and Table 36 from this book show a saving throw success number of 3 or less; these numbers refer to the character's

adjusted die roll, not the actual number rolled. For example, Wulf, a 21st-level priest, has a saving throw number of 2 against paralyzation, poison, or death magic. Wulf still automatically fails his saving throw against these attacks if his actual die roll is a 1, 2, or 3. However, if he encounters a particularly virulent poison that imposes a –3 penalty to the saving throw, his saving throw succeeds if Wulf rolls a 5 or higher on his saving throw die. (The roll, 5, is higher than the automatic failure number, and still equals a 2 after the –3 modifier is applied.)

## Saving Throws by Caster Level

This rule allows the DM to change a character's saving throw number based on the levels or Hit Dice of the spellcaster and the target. Targets that are weaker than the spellcaster have worse saving throws than targets that are stronger, as shown on Table 36.

### How to Use Table 36

Saving throws against poisons, breath weapons, or any other form of attack that is not a spell or spell-like ability from a creature or a device use the standard saving throw tables, not table 36. Rods, staves, wands, and other magical devices use the column from Table 36 that is closest to their effects. A *fireball* from a *wand of fire* uses the spell column, a paralyzation beam from a *wand of paralyzation* uses the paralyzation or death magic column, and so on. The type of device determines the attacker's level, since the wielder's level or Hit Dice is irrelevant when a device is used, as shown on Table 37.

During play, the DM should be careful to conceal the attacker's true level of power. That is, do not say, "Okay, the caster is four levels higher than the thief, so your saving throw number against the spell is an 11." Simply tell the players what the attack form is and then inform them if their characters succeed or fail based on their adjusted rolls.

## Saving Throw Penalties by Caster Level

Using Table 36 can be somewhat cumbersome to use in regular play because the DM must perform a calculation each time a spell is cast. Table 36 is intended primarily for magical dueling (see Chapter 5).

A quicker and easier method to adjust saving throws by caster level is to assign a penalty based on the caster's level. Table 38 lists the penalties. If you use Table 38, do not use Table 36; use Table 60 from the *Player's Handbook* instead.

**Table 37:**
## Device Casting Levels

| Device | Level |
|---|---|
| Rod | 12 |
| Staff | 8 |
| Wand | 6 |

| | |
|---|---|
| Other Magical Item | 12 |
| Artifact | 20 |

**Table 38:**
## Saving Throw Penalties by Caster Level

| Caster Level | Penalty |
|---|---|
| 1–12 | 0 |
| 13–15 | –1 |
| 16–18 | –2 |
| 19–21 | –3 |
| 22–24 | –4 |
| 25–27 | –5 |
| 28–30 | –6 |

**Table 39:**
## THAC0 Limits

| Character Group | THAC0 Limit |
|---|---|
| Priest | 8 |
| Rogue | 11 |
| Warrior | 1 |
| Wizard | 14 |

### Attack Rolls

Like a saving throw, there is always a chance that a melee or missile attack can fail. No matter what the attacker's THAC0, an attack roll of 1 is always a miss. In addition, a character's THAC0 advancement is limited—professional skills and training only extend a creature's natural talents so far. Warriors, naturally, can improve THAC0 the most. Table 39 shows THAC0 limits for all four character groups. Monsters have no THAC0 limits.

**Table 40:**
## Skills for High-Level Characters

**Warriors**

| Skill | Requirement | Base Score | Relevant Ability | Cost |
|---|---|---|---|---|
| Adaptation | Warrior 10+ | 9 | Intelligence/Reason | 2 (6) |
| All-Around Attack | Warrior 10+ | — | — | 1 (3) |
| Bravery | Warrior 10+ | 4 | Wisdom/Willpower | 1 (3) |
| Captivate | Warrior 15+, Bravery | 4 | Charisma/Appearance | 1 (3) |
| Death Blow | Warrior 15+ | — | — | 2 (6) |
| Frighten/Challenge | Warrior 10+, Bravery | 4 | Charisma/Leadership | 1 (3) |
| Hardiness | Warrior 15+, Bravery | 4 | Constitution/Fitness | 2 (6) |
| Inner Focus | Warrior 10+ | 4 | Wisdom/Willpower | 1 (3) |

| | | | | |
|---|---|---|---|---|
| Signature Item | Warrior 10+ | 10 | Wisdom/Intuition | 2 (6) |
| Signature Mount | Warrior 10+ | 9 | Wisdom/Intuition | 1 (3) |
| Sense Danger | Warrior 15+ | 6 | Wisdom/Intuition | 2 (6) |

## Wizards

| Skill | Requirement | Base Score | Relevant Ability | Cost |
|---|---|---|---|---|
| Mental Focus | Wizard 12+ | 4 | Wisdom/Willpower | 1 (3) |
| Signature Item | Wizard 12+ | 10 | Wisdom/Intuition | 2 (6) |
| Spell Sculpting | Wizard 12+ | 8 | Intelligence/Knowledge | 1 (3) |

## Priests

| Skill | Requirement | Base Score | Relevant Ability | Cost |
|---|---|---|---|---|
| Divine Strength | Priest 10+, Eminence | 4 | Wisdom/Willpower | 1 (3) |

| 16 | +3 |
| 17 | +4 |
| 18+ | +5 |

## Skills for High-Level Characters

Characters who become sufficiently advanced in their professions begin to develop bags of tricks that less-accomplished characters can't match. These special abilities are similar to nonweapon proficiencies, but characters cannot learn skills from outside their groups. Each skill has a much more dramatic effect than a proficiency and has a minimum level requirement associated with it.

Just like proficiencies, many skills require a die roll to determine if they work. Success is determined by rolling the number indicated or less on 1d20. In most cases, a character's ability scores can alter the chance for success; these adjustments are listed on Table 41. A skill's requirements, success numbers, and relevant abilities are listed after each skill description and are compiled in Table 40 for quick reference.

A few skills can be used a limited number of times each day. The success numbers for these skills drop by a fixed amount each time they are used. Once a skill's base score is reduced to zero or less, the character cannot use that skill for a set period of time, usually one day. Any other skill based upon the reduced skill is likewise unavailable. Even if the character's ability adjustment (from Table 41) raises the skill score above zero, the skill remains unavailable until the indicated time has passed. The skill's base score returns to normal after the listed time has elapsed.

*Opposed Success Rolls:* In some cases, a skill requires an opposed roll in which the two creatures involved both roll 1d20 against an ability score or skill success number. If one opponent fails the roll, the creature who succeeded wins the contest. If both make their rolls, the opponent with the higher roll wins. If both opponents fail, some unusual result usually occurs. All ties are re-rolled.

*Acquiring and Improving Skills:* Characters who meet a skill's level requirement can learn the skill by spending proficiency slots. If the character point system from the *Player's Option: Skills & Powers* book is in play, the character can spend points instead.

Each skill's cost is listed after the skill description. The first number is the cost in nonweapon proficiency slots unless otherwise indicated. The number in parentheses is the skill's character point cost.

A skill's base success number can be improved by devoting extra slots or character points to the skill (see the *Player's Handbook*, Chapter 5, and *Skills & Powers*, Chapter 6). No mortal can ever have a base score of more than 16 in any skill; *wishes* have no effect on this limit.

## Warriors

High-level warriors are formidable killing machines, especially when equipped with magical weapons and armor. Although their THAC0 ceases to improve once they reach level 20, they continue to receive extra proficiencies and hit points until level 30. In addition, warriors automatically receive special powers beginning at 21st level. These abilities vary according to the warrior's subclass. All warriors also have access to a host of special skills beginning at level 10.

**Table 42:**
### Warrior Advancement Beyond 20th

| | Experience Points | | Proficiencies | | |
|---|---|---|---|---|---|
| **Level** | **Fighter** | **Paladin/Ranger** | **Weapon** | **Nonweapon** | **Hit Points (d10)*** |

| | | | | | |
|---|---|---|---|---|---|
| 20 | 3,000,000 | 3,600,000 | 10 | 9 | 9+33 |
| 21 | 3,250,000 | 3,900,000 | 11 | 10 | 9+36 |
| 22 | 3,500,000 | 4,200,000 | 11 | 10 | 9+39 |
| 23 | 3,750,000 | 4,500,000 | 11 | 10 | 9+42 |
| 24 | 4,000,000 | 4,800,000 | 12 | 11 | 9+45 |
| 25 | 4,250,000 | 5,100,000 | 12 | 11 | 9+48 |
| 26 | 4,500,000 | 5,400,000 | 12 | 11 | 9+51 |
| 27 | 4,750,000 | 5,700,000 | 13 | 12 | 9+54 |
| 28 | 5,000,000 | 6,000,000 | 13 | 12 | 9+57 |
| 29 | 5,250,000 | 6,300,000 | 13 | 12 | 9+60 |
| 30 | 5,500,000 | 6,600,000 | 14 | 13 | 9+63 |

* Bonus hit points from high Constitution scores are not added after 9th level.

## Fighters Beyond 20th Level

**Breech Immunity:** Beginning at 21st level, a fighter using any weapon—including his bare hands—can harm creatures that are normally hit only by +1 or better magical weapons. The fighter does not actually get an attack or damage bonus but can harm creatures such as a lycanthropes with any physical attack. This power is not magical and is not diminished by factors such as planar distances or effects that disrupt magic.

At 24th level, a fighter can harm creatures that are hit only by +2 or better weapons. This ability increases to allow the fighter to strike creatures that require a +3 weapon at 27th level, and by 30th level, the warrior can strike creatures that require +4 weapons.

**Intimidation:** A fighter of 21st level or higher has the ability to shake an enemy's resolve before combat begins. To use this ability, the fighter must be in plain sight and close enough to see the opponent's face clearly (10 yards if the visibility is good). Use of this ability does not constitute an attack, nor is there any initiative modifier.

Opponents with 4+1 Hit Dice/levels or less automatically retreat from the confrontation. The creature does not flee in panic, but cautiously backs away. Intimidated creatures seek to avoid any confrontation with the fighter for the rest of the day. If the fighter or his party attacks, the creature is free to return the attack, suffering the penalties as detailed below.

If the opponent has more than 4+2 hit dice/levels, it is entitled to a saving throw vs. death magic to escape the effects. If the saving throw is failed, the creature can opt to retreat from the fighter or remain in the area, in which case it suffers a –2 penalty on all initiative, attack, saving throw, and ability check rolls as long as the fighter remains within 60 feet of the creature. The creature is free to leave the area to avoid the effects, launching missile attacks or directing other activities, but the penalties return once the creature gets within 60 feet of the fighter.

As a fighter increases in level, he becomes increasingly more intimidating. For every three levels that the fighter gains after receiving this ability, the opponent saves at an additional –2 penalty. Thus, after achieving 24th level, opponents save at –2, at 27th level the penalty increases to –4, and a 30th-level fighter inflicts a –6 saving throw adjustment.

## Rangers Beyond 20th Level

**Extra Followers:** At 21st level, a ranger attracts 2d6 more followers. The ranger attracts another group of 2d6 followers at 26th level.

**Scroll and Magical Item Use:** At 21st level, a ranger can read priest scrolls. The ranger's level is considered to be 9th when determining the chance of spell failure. The ranger can also use priest magical items at this level.

**Scroll Writing:** At 24th level, a ranger can prepare scrolls of priest spells according to the rules in Chapter 4. The ranger's level for purposes of determining success or failure is considered to be 9th.

**Scrying:** At 27th level, a ranger can employ crystal balls and other scrying devices as a 9th-level wizard.

## Paladins Beyond 20th Level

**Scroll and Magical Item Use:** At 21st level, a paladin can read priest scrolls. The paladin's level is considered to be 9th when determining the chance of spell failure. The paladin can also use priest magical items at this level.

**Scroll Writing:** At 24th level, a paladin can prepare scrolls of priest spells according to the rules in Chapter 4. The paladin's level for purposes of determining success or failure is considered to be 9th.

**Disease Immunity:** At 27th level, a paladin becomes immune to all forms of disease, even cursed afflictions, such as mummy rot and lycanthropy, but not disease inflicted by true dweomers (see Chapter 6) or the special powers of priests that are higher level than the paladin. At this level, the paladin's *cure disease* ability is potent enough to cure cursed afflictions, such as mummy rot and lycanthropy, and remove any form of curse or affliction cast by a character of lower level than the paladin. This applies to cursed magical items as well.

## Skills For High-Level Warriors

The following skills are available to fighters, rangers, and paladins who meet the listed requirements.

**Adaptation:** A character with this skill has a trained mind that quickly analyzes unusual or unfavorable environments and a finely tuned body that can compensate for physical impediments to fighting.

Warriors who use this skill successfully do not suffer combat and initiative penalties for fighting in an unfavorable environment, most notably the +6 foreign environment penalty to initiative (see Chapter 9 of the *Player's Handbook*). If the environment also

includes special saving throws or ability checks due to physical conditions, such as a Dexterity/Balance check to avoid falling off a ladder when struck in melee, characters successfully using this skill receive a +3 (or +15%) bonus to the check.

The skill does not allow characters to ignore situational movement penalties, environmental factors that are not combat related, or conditions that are physically impossible to overcome. For example, no one can avoid sinking into quicksand without magical aid, and resistance from water still makes slashing and bludgeoning weapons almost useless without a *ring of free action* or a *free action* spell. Likewise, characters adapted to fighting underwater still have to find ways to breathe.

The skill has no effect on penalties derived from an environment's magical properties or on penalties based on vision or lighting. In fact, characters who cannot observe their surroundings suffer a –4 penalty to the skill check—it is very hard to size up battlefield in thick fog or pitch darkness.

To use this skill, a character must actually enter combat in a foreign or unfavorable environment. At the end of each round, the character checks the skill. The skill check requires only a moment's thought and can be checked every round until successful. It does not prevent other actions—melee attacks, spellcasting, etc.—during the round. Once the skill succeeds, the character temporarily ignores the environment's special effects, as described above. The effect lasts for the entire battle plus one day per character level thereafter, and this can be extended indefinitely if the character practices fighting in the environment for at least eight hours a week. At an extra cost of one weapon or nonweapon proficiency slot (or three character points), the character can become permanently adjusted to fighting in the environment, provided the additional cost is paid before the adaptation fades.

**Requirement:** Warrior 10+
**Relevant Ability:** Intelligence/Reason
**Success:** 9 **Cost:** 2 (6)

**All-around Attack:** A warrior with this skill is capable of launching a massive blow that can be extended into a whirlwind physical attack that damages every enemy within reach.

An all-around attack must be announced in a round's player determination step (see the *Player's Handbook*, Chapter 9). In the round's resolution step, the warrior makes a single attack roll against any adjacent opponent. If the attack hits, the opponent suffers normal damage from the blow. If the damage is sufficient to kill the opponent, the hail of blows from the warrior automatically inflicts damage on every enemy within a 5-foot radius, as decided by the character. Enemies who are larger than the original target, or whose Armor Classes are better than the original target's, are not harmed. Invisible opponents within the radius can be harmed if their effective Armor Classes (after the –4 bonus for *invisibility*) is not better than the original target's.

An all-around attack is a measure of a warrior's skill and can be made with any type of melee weapon that the warrior is proficient with. However, opponents that would normally be immune to the weapon used cannot be harmed in an all-around attack. If the initial attack misses, the all-around attack fails. If the initial attack hits, the target suffers normal from the attack. If the damage inflicted fails to kill the original target, there is no radius effect.

The warrior cannot move or take another action during the round when he attempts an all-around attack. If the *Player's Option: Combat & Tactics* combat system is in use, an all-around attack cannot be used as an attack of opportunity or as part of a heroic fray.

Beyond determining if the initial attack succeeds, the warrior's combat bonuses are not a factor in an all-around attack. The damaged inflicted on creatures within the 5-foot radius varies with the warrior's level as follows:

| **Warrior Level** | **Area Damage** |
|---|---|
| 10–14 | 1d8 |
| 15–19 | 2d8 |
| 20–24 | 3d8 |
| 25–29 | 4d8 |
| 30+ | 5d8 |

**Requirement:** Warrior 10+
**Relevant Ability:** N/A
**Success:** N/A **Cost**: 1 (3)

**Bravery:** Warriors with this skill can harness their own strength of will to resist any fear effect.

When subjected to any form of unnatural fear from a spell, creature, or magical item, a warrior can roll a skill check. If the check succeeds, the fear effect is negated—no saving throw is necessary. If the check fails, the warrior still gets a saving throw if one is normally allowed. Paladins with this skill can use it against turning attempts by evil priests.

This skill is a prerequisite for the captivate, frighten/challenge, and invulnerability skills. Each time one of these skills is used, the character's base bravery score is reduced by two for the rest of the day. Once the warrior's base bravery score falls to zero, the character cannot use bravery or any of the other three skills for the rest of the day.

**Requirement:** Warrior 10+
**Relevant Ability:** Wisdom/Willpower
**Success:** 4 **Cost:** 1 (3)

**Captivate:** Warriors with this skill have developed a strong personal presence that is attractive to members of their own races.

Even without a skill roll, children, members of the opposite sex, and other warriors tend to be friendly toward the character provided they are of the same race and their alignments are similar to that of the character. For purposes of this skill, alignments are similar when they share one common element: law, neutrality, chaos, good, or evil.

Friendly nonplayer characters tend to pay attention to the warrior and view what the warrior says or does in a favorable light as long as it is not obviously harmful or contrary to local customs. With a minimum of encouragement, a friendly NPC gives the warrior information, performs simple errands, makes introductions, and so on. The warrior is a celebrity in the friendly character's eyes.

The warrior can attempt a skill roll to make a suggestion (as the 3rd-level wizard

spell) to a friendly NPC if the warrior can speak to the person privately for a few minutes. The NPC automatically obeys the suggestion if it does not involve risk, loss, or potential embarrassment; otherwise, a save vs. spell applies. If the warrior gives the NPC an appropriate gift of modest value or does a useful favor, the saving throw is made at a –4 penalty. If the saving throw succeeds, the NPC tries to flee from the warrior's presence. Each attempt to plant a *suggestion* reduces the warrior's base bravery score by two. Once the base bravery score falls to zero, the warrior's captivate skill is lost for the day.

Creatures with 8 or more Hit Dice/levels are immune to this skill's effects. Any hostile act or threat by the warrior—including a failed suggestion—breaks this skill's effects.

If the warrior spends an extended period of time (a few hours or more) in personal contact with a single NPC who is susceptible to this skill, the DM can secretly roll a skill check. If the check succeeds, the NPC forms an attachment to the character and acts upon the attachment in some way. More often than not, these attachments prove to be troublesome to the character. A few suggestions are listed below:

Stows away in the PC's baggage.
Offers to serve the warrior.
Brags about relationship with hero.
Undertakes a dangerous task on the PC's behalf.
Unfavorably compares a powerful local figure—perhaps a deity—with the character.
Steals a trinket or minor item from the hero.
Seeks marriage with (or adoption by) the PC.
Claims to be the warrior's spouse or offspring.
Presents PC with an apparently useless gift.

**Requirement:** Warrior 15+, Bravery Skill
**Relevant Ability:** Charisma/Appearance
**Success:** 4 **Cost:** 1 (3)

**Death Blow:** This skill allows warriors to strike deadly blows that can fell an opponent in a single stroke.

A death blow must be announced in a round's player determination step. In the round's resolution step, the warrior makes a single attack roll against any adjacent opponent. If the attack hits, the opponent suffers normal damage from the blow and must save vs. death magic or be slain immediately. The opponent's defensive bonuses from protective devices (such as magical armor and *rings of protection*) always apply to the saving throw. If the DM wishes, the optional saving throw modifiers from Table 36 or from Table 38 can be used as well.

Opponents with more Hit Dice/levels than the warrior are immune to the effect. Creatures that would not normally be vulnerable to damage from the weapon the warrior is using in the attack also are immune.

When a warrior attempts a death blow, that is the only attack a warrior can make during the round. Attacks of opportunity (see *Combat & Tactics*, Chapter 1) are allowed, however, and a warrior can combine a death blow with an all-around attack. Only the initial target of the all-around attack is subject to the instant death effect, but this might

allow the all-around attack to succeed when it otherwise might not.

**Requirement:** Warrior 15+
**Relevant Ability:** N/A
**Success:** N/A **Cost:** 2 (6)

**Frighten/Challenge:** Warriors with this skill can turn their personal energies outward, producing an aura of fright that forces fairly weak creatures to flee. This skill also allows warriors to issue challenges that draw powerful creatures into personal combat.

To create an aura of fright, the warrior must shout and charge a group of creatures of 4 Hit Dice/levels or less. The creatures must be able to see and hear the warrior to be affected. The warrior makes a skill roll, and, if it succeeds, the creatures scatter, fleeing for as long as the character pursues them. The creatures flee for 1d10 additional rounds after pursuit ends.

Undead and creatures with no morale scores, such as conjured or summoned creatures under the control of a spellcaster, are not affected. Creatures gain a saving throw vs. spell if they are within 30 feet of a friendly creature that is immune to the aura. A cloak of bravery spell negates the effect.

If the skill roll is a 20, the affected creatures attack the warrior instead. If the warrior flees, the creatures pursue as long as they can see him. If the warrior attacks, the creatures automatically pass any morale checks they might be required to make for the next 1d10 rounds.

To issue a *challenge*, the warrior must be able to speak to the target creature, which must have least 10 Hit Dice or levels. The creature must be close enough to see the warrior (about 100 yards if the light and visibility are good) and be able to understand what the warrior says. The skill check is an opposed roll using the warrior's Charisma/Leadership score and the target's Wisdom/Willpower score. If the character wins the opposed roll, the affected creature must immediately advance and engage the warrior in physical combat unless restrained by another creature (restraint breaks the compulsion to attack, but keeps the creatures involved occupied for a full round). Creatures that are unwilling to fight can attempt to save vs. spell each round to break off the fight, otherwise, they engage in melee combat with the warrior. The affected creature can employ spells or missile weapons if it wishes, but it must close to melee range before doing so.

If the target creature has no Wisdom/Willpower score. use Table 10 (page 59) to generate one or use the creature's Intelligence rating. The circumstances surrounding the challenge can alter the opposed die roll as follows:

–6 to the skill score if the player makes no attempt to role-play the challenge. For example, the player says "I challenge the dragon."

–4 to the skill score if the player makes only a feeble attempt to role-play the challenge. "Why don't you stop flying around and just fight you stupid dragon?"

+1 to the opponent's Wisdom/Willpower score for every companion accompanying the warrior.

+1 to the opponent's Wisdom/Willpower score if it has suffered any damage, and an additional +1 for every 10% of its original hit points it has lost.

+10 to the opponent's Wisdom/Willpower score if the creature has weak combat powers (THAC0 14 or higher, Armor Class 2 or worse, no physical attack that inflicts more than 6 hit points of damage).

Any roll of 20 is a failure, regardless of the modified score. If both the warrior and the opponent fail their ability checks, the warrior issuing the challenge suffers a loss of confidence and must retreat into cover—or move away from the target at top speed for a full round if no cover is available. The warrior stays away for 1d4 rounds. The bravery skill can be used to avoid this mandatory retreat.

The warrior is free to move and attack normally during the round when the skill roll or ability check is made. Each use of either form of this skill lowers the warrior's bravery skill by one for the rest of the day (each attempt depletes the warriors inner strength slightly) . This skill cannot be used once the bravery skill falls to zero.

A fighter can use his intimidation gaze while issuing a challenge, but only if the opponent is within range when the challenge is issued.

**Requirement:** Warrior 10+, Bravery Skill
**Relevant Ability:** Charisma/Leadership
**Success:** 4 **Cost:** 1 (3)

**Hardiness:** Warriors with this skill can use their inner strength to temporarily delay the harmful effects of special attacks, but not physical damage. If given sufficient time to rest, this skill allows warriors to recover from such attacks without additional aid.

When subjected to a harmful special effect from a spell, creature, or magical item, a warrior can roll a skill check. If the check succeeds, the effect is delayed for the period of time shown on the table below. If the check fails, the warrior suffers the effect normally. If the effect allows a saving throw, the warrior rolls the save before checking this skill.

| **Warrior Level** | **Delay** |
|---|---|
| 15–19 | 5 Rounds |
| 20–24 | 10 Rounds |
| 25–29 | 15 Rounds |
| 30 | 20 Rounds |

Hardiness does not delay simple damage from any source, including continuing damage, such as *Melf's acid arrow* or a *sword of wounding*, or special forms of purely physical damage, such as severed limbs or broken bones. Nor does this skill protect against effects that are not directly harmful, such as magical charms, entanglement, or imprisonment.

If the skill succeeds, the warrior suffers no harm from the effect until the delay ends, but he is aware of what the effect is. If the warrior receives the appropriate cure before the delay ends, there is no harm to the character. If the harmful effect's duration is shorter

than the delay there also is no effect.

For example, a 17th-level fighter with 34 hit points left (from a total of 115) is battling a wizard who casts power word kill on him. After making his hardiness skill roll, he delays the effects of the spell for five rounds. Two rounds later, after killing the wizard, the party priest casts heal on him. When the delay effect is over, the power word kill effect occurs, but his hit points are now over 60 and he is immune to the spell. If the priest had not healed him, he could have lapsed into unconsciousness in an effort to avoid the effect of the power word, as detailed below.

If the harmful effect has not expired or been cured when the delay ends, the warrior must either suffer the full force of the effect or lapse into unconsciousness while the character's body struggles to resist. The length of time the character remains unconsciousness depends on the extent of the injury, as noted on the table below.

| **Injury** | **Recovery Time** |
|---|---|
| Minor | 1 Day |
| Severe | 1 Week |
| Extreme | 1 Month |

*Minor:* These effects impair—but do not incapacitate—the character, such as blindness, deafness, and ability score reductions. Spells such as *antipathy/sympathy* (antipathy effect), *cause blindness/deafness, color spray* (most of the time), *contagion*, and *holy word* are examples of minor effects.

*Severe:* Includes effects that incapacitate or completely transform the character, such as petrification, polymorphing, and death. Severe spell effects include *hold person, phantasmal killer, polymorph other, power word kill*, and *power word stun*.

*Extreme:* Includes effects that wrench the character's very being, such as energy drains (per level drained) and magical aging (per year aged). Two notable examples include the 9th-level wizard spell *energy drain* and the 6th-level priest spell age creature from the *Tome of Magic*.

At the end of the recovery time, the character attempts a system shock roll. If the roll succeeds, the character awakens—fully healed—and the effects of the delayed magic are nullified. If the roll fails, the character awakens, but suffers the full force of the effect. Thus, it is possible for a character to rest for months and then wake up only to die from the effects of the delayed magic.

For instance, if our fighter from the above example had decided to sleep off the effects of the *power word kill*, he would have been unconscious for a week. The player rolls the character's system shock roll (17 Constitution) and rolls 98%—1% over what he needed. Since the power word would have killed him at the time he lapsed into unconsciousness, the character awakens just long enough to be killed by the spell.

If a character is suffering from multiple effects, the character makes system shock rolls at the end of each recovery period. The player can choose the order in which the checks are made, but the character does not awaken until checks have been made for all the effects. For example, a character who was drained by a vampire and paralyzed by a

lich remains unconscious for nine weeks—one month to revive from each of the two levels the vampire drained and another week for the paralysis.

If an appropriate cure is applied while the character is unconscious, the character recovers immediately and automatically. For instance, the fighter sleeping off the effects of the *power word kill* spell from the previous example would recover after receiving healing sufficient to raise his hit points above 60.

*Heroic Effort:* As a last-ditch effort to continue a battle, a fighter can use the hardiness skill to extend his life. Instead of dying at zero hit points (or falling unconscious at zero hit points and dying at –10 if the optional *Hovering at Death's Door* rule is in play), a warrior who makes a successful hardiness check can continue fighting until reaching –20 hit points. The character can function in this state for a number of rounds equal to his delay effect, suffering the appropriate consequences for reduced hit points at the end of the delay.

Use of this skill is not without its drawbacks, however. If the warrior is reduced to –20 hit points or less, the character is struck unconscious and dies once the delay expires. Once a character's hit points drop to –20 or less, death is inevitable at the end of the delay period unless unusual conditions exist (see below).

Curative spells can allow a warrior struck unconscious by being reduced –20 hit points or less to rejoin a battle, but death still occurs at the end of the delay period. A *raise dead* or *resurrection* spell cast during the delay period prevents death from occurring.

It is possible that a character with the ability to regenerate (from a magical item or high Constitution score) can continue fighting even after being reduced to –20 hit points or less. If regeneration increases the warrior's hit points to –19 or more during the delay period, the character regains consciousness and does not die if he receives enough healing to restore him to positive hit points before the delay ends. Even if death occurs, regeneration usually restores a character much more quickly than the rest period the hardiness skill requires. A character returned to life through regeneration need not make a system shock roll.

An *amulet of life protection* also allows a warrior to continue fighting after being reduced to –20 hit points or less if the character receives sufficient healing to restore him to –19 hit points or more. The character still lapses back into death at the end of the delay period, but any form of magical healing can restore him to life (see page 79) and no system shock roll is required.

Each use of the hardiness skill lowers the warrior's base bravery score by two for the rest of the day. The skill is ineffective if the character's base bravery score has been reduced to zero or less.

**Requirement:** Warrior 15+, Bravery Skill
**Relevant Ability:** Constitution/Fitness
**Success:** 4 **Cost:** 2 (6)

**Inner Focus:** Warriors with this skill can marshal their personal energies to provide a temporary bonus to their Strength, Dexterity, or Constitution scores.

By concentrating for one round and making a successful skill check, the warrior can improve one of the three eligible ability scores to the value listed on the table below. The

improvement lasts one round per character level. Because the majority of the character's energy is directed to the improved ability score, the other two ability scores are reduced by two for the same duration. Reductions lower scores by two full points; an extraordinary Strength score (18/01–18/00) is reduced to 16. The warrior can end the boost—and restore the values of the other scores—at any time. If the character's ability score is already higher than the value listed on the table, this skill has no effect. If the optional subabilities rule from *Skills & Powers* is in play, both subabilities in the increased ability score are raised to the same value.

| **Warrior Level** | **Improved Score** |
|---|---|
| 10–14 | 18 (18/00) |
| 15–19 | 19 |
| 20–24 | 20 |
| 25–29 | 21 |
| 30+ | 22 |

The warrior can take no other actions during the round spent concentrating on raising the selected ability score. Each attempt, successful or not, during a single day lowers the base skill score by two. The skill cannot be used once the base score falls to zero or less.

Bonuses are applied immediately when the skill succeeds and are lost immediately when the boost's duration ends. For example, a warrior who chooses to increase Constitution immediately gains bonus hit points but loses them again when the character's Constitution score returns to normal. Likewise, the effects from reduced ability scores are applied immediately but then restored when the improvement ends.

A character can have only one ability score improvement from this skill operating at any given time.

**Requirement:** Warrior 10+
**Relevant Ability:** Wisdom/Willpower
**Success:** 4 **Cost:** 1 (3)

**Sense Danger:** This skill allows warriors to discover threats that are not obvious to less perceptive characters.

The sense danger skill is actually five different subskills, as outlined below. The number of subskills the warrior knows depends on the character's level: one subskill at 15th–19th level, two at 20th–24th level, three at 25th–29th level, and four subskills at 30th level or higher. If the character purchases this skill twice, the warrior gains one extra subskill. Any improvement to the skill number improves all the subskills the character knows.

Each subskill gives the warrior the ability to detect danger in a different form:

*Ambushes:* The warrior can determine if hidden enemies are lurking in any area the character can see well (see Table 62 in the *Player's Handbook*). The warrior can scan an area roughly 200 yards square in a single round. An area can be scanned only once each turn, and a successful check reveals approximately how many creatures are hiding in the area and their approximate size.

*Attack Readiness:* With a successful skill check, the warrior can tell if a creature is prepared to attack. The skill does not tell the anything about the other being's actual intentions, just its readiness for combat. For example, a creature that is prepared for combat might attack soon, or it might simply be ready to respond to a hostile action. In one round, the warrior can determine the battle-readiness of every being in a 30-foot cube.

The warrior can also study a single creature to determine if it has any concealed weapons. A successful check reveals any hidden weapons (tucked into clothing, hidden nearby, etc). If faced with an unknown creature, a successful skill check allows the warrior to determine what its attack modes are (claws, teeth, etc.).

When the warrior detects a concealed weapon with this skill, the character notes its general size, location, and type—a sap tucked into the back of a character's breeches or a dagger hidden in a sleeve, for example. The character learns nothing else about the weapon. Note that the warrior must be aware of the creature before checking for concealed weapons. The warrior cannot detect weapons hidden by illusions or other magical means.

*Back Attacks:* When an enemy launches an attack at the warrior from the rear, the character can attempt a skill check to detect the assault. Success negates any chance for surprise and all special bonuses the attacker might gain from a rear attack, including a thief's backstab bonuses. A successful check allows the warrior to apply defensive bonuses from a high Dexterity/Balance score, even if the character does not turn to meet the attack. Shield bonuses are not applicable unless the character turns around. Unlike the barbarian's back protection ability (see *The Complete Barbarian's Handbook*, Chapter 1), this skill does not allow the warrior to make a free counterattack.

*Hidden Enemies:* The warrior has a sixth sense about hidden enemies in the immediate vicinity. Once a round, the character can make a skill check. If successful, the warrior learns the location of all invisible, ethereal, astral, out of phase, or hidden creatures within a 30-foot radius. The character does not know how the creature's are hidden—an ethereal creature is indistinguishable from an invisible one—but the character notes their locations and can track their movements so long as they remain within the radius. The warrior suffers a +1 initiative penalty on the round when he uses this ability.

This subskill does not reveal disguised creatures in plain sight or the intentions of creatures. For example, a golem posing as a statue is not revealed, nor can the character determine if an NPC is secretly hostile.

*Size Up Opponent:* With a successful skill check, the warrior can study a single creature each round and determine how dangerous the creature would be in physical combat. It does not give the warrior any indication of a creature's magical abilities, innate spell-like powers, breath weapons, and the like. If a creature's hit points and THAC0 qualify it for more than one category, the DM is free to choose which one the warrior detects.

*Low:* The creature's hit point total is 20% or less than the warrior's, and its THAC0 is at least 15 points higher.

*Moderate:* The creature has 21–50% of the warrior's hit points or its THAC0 is at least 10 points higher.

*Significant:* The creature has 51–70% of the warrior's hit points, and its THAC0 is at

least 5 points higher.

*Dangerous:* The creature has 71–100% of the warrior's hit points, and its THAC0 is less than 5 points higher, but not lower.

*Deadly:* The creature has more hit points and a lower THAC0 than the warrior.

With any subskill, the DM should roll the check secretly. If the roll fails on a roll of 19 or less, the character detects nothing. If the roll fails on a 20, the character gets a false indication—sensing an invisible figure where there is none, improperly sizing up an opponent, etc. A false indication has no effect on a back attack.

If the character also has the alertness proficiency, the character receives a +1 bonus to his skill score.

**Requirement:** Warrior 15+
**Relevant Ability:** Wisdom/Intuition
**Success:** 6 **Cost:** 2 (6)

**Signature Item:** A warrior with this skill chooses an item from the character's collection of equipment as a personal trademark that is specially protected from twists of fate.

The warrior designates a signature item by giving it a name and noting something distinctive about it. If the item has no distinguishing features, the character must hire an artisan with the appropriate skill—such as a weaponsmith for a sword—to add one. The alteration could be as simple as engraving the item's name somewhere upon its surface or as elaborate as the character desires (and can afford). No skill check is required to designate an item, and as soon as the item is designated, described, and named, the warrior forms an empathic link with it. It is possible to have more than one signature item, but the character must pay the full cost of this skill for each item. If the warrior improves the skill score, the improvement applies to all the character's signature equipment.

A signature item must be something the character has owned for an extended period of time and uses regularly. For example, a warrior cannot designate a friendly wizard's favorite spell book as a signature item. The DM is free to decide how long the character must own the item, but one level's worth of advancement is the usual period. Likewise, the DM must decide what constitutes regular use, but at least once during the majority of the character's adventures is the usual requirement. Only nonconsumable items can be signature items, but rechargeable items qualify.

If a signature item is ever required to roll an item saving throw (see the *Dungeon Master Guide*, Chapter 6), it automatically succeeds so long as the owner is carrying the item and the survives the event. For example, if Tana is subjected to a *fireball* and fails her saving throw vs. spell, all her equipment must save vs. magical fire or be destroyed. Tana's signature sword, *Windsinger*, does not have to roll the item saving throw, it succeeds automatically.

Deliberate actions that lead to item saving throws can destroy a signature item. For example, if Tana uses *Windsinger* as a brace to keep a trap from closing, the sword can break. Likewise, if an attacker deliberately targets a disintegrate spell at *Windsinger*, the sword can also be destroyed. Deliberate actions can destroy a signature item even if the owner is not aware of the danger. For example, if Tana slashes at what she thinks is a

giant spider, but the creature is really a rust monster, *Windsinger* could be destroyed.

If the character does not survive the event that caused the item saving throw, the item must make the roll normally. If the item survives the incident and the character is restored to life, the link is automatically reestablished. If the item is destroyed in the same event that killed the warrior, the link is broken.

If a signature item is ever lost or stolen, the link with the item allows the warrior to attempt a skill check once a day to receive a vision of the item's location. If successful, the character receives a visual image of the item's current surroundings and has a vague idea of the location's distance and direction. If the item lies on another plane, the warrior receives a vision of the plane, but can discern no other information unless he actually travels to the plane. If the item is magically hidden, the warrior learns this fact, along with the item's general location. For example, he would know that his signature item is hidden in King Snurre's great hall.

If a signature item is destroyed or irrecoverable, the character can use the link to obtain a replacement. This does not apply if both the signature item and the character were destroyed by the same event. If the signature item was nonmagical, the character need only acquire a similar item and give it the same name as the original. The character forms a link with the new item, which gradually begins to resemble the original until it becomes indistinguishable from the original after about one month.

If the item was magical, the character must obtain an item of quality (see the *Dungeon Master Guide*, Chapter 6) and roll a skill check. If the check succeeds, the link is strong enough to recreate the item. The character loses five times the item's experience point value and the nonmagical item is miraculously infused with an enchantment that exactly matches the original item after about one month. If the character is unwilling to pay the experience cost, the link is broken instead. If a magical item similar to the original item is used instead of an item of quality, its experience value is subtracted from warrior's experience loss. Artifacts cannot be restored in this manner, though the character gains the other benefits of the link.

Voluntarily giving away or not making a reasonable effort to recover a signature item that has been lost or stolen always breaks the link. The DM is the final judge of what constitutes a reasonable effort at recovery.

Warriors can have one signature item from each of the following categories: armor, weapon, shield, and miscellaneous magical item. Each signature item requires the expenditure of the appropriate number of proficiency slots or character points. At the DM's option, pairs of magical items might also qualify as a single signature item, such as the *twin blades of Ra*.

**Requirement:** Warrior 10+
**Relevant Ability:** Wisdom/Intuition
**Success:** 10 **Cost:** 2 (6)

**Signature Mount:** A warrior with this skill forms a special bond with a mount. When they are together, the mount gains considerable protection from attacks that might otherwise kill it.

A signature mount cannot have more than 10 Hit Dice and must have at least four hit points per Hit Die. For example, a heavy war horse has 5+5 hit dice; it cannot become a

signature mount unless it has at least 25 hit points. The mount must be tamed and recognize the warrior as its master. If the creature has an Intelligence score of 5 or more, it need not be trained if it willingly serves the warrior. The warrior must name the mount and provide it with something that makes it recognizable. This can be as simple as purchasing a saddle with the mount's name engraved in it or as elaborate as the character can afford.

When the link is established, the mount immediately gains one hit point per level of the character plus an additional hit point each time the warrior gains a level. When the warrior is riding the mount, the mount suffers no damage from area attacks (such as breath weapons and *fireballs*) if the rider successfully saves against the attack. If the rider fails the saving throw but survives the attack, the mount saves for half or no damage, using the rider's saving throw number. The mount also gains the rider's saving throw against effects targeted directly at it (such as *disintegrate* and the cold ray form of *Otiluke's freezing sphere*) as long as the rider is with the mount. Attacks such as power word spells must be potent enough to overcome the rider to have any effect, although they affect only the mount if that is where they are targeted. If the mount is alone, or the rider does not survive the attack, the mount must use its own saving throw number, and it suffers the normal effects from the attack.

If a signature mount is ever killed, the warrior can acquire a new one of the same type and hit points. Each day, the character can attempt a skill check to receive a vision of the new mount. If the check succeeds, the character sees the mount in its current surroundings and knows the approximate direction and distance to the location. If the mount is on another plane, the warrior receives a vision of the plane but can discern no other information unless the character actually travels to the plane. If the mount is magically hidden, the warrior learns this fact, along with the mount's general location. It is up to the character to seek out the replacement mount, but the mount willingly serves the warrior if the character obtains it.

A warrior can have one signature mount for each different type of terrain. For example, the character might have a young adult mercury dragon (airborne), heavy war horse (land), and a giant sea horse (water). Subterranean and desert mounts might also be allowed, at the DM's option. Each signature mount requires the expenditure of the appropriate number of proficiency slots or skill points.

**Requirement:** Warrior 10+
**Relevant Ability:** Wisdom/Intuition
**Success:** 9 **Cost:** 1 (3)

### Wizards

High-level wizards are unquestionably the most powerful characters in the campaign. While physically weak, the right combination of protective magical items can make them all but invulnerable to attack except by high-level warriors—who often have a hard time getting close enough to make melee attacks—and other high-level wizards. Wizards continue to receive extra proficiencies and hit points until level 30. Wizards receive very little in the way of special skills once they reach 20th level, as their ability to create magical items and cast an ever-increasing number of spells—including 10th-level spells—gives them a great deal of power already.

**Table 43:**
## Wizard Advancement Beyond 20th

| | | Proficiencies | | Hit Points |
|---|---|---|---|---|
| **Level** | **Experience Points** | **Weapon** | **Nonweapon** | **(d4)*** |
| 20 | 3,750,000 | 4 | 10 | 10+10 |
| 21 | 4,125,000 | 4 | 11 | 10+11 |
| 22 | 4,500,000 | 5 | 11 | 10+12 |
| 23 | 4,875,000 | 5 | 11 | 10+13 |
| 24 | 5,250,000 | 5 | 12 | 10+14 |
| 25 | 5,625,000 | 5 | 12 | 10+15 |
| 26 | 6,000,000 | 5 | 12 | 10+16 |
| 27 | 6,375,000 | 6 | 13 | 10+17 |
| 28 | 6,750,000 | 6 | 13 | 10+18 |
| 29 | 7,125,000 | 6 | 13 | 10+19 |
| 30 | 7,500,000 | 6 | 14 | 10+20 |

* Bonus hit points from high Constitution scores are not added after 9th level.

## Wizards Beyond 20th Level

**Sage Ability:** At 21st level, a wizard has accumulated enough books and esoteric knowledge to function as a sage (see *Dungeon Master Guide*, Chapter 12). The wizard can answer general questions in two categories listed on table 61 in the *Dungeon Master Guide*, but one category must be Alchemy or Chemistry. This reflects the character's knowledge of magical potions and scroll inks. The player can choose the remaining category or the DM can assign one.

The character's base chance to answer a general question is 6 or less on 1d20, modified by the character's Intelligence/Knowledge bonus.

At 24th level, the character can answer specific questions after acquiring 1d6 books or scrolls at a cost of 1,000 gp each.

At 27th level, the character can answer exacting questions after acquiring 1d6 additional books or scrolls at a cost of 1,000 gp each.

It is always possible for a character to discover the answer to a difficult question by consulting another character, undertaking an adventure the DM has devised, or by engaging in very lengthy and expensive research. See the magical item creation rules in Chapter 4 of this book and the spell research rules in Chapter 7 of the *Dungeon Master Guide* for guidelines.

For example, a high-level wizard with a knowledge of history might discover the answer to a fairly simple, but specific, question (What was the name of King Rassmon's oldest daughter?) after 1d3+1 weeks of study at a cost of 100 gp a week. This is the same as the cost to discover a potion formula. A very difficult and esoteric question (Who made the carpet that lay in king Rassmon's great hall?) might require as much time and money to research as a 6th- or 7th-level spell. The chance to know the answer would be the same as that for successfully researching the spell.

## Skills For High-Level Wizards

The following skills are available to mages and specialist wizards who meet the listed requirements.

**Mental Focus:** Wizards with this skill can marshal their personal energies to provide a temporary bonus to their Intelligence, Wisdom, or Dexterity scores.

By concentrating for one round and making a successful skill check, the wizard can improve one of the three eligible ability scores to the value listed on the table below. The improvement lasts one round per character level. Because the majority of the character's energy is directed to the improved ability score, the other two ability scores are reduced by two for the same duration. The wizard can end the boost—and restore the values of the other scores—at any time. If the character's ability score is already equal to or higher than the value listed on the table, this skill has no effect. If the optional subabilities rule from *Skills & Powers* is in play, both subabilities in the increased ability score are raised to the same value.

**Table 44:**
## Wizard Spell Progression

| **Level** | **1** | **2** | **3** | **4** | **5** | **6** | **7** | **8** | **9** | **10** |
|---|---|---|---|---|---|---|---|---|---|---|
| 20 | 5 | 5 | 5 | 5 | 5 | 4 | 3 | 3 | 2 | 1 |
| 21 | 5 | 5 | 5 | 5 | 5 | 4 | 4 | 4 | 2 | 1 |
| 22 | 5 | 5 | 5 | 5 | 5 | 5 | 4 | 4 | 3 | 1 |
| 23 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 3 | 2 |
| 24 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 4 | 2 |
| 25 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 5 | 2 |
| 26 | 6 | 6 | 6 | 6 | 5 | 5 | 5 | 5 | 5 | 3 |
| 27 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 5 | 5 | 3 |
| 28 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 6 | 3 |
| 29 | 7 | 7 | 7 | 7 | 6 | 6 | 6 | 6 | 6 | 4 |
| 30 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 6 | 6 | 4 |

| **Wizard Level** | **Improved Score** |
|---|---|
| 12–16 | 18 |
| 17–20 | 19 |
| 21–25 | 20 |
| 26–29 | 21 |
| 30+ | 22 |

The wizard can take no other actions during the round the character is concentrating on raising the selected ability score. Each attempt, successful or not, during a single day lowers the base skill score by two; the skill cannot be used once the base score falls to

zero or less.

Bonuses from an increased score are applied immediately when the skill succeeds and are lost immediately when the boost's duration ends. For example, a wizard who chooses to increase Dexterity immediately gains an improved Armor Class bonus, but loses it again when the character's Dexterity score returns to normal. Likewise, the effects from reduced ability scores are applied immediately when the improvement ends.

A character can have only one ability score improvement from this skill operating at any given time.

**Requirement:** Wizard 12+
**Relevant Ability:** Wisdom/Willpower
**Success:** 4 **Cost:** 1 (3)

**Signature Item:** A wizard with this skill chooses an item from the character's collection of equipment as a personal trademark that is specially protected from twists of fate. Except as noted below, this skill operates exactly like the warrior skill of the same name.

The wizard is free to have as many signature items as he is willing to pay for, but no more than one of any type of item is allowed. For example, the wizard could not have two *staffs of the magi* as signature items, but he could have a *staff of the magi, wand of magic missiles*, and a *rod of smiting* as signature items.

The wizard can choose items from the ring, rod, staff, wand, miscellaneous magic, and weapon categories.

**Requirement:** Wizard 12+
**Relevant Ability:** Wisdom/Intuition
**Success:** 10 **Cost:** 2 (6)

**Spell Sculpting:** A wizard with this skill knows one spell so well the character can alter its statistics when casting it.

To use this skill, the wizard must prepare an item to help focus and reshape the spell's magical energy. A focus item can be a small object such as a jewel, wand, or amulet. A focus item must be worth at least 500 gp per spell level.

When sculpting, the wizard must meet all the usual requirements to cast the spell; the wizard employs the focus item as an additional material component, which is normally not consumed. A successful skill roll allows the wizard to change the spell in a minor way, as listed below. If the roll fails, the spell is cast normally. If failure roll is a 20, the focus item is destroyed.

When a wizard successfully sculpts a spell, the character can choose one effect from the list below.

*Increase Damage:* The spell can inflict an extra two dice of damage of the type normally rolled to determine the damage the spell inflicts. For example, Neja, a 20th-level wizard, could sculpt a *burning hands* spell to inflict 3d3+20 points of damage. If Neja sculpted a *fireball* spell to increase damage, the spells would inflict 12d6 points of damage.

Spells that have individual damage dice, such as magic missile, are not increased individually. For example, Neja could cast a *magic missile* that inflicted a total of 7d4+7

points of damage. The additional damage could be added to a single missile or an additional die of damage could be added to two separate missiles.

Spells that do not use dice rolls to determine damage cannot be sculpted in this manner.

*Extend Duration:* The spell's total duration is doubled. This applies only to the actual time a spell lasts but not to any special durations a spell may have.

For instance, *invisibility* would last a total of 48 hours or until the creature made an attack. Neja's *stoneskin* would have a duration of 48 hours or until it had blocked 1d4+10 attacks (refer to the spell commentary for *stoneskin*). Spells with instantaneous durations cannot be sculpted in this manner.

*Extend Range:* The spell's range is doubled. If the spell has a range of touch or 0, its range cannot be extended.

*Shorten Casting Time:* The spell's casting time is cut in half, to a minimum of 1. If local conditions lengthen the spell's casting time (see page 47), apply the multiplier first, then cut the result in half.

It is not possible to sculpt a spell more than once. It is possible, however, to employ a metamagic spell, such as *extension* or *squaring the circle*, to a spell that has been sculpted provided that the sculpting effect does not duplicate the metamagic spell effect. For example, a wizard cannot extend a spell's duration and use an *extension* spell at the same time. A wizard could sculpt a spell to extend its range and use and *extension* spell to increase its duration.

The highest level spell a wizard can sculpt is limited by the character's level, as shown below:

| **Wizard's Level** | **Maximum Spell Level** |
|---|---|
| 12–14 | 1st |
| 15–17 | 2nd |
| 18–20 | 3rd |
| 21–23 | 4th |
| 24–26 | 5th |
| 27–29 | 6th |
| 30+ | 7th |

A wizard can learn to sculpt more than one spell but must pay the full cost for this skill for each spell. If the wizard improves the skill's base score, the increase applies to all spells the wizard knows how to sculpt.

**Requirement:** Wizard 12+
**Relevant Ability:** Intelligence/Knowledge
**Success:** 8 **Cost:** 1 (3)

## Priests

High-level priests combine spellcasting abilities with combat power. Like warriors, priests equipped with magical armor and weapons are formidable in combat. Their primary strength, however, comes from their spells.

In addition, priests receive extra proficiencies and hit points through 30th level. Priests also have access to special skills beginning at 10th level.

## Priests and 10th-Level Spells

All priests, even druids, gain the ability to cast true dweomers when they reach 20th level. (Although druids do not gain additional spells of levels 1–7 once they exceed 15th level, true dweomers represent a new approach to magic that very high-level druids can understand and use.) Note that the term "10th-level spell" is something of a misnomer. For a priest, a true dweomer might be called an 8th-level spell, but a true dweomer cast by a priest functions just like a wizard's true dweomer does.

Unlike wizards, priests use divine power to create their true dweomers, and any true dweomer a priest casts must promote the deity's interests in some way. This requires a judgment call for the DM. When deciding if a priest's deity grants a true dweomer, consider the following:

The priest must be in good standing with the deity, having observed the requirements of both the character's alignment and the deity's ethos. This is true of all priest spells, and a priest who has strayed too far from the path might not be able to cast any spells at all.

Any true dweomer that impacts on the deity's sphere of control or portfolio is likely to be granted unless it runs contrary to that power's wishes. For example, a deity of agriculture is likely to grant a true dweomer that creates an abundant harvest unless the people who are going to benefit from the harvest have offended the deity. Similarly, a deity of war is very likely to grant a true dweomer that transports an entire army to a battlefield, whereas a deity of peace would be more likely to help transport troops away from a battle. The DM should always try to consider the problem from the deity's point of view.

When in doubt, check the spheres of normal spells the priest is allowed to cast. If the proposed true dweomer contains effects found in those spells, it is probably acceptable. For example, a priest with access to the creation sphere probably can use true dweomers from the create, conjure, and animate areas.

**Table 45:**
### Priest Advancement Beyond 20th

| | ———Experience Points——— | | ———Proficiencies——— | | Hit Points |
|---|---|---|---|---|---|
| **Level** | **Cleric** | **Druid** | **Weapon** | **Nonweapon** | **(d8)*** |
| 20 | 2,700,000 | 2,000,000 | 7 | 10 | 9+22 |
| 21 | 2,925,000 | 2,500,000 | 7 | 11 | 9+24 |
| 22 | 3,150,000 | 3,000,000 | 7 | 11 | 9+26 |
| 23 | 3,375,000 | 3,500,000 | 7 | 11 | 9+28 |
| 24 | 3,600,000 | 4,000,000 | 8 | 12 | 9+30 |
| 25 | 3,825,000 | 4,500,000 | 8 | 12 | 9+32 |
| 26 | 4,050,000 | 5,000,000 | 8 | 12 | 9+34 |
| 27 | 4,275,000 | 5,500,000 | 8 | 13 | 9+36 |
| 28 | 4,500,000 | 6,000,000 | 9 | 13 | 9+38 |

| | | | | | |
|---|---|---|---|---|---|
| 29 | 4,725,000 | 6,500,000 | 9 | 13 | 9+40 |
| 30 | 4,950,000 | 7,000,000 | 9 | 14 | 9+42 |

* Bonus hit points from high Constitution scores are not added after 9th level..

## Priests Beyond 20th Level

**Improved Access to Quest Spells:** Any priest with access to true dweomers can receive a quest spell without sacrificing any spellcasting ability. All other requirements for receiving a quest spell must be met normally, see the *Tome of Magic* for details.

**Improved Undead Turning:** Upon reaching 21st level, a priest who receives the granted power to turn undead can use the power multiple times within the same encounter. The character may continue to turn undead so long as prior attempts against the same group of creatures were successful. Once an attempt fails, the priest cannot continue.

In the case of mixed groups of undead, where a single turning attempt succeeds against some creatures in the group but not others, further attempts to turn the unaffected creatures are useless. Weaker creatures continue to be affected as long as attempts against them succeed.

For example, Wulf meets a lich, six vampires, and a horde of skeletons and ghouls. Wulf is a 21st-level cleric and rolls a 7 on his turning attempt. Wulf automatically destroys 2d6+2d4 skeletons and 2d6+2d4 ghouls. The roll is sufficient to turn the vampires; Wulf rolls 2d6 and gets a 5, leaving one vampire unaffected. The turning roll of 7 is insufficient to turn the lich. The next round, Wulf can use his turning ability against the skeletons, ghouls, and the remaining vampire, but the lich is unaffected since Wulf's initial roll did not affect him.

**Increased Spell Selection:** At 21st level, the priest gains minor access to a sphere of spells the character previously did not have access to or gains access to another level of spells in a sphere the character already has minor access to.

For example, clerics do not have access to the plant, animal, or weather spheres, and they have only minor access to the elemental sphere. A 21st-level cleric could gain minor access to the plant, animal, or weather sphere or get access to 4th-level elemental spells. The DM can make the selection or let the player choose.

At 25th level, the priest gains minor access to another sphere of spells or adds access to another level of spells in one of the character's minor spheres, including the minor sphere the priest added or enhanced at 21st level.

At 27th level, the priest gains minor access to another sphere of spells or adds access to another level of spells in one of the character's minor spheres, including the minor spheres added or enhanced previously.

**Holy Army:** A priest of 21st level or higher can call up an army of dedicated followers to accomplish a single task. The task can be as simple or complex as the priest desires, but it must be something that can be accomplished through force of arms. Acceptable tasks include: destroying a particular castle, temple, or town; rescuing a captive; recovering a

stolen item; bringing a fugitive to justice; deposing a ruler; and so on. The task cannot violate the principles of the priest's alignment or ethos. A priest cannot summon a holy army if the character already has one in the field and cannot summon more than one each year.

A holy army can contain as many troops as the priest's experience point total divided by 1,000. For example, a priest who has just attained 21st level can summon 2,925 troops. Most troops are 0-level fighters, but there is one commander of half the priest's level (round down). The commander in turn has two assistants of half the commander's level, and each of those characters have two more assistants and so on. Each commander and assistant also has a priest or cleric of similar level. For example, a holy army summoned by a 21st-level priest has one commander of 10th level, two subcommanders of 5th level, four lieutenants of 2nd level, and eight sergeants of 1st level. Each officer is accompanied by a priest of similar level. If the priest is lawful good, there is a 10% chance that any given officer is a paladin. If the priest is of any good alignment, and the task involves activities in the wilderness, there is a 10% that any commander is a ranger.

To summon a holy army, the priest must be in a place where people worship the character's deity openly. A holy army takes two weeks to gather for every 500 people in it, though the priest can summon a smaller army. If worshippers of the character's deity are not common in the area where the priest is, the gathering time is doubled. An army usually stays together for a maximum of one month for each level of the priest summoning it. However, the priest can hold it together a little longer by paying the troops well (2–4 gp per 0-level trooper and 100 gp per level for commanders and priests) or by making a successful Charisma/Leadership check. In either case, the army's goal must be within easy reach, and the troops remain active for an additional 2d4 months.

When an army disbands, the troops may return home or they may decide to remain together as an independent force to pursue their own goals. It is best if the priest sees to it that the troops return home instead of giving a more radical element the opportunity to take control of the army.

## Skills For High-Level Priests

The following skills are available to clerics, specialty priests, and druids who meet the listed requirements.

**Divine Strength:** Priests with this skill can marshal divine energies to provide a temporary bonus to their Wisdom, Strength, or Charisma scores.

By concentrating for one round and making a successful skill check, the priest can improve one of the three eligible ability scores to the value listed on the table below. The improvement lasts one round per character level. Because the majority of the character's energy is directed to the improved ability score, the other two ability scores are reduced by two for the same duration. The priest can end the boost and restore the values of the other scores at any time. If the character's ability score is already higher than the value listed on the table, this skill has no effect. If the optional subabilities rule from *Skills & Powers* is in play, both subabilities in the increased ability score are raised to the same value.

| Priest Level | Improved Score |
|---|---|
| 10–14 | 18 |
| 15–19 | 19 |
| 20–24 | 20 |
| 25–29 | 21 |
| 30+ | 22 |

**Table 47:**
Priest Spell Progression

| Level | 1 | 2 | 3 | 4 | 5 | 6 | 7 | * |
|---|---|---|---|---|---|---|---|---|
| 20 | 9 | 9 | 9 | 8 | 7 | 5 | 2 | 1 |
| 21 | 9 | 9 | 9 | 9 | 8 | 6 | 2 | 1 |
| 22 | 9 | 9 | 9 | 9 | 9 | 6 | 3 | 2 |
| 23 | 9 | 9 | 9 | 9 | 9 | 7 | 3 | 2 |
| 24 | 9 | 9 | 9 | 9 | 9 | 8 | 3 | 2 |
| 25 | 9 | 9 | 9 | 9 | 9 | 8 | 4 | 3 |
| 26 | 9 | 9 | 9 | 9 | 9 | 9 | 4 | 3 |
| 27 | 9 | 9 | 9 | 9 | 9 | 9 | 5 | 4 |
| 28 | 9 | 9 | 9 | 9 | 9 | 9 | 6 | 4 |
| 29 | 9 | 9 | 9 | 9 | 9 | 9 | 7 | 4 |
| 30 | 9 | 9 | 9 | 9 | 9 | 9 | 8 | 4 |

* The number of true dweomers—10th-level spells—the character can prepare, have prepared, or cast in one day (see Chapter 6).

The priest can take no other actions during the round the character is concentrating on raising the selected ability score. Each attempt to raise an ability score, successful or not, during a single day lowers the base skill score by two; the skill cannot be used once the base score falls to zero or less.

Bonuses from an increased score are applied immediately when the skill succeeds and are lost immediately when the boost's duration ends. For example, a priest who chooses to increase Wisdom immediately gains saving throw bonuses against mental attacks but loses them again when the character's Wisdom score returns to normal. Likewise, the effects from altered ability scores are applied immediately. The priest does not gain any bonus spells from this skill but does gain immunity to certain spells for a Wisdom score of 19 or higher (see *Player's Handbook*, Table 5).

A character can have only one ability score improvement from this skill operating at any given time.

**Requirement:** Priest 10+, Eminence Skill
**Relevant Ability:** Wisdom/Willpower
**Success:** 4 **Cost:** 1 (3)

**Divine Voice:** Priests with this skill can speak with divine authority.

To use the skill, the priest must speak loudly and clearly for a full round. With a successful skill check (made at the end of the round), the priest's voice takes on a divine quality. Every creature within 180 feet can hear the priest speaking unless it has been magically deafened. The divine voice penetrates silence spells and up to 10 feet of solid rock or three inches of lead. *Antimagic shells, prismatic spheres, cubes of force*, and 10th-level ward spells shield their occupants.

Creatures that hear the voice are automatically *enthralled* (as the 2nd-level priest spell) if they have less than 5 Hit Dice or levels. Other creatures can save vs. spell to avoid the effect. Creatures do not have to understand the priest's words, they merely have to hear them. Undead and creatures normally immune to charm spells, such as golems and creatures with Wisdom/Willpower scores of 19 or more, are not affected.

The priest can hold an audience enthralled for up to one hour, as per the *enthrall* spell, but excessive jeering can break the effects (see the spell description in the *Player's Handbook*). The priest can also utter a *mass suggestion* to creatures the character has enthralled; this functions as the 6th-level wizard spell of the same name except that it effects every creature currently enthralled regardless of the priest's level. There is no saving throw vs. the *mass suggestion* if it is completed before the *enthrall* effect ends. The priest can issue only one *mass suggestion* per use of the divine voice skill.

Each use of this skill reduces the priest's base eminence score by two for one week. If the priest's eminence score is zero or less, the divine voice skill is ineffective.

**Requirement:** Priest 15+, Eminence Skill
**Relevant Ability:** Charisma/Leadership
**Success:** 4 **Cost:** 1 (3)

**Divine Will:** Priests with this skill can call upon divine aid to bolster their own strength of will and resist any form of compulsion imposed upon them.

When subjected to any form of unnatural compulsion from a spell, creature, or magical item, a priest can roll a skill check. If the check succeeds, the effect is negated, and no saving throw is necessary. If the check fails, the priest still gets a saving throw if one is normally allowed.

Divine will is effective against any effect that causes the priest to act according to another creature's will, including all forms of *charm, geas, quest, fear, magic jar* (the invading psyche is ejected), *beguiling, command*, etc.

Each use of this skill, successful or not reduces the priest's base eminence score by two for one day. This skill is ineffective when the character's eminence score has been reduced to zero or less.

**Requirement:** Priest 10+
**Relevant Ability:** Wisdom/Willpower
**Success:** 4 **Cost:** 1 (3)

**Detect Deception:** A priest with this skill can see through illusions and falsehoods of all sorts.

A successful skill roll allows the priest to uncover any falsehoods the character encounters, be it a false image from an illusion or a false statement from another creature.

This skill lasts for a short time, detailed on the table below:

| Priest Level | Duration |
|---|---|
| 15–17 | 1 Turn |
| 18–20 | 2 Turns |
| 21–23 | 3 Turns |
| 24–26 | 4 Turns |
| 27–30 | 5 Turns |

If the skill check is unsuccessful, the priest is aware of the failure and must wait one turn to try the skill again. If the skill check succeeds, the priest detects all forms of spoken falsehoods automatically for the duration of the skill's effect. Unlike a *detect lie* spell, the priest knows when a creature is deliberately evading the truth. The skill does not tell the priest what the truth is, it only reveals that fact that the priest has heard a lie or evasion. If the priest encounters magic that allows falsehoods to be spoken, the priest is unable to hear the magically protected creature speak; this reveals the falsehood indirectly.

While the skill is in effect, the priest also gains an immediate saving throw vs. spell to see through any false vision or visual distortion created by a spell, magical item, or creature. The DM should make the roll secretly. If successful, the priest sees the false image as a fine, semi-transparent mist. This power works against all forms of false and misleading images, including *mirror image*, *blur*, *shadow door*, *phantasmal force*, and other spells that mislead or visually confuse viewers. Illusion spells that do not create an image, such as *invisibility*, are not affected. The power also defeats *cloaks of displacement*, *robes of blending*, and similar magical items. The skill has no power against effects that disguise things through physical changes, such as *polymorph self* or *shape change*.

Each use of this skill, successful or not, lowers the priest's base eminence score by two for one week. If the priest's base eminence score falls to zero or less, this skill is ineffective.

**Requirement:** Priest 15+, Eminence Skill
**Relevant Ability:** Wisdom/Intuition
**Success:** 6 Cost: 1 (3)

**Eminence:** This skill allows priests to wrap themselves in an aura of divine power.

A successful check creates an aura that lasts one round for each level the caster has attained. The aura is undetectable except by a *true seeing* spell, which reveals it as a bright silver, inky black, or pearl gray halo depending on the priest's alignment. The aura gives the priest a +4 encounter reaction bonus when dealing with worshippers of the priest's deity or creatures of the same alignment.

Any hostile creature feels a shudder of fear when within 30 feet of the priest. If the priest wills it, the fear takes hold, causing creatures of less than 4th level or 4 Hit Dice to flee until the priest is no longer in sight. More powerful creatures are allowed a saving throw vs. spell to negate the fear. The skill works against all types of creatures—even those normally immune to fear attacks, such as undead. A *cloak of bravery* or *remove*

*fear* spell breaks the effect, as does a successful use of the warrior skill bravery or the priest skill divine will. Once a creature has resisted the fear effect once, it is not subject to fear effects from the same priest for the rest of the day.

Creatures within 30 feet of an opposing priest using the eminence skill are not subject to the fear effect if the second priest's level is equal to or higher than the priest using the fear effect.

Each attempt to raise the aura, successful or not, reduces the priest's base eminence score by two for one week. When the character's base eminence score is reduced to zero or less, the skill is ineffective.

The eminence skill is a prerequisite for the divine strength, divine voice, divine will, detect deception, and invincibility skills. Each time one of these skills are used, the character's base eminence score is reduced by two for either one day or one week, depending on the skill used. Once the priest's base eminence score falls to zero, the character cannot use eminence or any of the other skills. The smite skill is also connected to the priest's eminence score, but can be used (at some risk to the priest) when the eminence skill has been reduced to zero or less, see page 167.

**Requirement:** Priest 10+
**Relevant Ability:** Charisma/Leadership
**Success:** 6 **Cost:** 1 (3)

**Invincibility:** Priests with this skill can draw upon divine power to temporarily delay the harmful effects of special attacks, but not physical damage. If given sufficient time to rest, this skill allows priests to recover from such attacks without additional aid. It is very similar to the warrior skill hardiness

When subjected to a harmful special effect from a spell, creature, or magical item, a priest can roll a skill check. If the check succeeds, the effect is delayed for the period of time shown on the table below. If the check fails, the priest suffers the effect normally. If the effect allows a saving throw, the priest rolls the save before checking this skill.

| Priest Level | Delay |
|---|---|
| 21–23 | 5 Rounds |
| 24–26 | 10 Rounds |
| 27–30 | 15 Rounds |

Invincibility does not delay simple damage from any source, including continuing damage, such as *Melf's acid arrow* or a *sword of wounding*, or special forms of purely physical damage, such as severed limbs or broken bones. This skill does not protect against effects that are not directly harmful, such as magical charms, entanglement, or imprisonment.

If the skill succeeds, the priest suffers no harm from the delayed effect until the delay ends, but he is aware of what the effect is. If the priest receives the appropriate cure before the delay ends, there is no harm to the character. If the harmful effect's duration is shorter than the delay there also is no effect.

For example, a 25th-level priest with 52 hit points left (from a total of 107) is battling a wizard who casts *power word kill* on him. After making his invincibility skill roll, he

delays the effects of the spell for 10 rounds. Four rounds later, after killing the wizard, he casts heal on himself. When the delay effect is over, the power word kill effect occurs, but his hit points are now over 60 and he is immune to the spell. If he had not healed himself, he could have lapsed into unconsciousness in an effort to avoid the effect of the power word, as detailed below.

If the harmful effect has not expired or been cured when the delay ends, the priest must either suffer the full force of the effect or lapse into unconsciousness while the character's body struggles to resist. The length of time the character remains unconsciousness depends on the extent of the injury, as noted on the table below.

| **Injury** | **Recovery Time** |
|---|---|
| Minor | 1 Day |
| Severe | 1 Week |
| Extreme | 1 Month |

*Minor:* These effects impair—but do not incapacitate—the character, such as blindness, deafness, and ability score reductions. Spells such as *antipathy/sympathy* (antipathy effect), *cause blindness/deafness, color spray* (most of the time), *contagion,* and *holy word* are examples of minor effects.

*Severe:* Includes effects that incapacitate or completely transform the character, such as petrification, polymorphing, and death. Severe spell effects include *hold person, phantasmal killer, polymorph other, power word kill,* and *power word stun*.

*Extreme:* Includes effects that wrench the character's very being, such as *energy drains* (per level drained) and magical aging (per year aged). Two notable examples include the 9th-level wizard spell *energy drain* and the 6th-level priest spell age creature from the *Tome of Magic*.

At the end of the recovery time, the character attempts a system shock roll. If the roll succeeds, the character awakens—fully healed—and the effects of the delayed magic are nullified. If the roll fails, the character awakens, but suffers the full force of the effect. Thus, it is possible for a character to rest for months and then wake up only to die from the effects of the delayed magic.

For instance, if our priest from the above example had decided to sleep off the effects of the *power word kill*, he would have been unconscious for a week. The player rolls the character's system shock roll (15 Constitution) and rolls 96%—6% over what he needed. Since the power word would have killed him at the time he lapsed into unconsciousness, the character awakens just long enough to be killed by the spell.

If a character is suffering from multiple effects, the character makes system shock rolls at the end of each recovery period. The player can choose the order in which the checks are made, but the character does not awaken until checks have been made for all the effects. For example, a character who was drained by a vampire and paralyzed by a lich remains unconscious for nine weeks—one month to revive from each of the two levels the vampire drained and another week for the paralysis.

If an appropriate cure is applied while the character is unconscious, the character recovers immediately and automatically.

*Heroic Effort:* As a last-ditch effort to continue a battle, a priest can use the invincibility skill to extend his life. Instead of dying at zero hit points (or falling unconscious at zero hit points and dying at –10 if the optional *Hovering at Death's Door* rule is in play), a priest who makes a successful invincibility check can continue fighting until reaching –20 hit points. The character can function in this state for a number of rounds equal to his delay effect, suffering the appropriate consequences for reduced hit points at the end of the delay.

Use of this skill is not without its drawbacks, however. If the priest is reduced to –20 hit points or less, the character is struck unconscious and dies once the delay expires. Once a character's hit points drop to –20 or less, death is inevitable at the end of the delay period unless unusual conditions exist (see below).

Curative spells can allow a priest struck unconscious by being reduced –20 hit points or less to rejoin a battle, but death still occurs at the end of the delay period. A *raise dead* or *resurrection* spell cast during the delay period prevents death from occurring.

It is possible that a character with the ability to regenerate (from a magical item or high Constitution score) can continue fighting even after being reduced to –20 hit points or less. If regeneration increases the priest's hit points to –19 or more during the delay period, the character regains consciousness and does not die if he receives enough healing to restore him to positive hit points before the delay ends. Even if death occurs, regeneration usually restores a character much more quickly than the rest period the invincibility skill requires. A character returned to life through regeneration need not make a system shock roll.

An *amulet of life protection* also allows a priest to continue fighting after being reduced to –20 hit points or less if the character receives sufficient healing to restore him to –19 hit points or more. The character still lapses back into death at the end of the delay period, but any form of magical healing can restore him to life (see page 79) and no system shock roll is required.

Each use of the invincibility skill lowers the priest's base eminence score by two for the rest of the day. The skill is ineffective if the character's base eminence score is reduced to zero or less.

**Requirement:** Priest 21+, Eminence skill
**Relevant Ability:** Wisdom/Willpower
**Success:** 4 **Cost:** 2 (6)

**Loan:** Priests with this skill can transfer physical vitality between themselves and other living creatures.

With a successful skill roll, the priest transfers a small amount of his own hit points to a living creature (or vice versa). If the priest tries to borrow hit points from an unwilling donor, an attack roll is required before the character can make the skill roll. The number of hit points that are transferred depends on the priest's level:

| Priest Level | Amount of Loan |
|---|---|
| 15–19 | 1d8+2 Hit Points |
| 20–24 | 2d6+4 Hit Points |
| 25–29 | 3d6+6 Hit Points |

30+ 4d6+8 Hit Points

Transferred hit points are immediately subtracted from the donor's hit point total and added to the recipient's total. The hit points are lost to the donor, just as though the donor was subjected to a damaging attack. Donated hit points can be restored through rest or magical healing just as any other form of damage. If the donor has insufficient hit points to supply the transfer, only those available are transferred and the donor dies. Transferred hit points remain with the recipient for 24 hours or until lost in an attack.

Each attempt to use this skill lowers the base score by two for one week. The skill is useless once the base score falls to zero or less.

**Requirement:** Priest 15+
**Relevant Ability:** Wisdom/Intuition
**Success:** 4 **Cost:** 1 (3)

**Smite:** A priest with this skill is empowered to direct a wave of destruction at beings who have wronged the priest or offended the priest's deity.

When the priest uses this power, a cone of divine force issues from the priest's body in any direction the character wishes. The cone is 5' in diameter at the priest's body and 30' in diameter at the far end. Its maximum length depends on the priest's level as shown below:

| Priest Level | Cone Length |
|---|---|
| 18–20 | 30' |
| 21–23 | 50' |
| 24–26 | 70' |
| 27–29 | 90' |
| 30 | 110' |

The priest has no control over the precise effect of the smiting, which the DM chooses from the list below. No matter what the effect, only the priest's enemies are harmed. Allies, innocent bystanders, and worshippers in good standing with the priest's deity are not affected.

*Awestruck:* This is the default effect when the deity does not feel the targets are offensive or threatening. It also is granted when the deity feels that a simple demonstration of its power is sufficient to handle the situation.

A two-dimensional depiction of the deity or the deity's symbol appears in front of the priest, causing the priest's enemies to stare at it in awe if they are within the cone. Creatures with more than 10 Hit Dice or levels are allowed a saving throw vs. spell. Even if the save succeeds, creatures are awestruck for one round, regardless of personal immunities granted by spell or high ability scores.

Creatures remain awestruck only as long as the priest remains motionless and concentrates on the effect, but no longer than one round per level of the priest, plus 1d8 rounds, in any case. Enemies who enter the cone after the image appears are fully subject to the awe effect, even if they avert their eyes. Any motion or the slightest break in the priest's concentration ends the effect, as does any offensive action by the priest's allies.

Distractions to the awestruck characters also end the effect. Loud noises, magical displays, attacks, or attempts to steal the awestruck creatures' equipment, damage their property, or otherwise cause them harm are sufficient to break the effect.

*Blinded:* Deities grant this effect when they find the target creatures offensive, but not particularly dangerous.

Only creatures with 12 or more levels or Hit Dice are allowed a saving throw vs. breath weapon to avoid the effect.

Blinded creatures move at 2/3 the normal rate and suffer a –4 penalty to attack rolls, saving throws, initiative rolls, and ability checks. Blinded spellcasters cannot cast spells unless they can touch their targets. Blindness lasts until the victim receives a *heal* or *cure blindness or deafness* spell.

*Burned:* This effect is granted when the targets are violent and pose an immediate physical threat to the priest, a sacred site, or to creatures friendly toward the priest. The cone fills with a mass of heatless flames that burn the priest's enemies for 6d8 points of damage, save vs. breath weapon for half. Creatures killed by the flames are reduced to piles of ash and no regeneration is possible. Though the heatless flames do not harm the area, they can affect the target's equipment. If a target creature fails the breath weapon saving throw or is killed by the flames, any equipment the creature carries must save vs. disintegration or be reduced to dust.

*Deafened:* This effect occurs when the targets have not greatly offended the deity or when the priest is not in significant peril. Only creatures with 12 or more levels or Hit Dice are allowed a saving throw vs. breath weapon to avoid the effect.

Deafened creatures move at 3/4 the normal rate and suffer a –2 penalty to attack rolls, initiative rolls, and ability checks. There is a 50% chance that any spell a deafened spellcaster attempts fails outright. Deafness lasts until the victim receives a *heal* or *cure blindness or deafness* spell.

*Death:* Deities grant this effect only when deeply offended or when the priest is in extreme danger. Enemies within the cone are immediately reduced to dust if they have 4 Hit Dice/levels or less. Other enemies suffer a doubled burning effect (12d8 points of damage, save vs. spells for half damage).

*Immobilized:* Deities commonly grant this effect when the targets are genuinely dangerous or offensive. Creatures of 6+1 Hit Dice/levels or less are automatically paralyzed, their flesh turning into a rigid, crystalline substance that is easily shattered. Other creatures are allowed a save vs. petrification to negate the effect. The immobility lasts 1d4+2 turns. *Free action* is useless against this effect.

Immobilized creatures can be killed by striking their crystalline bodies with any hard object. For each strike, the creature must make a saving throw as rock crystal versus crushing blow. Only bonuses granted from magical rings, cloaks, and armor count toward the saving throw. Failure results in death.

*Plagued:* The deity grants this effect when the targets are offensive, but do not pose any danger to the deity's interests. The priest's enemies are affected as if struck by a *cause disease* spell. The disease inflicted is debilitating (see the reversed form of the 3rd-level priest spell *cure disease*) and causes the victim to radiate a foul stench. The disease is neither contagious nor fatal. It can be cured by a *cure disease* or *breath of life* spell from a caster of higher level that the priest who called down the plague.

*Slowed:* This effect is granted when deity is offended, but the enemies pose no

immediate threat to a sacred site, the priest, or creatures friendly toward the priest or the deity. The effect is the same as the 3rd level wizard spell *slow*, except that creatures with less than 8+1 Hit Dice or levels get no saving throw. The slow effect lasts for 1d4+2 turns.

Each use of this ability reduces the base score for the priest's eminence skill by two for one week. As long the priest has a positive eminence score, the priest need not make a skill roll to smite enemies. If the priest's base eminence skill score is zero or less, however, the priest must roll an eminence check to successfully smite enemies. Note that this is possible only if the priest has a Charisma/Leadership bonus large enough to offset a negative base score. If the roll fails, the deity is displeased. At best, no smite effect occurs, at worst, the deity directs a smite effect upon the priest.

An example: Marissa has an eminence score of 4 and a Charisma/Leadership bonus of +4. She can freely smite enemies twice a week as long as her eminence base score is not reduced by using other skills. During an adventure, she uses her smite skill once and the divine voice skill once. This reduces her eminence skill to zero. If she wishes to use her smite skill again, she must roll a 4 or less on 1d20 to succeed.

Undaunted, Marissa smites a group of passing kobolds she has come upon. Her 1d20 roll is a 3, so the smite works. Marissa's deity isn't too worried about the kobolds, who were minding their own business when Marissa came along, and grants Marissa an awe effect. The kobolds are briefly entranced, but a fighter from Marissa's party wades into the kobolds, making an all-round attack. The attack breaks the awe effect.

Feeling threatened by the swarm of kobolds, Marissa foolishly tries to smite them again. Her base eminence score is now a –2, but her Charisma/Leadership bonus increases that to a 2. Melissa rolls an 18 and fails. The deity is getting a little tired of all Melissa's attempts to call for special aid and bestows a deafness effect on her. Fortunately, her saving throw succeeds. Marissa's base eminence score is now a –4, leaving her no chance to smite the kobolds again even if she was silly enough to try it again.

**Requirement:** Priest 15+, Eminence Skill
**Relevant Ability:** N/A
**Success:** N/A **Cost:** 2 (6)

**Spell Talisman:** This skill allows a priest to cast one or more spells at the beginning of each day, making them available for instant use.

When a priest with this skill is finished praying for spells, the character can attempt to cast the spell and direct its magical energy into a special container or talisman. A talisman is a small object such as a jewel, crystal bead, or holy symbol blessed by the priest. A talisman must be worth at least 100 gp per spell level.

A successful skill roll is required to place a spell into a talisman. If the roll fails, the spell is wasted. The priest must have all necessary material components on hand and must meet all the usual requirements to cast a spell. If casting the spell has an effect on the priest, such as unnatural aging, the priest suffers the effect even if the spell was not placed in the talisman.

The total levels of spells a priest can have stored in talismans cannot exceed the priest's level. The highest level spell a priest can place in a talisman depends on the

priest's level, as shown below:

| Priest Level | Maximum Spell Level |
|---|---|
| 12–14 | 1st |
| 15–17 | 2nd |
| 18–20 | 3rd |
| 21–23 | 4th |
| 24–26 | 5th |
| 27–29 | 6th |
| 30+ | 7th |

For example, Wulf, a 21st-level priest, can have up to 21 levels of spells stored, but no stored spell can be higher than 4th level. Wulf might choose to store two spells of 4th level, two 3rd, and seven 1st-level spells.

To release a spell from a talisman, the priest must be holding or carrying the item and have the opportunity to concentrate briefly and utter a few words. Though the initiative modifier for releasing the spell is +2, the release cannot be disrupted (though a gagged or silenced priest could not release the spell). Once the spell is released, it functions as if cast normally in all respects, destroying the talisman in the process.

A spell can be stored in a talisman for a maximum of 24 hours. If not used in the allotted time, or if separated from the priest for more than one hour, the talisman crumbles into dust and the spell is lost. No being other than the priest who stored the spell can release the stored energy.

A portion of the spell stored in a talisman lingers in the priest's memory. If the priest memorizes spells again before the 24 hours have expired, the character cannot regain the spell stored in the talisman. The priest cannot transfer a spell from a talisman back into memory. If a talisman is destroyed, the spell is lost. A spell fades from the priest's memory when it is released or lost.

Spells stored in talismans can be cast on worlds where the local magical factor would not allow the spell to be cast (see Chapter 2). A spell cannot be stored in talisman, however, unless the local conditions allow the spell to be cast. The initiative modifier for releasing a spell from a talisman is never affected by the local magical factor.

**Requirement:** Priest 12+
**Relevant Ability:** Intelligence/Knowledge
**Success:** 4 **Cost:** 1 (3)

## Rogues

High-level rogues are masters of wit and misdirection. Although their special abilities are never more than 95% effective, they receive extra abilities at 21st level. They continue to receive extra proficiencies and hit points until level 30. In addition, rogues also have access to a host of special skills beginning at 11th level.

### Thieving Abilities

Rogues of 10th level or lower are limited to scores of 95% or less in thieving skills such as pick pockets and find traps. Once a single skill reaches 95%, the character must spend discretionary points on other skills. If all the character's thieving skill scores are

95%, the discretionary points are lost.

Once a rogue reaches 11th level, however, this limitation is removed, and there is no limit to how far a character can improve a skill, although any discretionary points the character lost earlier are not regained. No matter what the skill score, any roll of 96% or higher is an automatic failure. Any penalties to the roll, however, are subtracted from the base score.

For example, if Jobare has a find/remove traps score of 120%, he has a 60% chance to find or remove a magical trap (magical traps reduce the score by half, see *Player's Handbook*, Chapter 3). Likewise, if Jobare's open locks score is 100%, he has a 40% chance to open a masterful lock (which imposes a penalty of –60%, see *Dungeon Master Guide*, Table 24).

**Table 47:**
## Rogue Advancement Beyond 20th

| | | ———Proficiencies——— | | Hit Points |
|---|---|---|---|---|
| **Level** | **Experience Points** | **Weapon** | **Nonweapon** | **(d6)*** |
| 20 | 2,200,000 | 7 | 8 | 10+20 |
| 21 | 2,420,000 | 7 | 8 | 10+22 |
| 22 | 2,640,000 | 7 | 8 | 10+24 |
| 23 | 2,860,000 | 7 | 8 | 10+26 |
| 24 | 3,080,000 | 8 | 9 | 10+28 |
| 25 | 3,300,000 | 8 | 9 | 10+30 |
| 26 | 3,520,000 | 8 | 9 | 10+32 |
| 27 | 3,740,000 | 8 | 9 | 10+34 |
| 28 | 3,960,000 | 9 | 10 | 10+36 |
| 29 | 4,180,000 | 9 | 10 | 10+38 |
| 30 | 4,300,000 | 9 | 10 | 10+40 |

* Bonus hit points from high Constitution scores are not added after 10th level.

**Table 48:**
## Thieving Skill Base Scores

| **Skill** | **Base Chance** |
|---|---|
| Bribe | 5% |
| Detect illusion | 10% |
| Detect magic | 5% |
| Escape bonds | 10% |
| Tunneling | 15% |

**Table 49:**

| Bribe | –10% | +5% | –5% |
| Escape bonds | +5% | –5% | –5% |
| Tunneling | +10% | –5% | –10% |

## Thieves Beyond 20th Level

**Extra Thieving Skills:** At 21st level, a thief gains five new skills. The skills have base scores as shown on Table 48 and the character can immediately apply discretionary points to the skills:

*Bribe:* A thief can bribe an NPC with minor gifts of money or merchandise. Only one bribe can be attempted per target. If the attempt fails, the DM should make a reaction roll for the target to determine how he counters the bribe.

The amount of money required for a bribe varies with the NPC's status, according to the table below:

| **NPC Status** | **Bribe** |
|---|---|
| Peasant/Slave | 2d4 cp |
| Freeman/Soldier | 3d8 cp |
| Merchant/Officer | 5d10 cp |
| Noble/General | 5d100 cp |

*Bribery procedure:* It is best to role play an attempt at bribery, but here are a few guidelines:

First, the DM must decide if the NPC in question can be bribed, not everyone is susceptible. No character can be bribed to do something that falls outside his job or

station. A simple peasant or a palace guard would not agree to assassinate his king or liege lord for a few coins. However, the peasant might offer a party shelter for the night or hide the thief from a search party. A guard might agree to look the other way while the party sneaks out the gate.

Likewise, a simple bribe never induces a character to compromise something he believes in or do something that places the character in danger. For instance, an acolyte cannot be bribed to look the other way while the party defiles a holy water font. In any case, an NPC bribed through the use of this skill does not perform any action that takes more than a few minutes of effort or places himself in danger—the task must strike the character as something that is quick and harmless.

Once the DM decides that the NPC can be bribed, use Table 59 (**Encounter Reactions**, from the *Dungeon Master Guide*) to determine how the NPC responds when meeting the thief. Secretly roll 1d20 and find the NPC's reaction on the table. Do not tell the player what the reaction is, simply role play the NPC's response to whatever the thief does.

If the die roll results in a friendly reaction, the NPC probably does what the thief wants without a bribe. If not, the thief has to offer something—money, services, a magical item, information, or anything else valuable—to sweeten the NPC's reaction. To determine the exact amount required, roll on the bribery table, above, and multiply the result by the difference between the reaction roll and the highest number on Table 59 that is a friendly result.

The player should never be told exactly the NPC's station, the base bribe value, or the initial reaction roll. Good role-playing on the DM's part should allow a perceptive player to guess the first and the last.

For example, Jobare, the King of Thieves, approaches a peasant in a friendly manner and starts fishing for information about the local baron. The DM rolls a 13 for the peasant's reaction and checks the number on the first column in Table 59 (because Jobare is acting friendly); the peasant is cautious. The DM decides that the peasant is suspicious, and thinks the thief is a spy or bandit. "Boy, stranger, you sure do ask a whole lot of questions," says the peasant while backing away slowly.

The DM secretly rolls 2d4 and discovers that the base value of the bribe is 5 cp. However, the highest number that gives a friendly result on the first column of Table 59 is a 7, the difference is 6 (13–7), so Jobare has to give at least 30 cp (5x6) to make an effective bribe. Once Jobare pays the required amount, the player can make a bribery roll. If it succeeds, Jobare can ask a few simple questions and get equally simple answers.

*Detect illusion:* Thieves, masters of deception themselves, can see through visible illusions within their line of sight, up to 90 feet away. They perceive the illusion as a translucent image, seeing through it as though it were a light mist. The more real the illusion, the more solid the image.

For example, *phantasmal force* would be totally translucent, while a *simulacrum* would be mostly solid. *Demishadow monsters* would be somewhere in between the two. *Invisibility* and other nonvisible effects cannot be discerned.

Detection is not automatic, and the thief must spend a round concentrating on the area of effect to discover its illusionary qualities. Knowing that something is an illusion is not necessarily a fail-safe defense against illusionary magic, such as in the case of a *simulacrum*.

*Detect magic:* Thieves can spot magical emanations within their line of sight, up to 60 feet away. They can determine the intensity of the magic—dim, faint, moderate, strong, and overwhelming. This ability can be blocked by the same things that prevent *detect magic* spells from operating.

*Escape Bonds:* There comes a time in every thief's career when his luck runs out and he is apprehended. The ability to escape bonds such as ropes, leather thongs, manacles, chains, and even straight jackets is a feat of contortion and determination. The thief must roll to break free of every device binding him. If he's tied at the wrists and at the ankles, he must make two successful rolls to free himself. This skill takes five rounds to use. A thief might hurry his efforts, but he suffers a –5% penalty for each round he tries to shave from the required time. Locked items also require the thief to successfully pick the locks. A failure on any attempt means that the thief cannot loosen that bond or pick the lock.

*Tunneling:* A thief might need to dig a tunnel to get to a cache of riches. His success at tunneling depends on several factors. The tunneling table below shows the time required to dig a 10-foot tunnel with adequate tools. Every 10 feet, the thief must make a skill check, failure means that the front of the tunnel collapses. It can be re-dug at the loose earth rate.

| **Type of Earth** | **Modifier** | **Time** |
|---|---|---|
| Sand/loose earth | –10% | 5 hours |
| Packed earth | — | 10 hours |
| Rock | +10% | 30 hours |

Tables 49, 50, and 51 give racial, Dexterity/Aim, and armor adjustments for the skills.

If the character point system from the *Player's Option: Skills & Powers* book is in play, a thief may already have some or all of these new skills. In that case, the thief gains 50 bonus character points at 21st level. The character must use the points to buy thieving skills from Table 27 in *Skills & Powers*. If the thief already has 9 or more of the skills listed on Table 27, the character cannot spend all 50 points on thieving skills and is allowed to spend them on proficiencies and high-level rogue skills instead. The ability to acquire additional thieving skills is a special bonus for reaching 21st level; it is not normally possible to gain additional thieving skills after the character is created

**Improved Scroll Use:** At 24th level, a thief begins to develop an understanding of magic. The character becomes enlightened enough to read some spell scrolls with no chance of failure, as follows:

| **Thief Level** | **Spell Level*** |
|---|---|
| 24–26 | 1st |
| 27–28 | 2nd |
| 29–30 | 3rd |

* There is no chance for failure when reading a scroll of the listed level or less. Scroll spells of higher level have the standard 25% chance for a reversed or harmful effect.

**Table 52:**

## Bard Spell Progression

| Level | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|---|---|---|---|---|---|---|---|---|
| 20 | 4 | 4 | 4 | 4 | 4 | 3 | — | — |
| 21 | 4 | 4 | 4 | 4 | 4 | 4 | 1 | — |
| 22 | 4 | 4 | 4 | 4 | 4 | 4 | 2 | — |
| 23 | 4 | 4 | 4 | 4 | 4 | 4 | 3 | — |
| 24 | 4 | 4 | 4 | 4 | 4 | 4 | 4 | — |
| 25 | 5 | 5 | 4 | 4 | 4 | 4 | 4 | — |
| 26 | 5 | 5 | 5 | 5 | 4 | 4 | 4 | — |
| 27 | 5 | 5 | 5 | 5 | 5 | 5 | 4 | — |
| 28 | 6 | 5 | 5 | 5 | 5 | 5 | 5 | — |
| 29 | 6 | 6 | 5 | 5 | 5 | 5 | 5 | 1 |
| 30 | 6 | 6 | 6 | 6 | 5 | 5 | 5 | 1 |

## Bards Beyond 20th Level

**Extra Thieving Skills:** At 21st level, a bard gains two of the five new skills listed in the thief section. The skills have base scores as shown on Table 48, and the character can immediately apply discretionary points to the skills.

If the character point system from *Player's Option: Skills & Powers* is in play, a bard may already have some or all of these new skills. In that case, the bard gains 20 bonus character points at 21st level. The character must use the points to buy thieving skills from Table 27 in the *Skills & Powers* book.

**Improved Scroll Use:** Also at 21st level, a bard can read wizard spells from scrolls with no chance of failure provided that the bard is high enough level the cast the spell. The rogue can read low-level spells from priest spells from scrolls as follows:

| Bard Level | Spell Level* |
|---|---|
| 21–23 | 1st |
| 24–26 | 2nd |
| 27–29 | 3rd |
| 30 | 4th |

The bard has the standard 15% chance for a reversed or harmful effect when reading scroll of wizard spells of higher level than the character can cast or priest spells of higher level than the table allows.

**Improved Item Identification:** At 21st level, a bard can analyze magical items and determine something about their specific powers.

For each hour a bard spends studying an item, the character has a 55% chance to determine a single power. The item's exact magical bonuses and number of charges are never revealed (see the 1st-level wizard spell *identify*). The bard need not handle the item or expend any materials, the character merely examines the item closely.

**Magical Item Use:** At 24th level, a bard can use wands, staves, and rods as a wizard of the same level.

**Item Creation:** At 27th level, a bard can write wizard spells the character knows and brew potions as a wizard of the same level.

## Skills For High-Level Rogues

The following skills are available to thieves and bards who meet the listed requirements.

**Adaptation:** A character with this skill has a trained mind that quickly analyzes unusual or unfavorable environments and a finely tuned body that can compensate for physical impediments to fighting. Except where noted below, it is identical to the warrior skill of the same name.

Rogues who use this skill successfully do not suffer combat and initiative penalties for fighting in an unfavorable environment, most notably the +6 foreign environment penalty to initiative (see Chapter 9 of the *Player's Handbook*). If the environment also includes special saving throws or ability checks due to physical conditions, such as a Dexterity/Balance check to avoid falling off a ladder when struck in melee, characters successfully using this skill receive a +3 (or +15%) bonus to the check.

The skill does not allow characters to ignore situational movement penalties, environmental factors that are not combat related, or conditions that are physically impossible to overcome. For example, no one can avoid sinking into quicksand without magical aid, and resistance from water still makes slashing and bludgeoning weapons almost useless without a *ring of free action* or a *free action* spell. Likewise, characters adapted to fighting underwater still have to find ways to breathe.

The skill has no effect on penalties derived from an environment's magical properties or on penalties based on vision or lighting. In fact, characters who cannot observe their surroundings suffer a –4 penalty to the skill check—it is very hard to size up battlefield in thick fog or pitch darkness.

To use this skill, a character must actually enter combat in a foreign or unfavorable environment. At the end of each round, the character checks the skill. The skill check requires only a moment's thought and can be checked every round until successful. It does not prevent other actions—melee attacks, spellcasting, etc.—during the round. Once the skill succeeds, the character temporarily ignores the environment's special effects, as described above. The effect lasts for the entire battle plus one day per character level thereafter, and this can be extended indefinitely if the character practices fighting in the environment for at least eight hours a week. At an extra cost of one weapon or nonweapon proficiency slot (or three character points), the character can become permanently adjusted to fighting in the environment, provided the additional cost is paid before the adaptation fades.

**Requirement:** Rogue 11+
**Relevant Ability:** Intelligence/Reason

**Success:** 10 **Cost:** 2 (6)

**Classify Traps:** Rogues with this skill have made an exhaustive study of traps and may be able to apply their knowledge to any traps they find. The skill is useless without the find traps ability.

A successful skill roll reveals a trap's exact nature, not just its general principle. A successful skill roll shows how the trap works and what it does to people who trigger it. The rogue learns where any attacks the trap launches are aimed—provided he can observe those areas. The examination requires at least a turn for basic constructs and possibly much longer for very elaborate traps (DM's discretion). A magical or invisible trap reduces the rogue's success number, including ability score bonuses, by half, round fractions up.

A failed skill roll of less than 20 means that the rogue cannot determine anything special about this particular trap. A roll of 20 means the rogue has made a false assumption about what the trap does. As with any roll a rogue makes when finding or removing a trap, the DM should make the skill roll secretly.

If the rogue decides to disarm a trap after a successful examination, the character can make two remove traps rolls taking only the best result. Alternatively, the rogue can simply bypass the trap by standing in a safe place and triggering it, carefully avoiding the areas it targets. If the DM decides it is not possible to completely avoid the trap's effects, the rogue is allowed a saving throw vs. breath weapon. If successful, the rogue is unharmed; otherwise, the damage inflicted is reduced by half. If the rogue also has the evasion skill, the character gets a +2 bonus to the saving throw. If the rogue has companions, the character can mark or carefully explain what the trap does, allowing these characters to attempt breath weapon saving throws to avoid the effects. If the save fails, the victim suffers only half damage.

In many cases, a trap's attack cannot have a half effect. In these cases, the DM can require another saving throw against the trap's attack form or rule that character's are fully effected when they fail the breath weapon saving throw.

An example: Jobare analyzes a trap he has found on a door and discovers that opening the door is going to flood the corridor, and possibly chamber beyond, with poisonous gas. Jobare decides that plugging all the gas vents would require too much time, so he advises his colleagues to take deep breaths and tie damp cloths over their faces. When the preparations are complete, Jobare flings open the door. Because the party did not leave the area the gas is flooding into, the DM calls for saving throw checks to see if anyone is effected by the gas. Because it is difficult for someone to suffer a half effect from poison gas, the DM requires the characters who fail their breath weapon saving throws to roll a second saving throw vs. poison to see if they succumb to the gas they inadvertently inhaled. If the trap dropped a 20-ton block into the corridor instead of poison gas, the DM would have been justified in ruling that character who failed their breath weapon saving throws were crushed to death instead.

**Requirement:** Rogue 11+
**Relevant Ability:** Intelligence/Knowledge
**Success:** 4 **Cost:** 2 (6)

**Evasion:** Rogues with this skill can avoid damage from energy discharges such as breath weapons, *fireball* spells, and the like through a combination of superior reflexes and inner strength.

This skill operates automatically whenever a rogue is subjected to an energy attack that causes damage. The rogue rolls a normal saving throw vs. the effect and suffers no damage if it is successful. This skill is not effective against effects that do not inflict damage or that do not normally allow a saving throw. For example, the skill does not protect the rogue against a bronze dragon's repulsion breath weapon, a gorgon's petrifying breath, or *magic missile* spells.

The rogue can also avoid missiles fired from fixed points, such as traps and siege engines, but not from creatures. If not surprised, the rogue avoids the missile with a successful saving throw vs. breath weapon.

**Requirement:** Rogue 16+
**Relevant Ability:** N/A
**Success:** N/A **Cost:** 1 (3)

**Fall/Jump:** A rogue with this skill can safely break a fall if there is a vertical surface nearby to help slow the character's descent. A very accomplished rogue can fall or jump from amazing heights and not suffer the slightest injury.

A successful skill check allows the rogue to make contact with a nearby surface and safely descend. The maximum distance from a vertical surface and the maximum distance for a safe fall depends of the rogue's level:

| Rogue Level | Surface Distance | Distance Fallen |
|---|---|---|
| 11–13 | 1' | 30' |
| 14–16 | 2' | 60' |
| 17–19 | 3' | 90' |
| 20–21 | 5' | 120' |
| 22–24 | 7' | 150' |
| 25–27 | 9' | 180' |
| 28–30 | 11' | 210' |

Rogues who simply step off a precipice or fall while climbing are always within one foot of a vertical surface unless it has a negative slope (angled back under the place from which the rogue fell). Any surface that can provide a reasonable amount of friction when the rogue grabs it or places his hands or feet against it is sufficient (ropes, tree trunks, walls, etc.). Very smooth or slippery surfaces are useless (ice walls, greased poles, *walls of force*, etc.).

If the fall is longer than the safe distance allowed for the rogue's level, subtract the safe distance from the total distance before determining damage from the fall. For example, a trap door opens under Jobare, a 20th-level thief, and dumps him into a shaft 10 feet square. No matter what happens, Jobare is within five feet of one wall, so he can attempt to break his fall. His skill roll succeeds, however, the shaft goes down 150 feet and then opens into a chamber 30 feet high and several hundred feet across. Jobare can

break only the first 120 feet if his fall and suffers 6d6 points of damage for the final 60 feet. Even if he had been a 30th-level thief, Jobare would have suffered 3d6 points of damage because there was no surface within reach to break the final 30 feet of the fall.

**Requirement:** Rogue 11+
**Relevant Ability:** Dexterity/Balance
**Success:** 11 **Cost:** 1 (3)

**Featherfoot:** Rogues with this skill can make their footsteps as light as a feather, moving silently and exerting very little pressure on the surface they are moving over.

This skill is a function of the rogue's move silently ability, which is a requirement for using this skill. A rogue who makes a successful move silently roll can move a short distance over a surface fairly quickly and without exerting any appreciable weight on it, according to the table below.

| Rogue Level | Surface | Distance* | Movement |
|---|---|---|---|
| 11–13 | Soft | 30' | 12 |
| 14–16 | Very Soft | 60' | 15 |
| 17+ | Liquid | 120' | 18 |

* The rogue must stop and make contact with the surface after moving this far.

*Soft Surfaces:* Mud, snow, sand, or other surfaces where normal humans would leave clear tracks.

*Very Soft Surfaces:* Quicksand, fine dust, or other surfaces where normal humans would sink slowly.

*Liquid Surfaces:* Water or other surfaces where normal humans would sink immediately.

A rogue using the featherfoot skill moves in complete silence and leaves no tracks on the ground. The character's weight doe not press down upon the surface at all. The character does not set off any alarm or trap triggered by weight and does not trigger a *squeaking floors* spell.
**Requirement:** Rogue 11+
**Relevant Ability:** N/A
**Success:** N/A **Cost:** 1 (3)

**Improvised Attack:** Rogues with this skill can use unorthodox and unexpected maneuvers to achieve special results in combat. The more unusual the maneuver, the better its chance for success.

A rogue can use this skill only once a day, but the character can learn the skill multiple times. For example, a rogue who learns this skill three times can make three improvised attacks each day. An improvised attack can have one of the following effects:

*Blinding:* If the attack succeeds, the opponent must save vs. breath weapon or suffer blocked vision (from debris thrown into the eyes, an object wrapped around the victim's

head, or even a hat or helmet dropped over the eyes). The opponent suffers the full penalties for darkness (–4 to attacks, saving throws, and Armor Class and movement reduced to one-third; see the *Dungeon Master Guide*, Chapter 13). Because the opponent's situation is painful or awkward or both, the blindfighting proficiency does not reduce the penalties. Note that many creatures cannot be blinded in an improvised attack because they have no eyes or visual organs.

The blinding effect lasts until the opponent clears his vision, which requires a roll of 9 or less on 1d20. The opponent's Wisdom/Willpower or Dexterity/Balance score affects the roll—the DM decides which ability applies. The opponent can attempt to clear his vision at the beginning of each round, but doing so counts as a half move (see the *Player's Handbook*, Chapter 9, or *Combat & Tactics*, Chapter 1).

*Disarm:* If the attack is successful, the opponent must save vs. petrification or lose the use of one weapon (because it is dropped or has become stuck in something). Recovering a lost weapon takes a half move. If the weapon is stuck, the opponent must make a successful open doors roll to get it free.

*Immobilize:* If the attack succeeds, the opponent's entire body becomes entangled or trapped, and he must save vs. paralyzation or cease all meaningful movement. The opponent remains unable to move or attack until he works free, which requires a roll of 9 or less on 1d20. The creature's Strength/Muscle or Dexterity/Aim score applies to the roll—the DM decides which ability applies. The opponent can attempt to get free at the beginning of each round, but doing so counts as a half move.

*Kill:* If the attack succeeds, the opponent suffers a critical injury that reduces the creature's hit points to –10 instantly unless the opponent saves vs. death magic. If the save succeeds, there is no effect, but in some cases, the rogue can force the opponent to save again the following round by winning initiative and grappling the opponent.

For example, Jobare has attempted to kill an enemy warrior by slamming a shutter down on his neck. The warrior's saving throw was successful, but his head is still caught under the shutter. Jobare can attempt a grappling attack to get another chance to strangle the warrior.

Opponents with more Hit Dice or who are higher level than the rogue are immune to kill effects. In this instance, the thief inflicts normal damage.

*Stun:* If the attack is successful, the opponent must save vs. breath weapon or become stunned for 2d4 rounds. The character's Constitution/Fitness adjustment applies to the saving throw. A stunned character is unable to cast spells, attack, or move at more than half speed. The character suffers a –2 penalty to Armor Class, attack rolls, saving throws, and ability checks while stunned.

*Trip:* If the attack succeeds, the opponent suffers a misstep or other misfortune and must save vs. petrification or fall down. Dexterity/Balance bonuses apply to the saving throw. Creatures that fall while moving at speeds greater than 12 might suffer minor damage (1d3 or 1d6 points of damage, at the DM's option). In some cases, a fall might be inherently more dangerous, such as when a character falls when climbing or stumbles onto a sharp object. If a fall could result in instant death, use the rules for killing attacks instead. Getting up after a fall counts as a half move.

The improvised attack skill requires some imagination and role-playing ability from the player. An improvised attack must be announced in a round's player declaration phase. During the resolution phase, the player must describe exactly what unusual attack

the rogue is employing—a simple called shot never qualifies as an improvised attack. The rogue then makes a normal attack roll. Standard combat modifiers apply, as does the rogue's backstab bonus for rear attacks that qualify. In most cases, the rogue's missile bonus from Dexterity/Aim also applies, because most improvised attacks rely on precision and fast movement. Improvised attacks that involve a blow to the opponent are also subject to Strength/Muscle bonuses.

If the attack fails, the improvised attack has no effect. If the attack succeeds, the opponent suffers no damage but must roll a saving throw or suffer the improvised special effect. The cleverness and appropriateness of the attack affects the saving throw as follows:

+6 if the rogue player made no attempt to role-play or describe the attack. For example, the player says, "I blind the dragon with an improvised attack."

+4 if the rogue player makes only a feeble attempt to role-play or describe the attack. "Uh, I find some dirt and throw it in the dragon's eyes"

+2 to +6 if the attack described is physically unlikely to have the desired effect. Trying to trip a horse with a staff is not likely to be effective.

The save is automatic if the method described is completely inadequate. For example, no character can strangle a great wyrm dragon with a 12-inch leather thong, nor can a character blind a storm giant with a glob of oatmeal unless he can reach the giant's face.

+2 if the rogue has used the same trick earlier in the adventure. The bonus is +4 if the rogue has used the trick earlier in the same encounter, +6 if the rogue has used the trick on the same creature during this adventure, and +8 if the rogue has used the trick on the same creature this encounter. However, see the note on establishing tricks, below.

–2 if the opponent is surprised.

–4 if the attack described is particularly appropriate. For example, causing a fall from a wall by slamming a window down on the creature's fingers, entangling an opponent in a fishing net, blinding a creature by tricking it into looking at a dusty object and then blowing the dust into its face, etc.

The optional saving throw modifiers from Table 36 or from Table 38 can be applied to the saving throw if the DM wishes.

*Establishing a Trick:* If a rogue has successfully used the same improvised attack in three separate adventures, the character can purchase the improvised attack skill the next time he gains a level and make the trick a permanent part of the character's skills. An established trick can be used once per encounter without the usual penalty for multiple use; situational penalties still apply. Using an established trick does not count toward the character's daily allotment of improvised attacks unless the trick is used more than once in a single encounter, in which case the multiple use penalties also apply. Opponents who have fought the rogue previously and are prepared for an established trick gain a +6 saving throw bonus against it.

*An Example:* Jobare is collecting his ill-gotten gains after a game of chance in a seedy inn. When one of the players demands his money back, Jobare asks the fellow to hold out his hand. When the man complies, Jobare grabs his own feathered hat and clamps it over the man's face. The DM and the player agree that this is a blinding attack. The DM decides that a roll for surprise is in order, as the man is dutifully holding out his hand and not expecting attack. The man rolls a 2 on the surprise die, indicating surprise. Jobare rolls a normal melee attack, adjusts for his Dexterity/Aim score and the fact that the man is surprised. The attack succeeds, and the DM rules that the man must save. vs. breath weapon at –2 or be blinded. His saving throw fails, giving Jobare an opportunity to escape.

Later, Jobare has a special hat made that is lined with pleats of loose cloth that allow the hat to unfold into a small bag, and it contains a springy headband that helps hold the hat in place, whether the hat is on Jobare's head or on an opponent's face. Jobare uses his trick hat several times, and when he gains enough experience to advance a level, he decides establish it as a skill (spending one proficiency slot or three character points).

**Requirement:** Rogue 16+
**Relevant Ability:** N/A
**Success:** N/A **Cost:** 2 (6)

**Inner Focus:** Rogues with this skill can marshal their personal energies to provide a temporary bonus to their Dexterity, Intelligence, or Constitution scores; it is otherwise similar to the warrior skill of the same name.

By concentrating for one round and making a successful skill check, the rogue can improve one of the three eligible ability scores to the value listed on the table below. The improvement lasts one round per character level. Because the majority of the character's energy is directed to the improved ability score, the other two ability scores are reduced by two points each. The rogue can end the boost—and restore the values of the other two ability scores—at any time. If the character's ability score is already higher than the value listed on the table, this skill has no effect. If the optional subabilities rule from *Skills & Powers* is in play, both subabilities in the increased ability score are raised to the same value.

| Rogue Level | Improved Score |
|---|---|
| 11–15 | 18 |
| 16–20 | 19 |
| 21–25 | 20 |
| 26–30 | 21 |

The rogue can take no other actions during the round spent concentrating on raising the selected ability score. Each attempt, successful or not, during a single day lowers the base skill score by two.

Bonuses from an increased score are applied immediately when the skill succeeds and are immediately lost when the boost's duration ends. Likewise, the effects from reduced ability scores are applied immediately but then restored when the improvement ends.

A character can have only one ability score improvement from this skill operating at

any given time.
**Requirement:** Rogue 11+
**Relevant Ability:** Wisdom/Willpower
**Success:** 5 **Cost:** 1 (3)

**Nondetection:** Rogues with this skill can shield themselves from many types of magical divination, as the 3rd-level wizard spell of the same name.

When subjected to a spell such as *ESP*, *clairaudience*, or *detect invisibility*, or to a magical item such as a *crystal ball*, a successful skill check defeats the spell or device. Even if the roll fails, the rogue is still entitled to any applicable saving throws.

This skill is also effective against the sense danger skill, the priest's detect deception skill, and the ability of intelligent or powerful creatures to detect invisible opponents. When subjected to one of these powers, the rogue can attempt an opposed Wisdom/Willpower check to remain undetected.

This skill is not effective against the spells *know alignment*, *true seeing*, *commune*, or *contact other plane*, nor is this skill effective against the detection abilities of legendary monsters, wyrm and great wyrm dragons, and deities.

**Requirement:** Rogue 16+
**Relevant Ability:** Wisdom/Willpower
**Success:** 4 **Cost:** 2 (6)

**Sense Danger:** This skill allows rogues to discover threats that are not obvious to less perceptive characters. It is similar to the warrior skill of the same name, but relies on the rogue's intellect rather than on intuition and grants rogues a slightly different set of sensing abilities.

The sense danger skill is actually four different subskills, as outlined below. The number of subskills the rogue knows depends on the character's level: one subskill at 16th–20th level, two subskills at 21st–25th level, and three subskills at 26th–30th level. If the character purchases this skill twice, the rogue gains one extra subskill. Any improvement to the skill number improves all the subskills the character knows.

Each subskill gives the rogue the ability to detect danger in a different form:

*Ambushes:* The rogue can determine if hidden enemies are lurking in any area the character can see well (see Table 62 in the *Player's Handbook*). The rogue can scan an area roughly 200 yards square in a single round. An area can be scanned only once each turn, and a successful scan reveals approximately how many creatures are hiding in the area and their approximate size.

*Concealed Weapons:* The rogue can study a creature to determine if it has any concealed weapons. A successful check reveals any weapons hidden about the creature's person (tucked into clothing, hidden nearby, etc). If faced with an unknown creature, a successful skill check allows the rogue to determine what its attack modes are (claws, teeth, etc.).

When the rogue detects a concealed weapon with this skill, the character notes its general size, location, and type—a sap tucked into the back of a character's breeches or a dagger hidden in a sleeve, for example. The character learns nothing else about the

weapon. Note that the rogue must be aware of the creature before checking for concealed weapons—a rogue cannot attempt to search a statue for concealed weapons because the player suspects it might be a golem. Unlike the warrior's version of this skill, a rogue can detect magically concealed weapons.

*Hostile Intentions:* A rogue can size up a living creature in plain sight and deduce its level of hostility toward the rogue and his party. A successful roll gives the rogue a general level of hostility: low (a suspicious merchant), medium (a thief from an opposing guild), or high (caught by the local wizard with his *staff of the magi* in your backpack). Unlike the warrior ability, the rogue skill does not reveal how well prepared for attack the creature is, just how much it would like to attack. This skill does not indicate how likely a creature is to attack, since a creature does not always act on its hostility.

*Impending Attacks:* The rogue develops a sixth sense about weapons and other forms of attack aimed at the character. Any time an undetected enemy is preparing an attack, the rogue can attempt a skill check to receive a vague impression about the attacker's general direction (front, rear, left, right) and distance (close, far). In many cases, the attacker's identity is obvious from the information the skill provides. A successful skill check gives the rogue a +2 bonus on surprise rolls and a +1 bonus to the initiative roll during the first round of combat if the character is not surprised. Unlike the warrior back protection subskill, the rogue must turn to face the attacker to negate any applicable rear attack bonuses. If the character is surprised in spite of this skill, the attacker receives all bonuses normally applied to rear attacks, including backstab adjustments.

With any subskill, the DM should roll the check secretly. If the roll fails on a roll of 19 or less, the character detects nothing. If the roll fails on a 20, the character gets a false indication—improperly analyzing a creature's level of hostility, noting a concealed weapon where there is none, etc. A false indication has no effect on an impending attack.

If the character also has the alertness proficiency, he receives a +1 bonus to his skill score.

**Requirement:** Rogue 16+
**Relevant Ability:** Intelligence/Reason
**Success:** 6 **Cost:** 2 (6)

**Shadow Flight:** This ability is similar to the shadow travel skill, except that a successful hide in shadows roll allows the character to fly silently from shadow to shadow.

Like the shadow travel skill, the rogue must begin with a successful hide in shadows roll. Once in the shadows, the character's movement rate and maneuverability class depend on the strength of the shadows:

| **Amount of Shadow** | **Rate/Maneuverability** |
|---|---|
| None | Normal* |
| Weak | 15/D |
| Strong | 18/C |
| Very | 24/B** |

* Flight is not possible.
** Once an hour, the rogue can instantly move up to 360 yards, as a dimension door spell, as long as the destination is at least as shadowy as the rogue's current position.

While flying or traveling instantaneously, the rogue can be no more than lightly encumbered. The rogue can carry other creatures if their weight does not exceed the rogue's light encumbrance limit.

**Requirement:** Rogue 21+
**Relevant Ability:** N/A
**Success:** N/A **Cost:** 1 (3)

**Shadow Travel:** This skill allows a rogue to move rapidly from one shadowy area to another, moving at seemingly blinding speed.

The use this skill, the rogue must first successfully hide in shadows, which is required to use this skill. After entering the area of shadow, the rogue can move into other shadows at increased speeds. The actual movement depends on the amount of shadow available, according to the table below.

| **Amount of Shadow** | **Movement Rate** |
|---|---|
| No Shadows | Normal |
| Weak Shadows | 15 |
| Strong Shadow | 18 |
| Very Shadowy | 24 |

*No Shadows:* The rogue is surrounded by multiple light sources, within a magical light or darkness spell, or in the open on a bright, clear day.

*Weak Shadows:* Outdoors at dawn or twilight, in a woods on a bright day, average indoor light, or outdoors on a moonless or overcast night are examples of these conditions.

*Strong Shadows:* The rogue is outdoors at night or in dim indoor light.

*Very Shadowy:* Most areas of near-darkness apply for this condition, including: in woods at twilight; in a windowless room with a single, flickering light source such as a torch, candle, or fire; outdoors at night along the edges of the circle of light thrown by an artificial light source (*Player's Handbook*, Table 63).

The rogue is visible when moving between shadows, but he remains hidden while within the shadows and able to move at an accelerated rate until the character attacks or the shadows get weaker. If the rogue leaves the shadows to attack, the character can enter them again and resume accelerated movement on any round when the rogue does not attack and there are shadows available. Shadow movement is not silent, but the rogue can attempt a move silently roll while moving through shadows and still move at the accelerated rate. Accelerated movement is subject to normal modifiers for terrain and encumbrance.

**Requirement:** Rogue 16+
**Relevant Ability:** N/A
**Success:** N/A **Cost:** 1 (3)

### Demihumans in High-Level Play

Demihuman characters are usually forced to retire or assume secondary roles in the campaign once human player characters begin to reach high levels and the demihuman characters reach their advancement limits. That is exactly what is supposed to happen. Many DMs are tempted to ignore demihuman advancement limits, especially when players are unwilling to retire their high-level demihuman characters.

Do not ignore demihuman advancement limits; they are the price players must pay for gaining demihuman advantages at lower levels. Ignoring the advancement limits unbalances play by placing high-level power in the hands of characters who already have extra abilities, and it is grossly unfair to players who have chosen human characters and have labored long and hard to get to the point where their choices begin to pay dividends in the form of unlimited advancement.

## Some Solutions to the Demihuman Advancement Problem

Demihuman advancement limits are a fact of life in any AD&D game world. Nevertheless, the DM can solve the problem in several ways without forcing demihuman characters out of the game:

A demihuman character can use a *wish* or 10th-level transformation spell to become human. Such a character might still look and act like a demihuman, but has put aside the racial characteristics—and special racial abilities—that have held the character back.

A demihuman character can use a wish or 10th-level imbue spell to gain one level beyond the normal racial maximum. The character in question must have earned enough experience to actually gain the level. Each level gained beyond the maximum requires one wish or 10th-level imbue spell.

The DM can use the *Slow Advancement* rule from Chapter 2 of the *Dungeon Master Guide*. At low levels, slow advancement doesn't have much affect on play, but humans begin to pull ahead fairly rapidly once the characters reach 10th level or so.

The DM can apply the *Slow Advancement* rule only after demihuman characters reach their maximum levels. This represents their struggle to stay focused on their professional skills despite the distractions and difficulties of being a demihuman. To reflect a demihuman character's nonhuman viewpoint, it's a good idea to also require the character to complete some heroic task that furthers the interests of the character's race each time the character advances a level beyond the usual maximum. For example, an elf wizard might undertake a quest to protect a tract of virgin forest and perhaps establish a colony there. This kind of effort marks the character as a racial hero instead of a demihuman with human interests.

### Beyond 30th Level

All character advancement stops at 30th level, which represents the pinnacle of mortal achievement. At this level, even a wizard has more hit points than five normal men and characters of any class have powers greater than the avatars that

deities use to conduct business in the mortal world. Once a character has gotten this far, there is nowhere else to go. Or is there?

## Divine Ascension

With the DM's approval, a character can abandon his or her profession and follow a different path to power. Divine ascension requires a great deal of attention and creativity from both DM and player. Only the barest guidelines are given here, because each character and campaign are unique.

A character can seek to ascend anytime after reaching 20th level (or earlier if the DM allows it). Once a character has reached 30th level, this is the only option that allows the character any further advancement.

Once the character embarks on the path to godhood, he can never turn back. The character ceases advancing in the original class. The character retains all class abilities but gives up normal adventuring and acts with a new purpose.

The character must seek a divine sponsor—usually a deity appropriate to the character's alignment, original class, and race—and prepare a special offering for that deity. The gift can be anything the character desires and the DM agrees to. The donation need not be a single item. In any case, the gift's monetary value must be at least equal to the character's experience point total.

While preparing the offering, the character receives experience points normally. For each 500,000 experience points gained, the character can lower one saving throw number one point, to a minimum saving throw of three.

The ability to reduce saving throw numbers below the normal minimum for the character's original class is special, and it is why the character must give up his or her original class. The character gains no other benefits from accumulated experience; no hit points, proficiencies, skills, etc.

When the offering is completed, the character must journey to the deity's abode and present the gift. If the character has been true to the principles of his or her alignment and profession, the deity probably accepts the gift. If in doubt, use Table 59, Encounter Reactions, from the *Dungeon Master Guide*. If the deity's alignment and portfolio match the character's alignment and profession—for example, a lawful good fighter petitioning a lawful good war deity—use the first column on the table. If the character and deity are slightly mismatched, use the second column. Otherwise, use the third column. If the reaction roll is friendly, the deity accepts the gift. If not, the deity destroys the gift and sends the character away. The character can try again with the same deity or with another deity.

Note that the character might not get an immediate audience with the deity. Just finding and entering the deity's abode could be an adventure in itself. The material in the *Planescape* setting can provide details about what the character might find.

Once the deity accepts the gift, it assigns some heroic task to the character. (In a *Planescape* campaign, the character becomes the deity's proxy, see *A Player's Guide to the Planes*.) Completing the task proves the character's mettle. It is up to the DM to create a suitable task and design a series of adventures so that the character can complete it. A few examples follow:

Found a dynasty.
Create a new magical item or spell that others seek to imitate.
Find and destroy an artifact from an opposing alignment.
Find and defeat the avatar of a rival deity.
Build a lasting monument to the deity.

The DM and the player must work out the exact details. In any case, the character must complete the task and earn enough experience to lower all saving throw numbers to three. In addition, the character cannot have any ability score (or subability score) lower than 13. When all of that is accomplished, the character becomes a demigod and companion to the sponsor. The character becomes an NPC under the DM's control.

Some players may be upset that they have worked so hard to improve their characters only to lose control of them to the DM. Remind them of their contributions to the campaign world—new characters can worship their "retired" heroes/demigods—and invite them to help construct the new powers' portfolios. AD&D is a game of heroes, not gods.

## Appendix Notations

P = Priest spell  W = Wizard spell
PR = Power Rank  MV = Movement

### Spell Statistics

These are detailed on pages 99–100. Letters separated by a slash indicate spells that can be used in multiple ways; the caster must choose how the spell is to be used before the duel begins.

A = Attack  D = Defense
L = Leech  AD = Attack/Defense
M = Missile

† Spell from the *Tome of Magic*
S Spell has a special effect; see Chapter 5.

## A

Abi-Dalzim's Horrid Wilting† (W 8) A, PR 17, MV 2

Dispel Magic[S] (W 3) AD, PR 12, MV 5
Dissension’s Feast (P 2) L, PR 11, MV 1
Distance Distortion (W 5) L, PR 14, MV 4–5
Divination (P 4) L, PR 13, MV 5
Divination Enhancement[†] (W 4) L, PR 13, MV 1
Divine Inspiration[†] (P 7) L, PR 16, MV 1
Domination (W 5) A, PR 14, MV 4–5
Dragonbane[†] (P 6) L, PR 15, MV 1

Draw Upon Holy Might (P 2) D, PR 11, MV 1
Drawmij's Instant Summons (W 7) L, PR 16, MV 5
Dream (W 5) L, PR 14, MV 1
Duo-Dimension[S] (W 7) D, PR 16, MV 1
Dust Devil (P 2) AD, PR 11, MV 3

## E

ESP (W 2) L, PR 11, MV 2–4
Earthquake[S] (P 7) AD, PR 16, MV 5
Easy March[†] (P 5) L, PR 14, MV 2
Efficacious Monster Ward[S†] (P 3) D, PR 12, MV 3
Elemental Aura[S†] (W 9) D, PR 18, MV 1
Elemental Forbiddance[S†] (P 5) D, PR 14, MV 1
Emotion (W 4) D/A, PR 13, MV 4–5
Emotion Control[S†] (P 3) D/A, PR 12, MV 2
Emotion Perception[†] (P 2) L, PR 11, MV 5
Emotion Read[†] (P 1) L, PR 10, MV 2–5
Enchant an Item (W 6) L, PR 15, MV 1
Enchanted Weapon (W 4) L, PR 13, MV 1
Endure Heat/Endure Cold[S] (P 1) D, PR 10, MV 1
Energy Drain[S] (W 9) A, PR 18, MV 1
Enervation[S] (W 4) M, PR 13, MV 4–5
Enlarge (W 1) L, PR 10, MV 1–5
Ensnarement (W 6) L, PR 15, MV 2
Entangle (P 1) A, PR 10, MV 4
Enthrall[S] (P 2) L/A, PR 11, MV 1
Erase (W 1) L, PR 10, MV 3
Estate Transference[†] (W 9) L, PR 18, MV 5
Evard's Black Tentacles (W 4) A, PR 13, MV 3
Exaction (P 7) L, PR 16, MV 2
Explosive Runes (W 3) L, PR 12, MV 1
Extension I (W 4) L, PR 13, MV 1
Extension II (W 5) L, PR 14, MV 1
Extension III (W 6) L, PR 15, MV 1
Extradimensional Detection[†] (P 3) L, PR 12, MV 2
Extradimensional Manipulation[†] (P 5) L, PR 14, MV 2
Extradimensional Pocket[†] (P 5) L, PR 14, MV 1
Eyebite[S] (W 6) A, PR 15, MV 2

## F

Fabricate (W 5) L, PR 14, MV 3–5
Faerie Fire (P 1) L, PR 10, MV 4
False Vision (W 5) L, PR 14, MV 1
Far Reaching I[†] (W 3) L, PR 12, MV 1
Far Reaching II[†] (W 4) L, PR 13, MV 1
Far Reaching III[†] (W 5) L, PR 14, MV 1

Fear (W 4) A, PR 13, MV 1
Feather Fall (W 1) L, PR 10, MV 2–5
Feeblemind (W 5) A, PR 14, MV 4–5
Feign Death (P 3) L, PR 12, MV 1
Feign Death (W 3) L, PR 12, MV 1
Find Familiar (W 1) L, PR 10, MV 5
Find Traps (P 2) L, PR 11, MV 3
Find the Path (P 6) L, PR 15, MV 1
Finger of Death (W 7) A, PR 16, MV 4
Fireball (W 3) M, PR 12, MV 4–5
Fire Burst† (W 1) A, PR 10, MV 2–5
Fire Charm (W 4) L, PR 13, MV 2
Fireflow† (W 3) L, PR 12, MV 3
Fire Purge[S†] (P 4) D, PR 13, MV 3–5
Fire Seeds[S] (P 6) M, PR 15, MV 3
Fire Shield[S] (W 4) D, PR 19, MV 1
Fire Storm (P 7) A, PR 16, MV 5
Fire Trap (P 2) L, PR 11, MV 1
Fire Trap (W 4) L, PR 13, MV 1
Fist of Stone† (W 1) A, PR 10, MV 1
Flame Arrow (W 3) M, PR 12, MV 4–5
Flame Blade (P 2) A, PR 11, MV 1
Flame Strike (P 5) A, PR 14, MV 4
Flame Walk[S] (P 3) D, PR 12, MV 1
Flaming Sphere (W 2) A, PR 11, MV 2
Fly[S] (W 3) L, PR 12, MV 1
Focus† (P 4) L, PR 13, MV 1
Fog Cloud (W 2) AD, PR 11, MV 2
Fools' Gold (W 2) L, PR 11, MV 2
Fool's Speech† (W 3) L, PR 12, MV 1
Forbiddance (P 6) L, PR 15, MV 1
Forcecage[S] (W 7) AD, PR 16, MV 4–5
Foresight[S] (W 9) D, PR 18, MV 1
Forest's Fiery Constrictor† (W 6) A, PR 15, MV 5
Forget (W 2) L/A, PR 11, MV 3
Fortify† (P 4) L, PR 13, MV 1
Free Action[S] (P 4) D, PR 13, MV 1
Friends (W 1) L, PR 10, MV 1
Frisky Chest (P 2) L, PR 11, MV 1
Fumble (W 4) A, PR 19, MV 4–5

## G

Gate (P 7) L, PR 16, MV 3
Gate (W 9) L, PR 18, MV 3
Gaze Reflection (W 1) D, PR 10, MV 1
Geas (W 6) A, PR 15, MV 2

Genius† (P 4) L, PR 13, MV 1
Giant Insect (P 4) AD, PR 13, MV 2
Glassee (W 6) L, PR 15, MV 1
Glassteel (W 8) L, PR 17, MV 1
Glitterdust (W 2) A, PR 11, MV 2–5
Globe of InvulnerabilityS (W 6) AD, PR 15, MV 1
Glorious Transmutation† (W 9) L, PR 18, MV 1
Glyph of WardingS (P 3) D, PR 12, MV 1
GoodberryS (P 2) D, PR 11, MV 1
Gravity Variation† (P 6) L, PR 15, MV 5
Grease (W 1) A, PR 10, MV 2
The Great Circle† (P 6) L, PR 15, MV 1
Greater Malison (W 4) L/A, PR 13, MV 2
GroundingS† (P 5) D, PR 14, MV 3
Group Mind (P 6) L, PR 15, MV 1
Guards and Wards (W 6) L, PR 15, MV 5
Gunther's Kaleidoscopic Strike† (W 8) A, PR 17, MV 4–5
Gust of WindS (W 3) L, PR 12, MV 1

## H

Hallucinatory Forest (P 4) L, PR 13, MV 4
Hallucinatory Terrain (W 4) L, PR 13, MV 5
HasteS (W 3) L, PR 12, MV 4
Hatch the Stone from the Egg† (W 7) L, PR 16, MV 1
HealS (P 6) D, PR 15, MV 1
Heat MetalS (P 2) M/A, PR 11, MV 3
Helping Hand† (P 3) L, PR 12, MV 5
Heroes' Feast (P 6) L, PR 15, MV 2
Hesitation† (P 2) L, PR 11, MV 3
Hold Animal (P 3) L, PR 12, MV 4
Hold Monster (W 5) A, PR 14, MV 3–5
Hold Person (W 3) A, PR 12, MV 5
Hold Plant (P 4) L, PR 13, MV 4
Hold Portal (W 1) L, PR 10, MV 3–5
Hold Undead (W 3) L/A, PR 12, MV 2
Holy WordS (P 7) A, PR 16, MV 1
Homunculus Shield† (W 8) L, PR 17, MV 1
Hornung's Baneful DeflectorS† (W 2) AD, PR 11, MV 1
Hornung's Guess† (W 1) L, PR 10, MV 5
Hornung's Random Dispatcher† (W 8) L, PR 17, MV 3
Hornung's Surge Selector† (W 7) L, PR 16, MV 1
Hovering Road† (P 7) L, PR 16, MV 5
Hypnotic Pattern (W 2) A/L, PR 11, MV 1
Hypnotism (W 1) L/A, PR 10, MV 2

## I

Ice Storm (W 4) A, PR 13, MV 4–5
Idea† (P 2) L, PR 11, MV 1
Identify (W 1) L, PR 10, MV 1
Illusionary Script (W 3) L, PR 12, MV 1
Illusionary Wall (W 4) AD, PR 13, MV 3
Illusory Artillery† (P 5) L, PR 14, MV 5
Illusory Fortification † (P 7) L, PR 16, MV 5
Imbue With Spell Ability (P 4) L, PR 13, MV 1
Impending Permission† (P 5) A, PR 14, MV 5
Imprisonment (W 9) A, PR 18, MV 1
Improved Invisibility (W 4) L, PR 13, MV 1
Improved Phantasmal ForceS (W 2) Any, PR 11, MV 3–5
Incendiary Cloud (W 8) A, PR 17, MV 3
Infravision (W 3) L, PR 12, MV 1
Insatiable Thirst† (W 2) A, PR 11, MV 2–5
Insect PlagueS (P 5) A, PR 14, MV 5
Intensify Summoning† (W 7) L, PR 16, MV 1
Inverted Ethics (P 4) L, PR 13, MV 1
Invisibility (W 2) D, PR 11, MV 1
Invisibility to Animals (P 1) L, PR 10, MV 1
Invisibility to Undead (P 1) L, PR 10, MV 1
Invisibility, 10' Radius (W 3) D, PR 12, MV 1
Invisibility Purge† (P 3) L, PR 12, MV 3
Invisible Stalker (W 6) A, PR 15, MV 2
Irritation (W 2) A, PR 11, MV 2–5
Item (W 3) L, PR 12, MV 1

## J

Join With Astral Traveler† (P 4) L, PR 13, MV 5
Jump (W 1) L, PR 10, MV 1

## K

Khazid’s Procurement† (W 5) L, PR 14, MV 5
Knock (W 2) L, PR 11, MV 3
Know Age† (P 1) L, PR 10, MV 1
Know Alignment (P 2) L, PR 11, MV 2
Know Alignment (W 2) L, PR 11, MV 2
Know Customs† (P 3) L, PR 12, MV 5
Know Direction† (P 1) L, PR 10, MV 1
Know Time† (P 1) L, PR 10, MV 1

## L

Land of StabilitySt (P 6) D, PR 15, MV 5
Lasting Breath† (W 1) L, PR 10, MV 2–5
Leadership† (P 4) L, PR 13, MV 5
Legal ThoughtsSt (P 6) A, PR 15, MV 2

Legend Lore (W 6) L, PR 15, MV 1
Leomund's Lamentable Belaborment (W 5) A, PR 14, MV 2
Leomund's Secret Chest (W 5) L, PR 14, MV 5
Leomund's Tiny Hut (W 3) L, PR 12, MV 1
Leomund's Trap (W 2) L, PR 11, MV 1
Levitate[S] (W 2) L, PR 11, MV 2–5
Light[S] (P 1) A, PR 10, MV 5
Light[S] (W 1) A, PR 10, MV 3
Lighten Load (P 2) L, PR 11, MV 3
Lightning Bolt (W 3) M, PR 12, MV 4–5
Limited Wish[S] (W 7) Any, PR 16, MV 5
Line of Protection[†] (P 3) L, PR 12, MV 1
Liveoak[S] (P 6) AD, PR 15, MV 1
Locate Animals or Plants (P 1) L, PR 10, MV 5
Locate Creature[†] (W 4) L, PR 13, MV 5
Locate Object (P 3) L, PR 12, MV 5
Locate Object (W 2) L, PR 11, MV 2–5
Log of Everburning[†] (P 1) L, PR 10, MV 1
Lorloveim's Creeping Shadow[†] (W 3) L, PR 12, MV 1
Lower Resistance[†] (W 5) L, PR 14, MV 4
Lower Water (P 4) L, PR 13, MV 5
Lower Water (W 6) L, PR 15, MV 4

## M

Magic Font (P 5) L, PR 14, MV 5
Magic Jar (W 5) A, PR 14, MV 4–5
Magic Mirror (W 4) L, PR 13, MV 5
Magic Missile (W 1) M, PR 10, MV 4–5
Magic Mouth (W 2) L, PR 11, MV 2
Magic Staff[†] (W 5) L, PR 14, MV 1
Magical Stone[S] (P 1) M, PR 10, MV 3
Magical Vestment (P 3) D, PR 12, MV 1
Major Creation (W 5) L, PR 14, MV 2
Malec-Keth's Flame Fist[†] (W 7) A, PR 16, MV 1
Mask of Death[†] (W 4) L, PR 13, MV 1
Mass Charm (W 8) A, PR 17, MV 4–5
Mass Invisibility (W 7) L, PR 16, MV 5
Mass Suggestion (W 6) A, PR 15, MV 3
Maximilian's Earthen Grasp[†] (W 2) A/L, PR 11, MV 3–5
Maximilian's Stony Grasp[†] (W 3) A/L, PR 12, MV 4–5
Massmorph (W 4) L, PR 13, MV 4–5
Maze (W 8) A, PR 17, MV 4–5
Meld[†] (P 5) L, PR 14, MV 2
Meld Into Stone[S] (P 3) D, PR 12, MV 1
Melf's Acid Arrow (W 2) M, PR 11, MV 5
Melf's Minute Meteors[S] (W 3) M, PR 12, MV 5

Memory Read† (P 3) L, PR 12, MV 2
Memory Wrack† (P 5) L, PR 14, MV 2
Mending (W 1) L, PR 10, MV 3
Mental Domination† (P 4) A, PR 13 MV 3
Message (W 1) L, PR 10, MV 1
Messenger (P 2) L, PR 11, MV 2–5
Metamorphose Liquids† (W 1) L, PR 10, MV 1
Meteor Swarm (W 9) M, PR 18, MV 5
Mind BlankS (W 8) D, PR 17, MV 2
Mind Fog† (W 5) A/L, PR 14, MV 4
Mind Tracker† (P 7) L, PR 16, MV 5
Mind Read† (P 2) L, PR 11, MV 2–5
Mindshatter† (P 5) A, PR 14, MV 3–4
Minor Creation (W 4) L, PR 13, MV 1
Minor Globe of InvulnerabilityS (W 4) AD, PR 13, MV 1
Minor Malison† (W 3) L/A, PR 12, MV 2
Minor Spell TurningS† (W 4) AD, PR 13, MV 1
Mirage Arcana (W 6) L, PR 15, MV 5
Mirror ImageS (W 2) D, PR 11, MV 1
Miscast Magic† (P 3) A, PR 12, MV 4–5
Misdirection (W 2) L, PR 11, MV 3
Mislead (W 6) L, PR 15, MV 2
Mistaken Missive† (P 1) L, PR 10, MV 1
Modify Memory† (P 4) L, PR 13 MV 2
MomentS† (P 2) AD, PR 11, MV 1
Moment Reading† (P 3) L, PR 12, MV 1
Monster Mount† (P 6) L, PR 15, MV 3
Monster Summoning I (W 3) AD, PR 12, MV 3
Monster Summoning II (W 4) AD, PR 13, MV 3
Monster Summoning III (W 5) AD, PR 14, MV 3
Monster Summoning IV (W 6) AD, PR 15, MV 4
Monster Summoning V (W 7) AD, PR 16, MV 4
Monster Summoning VI (W 8) AD, PR 17, MV 4
Monster Summoning VII (W 9) AD, PR 18, MV 4
Moonbeam (P 5) L, PR 14, MV 5
Morale† (P 1) L, PR 10, MV 5
Mordenkainen's Celerity† (W 4) L, PR 13, MV 1
Mordenkainen's DisjunctionS (W 9) AD, PR 18, MV 1
Mordenkainen's Faithful Hound (W 5) D, PR 14, MV 2
Mordenkainen's Lucubration (W 6) L, PR 15, MV 1
Mordenkainen's Magnificent Mansion (W 7) L, PR 16, MV 2
Mordenkainen's Sword (W 7) A, PR 16, MV 3
Mount (W 1) L, PR 10, MV 2
Move Earth (W 6) L, PR 15, MV 5
Murdock's Feathery Flyer† (W 1) L, PR 10, MV 1
Music of the Spheres† (P 2) A, PR 11, MV 3

Mystic Transfer† (P 2) L, PR 11, MV 1

## N

Nahal's Nonsensical Nullifier† (W 2) L, PR 11, MV 1
Nahal's Reckless Dweomer† (W 1) L, PR 10, MV 5
Nap† (P 2) L, PR 11, MV 1
Negative Plane Protection$^{S}$ (P 3) D, PR 12, MV 1
Neutralize Poison$^{S}$ (P 4) D, PR 13, MV 1
Nondetection (W 3) L, PR 12, MV 1
Nystul's Magical Aura (W 1) L, PR 10, MV 1

## O

Obscurement (P 2) AD, PR 11, MV 1
Otiluke's Freezing Sphere$^{S}$ (W 6) M/A, PR 15, MV 5
Otiluke's Resilient Sphere$^{S}$ (W 4) AD, PR 13, MV 2
Otiluke's Telekinetic Sphere$^{S}$(W 8) AD, PR 17, MV 2
Otto's Irresistible Dance (W 8) A, PR 17, MV 1

## P

Part Water (P 6) L, PR 15, MV 5
Part Water (W 6) L, PR 15, MV 5
Pass Plant (P 5) L, PR 14, MV 5
Pass Without Trace (P 1) L, PR 10, MV 1
Passwall (W 5) L, PR 14, MV 3
Past Life† (W 2) L, PR 11, MV 1
Pattern Weave† (W 1) L, PR 10, MV 2
Permanency$^{S}$ (W 8) L, PR 17, MV 5
Permanent Illusion$^{S}$ (W 6) Any, PR 15, MV 5
Personal Reading† (P 1) L, PR 10, MV 1
Phantasmal Force$^{S}$ (W 1) Any, PR 10, MV 3–5
Phantasmal Killer (W 4) A, PR 13, MV 3–5
Phantom Steed (W 3) L, PR 12, MV 1
Phase Door (W 7) L, PR 16, MV 1
Physical Mirror$^{S}$ (P 6) AD, PR 15, MV 3
Plane Shift$^{S}$ (P 5) L, PR 14, MV 5
Plant Door (P 4) L, PR 13, MV 5
Plant Growth (P 3) L, PR 12, MV 5
Plant Growth (W 4) L, PR 13, MV 4–5
Polymorph Any Object (W 8) A, PR 17, MV 4–5
Polymorph Other (W 4) A, PR 13, MV 3–5
Polymorph Self (W 4) D, PR 13, MV 1
Power Word, Blind (W 8) A, PR 17, MV 4–5
Power Word, Kill (W 9) A, PR 18, MV 3–5
Power Word, Stun (W 7) A, PR 16, MV 4–5
Prayer (P 3) D, PR 12, MV 1
Prismatic Sphere (W 9) AD, PR 18, MV 1

Prismatic Spray (W 7) A, PR 16, MV 2
Prismatic Wall (W 8) AD, PR 17, MV 2
Probability Control† (P 4) D, PR 13, MV 3
Produce Fire[S] (P 4) A, PR 13, MV 3
Produce Flame (P 2) M, PR 11, MV 3
Programmed Illusion (W 6) Any, PR 15, MV 5
Project Image (W 6) L, PR 15, MV 5
Protection From Cantrips (W 2) D, PR 11, MV 1
Protection From Evil[S] (P 1) D, PR 10, MV 1
Protection From Evil[S] (W 1) D, PR 10, MV 1
Protection From Evil, 10' Radius[S] (P 4) D, PR 13, MV 1
Protection From Evil, 10' Radius[S] (W 3) D, PR 12, MV 1
Protection From Fire[S] (P 3) D, PR 12, MV 1
Protection From Lightning[S] (P 4) D, PR 13, MV 1
Protection From Normal Missiles (W 3) D, PR 12, MV 1
Protection From Paralysis† (W 2) D, PR 11, MV 1
Purify Food & Drink (P 1) L, PR 10, MV 3
Pyrotechnics (P 3) A, PR 12, MV 5
Pyrotechnics (W 2) A, PR 11, MV 5

## Q

Quest (P 5) A, PR 14, MV 4

## R

Rainbow[S] (P 5) M, PR 14, MV 5
Rainbow Pattern (W 4) A/L, PR 13, MV 2
Raise Dead[S] (P 5) L, PR 14, MV 3
Rally† (P 2) L, PR 11, MV 5
Random Casualty† (P 3) L, PR 12, MV 1
Rapport† (P 4) L, PR 13, MV 3
Rary’s Mnemonic Enhancer (W 4) L, PR 13, MV 1
Ray of Enfeeblement (W 2) A/L, PR 11, MV 2–5
Read Magic (W 1) L, PR 10, MV 1
Reflecting Pool (P 4) L, PR 13, MV 5
Regenerate (P 7) L, PR 16, MV 1
Reincarnate[S] (P 7) D, PR 16, MV 1
Reincarnation[S] (W 6) D, PR 15, MV 1
Remove Curse[S] (P 3) D, PR 12, MV 1
Remove Curse[S] (W 4) D, PR 13, MV 1
Remove Fear[S] (P 1) D, PR 10, MV 2
Remove Paralysis[S] (P 3) D, PR 12, MV 1
Repeat Action† (P 5) A\L, PR 14, MV 3
Repel Insects[S] (P 4) D, PR 13, MV 1
Repulsion (W 6) AD, PR 15, MV 5
Resist Fire/Resist Cold[S] (P 2) D, PR 11, MV 1
Restoration[S] (P 7) L, PR 16, MV 1

Resurrection[S] (P 7) D, PR 16, MV 1
Reverse Gravity[S] (W 7) A, PR 16, MV 4–5
Reverse Time[†] (P 6) L, PR 15, MV 3
Ride the Wind[†] (W 2) L, PR 11, MV 2–5
Rigid Thinking[†] (P 3) A, PR 12, MV 4
Ring of Hands[†] (P 1) L, PR 10, MV 1
Rope Trick (W 2) L, PR 11, MV 1

## S

Sacred Guardian (P 1) L, PR 10, MV 1
Safeguarding[†] (W 5) L, PR 14, MV 1
Sanctify[†] (P 2) L, PR 11, MV 2
Sanctuary[S] (P 1) D, PR 10, MV 1
Scare (W 2) A/L, PR 11, MV 3–5
Screens (W 8) D, PR 17, MV 1
Secret Page (W 3) L, PR 12, MV 1
Seclusion (P 6) L, PR 15, MV 1
Seeming (W 5) L, PR 14, MV 2
Sending (W 5) L, PR 14, MV 5
Sense Shifting[†] (W 2) L, PR 11, MV 1
Sepia Snake Sigil (W 3) L, PR 12, MV 2
Serten's Spell Immunity (W 8) D, PR 17, MV 1
Shades (W 6) AD, PR 15, MV 3
Shadowcat[S†] (W 7) AD, PR 16, MV 5
Shadow Door (W 5) L, PR 14, MV 2
Shadow Engines[S†] (P 7) M, PR 16, MV 5
Shadow Magic[S] (W 5) A/M, PR 14, MV 5
Shadow Monsters[S] (W 4) AD, PR 13, MV 3
Shadow Walk (W 7) L, PR 16, MV 1
Shape Change (W 9) D, PR 18, MV 1
Shatter (W 2) A/L, PR 11, MV 3–5
Shield[S] (W 1) AD, PR 10, MV 1
Shillelagh[S] (P 1) A, PR 10, MV 1

# *Player's Option*™: Combat & Tactics

## Foreword

Way back in issue #39 of *Dragon*® Magazine, I found a great article called *Good Hits and Bad Misses*. My friends and I had been playing the AD&D® game for a couple of years, and we took one look and adopted the article's critical hit and fumble system. We ignored every piece of advice about responsible use of the system and began using the critical tables in our next game.

Our epic battles turned into bloodbaths. Our group of adventurers left a trail of dismemberment and sucking chest wounds in our wake. I distinctly recall one battle in which my character, a dwarven fighter named Hendel, had the unbelievable misfortune of losing one leg, an arm, and the other leg at the ankle. He still had 30 hit points left, so Hendel kept on battling, swinging his axe with great war-cries as he crawled along after his enemies. Talk about your suspended disbelief!

Now it occurs to me that maybe, just maybe, even Conan (or Godzilla!) would have been incapacitated by these injuries. In fact, maybe Hendel, if role-played well, would have curled up into a ball and cried for his mother when he lost that first leg. I sure would have. But we had a great time with it, even when fumbles led to friendly-fire decapitations and other such incidents.

The point to all this is that any fantasy role-playing game has a pretty tough job in creating fast but semi-realistic combat rules, and the AD&D game, even with variant rules like the critical hit system we ran amok with, is basically an abstract game. The *Combat & Tactics* book is a compromise that adds some detail to combat—not to make it more *realistic*, but to make combat more *believable*. There are darn good reasons why people stop fighting after they lose a couple of limbs, why 12th-level fighters don't turn their backs on guys with knives in their hands, and why people ought to be polite to angry folks pointing loaded crossbows at them.

If you're one of those players who thinks, "Hey, it's only 1d4 points of damage, what do I care?" (and who hasn't, once in a while?) you'll find that this book's going to make you think twice. I can't think of a single example in all of fantasy literature where a character wasn't concerned about someone trying to put a knife or arrow in him; why should your character be any different? *Combat & Tactics* rewards common sense and quick thinking. Taking needless risks and making bad decisions can get a person killed in a fight. Don't you think your character would see things the same way?

Rich Baker
November, 1994

Before anyone ever thought about creating a role-playing game, there was a little set of

rules called the *Chainmail*™ game. With that slim booklet in hand, one could use miniature figures to conduct medieval battles, from sweeping conflicts in which huge armies of steel-clad men fought for honor and booty, to small bands of heroes storming formidable castles, to forces of elves taking up their bows against fearsome dragons.

The *Chainmail* rules were hardly the last word in historical accuracy, but they were easy to learn and easy to play. They also did a great job of conveying what it might have been like to see a medieval battle unfolding before you. The *Chainmail* game eventually gave rise to the first fantasy campaigns, but a set of miniatures rules is not a role-playing game, and it wasn't long before the D&D® game, and later the AD&D game, came along to replace it. Nevertheless, the *Chainmail* rules for tabletop combat remain at the root of the AD&D game.

The AD&D game is about more than combat, but what fantasy adventure is complete without at least one pitched battle where the heroes prevail by the strength of their sword arms and the sharpness of their wits? The *Combat & Tactics* book is for anyone whose heart races (as mine does) at the thought of clashing arms; not just hack 'n slash, but heroic battles with swirling action, ringing steel, and eldritch flashes of magic. You won't find 20 pages of tables telling you exactly where a sword blow lands in this book, but you will find plenty of ways to make combat more than a dice-rolling contest or an exercise in subtracting hit points from your character's total. If along the way you learn to stay away from fights unless you're sure your party can win them, that's even better.

Skip Williams

# Chapter One: *Player's Option*™ Combat System

This chapter introduces the *Player's Option* combat system, an advanced set of skirmish rules designed to add detail and flavor to battles in an AD&D game. The combat rules from the *Player's Handbook* and *Dungeon Master® Guide* have been expanded and streamlined to create more active, exciting battles.

In most forms of personal combat, there is a lot more going on than a cycle of swing-and-miss and swing-and-hit actions. In a fight, people move around. They press advantages or fall back when they need to get some room. Consider a pair of boxers. They're not just throwing punches; they're ducking, dodging, weaving, and trying different attack strategies such as jabs, hooks, or uppercuts.

Armed combat is much the same. Position is important. Enemies try to surround lone characters to get flank or rear attacks. Large creatures such as giants or dragons use their bulk to knock smaller opponents back and scatter defenses. These are not unusual attacks or special maneuvers; they're things that just happen in the chaos of a fight.

The *Player's Option* combat system incorporates these effects and tactics, making them available for heroes and monsters both. Your battles will never be the same again.

## Does This Belong in My Campiagn?

The *Player's Option* combat system is an integrated set of rules that dovetails with the later chapters in this book. However, you don't have to use this chapter in order to make use of the other systems.

This chapter presents several new combat actions, restructures the AD&D initiative system, and introduces retreats, fatigue, and critical events. Most of the material assumes that you will use these rules with character and monster miniatures on some kind of map. If you don't want to run combat like this, you'll still find that the new initiative system and actions can be used without any figures or maps at all.

## The Battle Map

The *Player's Option* combat system is played on a gridded battle map with 1-inch squares. The battle map becomes a diagram of the battlefield that can be used with figures, stand-up counters, or markers. The exact location of each character or creature is important, since facing and terrain are critical to the tactics of a fight.

A number of games and accessories, such as the *Dungeons & Dragons*® Adventure Packs, include gridded maps. Feel free to borrow mapboards and modify them for use in your own campaign.

You can also use dry-erase boards, magnetic dungeon tiles, or washable gridded mats to portray your battlefield. You can make your own maps to customize the battlefield for each combat. In fact, it's a good idea for the DM to prepare for an encounter by making a map of the battlefield beforehand. As long as the map is marked in 1-inch squares, it will do.

Some DMs and players may prefer battle maps marked with hexes instead of squares. Hexes, however, introduce certain inconveniences to the rules that do not surface with a

square grid. (For example, can figures occupy partial hexes near walls?) Nevertheless, with a few modifications it is certainly possible to adapt the *Player's Option* combat system to a hex grid.

## Figures and Facing

Every character in a fight is represented by a miniature, stand-up, or marker of some kind. Figures show the location of every creature in the battle and also show the *facing* of each creature. In melee scale, one Man-sized creature fills one square on the map.

In any fight, facing is very important. It's hard to punch someone standing behind you unless you turn around. Each figure or marker on the battle map should have an obvious front facing. For miniatures in strange poses, everyone should agree beforehand what direction is the front of figure. "This figure faces the square his sword is pointing at" is good enough.

All figures have *front*, *flank*, and *rear* spaces. The three spaces in front of a figure are its front spaces, the two spaces directly beside it are flank spaces, and the three spaces behind it are rear spaces. Facings can be at the side of a square or at the corner (see diagram).

Normally, characters can only attack enemies in their front spaces and gain attack bonuses when they attack an enemy's flank or rear.

There are two situations where more than one figure can occupy a single square: grappled figures are both in the defender's square, and characters in close order (see Chapter Two) can fit two figures to a single square. If there is more than one figure in a square, each figure has the same front, flank, and rear spaces; no one is considered to be in the left side of the space, or the back of the space, or whatever.

Tiny (Size T) creatures can fit an unlimited number in one square, although it would be unusual for more than 10 to be in one space unless they were insect-sized.

Figures that are smaller than Man-sized (Size S) normally occupy one square each, but if space is tight they'll fight two to a square with no penalty. Small creatures in close order can fit three figures in a square.

Large (size L) creatures normally occupy one space on the map. They can fight in close order simply by occupying adjacent spaces.

Huge (size H) creatures occupy two to four spaces on the map, depending on their size and shape. Humanoids such as giants and ettins are two squares wide, creating an extra front space and an extra rear space. Horse-like or serpentine creatures have a narrow front and a long body, creating two extra flank spaces. Block-like or massive creatures occupy a four-space square.

Gargantuan (Size G) creatures occupy at least six spaces. They can be even bigger if the DM decides that the creature's proportions are truly immense. A dragon with a 40-foot body could take up a block of spaces two wide and eight long! Gargantuan creatures define front, flank, and rear spaces so that roughly one-third of the adjacent squares fall into each category.

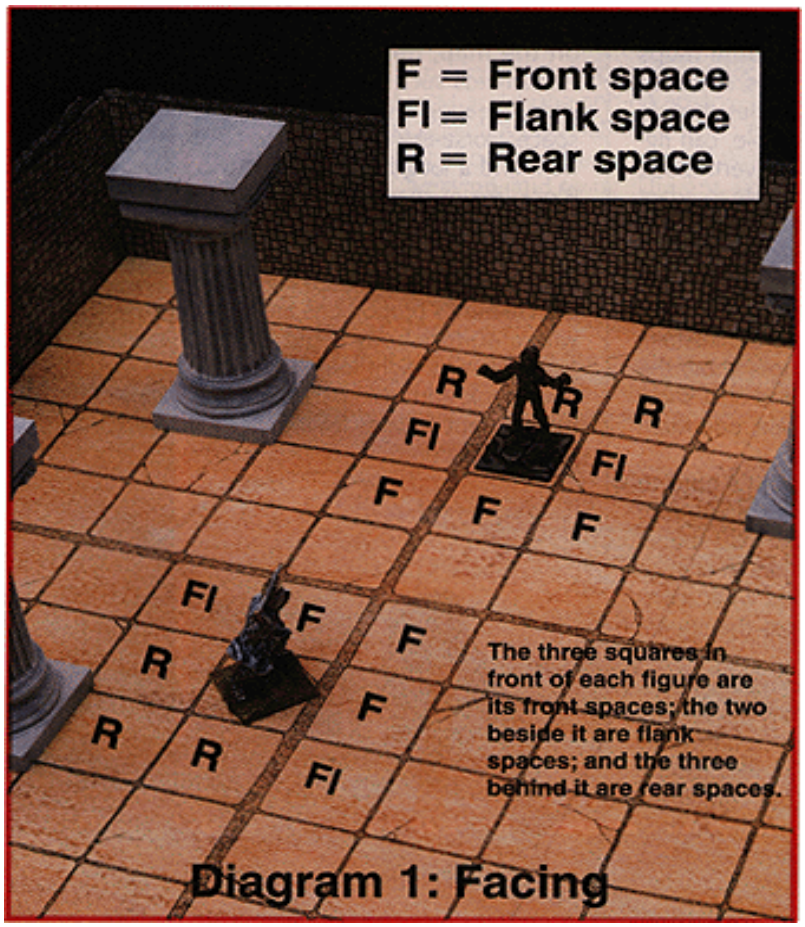

Diagram 1: Facing

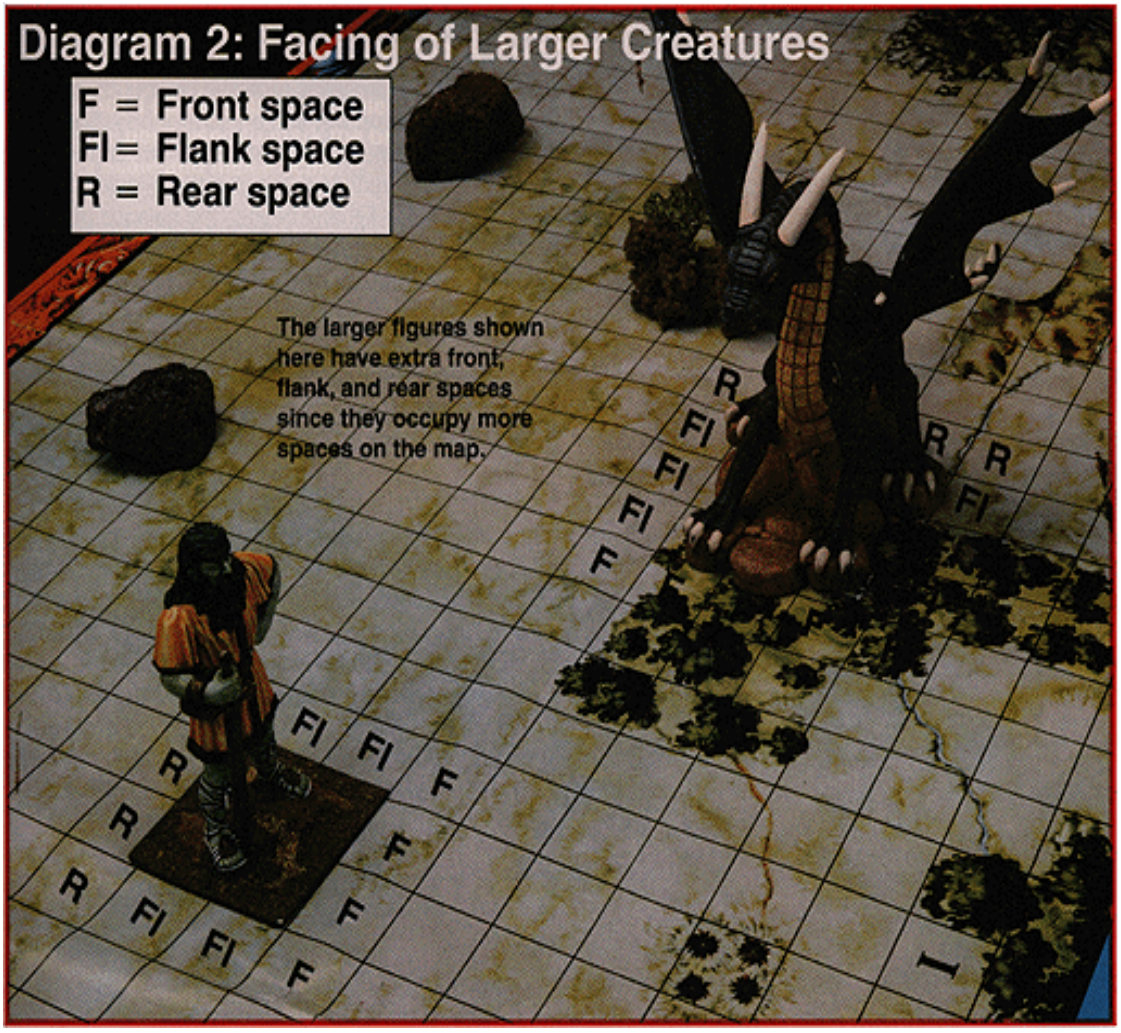


Scale In normal combat situations, each 1-inch square on the map represents an area 5 feet square. This is referred to as melee scale. Under certain special circumstances, each 1-inch square can represent 5 yards. This is known as missile scale.

## Melee Scale

The melee scale is the default scale for battles that take place indoors, inside dungeons, in darkness or fog, or at close range. As long as the combatants are all starting within 50 or 60 yards of each other, most battle maps are big enough to run in melee scale from the start. This will save you the trouble of converting from missile scale to melee scale during the battle (see Missile Scale, below).

In melee scale, remember that spell and missile ranges are based on yards, not feet. A thrown dagger normally has a short range of 10 yards, or 30 feet. In melee scale, this is 6 squares on the battle map. A spell with a 30-yard range can be targeted 18 squares away.

## Range

Most characters and monsters can only make melee attacks against creatures standing in one of their front spaces. However, some weapons provide extra reach for characters, and

some monsters cover a greater area because of size.

### Weapons

Many polearms are assigned a range, much like missile weapons. A polearm with a range of 2 can strike enemies standing in the character's front square or any adjacent square beyond the row of front squares.

Some weapons are defined as *range only* weapons. Pikes and lances fall into this category. These weapons can be used to make normal attacks in the squares they can reach but cannot be used against targets in between the wielder and the weapon's point.

Creatures wielding range 2 or larger weapons or natural attack forms cannot make melee attacks through an occupied square to another square unless as part of a spear or pike hedge (see Chapter Two).

### Monsters

Any Large creature armed with a weapon adds 1 to its range, due to its great natural reach. For example, an ogre wielding a spear (normally range 1) has a range of 2 with the weapon. Any Huge creature armed with a weapon adds 2 to the weapon's range. A Gargantuan creature adds 3 to a weapon's range; a titan swinging a 15-foot sword endangers an enemy quite a ways off.

Some monsters may also have natural attacks that allow them to strike opponents at ranges greater than 1.

## Missile Scale

Some battles may open in missile scale, which is five *yards* to the square. The only reason to set up a battle in missile scale is when the two hostile forces try to engage each other with spells or missiles at ranges greater than 50 yards or so. Naturally, this usually happens in outdoor settings with good visibility. If neither side has any missile or spell capability, there is no reason to set up the battle in missile scale. Save yourself the trouble of converting and set it up in melee scale from the start.

*For example, the heroes encounter a party of orcs while climbing a high mountain pass. The DM decides that the two groups spot each other at a range of 500 yards, since there isn't much cover. Nothing happens until the groups close to 210 yards, since that is the maximum range of the party's longbows. The DM tells the players that they begin the battle in missile scale, 42 squares away from the orcs.*

In missile scale, characters and monsters move 1/3 as fast as normal. A character that could normally move 12 squares in a combat round can only move four spaces per round in missile scale. There are nine melee squares in a single missile square, so up to nine Man-sized creatures can occupy a square when missile scale is in effect.

Since all spell and missile weapon ranges are expressed in yards, it is easy to figure ranges in missile scale. A target eight squares away is actually 40 yards distant.

## Switching Scale

When two opposing creatures move adjacent to each other, it's time to switch the scale from missile to melee scale. Select one figure as an anchor, and move all the other figures

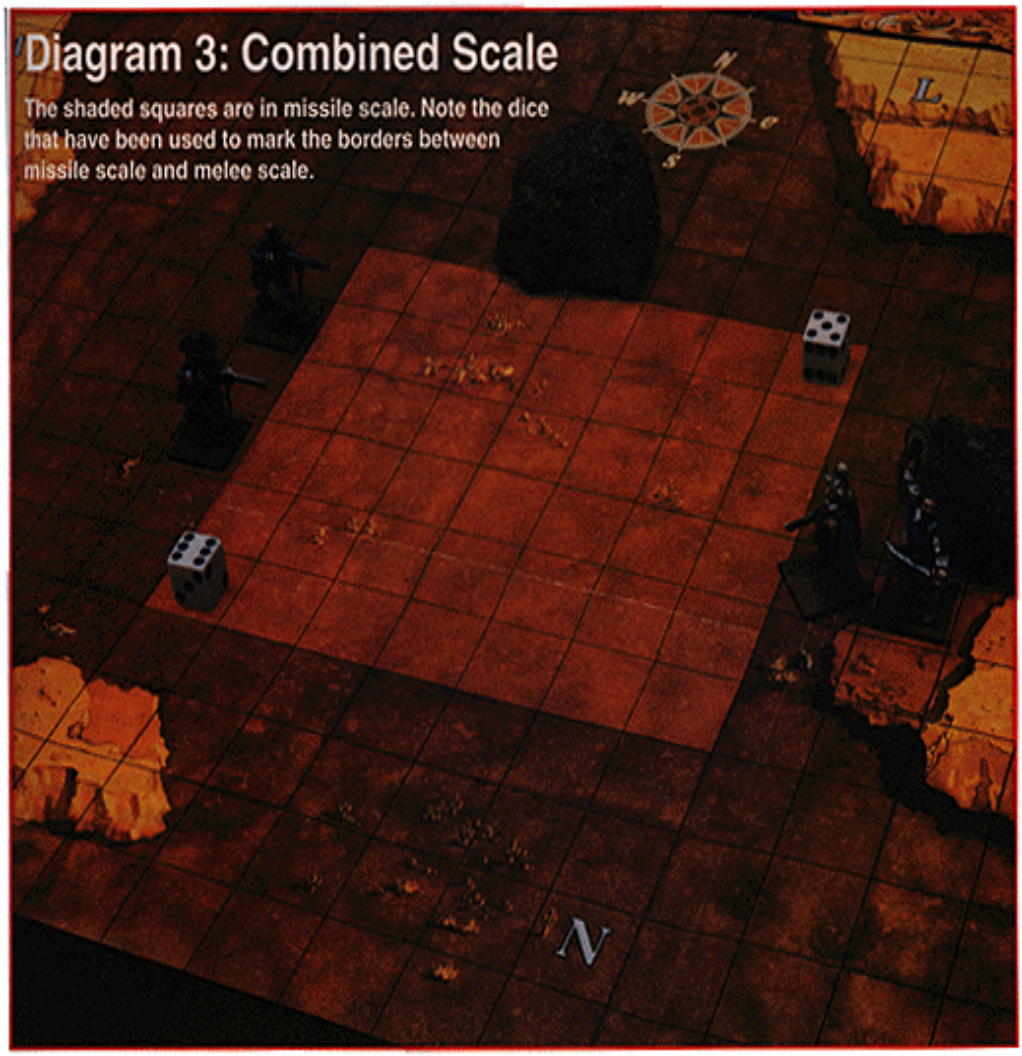
three times as far from the anchor as they were. In effect, you're zooming in on the battle.

An easier but less accurate method of zooming in on the battle is to simply announce that you're switching scale and allow both players and monsters to get a second set-up. As long as everyone sticks by the spirit of the set-up, just eyeball it. Make certain that the opposing forces have three times as many squares between them as they did before the scale was zoomed in.

## Combined Scale

A handy way to keep track of where the party members are in relation to each other is to have them set up their marching order in melee scale. Set up the monster group in melee scale in relation to each other. Now, assume that all the spaces between the party and the monsters are missile squares. Make sure you indicate where the scale changes by setting a pencil or ruler on the map.

This combined scale method assures that monsters trying to close under missile fire have to withstand the normal amount of attacks before they get close enough for melee. It's also useful for determing the areas of effect of any spells cast at the opposing group. When any two opposing characters come in contact, switch the scale.



## The Combat Round

In a standard AD&D game, rounds are assumed to be about one minute long. The combat system round lasts about 10 to 15 seconds, during which a typical swordsman will make about three to six swings. Most characters and monsters can only make one effective attack in this time; the rest of the swings are feints, parries, or just for show.

Higher-level characters with multiple attacks are able to make more of these swings count. Parries are followed up with ripostes. Feints suddenly become attacks when an opening presents itself. With time and practice, a skillful swordsman can make every swing of his sword a potentially lethal attack.

## Combat Rounds and Game Time

Combat rounds *replace* the one-minute round in normal AD&D combat situations. If you need to keep count, five combat rounds equal one normal round, and 50 equal a full turn.

To make things easy, the DM can rule that a battle, regardless of its actual length, takes one turn. Characters tend to spend several minutes checking on fallen enemies, surveying their own injuries, and making sure that the enemy has abandoned the field

before dropping their guard. Unless time is an issue, this is reasonable.

## Spell Durations

All spells with durations expressed in rounds last for the exact same number of combat rounds. Spells with durations measured in turns last for the entire battle. If a spell measured in rounds is in the middle of its duration when the fighting begins, the balance of its duration runs in combat rounds.

*For example, a 5th-level mage casts a haste spell that lasts three rounds, plus one round per level, for a total of eight rounds. In the fifth round, the party gets into a fight. The haste spell lasts four combat rounds before expiring.*

Everything else about the spell still functions on a round-by-round basis, as it did before. A cleric casting *heat metal* still inflicts 2d4 points of searing damage in the third, fourth, and fifth combat rounds. A wizard with a *feather fall* spell still falls at a rate of 120 feet per combat round. Remember, this is an abstract system; applying physics properties to every situation (such as the fact that the wizard with *feather fall* is now plummeting to the ground at a hasty 6.8 mph rather than the standard 1.4 mph) may reveal lots of facts, but it won't make for a better game.

## Combat Status

Any figure involved in combat falls into one of three categories: *clear, threatened,* or *grappled*. This represents the immediacy of an enemy threat and influences what actions the character can choose for that combat round. A character's options are extremely limited when he is caught in an owlbear's hug.

In addition to governing the character's choice of combat actions for the round, threatening is also important because it determines who is subject to what are known as *attacks of opportunity* (see below).

## Clear

Characters who are standing free of the melee and aren't endangered by any adjacent monsters are considered clear. (The character can still be attacked by missile fire, charged, or have a spell thrown at him, of course.) As long as a character is not in the threatened spaces of any enemy figure, he is clear. The character's choice of combat action is unrestricted.

Characters who are clear are allowed to turn to threaten a figure that moves up to them in the course of a combat round. The character doesn't have to do this; he can ignore the danger. The character only gets this free facing change once per round, so he can elect to threaten the first figure that moves up to him or to wait upon the arrival of a more dangerous enemy.

## Threatened

Any square that a creature can reach with its weapons or claws also *threatens* those squares and therefore any characters or creatures standing in one of the threatened squares. The character's own facing doesn't matter—it's possible to be threatened by someone standing behind you.

Threatened characters can choose to ignore the creature threatening them and take any

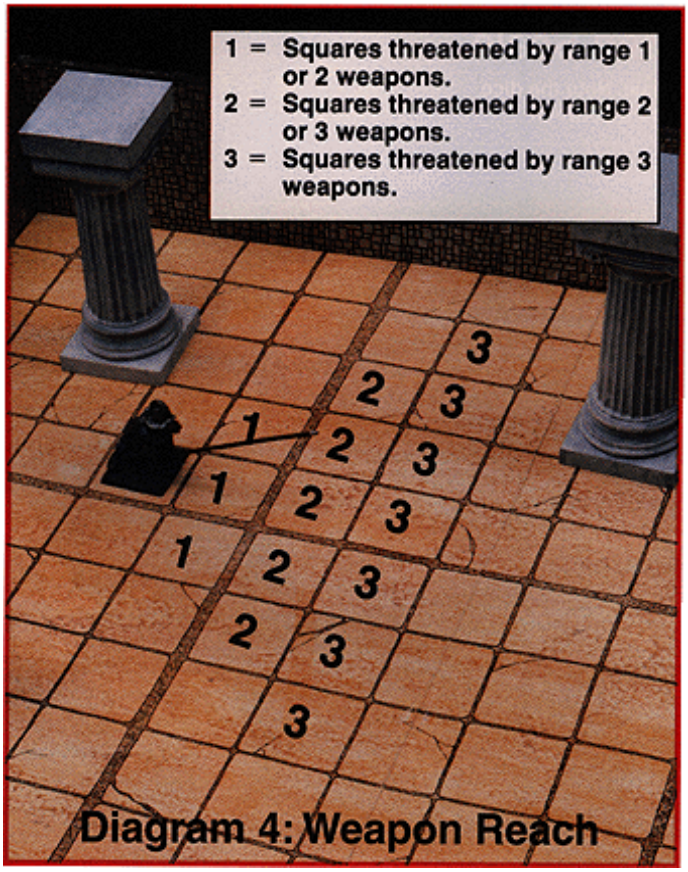
combat action they wish, but if they do, the threatening creature gains an immediate attack of opportunity. The following actions create an attack of opportunity for the threatening creature:

- Attempting missile combat (other than at the threatening creature, and only in the combat round when it first threatens the character).
- Moving away from the threatening creature. This includes move, charge, and run, but not withdraw.
- Turning so that the threatening creature is now in a rear square.
- Attempting an unarmed attack against any foe except an unarmed human-like creature.

Monsters and characters threaten all eligible squares throughout the entire round. If a character tries to sprint through the threatened squares to get by the defender, the defender gets an attack of opportunity as the character runs by. If the creature being attacked suffers from a successful knockdown roll or if a critical hit from the attack of opportunity is suffered, then it must stop moving. Otherwise, it may run by the creature threatening it.

### Unusual Monsters and Threatening

There are a number of creatures that do not have a clear front facing. Who can tell what the dangerous end of an ochre jelly or otyugh is? These amorphous monsters don't have rear or flank spaces, and therefore threaten any character who moves next to them.



## Grappled

Grappled characters are physically restrained by their foes. There are a number of ways to grapple with an opponent; wrestling, martial holds, pinning, and grabbing are all possible. In addition, some monsters have special attacks that grapple their victims. For example, a giant scorpion can pin its prey in its claws, or an owlbear can hug a victim.

Grappled creatures must get free before they can move. The only combat actions a grappled creature can take are:

Respond with unarmed combat.
Attack the grappling creature with a size S weapon.
Attempt to escape. Each grappling method defines a means of escape.

Grappling creatures occupy the same square on the battle map, unless there is something unusual about the monster doing the grappling. For example, a roper can grapple characters up to 10 squares away with its special tentacle attack.

Grappling figures never threaten other squares.

## Attacks of Opportunity

Attacks of opportunity occur when a threatened character or creature ignores the enemy next to it or turns its back on a foe. The threatening enemy gets to make an immediate melee attack (or sequence of attacks for monsters with multiple attacks) against the threatened creature. Attacks of opportunity cannot be performed with missile weapons.

This is a free attack that does not take the place of any actions the threatening creature had already planned.

A creature can't make more than one attack of opportunity against a single opponent in the course of a combat round, but if several enemies leave themselves open, the creature can make one free attack against each one.

There is a limit to the number of attacks of opportunity a single creature may make in one round. Warriors and monsters can make three attacks of opportunity plus one per five levels or Hit Dice. All other characters can make one attack of opportunity plus one per five levels. Thirty kobolds trying to swarm past a fighter in a narrow passage will take losses, but some will still get through.

Surprised characters and monsters cannot make attacks of opportunity during the round in which they are surprised.

## Movement

Obviously, movement is an important part of a fight. If a character is wielding a sword, he can't hurt anyone with it unless he gets very close to them. The more time a character spends moving, the less he is able to do when he gets there.

In the standard AD&D game, every character and monster has a base movement rate. Since *Player's Option* combat rounds are shorter than AD&D rounds, each point of that base movement rate allows a PC, NPC, or creature to move one square per combat round in melee scale. A human fighter with a movement rate of 12 can move 12 squares, or 60 feet, in one combat round. If a character moves diagonally, it costs 3 movement points for each 2 squares, rounded up. If a character moves three squares diagonally, it costs 5 movement points: 3 for the first two squares and 2 for the the third square.

Remember, this is a conservative advance. Figures can exceed their normal movement rates by *charging*, *running*, or *sprinting* (see Attack Options, below). The same human fighter sprints 180 feet in a combat round, which isn't bad for an untrained runner wearing sturdy boots, heavy clothes, and carrying a sword.

Characters determine their combat system movement in three steps:

- Determine the character's base movement rate from his character race;
- Adjust the base movement rate for exceptional ability scores;
- Modify the character's movement due to his encumbrance.

### Base Movement

Every character (and monster) begins with a base movement determined by race. For monsters, this information appears in the apropriate *Monstrous Manual*™ accessory under Movement. For characters, the base move varies by race:

| **Character Race** | **Movement Rate** |
|---|---|
| Human | 12 |
| Elf or Half-elf | 12 |
| Dwarf | 6 |
| Gnome | 6 |
| Halfling | 6 |

Unless the DM wants to generate ability scores for every NPC in the game, it's safe to

assume that any generic member of the race has the base movement rate listed. However, player characters and exceptional NPCs may be able to move faster than normal.

## Exceptional Abilities and Movement

Characters with exceptional Strength or Dexterity scores can increase their base movement rate beyond the normal limits of their race. Similarly, characters with weaknesses in these areas are slower than others of their kind.

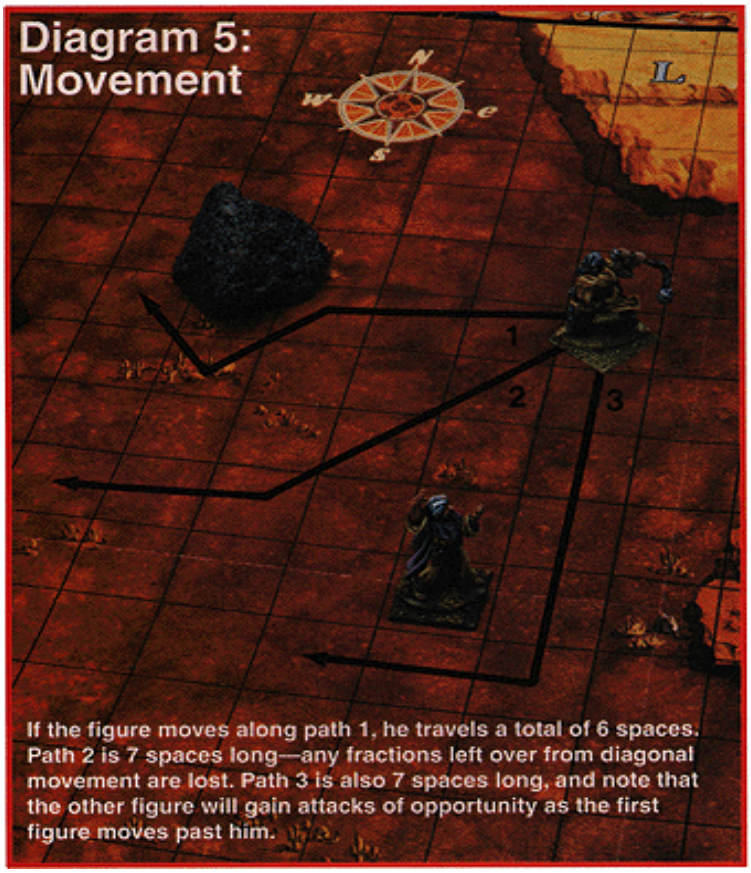
### Strength

Add the character's hit probability adjustment to her base movement rate. If you are also playing with the *Skills & Powers* rulebook, add the hit probability adjustment based on the character's Strength/Stamina (not Strength/Muscle) instead.

### Dexterity

Add the character's reaction adjustment to his base movement rate. If you are also playing with the *Skills & Powers* rules, use the adjustment for Dexterity/Balance instead.

*For example, Loftos the Swift, a human fighter, has a Strength of 17 and a Dexterity of 16. His Strength gives him a hit probability bonus of +1, and his Dexterity gives him a reaction bonus of +1, too. His base movement rate, therefore, is 12+1+1, or 14.*



## Encumbrance

Even the fastest sprinter won't move so quickly when he's carrying 140 pounds of armor, weapons, and adventuring gear. A character's encumbrance falls into five categories: *none*, *light*, *moderate*, *heavy*, and *severe*. Encumbrance is described in the *Player's Handbook* in Chapter 6: Money and Equipment.

To determine the character's encumbrance category, find his Strength and read across the table. The numbers on the table are the breakpoints for each category. A character with a Strength of 14 is not encumbered until he has 56 pounds of gear, lightly encumbered until he has 86 pounds of gear, moderately encumbered until he carries 116 pounds of gear, and heavily encumbered up to a load of 146 pounds.

To calculate a monster's strength for this purpose, add 31/2 points per size category (rounded down) to the monster's base Hit Dice (ignoring plusses). Thus, an ogre has a generic Strength score of 18 (Large creature is size category 4, x 31/2 = 14, plus 4 Hit Dice = 18).

| **Character** | **Encumbrance Category** | | | |
|---|---|---|---|---|
| **Strength** | **Lt.** | **Mod.** | **Hvy.** | **Severe** |
| 3 | 6 | 7 | 8 | 10 |
| 4–5 | 11 | 14 | 17 | 20 |
| 6–7 | 21 | 20 | 39 | 47 |
| 8–9 | 36 | 51 | 66 | 81 |
| 10–11 | 41 | 59 | 77 | 97 |
| 12–13 | 46 | 70 | 94 | 118 |
| 14–15 | 56 | 86 | 116 | 146 |
| 16 | 71 | 101 | 131 | 161 |
| 17 | 86 | 122 | 158 | 194 |
| 18 | 111 | 150 | 189 | 228 |
| 18/01 | 136 | 175 | 214 | 253 |
| 18/51 | 161 | 200 | 239 | 278 |
| 18/76 | 186 | 225 | 264 | 303 |
| 18/91 | 236 | 275 | 314 | 353 |
| 18/00 | 336 | 375 | 414 | 453 |

A creature's final movement is figured by comparing current encumbrance with natural base movement.

| **Base** | **Encumbrance Category** | | | | |
|---|---|---|---|---|---|
| **Move** | **None** | **Lt.** | **Mod.** | **Hvy.** | **Severe** |
| 1 | 1 | 1 | 1 | 1 | 1 |
| 2 | 2 | 2 | 1 | 1 | 1 |
| 3 | 3 | 2 | 2 | 1 | 1 |
| 4 | 4 | 3 | 2 | 1 | 1 |
| 5 | 5 | 4 | 3 | 1 | 1 |
| 6 | 6 | 4 | 3 | 2 | 1 |

| | | | | | |
|---|---|---|---|---|---|
| 7 | 7 | 5 | 4 | 2 | 1 |
| 8 | 8 | 6 | 4 | 2 | 1 |
| 9 | 9 | 7 | 5 | 2 | 1 |
| 10 | 10 | 7 | 5 | 3 | 1 |
| 11 | 11 | 8 | 6 | 3 | 1 |
| 12 | 12 | 9 | 6 | 3 | 1 |
| 13 | 13 | 10 | 7 | 3 | 1 |
| 14 | 14 | 11 | 7 | 4 | 1 |
| 15 | 15 | 12 | 8 | 4 | 1 |
| 16 | 16 | 12 | 8 | 4 | 1 |
| 17 | 17 | 13 | 9 | 4 | 1 |
| 18 | 18 | 14 | 9 | 5 | 1 |

In addition to affecting how far a character can move in a combat round, encumbrance also affects how well a character can fight. Moderately encumbered characters suffer a –1 penalty to attack rolls. Heavily encumbered characters suffer a –2 attack penalty, and their Armor Class suffers a +1 penalty. If the character is severely encumbered, he suffers a –4 penalty to all attacks and a +3 penalty to his Armor Class. Fatigue may temporarily increase a character's effective encumbrance; see Fatigue for more information.

### Simplified Encumbrance

If the standard encumbrance rules aren't worth the trouble, here's an easier way to do it. Most of the weight a character carries is in armor and weapons. To streamline things, only use the character's armor, shield, and largest weapon when figuring the total weight carried. This slightly favors PCs, but it's much faster than tracking every addition of weight.

In Chapter Seven, armor is rated with a base encumbrance. This is the typical encumbrance level of a human wearing that armor. For example, plate mail is rated as moderate encumbrance, with a movement of 6 for a typical human. These default values make it easy to eyeball NPC movement rates.

If you use the simplified encumbrance rule, make sure that it is not abused. If the DM feels that a PC is taking advantage of this rule (for example, carrying dozens of weapons or vast amounts of adventuring gear), he can insist on using the more detailed accounting of the normal encumbrance rules.

## Opening the Battle

Now that you know what the map looks like, how to handle long- and short-range battles, and how the figures interact on the map, it's time to discuss the set-up and presentation of a fight. What effect does surprise have? Where do terrain features go? Who sets up their figures where?

## Surprise

Before a battle begins, one or both sides may have to check for surprise. The Dungeon Master has the final word on whether or not a surprise check applies. There are situations in which one side may have to make a surprise check but their opponents don't—for example, an ambush or a nighttime encounter with enemies carrying bright lights. Surprise conditions and modifiers are discussed extensively in the *DMG* and the *PHB*

(Chapter 11: Encounters for both).

The surprise check is a d10 roll, modified for the surrounding conditions and any special preparations one party or the other makes. Normally, a group is surprised on a roll of 1, 2, or 3. The surprisers get a free round of attacks, movement, or spells against the surprised members of the other group.

## Encounter Distance

The distance between two groups is an important part of setting up the battle. The terrain and weather have a great effect on encounter distance; even an eagle-eyed character will have a hard time spotting his enemies in a dense fog or pitch-black night.

The DM can simply assign an encounter distance based on his estimation of the situation, or he can roll on the table below. In many cases, the range of the encounter is obvious; if a party of heroes kicks down a dungeon door and storms a guardroom, it stands to reason that the gnoll warriors are *somewhere* in that room.

| **Situation** | **Range (melee scale)** |
|---|---|
| Both groups surprised | 1d4 squares |
| One group surprised | 1d6 squares |
| No surprise: | |
| Smoke or heavy fog | 1d8 squares |
| Jungle/dense forest | 2d10 squares |
| Light forest | 4d6 squares |
| Scrub/brush/bush | 4d12 squares |
| Grassland/field | 10d6 squares |
| Dungeon/night | Limit of vision |
| No cover | Long missile range |

Note that dungeon or night encounters refer to the vision limits of whoever can see the farthest. If a party of heroes equipped with lanterns can see 30 feet in a dark forest, a hunting party of orcs that can see 60 feet may try to open the battle with a volley of arrow fire out of the darkness.

If a situation arises where there is no real cover or the enemy's approach is detected hundreds of yards away, the encounter should be set up at the maximum range of the longest-range missile weapon in the fight. In this case, it will probably be necessary to begin the battle in missile scale and move to melee scale when the groups close.

## Set-up

The last step before starting the fight is setting up the battlefield and the location of the combatants. The DM should first arrange the battlefield; if the fight is taking place in a room inside a dungeon, the DM notes the room's size, shape, and interesting contents before placing any creatures in it. Chapter Three describes battlefields of all kinds in great detail.

If one side has spotted the other without being seen, or has surprised the other group, they can make their opponents set up first and then place their own combatants to take advantage of the situation. (They still have to observe the encounter distance dictated by the DM, though.)

If neither side is surprised, or if other special circumstances exist, the DM can dictate the positions of all characters and monsters at the beginning of the battle. The PCs should be set up in their normal marching order, with any adjustments the DM deems appropriate. Someone had to open the door to the guardroom, after all. The monsters are placed by the DM as she sees fit.

If the DM knows something the players don't, there's no reason she can't keep some figures off the map until the players have reason to spot them. If there's a giant spider on the ceiling and no one looks up, the DM should feel free to spring a fiendish surprise when a character walks under it.

## The Five Basic of Every Combat Round

With the exception of two skilled fighters using similar weapons or styles, combat is utter chaos. It's ludicrous to believe that any set of game rules could begin to approach an accurate simulation of fights that range from barroom brawls to fantastic duels between archmages and dragons.

However, there has to be some way to resolve combat. In the *Player's Option* combat system, battles are divided into combat rounds, and each round is divided into five basic steps. These steps are:

Step One: Monster Action Determination
Step Two: PC Action Declaration
Step Three: Initiative
Step Four: Resolution of Actions
Step Five: End-of-Round Resolution

## Step One: Monster Action Determination

Before the players announce what their characters are doing this round, the DM secretly decides what actions the monsters take. Once the DM decides what the monsters will do, he should stick by it—he's on his honor not to switch actions after learning the players' decisions. After all, the monsters don't know what the PCs are going to do before they do it. If necessary, the DM can make notes about monster actions to remind himself of what they intend to do.

Generally, monsters and NPCs have the same actions available to them that the player characters do. They can charge, attack, or withdraw, just like the PCs. Monsters normally choose the most advantageous and sensible actions for the situation. Refer to Chapter Nine: Monsters, for more information.

## Step Two: Player Action Declaration

After the DM has decided what the monsters will do, each player must announce his character's action for the combat round.

## Step Three: Initiative

In this step, all characters in a fight determine when their declared actions actually take place. The *Player's Option* combat system resolves actions in a series of initiative phases, with the resolution time of different actions affected by weapon choice, creature size, and other factors. See Initiative, below, for more information on the initiative system.

## Step Four: Resolution of Actions

The declared actions of all characters and monsters are resolved using the initiative phase system. A character can abort his planned action and do something else, but the new action takes place at the very end of the combat round.

## Step Five: End-of-Round Resolution

After all actions have been resolved, there are several things that need to be done before the round ends. The four parts of this step are *fatigue*, *retreats*, *morale*, and *status*.

Fatigue is a measure of the character's endurance over a prolonged combat. At the end of each round, the character checks to see if the combat has lasted long enough for him to become fatigued or exhausted.

Retreats occur when a figure is forced to fall back by the press of the fight. This can have the effect of breaking up an enemy line or forcing the retreating character over a cliff, into quicksand, and so on.

The DM makes morale checks for the monsters, if appropriate. Most creatures don't care to carry a losing battle to their own deaths and will try to break off the fight if things aren't going their way.

Last but not least, characters who are suffering from spell effects, poison, or special critical hits suffer damage or fight off the effect. The exact procedure is determined by the type of condition the character is suffering from.

## Initiative

Timing is everything in combat. Does a fighter try to get in a quick blow before his enemy can react, or does he wait for a better opening? Who gets to go first when a barbarian warrior is trying to cut down a mage casting a spell? The initiative structure presented here is designed to answer those questions and provide your character with better alternatives for combat.

## The Initiative Roll

The *Player's Option* combat system resolves actions in five action phases: *very fast*, *fast*, *average*, *slow*, and *very slow*. A character's action phase is determined by his *base initiative*, modified by his weapon speed and the combat action he selects for the round. Striking at an opponent standing next to you doesn't take much time at all, but running halfway across the battlefield in a long charge will take a little more time.

At the beginning of each round of combat, both sides roll a d10. The side with the lowest roll wins initiative. In each action phase, the side that has won initiative attacks and moves first. In any given action phase for one side of a fight, attacks and spells occur before movement takes place. (In other words, if you and your companion both take an action in the average phase, your buddy gets to fire an arrow or cast a spell down that hallway before you actually begin running down it.) If there are fast creatures on both sides of the fight, the fast creature that won initiative strikes before the fast creature that lost initiative. Fast creatures strike before average creatures, even if the average creature's side won initiative.

Some initiative rolls provide unusual results:

- A roll of 1 accelerates the action phase of that side by one, so a slow character gets to go in the average phase;

- A roll of 10 slows the action phase of that side by one step;
- A tie results in a critical event. Reroll the initiative dice until one side or the other wins, and then consult the Critical Event Table below.

## Base Initiative

A creature's base initiative is the time it begins to move or makes an attack if it attacks without weapons. Monsters that normally fight with natural weaponry are simply assigned a base initiative determined by their size and speed.

| **Monster Size** | **Base Initiative** |
|---|---|
| Tiny or Small | Very Fast |
| Man-Sized | Fast |
| Large | Average |
| Huge | Slow |
| Gargantuan | Very Slow |

Improve base initiative one grade for a movement rate of 18 or better, and reduce base initiative one grade for a movement rate of 6 or less. Also, moderately encumbered characters and monsters suffer a one-phase initiative penalty, heavily encumbered creatures are slowed by two phases, and severely encumbered creatures suffer a three-phase initiative penalty.

Note that most player characters have a base initiative of fast. Remember, this doesn't take into account weapon speeds or combat actions. Record the character's base initiative on the character sheet—it's used in each and every round of combat.

## Weapon Speeds

Characters armed with weapons modify their base initiative with their *weapon speed*. All weapons are assigned a speed rating of fast, average, slow, or very slow. When the character makes an attack, his action phase is his base initiative or weapon speed, *whichever is later*. A fast human armed with a two-handed sword, a slow weapon, attacks in the slow phase of the round. The base initiatives of magical weapons are modified as follows:

| **Magical Bonus** | **Base Initiative Modifier** |
|---|---|
| +1 | none |
| +2 or +3 | one phase |
| +4 or more | two phases |

Thus, a human wielding a *two-handed sword +2* gains a one-phase modifier, attacking in the average phase rather than the slow phase.

## Critical Events

Strange things happen in the fog of war. Many battles hinge on a lucky break or an unforeseen complication. In the *Player's Option* combat system, this is reflected by the critical event roll.

Critical events are provided to add color and excitement to the melee. They create

openings or opportunities that quick-thinking PCs can take advantage of. They also allow the DM to present a more active and visual portrayal of the characters in battle.

The DM is free to rule that the critical event does not occur, or even alter it to reflect the exact circumstances of the battle. For example, if the battle is taking place on a mountainside beneath an overhang of snow, the DM can decide that the critical event is an avalanche triggered by the fighting.

As a general rule, critical events should not directly inflict damage to a character or creature, although they can force saving throw rolls or ability checks to avoid damage. Use critical events to create chaos and disorder on the battlefield, but avoid favoring one side or the other.

## Critical Event Table

| d20 roll | Result |
|---|---|
| 1–2 | Armor Trouble |
| 3–4 | Battlefield Damaged |
| 5 | Battlefield Shifts |
| 6 | Close Quarters |
| 7 | Item Damaged |
| 8 | Item Dropped |
| 9–11 | Knock Down |
| 12 | Lucky Break |
| 13 | Lucky Opening |
| 14–15 | Mount Trouble |
| 16 | Reinforcements |
| 17 | Retreat |
| 18 | Slip |
| 19–20 | Weapon Trouble |

### Armor Trouble

A random combatant has trouble with his armor. Roll 1d6 for the exact problem. The character can remedy the situation by spending one round standing still and repairing his armor.

| d6 roll | Result |
|---|---|
| 1–2 | Helm lost, victim's head is exposed |
| 3–5 | Shield lost |
| 6 | Plate lost, +2 to AC (plate armor only) |

### Battlefield Damaged

Something in or around the battlefield gets broken. If the fight occurs indoors, it might be a piece of furniture, a window, or a keg of ale.

### Battlefield Shifts

The tide of battle carries all figures 1d6 squares in a random direction from their current location. Nobody gains any attacks of opportunity.

### Close Quarters
Two enemies that threaten each other find themselves inside one another's reach and are effectively grappled.

### Item Damaged
A random combatant has something damaged by a wild swing. Choose anything except a weapon and roll an item saving throw to see if it broke.

### Item Dropped
As above, but the item is spilled, dropped, or cut free from the owner's person.

### Knock Down
A random combatant engaged in melee is knocked to the ground by a collision with someone near him. The nearest figure (friend or foe) must roll a successful saving throw vs. paralyzation or fall down next to him.

### Lucky Break
A random combatant is favored by fate and gains a +4 bonus to his Armor Class and saving throws for this round only.

### Lucky Opening
A random combatant sees his chance. He gets a +4 bonus to the attack roll against whatever enemy he had planned to attack this round.

### Mount Trouble
A random mounted combatant experiences difficulty with his animal. Roll 1d6:

| d6 roll | Result |
|---|---|
| 1–3 | Mount bolts. It sprints for 1d10 rounds in a random direction or until the rider rolls a successful riding proficiency check. |
| 4–5 | Mount rears. The rider must roll a successful riding proficiency check or fall off the mount. |
| 6 | Mount falls. The thrown rider must roll a successful saving throw vs. paralyzation or be stunned for 1d6 rounds. |

### Reinforcements
Allies of the DM's choice show up for one side or the other.

### Retreat
The press drives back all threatened figures of one side or the other. See Retreats, below.

### Slip
A random combatant slips and falls, spending the round on his back.

### Weapon Trouble

A random combatant experiences difficulty with his weapon. Roll 1d6:

| d6 roll | Result |
|---|---|
| 1–2 | Combatant disarmed unless a successful saving throw vs. paralyzation is rolled. |
| 3–5 | Hard parry may break weapon. Roll a successful item saving throw vs. crushing blow to avoid. |
| 6 | If the character killed an opponent last round, his weapon is stuck in the foe's body. Take a round to pull it out. |

## Combat Actions

Combat actions are basic strategies that a character can follow in a round of combat. Does Argath the Brave stand his ground and wait for the orcs to come to him, or does he charge rashly into the center of their line? Does Rowan the Mage cast a spell or spend her round moving to a better vantage point? You decide when you select your character's combat action for that round.

There are several factors involved in choosing a combat action. It is dangerous to do anything but attack or parry when your character is threatened by an adjacent opponent. It's downright useless to declare a charge when your character is grappled by a giant constrictor snake.

Player characters have the right to choose any action they like in combat, as long as they meet the basic requirements for it. (It makes no sense for a character without magical items to announce that he will use one for his combat action.) However, once the requirements have been met, all options are open. The DM should not disallow a combat action except under the most extreme circumstances. No matter how foolish or difficult something may seem, let the PC try it if he really wants to. (Of course, the DM can assign difficulty modifiers if she deems it necessary.)

The following choices are available as combat actions in the *Player's Option* combat system:

| Attack | Fire Missiles | Run |
|---|---|---|
| Cast a Spell | Guard | Sprint |
| Charge | Move | Use a Magical Item |
| Cover | Parry | |

Each of these actions is explained in more detail later in this section.

## Combat Actions and Movement

A character's choice of combat action governs how far he can move in a given combat round. For example, a wizard certainly can't move a considerable distance, picking his way through swinging weapons and uneven footing, while attempting to cast a spell, which requires great concentration and precision. Likewise, a warrior cannot safely withdraw from a fight merely by turning and walking away at normal speed. Certain kinds of actions naturally preclude movement, while other choices are actually more effective when larger distances are crossed. Some choices allow for a range of movment options.

The various combat actions fit into three basic movement categories. These categories

include no-move actions, half-move actions, and full-move actions. Some of the combat actions listed above may fit into only one category, while others may function with two or even all three types of movement.

### No-Move Actions

No-move actions are just that—the character performs some sort of action during her proper action phase, whether it is fighting an opponent or using a wand, without moving significantly during the round. Even if a character chooses any one of the no-move actions, however, she can still adjust her position during her action phase. She can move one square in any direction and choose any facing as a free adjustment to her position. If the character is threatened, she can adjust her position without provoking an attack of opportunity by making sure that her adjustment does not take her out of the enemy's front squares or turn her back to him. No-move actions include:

- Attack
- Cast a Spell
- Cover
- Fire/Throw Missiles (normal ROF)
- Guard
- Parry
- Unarmed Combat
- Use a Magical Item

### Half-Move Actions

Half-move actions allow a character to move up to half his normal movement rate and still perform some other action, such as attacking with a weapon or firing missiles. There are, however, limits to what can be done or how far a character can move and still accomplish these actions. Half-move actions include:

- Attack
- Charge
- Fire/Throw Missiles (half the normal ROF)
- Guard
- Unarmed Combat
- Withdraw

### Full-move Actions

Full-move actions involve a character moving his full normal movement rate (or even more, in some cases) before attempting other actions. Full-Move actions include:

- Charge
- Move
- Run
- Sprint

## Movement and Initiative

Compare these two actions: one character with a readied bow decides to fire at an orc chieftain 40 feet away, and a second character with a readied sword decides to run over to the orc and take a swing at him. Which action is resolved first? Obviously, the archer's attack will arrive before the swordsman gets his swing. Moving takes time, especially in a 10–15 second combat round.

Characters don't instantaneously blink across a battlefield just because it's their turn to move. They begin their move at one point in time and then finish moving sometime later. A character who begins his move when fast actions are resolved may finish his move while average or slow actions are resolved.

Movement always begins in a character's base initiative phase and is performed in half-move increments, one phase at a time. For a half-move action, the total amount of movement takes place in a single phase. For a full-move action, the character moves no more than half of his total movement in each of two consecutive phases, so a sprinting character is actually travelling 1.5 times his full normal movement in each of his two movement phases. After any movement is completed for the character, the rest of the combat action is resolved. Note that an action may be delayed by movement, but it will never occur sooner than normal because of movement. In other words, if a fast character with a two-handed sword (a slow weapon) chooses to make a half-move and attack, the half-move occurs in the fast phase, but the attack does not happen until the slow phase (unless the character was charging; see below).

Note that when several allies (characters or creatures that all won or lost initiative together) are acting in the same phase, characters performing actions do so before their companions begin to move.

*For example, Boldo the swordsman intends to take a half-move and attack an orc, while his companion, Fletcher the bowman, prepares to fire an arrow at it. If Boldo's half-move and Fletcher's shot both occur in the same phase, the arrow actually streaks toward the orc before the swordsman lunges forward to close with it.*

Also note that the 1-square adjustment of a no-move action is considered simultaneous with the action itself. Thus, the adjustment and the no-move action all occur before any normal movement is performed by allies who are eligible to do so during the same phase.

## Combat Movement on the Battle Map

When a character actually moves across the battlefield, don't pick up the figure and then drop it back down again several spaces away. Trace the exact path the character is following from square to square on the battle map. A character never knows when there is a trap he may trigger or an invisible enemy threatening part of his planned move.

Characters can make any facing changes they want with no cost in movement points during their move. Remember, too, that characters can make a single facing change during an enemy's move if the enemy moves adjacent to them.

## Moving Through Other Figures in Combat

A character can move through a square occupied by a friendly figure as long as that

figure isn't threatened or attacking in the current round. Enemies can only occupy the same square if they are grappled or if one is prone. Otherwise, larger creatures can attempt to make an overrun.

## Overruns

When a larger creature attempts to move into a smaller, standing enemy's square, it is called an overrun. Mounted figures use their mount's size for this purpose, so a human on a size L horse can overrun a human on foot. Overruns create an attack of opportunity for the figure being stepped on. After the defender's attack, the defender must roll a successful saving throw vs. paralyzation or be knocked down. Even if he does successfully save, he is forced one square away from his current location. This save is modified by a –4 penalty for a creature two sizes larger than the defender, a –8 penalty for a creature three sizes larger, etc.

*For example, a halfling (size S) gets in an ogre's way. After the halfing's attack of opportunity, he must roll a successful saving throw vs. paralyzation or be knocked down. The ogre is two sizes larger, so the saving throw is rolled with a –4 penalty. Even if the halfling successfully saves, he is forced out of the square.*

When a defender is knocked down by an overrunning creature, he may suffer a trampling attack. The trampler gets an attack of opportunity that inflicts 1d4 points of damage per difference in size. Even though the defender is prone, no modifiers apply; trampling is an afterthought on the attacker's part. The DM can adjust the damage as he sees fit; very dense creatures such as clay or stone golems may not be seriously hurt by even a giant's trample.

*Continuing our example, the halfling fails his saving throw and is knocked flat by the ogre's rush. The ogre gets a free attack of opportunity and rolls a hit. Since there is a two-category difference in size between them, the halfling suffers 2d4 points of damage. Being trampled by someone ten times your weight can be lethal.*

A prone creature with an enemy in its square may get up by using a full-move action. Since two standing enemy figures cannot occupy the same square, size always wins; the larger of the two creatures displaces the smaller one. In addition, the standing figure always chooses which square the displaced figure enters. If the creatures are of the same size, an opposed Strength roll is made to determine who stays and who is displaced.

*Concluding our example, the halfling decides to rise again to avoid getting trampled some more. Since the ogre is larger than the halfling, the halfling must be displaced one square in order to rise. Since the ogre is also the standing creature, it decides which square the halfling is displaced to. If the roles had been reversed, with the halfling in the square of a prone ogre that wished to stand, the halfling would still have to be displaced, since it is smaller. However, this time the halfing, which is the standing figure, chooses which square to be displaced to.*

Of course, the standing figure might wish to keep the other figure from rising, or the

prone figure might decide to fight it out rather than try to rise. If one figure wishes to keep another figure prone, an overbearing attack is necessary, but treat the situation as if the attack roll to hit AC 10 is automatically successful (see Overbearing, Chapter Five).

## Choosing an Action

When it is time for a character to select an action for the round, the action is chosen independently without selecting a movement category beforehand. For example, if a warrior chooses to attack, there is no need to declare whether this is a no-move attack or a half-move and attack. The player simply announces that his warrior intends to attack.

This allows some flexibility in the system so that the ebb and flow of battle does not thwart the characters' actions each round. By waiting until a character's action phase occurs to determine how much movement is needed to perform a chosen action, much of this problem is eliminated.

Still, there are times when characters may be prevented from completing their action by a change in their situation. A spellcaster may have his spell interrupted, or a fleeing character may find himself trapped with no place to run. When a character's action is prevented by an enemy's interference, the action is lost for the round and the character can take no other action for that round.

On the other hand, characters may sometimes start an action and then think better of it. A character may begin a charge and then pull up short when he realizes he is about to run into a hedge of pikes, or a character who had planned to fire a crossbow may suddenly recognize his target as a potential ally.

At that point, a character can choose to either hold or abort a combat action when his action phase arises. Holding an action simply involves delaying the intended action for one or more action phases.

*For example, Tyar the Glorious wins initiative and declares that he will attack (because there is an orc in front of him). Tyar would normally perform his attack on the average phase, due to his long sword. However, on the fast phase Twillo the Sly, Tyar's thiefly companion, successfully kills the orc with a backstabbing attack. Tyar sees an ogre that will most likely advance during the average phase, but only after Tyar is elligible to take his attack (since Tyar won initiative). Tyar decides to hold his attack until the slow phase so that he can attack the ogre after it advances.*

A character may also choose to abort his planned action in favor of another. There are some limits to the new choice of actions, and the character's turn automatically bounces to immediately after the very slow phase of the combat round. It is treated like an extra phase and is resolved normally in all respects. See the individual action choices for more details.

## The Actions

Below are listed each of the actions available to a character and how they are resolved.

### Attack

This is the basic action for characters and monsters in a fight. When a character chooses to attack, he makes his normal hand-held weapon attacks. Characters and creatures can

make a half-move and attack or they can stand their ground and attack as a no-move action.

Monsters with multiple attacks perform all their attacks on the same phase. If a dragon attacks with average speed, its bite, claws, tail, and wing buffets all take place in the average phase of the combat round. Characters using a weapon in each hand strike in the same fashion, during the action phase of the slower weapon.

Characters who have multiple attacks with the same weapon (such as high-level fighters or weapon specialists) make their first attack normally and then make one attack each phase thereafter until they've resolved all of their multiple attacks. A long sword specialist with two attacks in a round makes his first attack in the average phase and his second in the slow phase of the round.

Normally, a character can combine a move and an attack only by moving first and resolving attacks later. However, a character can choose to attack first and then make a half-move at the end of the round. Note that characters can adjust their position each time they attack, so a hero with multiple attacks could attack several creatures standing apart from each other.

Attacks of opportunity (see Threatening) do not count as a character's attack for the round. It is possible for a creature to get more attacks than normal if its opponent provides it with an opening for an attack of opportunity.

Characters and monsters may choose a number of attack options, such as *grab*, *block*, *trap*, or *disarm*. The fighter might use his bill-hook to pull a mounted opponent off his horse, or he might try to trip the animal. He could even go on the defensive and try to block his enemy's blow. Refer to Attack Options in Chapter Two for more information about the various alternatives.

## Cast a Spell

Wizards and priests may choose to cast spells during combat. All spells are assigned an action phase just as weapons are. The character is considered to begin casting in the very fast phase and to finish in the spell's action phase. If the spellcaster is injured by an attack during the casting, the spell is lost.

Spells and spell-like abilities are assigned action phases based on their casting times:

| **Casting Time** | **Phase** |
|---|---|
| 1–3 | Fast |
| 4–6 | Average |
| 7–9 | Slow |
| 1 round or more | Very Slow |

When a character casts a spell, she loses any Dexterity benefit to her Armor Class, since she must hold still and concentrate to make the spell work. After the spell has been cast, the mage or priest may apply her Dexterity bonus to her Armor Class again. If the spellcaster doesn't cast a very slow spell, she can take a half-move at the end of the round.

Psionic powers take effect during a randomly determined phase, regardless of the psionic creature's regular Base Phase.

**Random Psionic Initiative**

| d10 roll* | Base Phase |
|---|---|
| 1-2 | Very Fast |
| 3-4 | Fast |
| 5-6 | Average |
| 7-8 | Slow |
| 9-10 | Very Slow |

*Add the power's Preparation Time to this roll.

## Charge

Characters and monsters can charge to rapidly close for combat and make an attack. Charging is a full-move action, but a charging character may move 11/2 times his base movement when he charges. A knight with a movement of 6 can charge an enemy up to 9 spaces away.

Characters begin their charge on their base initiative, moving up to one-half the distance of the charge. In the following phase, they move the remainder of the distance. Unlike most attack forms, the charge attack is resolved the moment the attacker arrives. If the knight above has a base initiative of fast and an opponent is standing 7 squares away, the knight moves 5 spaces in the fast phase and 2 more in the average phase, at which point he attacks immediately.

Charging (which might more accurately be called the reckless attack) gives characters several advantages but also imposes some penalties. The charging character gains a +2 bonus on his attack roll. Some weapons, such as lances, are suited for charging and inflict double damage when used in a charge.

Because they are so intent on the attack, however, charging characters are at a disadvantage defensively. They lose all Dexterity bonuses to Armor Class and suffer a +1 penalty to AC in addition to that. Guarding characters with weapons longer than the charger's automatically strike first. In addition, characters can set spears (see Guard) against charges.

## Cover

A character with a cocked and loaded crossbow, or an arrow nocked and drawn in a bow, can announce that he is covering an opponent within his weapon's short range. The covering character can only choose to cover a single square on the board, as long as that square is within the weapon's short range and in sight. Only characters with a weapon proficiency slot in bow or crossbow can cover someone in this manner. Covering situations usually are created by the circumstances of the initial encounter; for example, an archer may surprise his enemy, cover him, and order him to drop his weapon. Characters can also declare a combat action to cover someone.

Since the arrow or bolt is ready to be fired, the covering character's first shot is fast (or very fast if the character is a specialist.) See Bows and Crossbows in Chapter Seven. The covering character automatically wins initiative against the covered target. It is possible for a very fast creature to beat out the shot of a proficient archer, but even very fast creatures can be covered by a specialist.

The character can hold his cover until later in the round, if he wants to see what his

target is going to do. He can fire first in any later phase. After the first shot has been loosed, the covering character can perform the rest of his missile fire at the regular action phase and rate of fire.

The covering shot itself is made with a +2 bonus to the attack roll. Covering is handy for freezing opponents in their tracks, since everybody knows how quickly an arrow or bolt can be released once it is drawn.

Covering can also be used with any hand-held bladed weapon—basically, the character puts her sword to an opponent's throat in a single adjacent square and menaces him. The victim must be stunned, dazed, pinned, unconscious, or surprised for a character to cover him with a melee weapon. As with bows and crossbows, the covering character automatically wins initiative against her target and can attack in the fast phase, or in the very fast phase if she is a specialist. The attack is made with a +2 bonus to hit, and the critical number (see Critical Hits in Chapter Six) drops to a 16.

### Fire/Throw Missiles

Firing missiles and throwing hand-held weapons (including splashing holy water or oil) is another basic action that is very common in combat. The character can stand still and attack at his full rate of fire, or he can make a half-move and fire or throw missiles at 1/2 his normal rate.

The one exception to this move-and-fire routine is for missile weapons that have a rate of fire less than 1/round (this includes large crossbows and most firearms). In this case, the character wielding such a weapon can move half his normal rate and still fire the weapon *only on the initial discharge of the weapon*. The weapon is assumed to be loaded and cocked. After this first shot, the character can only fire the weapon as a no-move action.

Firing or throwing missiles is dangerous when a character is threatened by another creature, since it creates an attack of opportunity. The only exception to this rule is during the same combat round that the threatening creature actually moves up to threaten the character. The character can get his shots in while his enemy closes, but after that he had better switch to a melee weapon.

Characters with multiple missile attacks in the same combat round perform their first attack on the normal action phase, and then follow with one missile per phase until they've completed their full rate of fire. For example, a dart specialist has 3 attacks per round with his darts, a fast weapon. He therefore throws his first dart in the fast phase, the second in the average phase, and the third in the slow phase.

Some monsters, such as manticores, may have multiple missiles that are fired simultaneously. These attacks are all resolved in the same phase.

### Guard

When a character guards, she waits for her opponents to come to her. Guarding is a half-move action, or a no-move action if the character stands her ground. A guarding character strikes the moment an attacker moves into the guarding character's threatening squares, regardless of her actual initiative and action phase. The only way an enemy can attack a guarding character first is with a longer-ranged weapon.

If a guarding character is attacked by a charging character, the character that won initiative attacks first (unless one of the characters has a longer-ranged weapon than the

other). If both the charging and guarding characters have weapons of equal range, then the character with the larger weapon strikes first. Guarding characters are considered to be *set for charge*, and spears and spear-like polearms inflict double damage against charging creatures (see Chapter Seven).

*For example, Aerwen loses initiative and is armed with a long sword, normally a weapon of average speed. A very fast size M creature takes a half-move to attack her with claws in the fast phase, but since Aerwen is guarding, she attacks first. If the very fast creature were charging, it would attack first since it won initiative for the round. If Aerwen had a long spear (range 2), she would get the first blow despite the creature's charge.*

If no one attacks a guarding character, she can abort to an attack at the end of the round and take a half-move to reach someone.

### Move

Moving allows a character to cover a lot of ground without dropping his defenses. Moving is normally a full-move action, but if a character only moves half his maximum move or less, he can consider it a half-move action instead.

Movement normally begins on a character's base initiative, without modifiers for weapon speed. Each half-move a character makes requires one phase, so a fast character does half his move in the fast phase and finishes his move in the average phase.

### Parry

Sometimes the best thing to do is take cover and try not to get clobbered. Any character can choose to parry as a combat action. Parrying is a no-move action that is in effect for the entire combat round. If a character parries, he cannot move, attack, or cast spells.

Parrying reduces a nonwarrior character's Armor Class by one-half his level. A 6th-level wizard with an AC of 5 who parries reduces his AC to 2. Warriors who choose to parry reduce their AC by one-half their level, plus one. A 6th-level fighter gets an AC bonus of 4 by parrying.

### Run

A character can double his base movement by running. Running is considered a full-move action; the character can't do anything else in the same combat round that he runs. Running on a battlefield is dangerous; the character loses all Dexterity bonuses to his Armor Class and suffers a +1 AC penalty on top of that. In addition, he is considered to be charging if he runs into a square threatened by an opponent with a set spear.

Characters can maintain a run as long as they have the necessary fatigue points (see Fatigue, below). Outside of combat, they can run for a number of rounds equal to their Constitution score. After that, they must stop and rest. See Jogging and Running in the *Player's Handbook* under Chapter 14: Time and Movement for more information.

### Sprint

A character can triple his base movement by sprinting. Like running, sprinting is a full-move action that drops the character's defenses for the round.

## Unarmed Combat

Any character may choose to make an unarmed attack instead of attacking with his weapons. There are four basic types of unarmed combat: punching, wrestling, overbearing, and martial arts. Refer to Chapter Five for more information on resolving unarmed attacks.

A character can perform an unarmed attack on his base initiative if he doesn't have to move to reach his target, or he can take a half-move action to close for combat. Attacking armed opponents (including monsters with natural attacks) is dangerous for an unarmed fighter; if the character attacks an armed creature that is threatening him, he suffers an immediate attack of opportunity from his intended victim. The armed defender gains a +4 bonus on his attack roll and his damage roll against an unarmed attacker.

Monsters with natural weaponry almost never make unarmed attacks. However, it is possible for intelligent creatures to "pull in their claws" and try to batter a character into unconsciousness. Monsters without natural attacks may resort to unarmed combat if they are disarmed or want to capture their enemy.

## Use A Magical Item

Generally, a character can use a magical item as a fast action or make a half-move and use an item as an average action. Some magical items take more or less time, as noted below:

| **Item** | **Phase** |
|---|---|
| Potion | Average |
| Scroll | Very Slow |
| Rod, Staff, or Wand | Fast |
| Miscellaneous Magical Item | Average |

For most magical items with functions that do not emulate combat or spellcasting actions, the magic of the item is activated during the resolution step at the end of the round. In a few cases where powers take an unusual amount of time to activate, the DM is the final arbiter. If an item combines weapon-like characteristics and miscellaneous magic, such as a rod of lordly might, it should be treated as a weapon when being used to attack and as a magical item when its other functions are being used.

## Withdraw

Withdrawing is the only safe way to leave a square that is threatened by an opponent. When a character withdraws, he backs carefully away from his opponent without turning his back or creating an attack of opportunity for his opponent.

Withdrawing is a half-move that takes place on the character's base initiative. A withdrawing character cannot attack or cast spells, although he can still get attacks of opportunity.

## Ending the Combat Round

After all the combat actions have been resolved, it is time to finish up the round and get ready for the next one. The end of the round is a time to take care of any loose ends or bookkeeping that needs to be looked after. The four major items that are addressed at the end of the round are *retreats*, *fatigue*, *morale*, and *status*.

## Retreats

When one character inflicts melee damage (but not as a result of missile combat) on an enemy without being hit in return, she may force her foe to retreat, driving him back with well-aimed blows. The attacker doesn't have to force her enemy back; she can decide to let him stand fast and not press the advantage. A defender can ignore the requirement to retreat if he is 4 or more levels/Hit Dice higher than the attacker or if he is two sizes larger than the attacker. A retreat cannot occur if the enemy was knocked down during the round.

When a character retreats, he must move backward into one of his rear spaces chosen by the attacker. If there is no place to retreat directly behind him, the attacker must choose one of the retreating character's flank spaces. If the character is unable to retreat into any rear or flank space, he must roll a successful saving throw vs. paralyzation or be knocked down in the space he is in. In some special situations, the DM may allow a retreating character a chance to avoid being forced back. This allows a character with his back to a cliff (for example) to avoid giving ground.

The creature who forces a retreat may follow her retreating enemy, keeping her foe in a threatened square. The attacker can instead choose to back her enemy off and then hold her own position.

Retreats are good for breaking up enemy battle-lines or for maneuvering an enemy into a battlefield hazard. Retreats can also be used to disengage from a threatening creature by driving it back. Retreats don't create attacks of opportunity for the creature forcing the retreat; this is the end of the combat round and everyone is finished attacking for the round. However, the retreating creature may have been pushed into a situation where his rear or flank is exposed to an enemy during the next round of combat.

## Fatigue

Fighting a prolonged battle can be exhausting. Only the most heroic characters can stand fast against wave after wave of foes without tiring. The various character classes gain a number of fatigue points equal to their base Hit Die value. In other words, a warrior has 10 fatigue points, a thief 6, etc. Warriors gain one additional fatigue point each time they gain a level; nonwarriors gain one fatigue point every two levels. This value is modified by the hit-point bonus or penalty for Constitution.

For monsters, fatigue points are equal to 8 (since monsters use a d8 for their Hit Dice) plus the number of Hit Dice, rounded down. Thus an ogre (4+1 Hit Dice) has 12 fatigue points.

### Keeping Track of Fatigue

Characters and monsters start off in a fresh state. In every phase that a character or monster moves or attacks, check off one fatigue point. When the total reaches 0, the character or creature is fatigued. Reset the fatigue score back to its original value and check off two points in every phase that movement or combat takes place. When the score reaches 0 again, the creature is exhausted.

### Effects of Fatigue

Characters and monsters who are fatigued move and fight as if they were encumbered

one category more than they really are. For example, A character who was moderately encumbered becomes heavily encumbered when he is fatigued.

Exhausted characters move and fight as if they were encumbered two categories more than normal. An exhausted, moderately encumbered character moves and fights as if he were severely encumbered. Usually, exhausted characters are well-advised to catch their breath.

### Recovering from Fatigue

If a character or monster spends one round resting, making no moves or attacks of any kind, he gets the chance to recover one category of fatigue (exhausted to fatigued, fatigued to fresh) by rolling a successful saving throw vs. paralyzation. Characters modify the die roll by a cumulative +1 bonus for each consecutive round they spend resting. The character's hit-point bonus for exceptional Constitution is also used as a modifier to the recovery roll.

When a character recovers a fatigue category, his fatigue number is re-set all the way back to its original value. He gets a second wind and can rejoin the fray.

### Effects of Force Marching on Fatigue

Whenever characters have failed a Constitution check as a result of force marching and are still in the process of recovering (see the *PHB*, Chapter 14: Time and Movement, under Cross-Country Movement), they automatically begin the combat in a fatigued state rather than fresh. Fatigue points are consumed at the doubled rate and all the penalties for being fatigued (as well as the penalties for force marching) apply, until a state of exhaustion is reached. Furthermore, creatures cannot return to a fully fresh state during the battle; only the noncombat recovery period for force marching can remove this restriction.

## Morale

The end of the round is also the time for morale checks. Remember, player characters never need to check morale; they're smart enough to know when to cut and run, and foolish enough not to run when they should. However, NPC allies or followers of the PCs may decide to abandon them if things go poorly.

Morale is discussed at length in the *Dungeon Master Guide*, so it won't be reiterated here. The DM is not required to make a morale roll every round; he can use his own judgment to decide when someone might be thinking of calling it a day. Some good guidelines of when monsters or NPCs might make morale checks:

- When surprised;
- When faced by an obviously superior enemy force;
- When an ally is slain by magic;
- When 25% of their group has fallen;
- When 50% of their group has fallen;
- When their leader deserts or is killed;
- When they are fighting an enemy that can't be hurt by their weapons;
- When they are offered a chance to surrender and they've already met one other condition for a morale check.

### Informal Morale Checks

The DM can always just decide if a creature or NPC passes its morale check, without even rolling dice. The DM should be fair with this; it'll quickly annoy the players if their trusted henchmen run away through DM capriciousness at the first sign of trouble.

### Formal Morale Checks

A formal morale check is a comparison of a 2d10 roll against the creature's base Morale rating, modified for the situation. An extensive list of modifiers appear on the DM Screen and under Morale in Chapter 9: Combat in the *Dungeon Master Guide*.

### Failing a Morale Check

When a character or group of monsters fails a morale check, their first consideration is to get away from the fight. If they fail by a small margin (say, 1 or 2 on the die roll), they try to withdraw in good order. If they fail by a large margin, they break off the fight and flee for their lives. Intelligent creatures may try to surrender if there is no place for them to run, or if they think they won't be able to get away.

## Status

This is a catch-all phrase for any condition or situation that may affect the actions next round. Did a character get knocked down during the fight? He'll start the next round prone. Generally, magical effects and continuing damage (poison, burning, acid, etc.) actually inflict their damage in this part of the combat round.

## Special Combat Conditions

There are a number of special situations that can arise in the course of a fight, through natural circumstances or military planning. Someone might fall down or be incapacitated by a spell. A battle fought in a thick, tangled forest may limit archery to shots of 30 feet or less. Stinging snowstorms or sandstorms may limit visibility and carry away light missiles. The side that considers the characteristics of the battlefield in its tactics often gains an advantage over its enemies. Chapter Three describes battlefields in great detail, but there are a few special rules that should be mentioned here.

## Standard and Optional AD&D Rules

These rules can all be found in the *Player's Handbook* and/or the *Dungeon Master Guide*. Even if they are listed as optional rules in the core rule books, they are a standard part of the *Player's Option* combat system. They are presented again here (with any necessary combat system alterations and additions) for ease of reference. Refer to Chapter 9: Combat in the *PHB* and *DMG* for more details.

### Movement and Footing

Ground characteristics may drastically limit a character's ability to move in a fight. The movement reductions listed below apply to the character's base movement, so a character with a normal move of 12 spaces would be reduced to a move of four spaces in heavy brush. If a character passes through multiple ground types in one round, he uses the worst of the modifiers.

| Condition | Reduce Move by |
|---|---|
| Heavy brush or thicket | 2/3 |
| Light brush or forest | 1/3 |
| Ice or slippery footing | 1/3 |
| Steep slope or rough ground | 1/2 |
| Knee-deep snow, water, or soft sand | 1/3 |
| Waist-deep snow or water | 1/2 |
| Shoulder-deep snow or water | 2/3 |

## Cover and Concealment

Concealment and cover work only against missile fire, and cover also provides a bonus to saving throw rolls where an effect causes physical damage, like a fireball spell.

The amount of the target that is concealed or covered determines the penalty to any missile attacks made against the target.

| Target is: | Cover | Concealment |
|---|---|---|
| 25% hidden | –2 | –1 |
| 50% hidden | –4 | –2 |
| 75% hidden | –7 | –3 |
| 90% hidden | –10 | –4 |

A target is impossible to hit when it is completely blocked from the archer by cover.

**Line of Fire.** A figure's line of fire is considered to run from the center of its square to the center of the target's square. If the line of fire passes through any part of a square containing an obstacle, the target is considered to be covered or concealed to some extent. The DM can decide whether the target is 25%, 50%, 75%, or 90% screened, or he can roll randomly if it is not clear. If the line of fire passes through a square containing a figure engaged in melee, the archer must use the rules for firing into a melee to determine where his shot goes.

Note that intelligent creatures who are facing the archer will usually use the screening object for its maximum effect, while animals and monsters that aren't intelligent (Int 1 or less) will rarely try to screen themselves against an archer's fire.

If there's any question about which squares the line of fire passes through, you can use a string, a ruler, or the edge of a card to check the missile's path.

## Mounts

Mounts provide their rider with a +1 bonus to attack rolls when fighting against unmounted opponents, while the opponents suffer a –1 penalty to attacks against the rider (there is no penalty to attack the mount itself). Most mounts are fairly large and can overrun smaller creatures. A normal human on horseback can use his mount's speed and size to trample his opponents underfoot (see Overrun). Many mounts are also capable of making attacks along with their rider.

## Rear or Flank Attacks

If a creature is able to position itself for a rear or flank attack, it gains a significant

advantage. Flank attacks get a +1 bonus to hit, and rear attacks a +2 bonus. A thief attacking from the rear can declare a *backstab* and gain a +4 bonus to his attack roll. In addition to the attacker advantages, the defender's shield doesn't help against flank attacks on his unshielded side nor on *any* rear attacks. Last but not least, the defender's Dexterity adjustment doesn't count against rear attacks, since the defender can't see the attack coming and attempt to dodge it.

### Sitting, Kneeling, and Lying Prone

Characters may sit, kneel, or fall prone as a no-move action. Getting up from sitting or kneeling is considered a half-move action, so a character can stand and still fire a missile or make an attack. Standing up from a prone position is treated as a full-move action, so the character can do nothing else in that round except rise.

Sitting or kneeling characters are slightly harder to hit with missiles or thrown weapons; they gain an Armor Class bonus of –1 against any ranged attacks. However, they're at a disadvantage in melee. Anyone making a melee attack against a sitting or kneeling character gains a +2 bonus to hit them.

Prone characters present very small missile targets and gain an AC bonus of –2 versus ranged attacks. However, they are very vulnerable to anyone close enough to threaten them. Melee attacks against prone characters gain a +4 bonus to hit.

Kneeling characters can use any weapon with no penalty. Sitting characters can only use crossbows without a penalty; with any other weapon, they suffer a –2 penalty to their attack rolls. (Note that characters on horseback are mounted, not sitting!) Prone characters can only use crossbows or size S weapons while they're on the ground. A prone character firing a crossbow attacks at one-half the normal rate of fire and makes any melee attacks with a –4 penalty to hit.

### Damage and Dying

Creatures reduced to negative hit points are incapacitated and begin losing 1 hit point per round until they reach –10, at which point they die. A creature's loss of hit points can be halted by binding its wounds, using the healing proficiency, or casting some kind of curative magic on the victim.

Characters who have been reduced to 0 hit points or less are helpless; they can't tend their own wounds or take any actions. At exactly 0 hit points, the character is simply unconscious, and remains so until healed or until 2d6 full turns pass. If a character's death is prevented by binding his wounds or healing him, the character is completely helpless for at least 24 hours.

It is dangerous to leave characters at a negative hit point total for long. Each day that a character begins with negative hit points, roll a d10 and compare it with the absolute value of the character's hit points (in other words, take into account only the numerical value of the hit points, ignoring the negative sign). If the die roll is less than this numerical score, the character loses 1d4 additional hit points. This additional loss of hit points can be avoided if someone with the healing proficiency is there to tend to the patient, or if curative magic is used.

*For example, Gorathan the Unlucky was badly mauled by a dire wolf and reduced to –5 hit points. His companions bound his wounds, but no clerics or proficient healers were*

*nearby, so Gorathan didn't recover any hit points. The next day, a d10 is rolled to see if he worsens or not. If the roll is a 4 or less (which is less than the "5" of Gorathan's –5 hit points), Gorathan loses 1d4 additional hit points. If the roll is a 5 or better, Gorathan recovers hit points normally for a day of bed rest. If Gorathan has some bad rolls, he might not make it.*

### Weapon Type vs. Armor Type

Some weapons have an innate advantage against certain types of armor. In the Middle Ages, hundreds of weapons were designed for the purpose of penetrating heavy armor. Weapon types and armor types are explored in more detail in Chapter Seven.

### Firing Into a Melee

Throughout the ages, friendly fire has been a significant threat on the battlefield. In the *Player's Option* combat system, the shorter combat round means that archers can't wait to pick and choose their shots. They have to fire or hold their fire in an instant.

A melee is defined as any situation in which one creature threatens another. Firing or throwing missiles at either of the two engaged creatures requires the shooter to roll to see which figure he actually attacks. All creatures that are threatened or threatening one another in the same group are included, so the archer is guaranteed of at least firing at the right engagement.

To determine the actual target, assign each Man-sized target 1 point on a die. Small-sized targets get 1/2 a point, Large targets 2 points, Huge targets 4 points, and Gargantuan targets 6 points.

## Additional Rules

These rules are specific to the *Player's Option* combat system.

### Higher Ground

If the attacker's waist is higher than his opponent's head, he gains a +1 bonus to his attack rolls. Stairways, tabletops, and steep slopes may create higher-ground opportunities for a character in combat. This doesn't apply to colossal creatures such as giants who are fighting on level ground against much shorter characters, nor does it apply to mounted characters; they already get a bonus.

### Knockdowns

Some creatures can smash their opponents to the ground with raw strength or heavy weaponry. Knockdowns are based on the size of the attacker's weapon compared to the size of the defender.

Every weapon (including monster attacks) is assigned a *knockdown* die that is rolled when a hit is scored. Light weapons have a small die, while heavy weapons use a d10 or d12 for knockdowns. The size of the target determines what roll is required for a knockdown.

| Target Size | Knockdown Roll |
|---|---|
| T | 3 |
| S | 5 |

| | |
|---|---|
| M | 7 |
| L | 9 |
| H | 11 |

Don't confuse the knockdown die with the actual damage caused by the hit; they are two different things. It is a little quicker to roll the knockdown chance along with the damage dice, but don't feel like you have to.

Obviously, some creatures are immune to knockdowns. An ochre jelly, black pudding, or fire elemental can't really be knocked down, nor could a crocodile or shark in the water. In addition, some monsters may be unusually resistant to knockdown effects.

**Knockdown Effects.** Creatures who suffer a knockdown must roll a successful saving throw vs. death or be knocked prone. The victim can stand up by forfeiting a half-move or an attack. If he has already completed his actions for the round, he has to wait until next round to stand up. Refer to Sitting, Kneeling, and Prone above for more information about being on the ground.

Any character or creature armed with a loaded and cocked crossbow or firearm that is knocked down must roll a successful saving throw vs. paralyzation or accidentally fire the weapon.

**Monsters and Knockdowns.** Monsters who wield weapons can use the knockdown die size that is listed for that weapon, and then modify the die for their own size. Increase the die one step for each Size category larger than Man-sized, or decrease it for each one under. For example, an ogre is wielding a morningstar, which normally has a knockdown die of d10. Because the ogre is Size L, one size larger than Man-sized, the knockdown die increases to a d12.

For monsters with natural attacks, choose a weapon that seems close to the attack type and then modify it for the monster's size. An adult dragon's claws may be like long swords. A wyvern's sting might be similar to a spear. Monsters may resist knockdowns better if they have four or more legs, are exceptionally dense or low-built, or seem generally tougher than normal.

### Critical Hits

Although critical hits are mentioned in the core AD&D rules as an option, this system works differently than any provided there. A critical hit may occur when a character rolls exceptionally well during his attack. The attack roll must be a natural 18 or higher, and the roll must hit the target by at least 5. A 1st-level fighter with a THAC0 of 20 can achieve a critical against an opponent with AC 5, since he can roll a 20 and hit him with 5 to spare, but he can't get a critical against an opponent with AC 4 (or better).

As a basic rule, critical hits inflict double damage. However, Chapter Six is devoted to the topic of critical hits and presents an integrated system that accounts for the strength of the blow, the location injured, and a dash of luck.

If PCs can get critical hits with great attack rolls, monsters should be able to as well. Otherwise, the balance of the game shifts in favor of the player characters.

## The Gray Areas

Opponents who are facing off across squares that are partially blocked by solid obstacles may or may not be able to effectively attack one another. For example, two opponents are facing each other diagonally where a wall corner abutts the intersection of their squares. Half of the people using the *Player's Option* combat system will argue that they can attack each other, and half of them will argue against it. The same problem arises when considering whether or not figures can occupy half squares (like any square that is bisected by a diagonal wall). Some people will argue for such a rule, and some will argue against it.

The answer to these and other similar gray areas of figure placement and movement is, it doesn't really matter, as long as the solution is equitable. If characters can attack around corners, then so can monsters. If you don't want it to happen, then it doesn't—for characters or monsters. Neither choice skews the system to favor anyone, so both solutions are equally viable. Just decide as a group beforehand how you want to handle the situation, then stick with it. These kinds of situations and conditions are way too numerous to mention or adjudicate within these pages, but the guidelines set out above should give the DM and players enough to work with.

### Example of Combat

Here's the scenario: four adventurers are exploring the dungeons beneath a ruined temple when they encounter a guardroom with six bugbears armed with morningstars. The heroes are Dain, a dwarf fighter with 13 fatigue points; Pascal, a human paladin with 10 fatigue points; Lyssa, an elven mage with 4 fatigue points; and Damiar, a half-elven thief with 6 fatigue points. The bugbears each have 11 fatigue points (Monsters get 8 points plus their Hit Dice, in this case 3+1). None of the members of either group are considered encumbered.

No one is surprised, so the DM places the bugbears in their room and tells the players to arrange their heroes in the doorway. Since Damiar opened the door, the DM decides that Damiar must be in front, even though Dain usually takes point in the marching order.

## Round One

First, the DM decides what the bugbears are going to do. The two on the flanks move to take cover, the one in the middle flips the table for cover, his companions close for combat, and the last bugbear is still getting out of bed and decides to wait and see what happens. Now the DM asks each of the players what their characters will do:

*Damiar: "I'll shoot at the nearest bugbear."*
*Pascal: "Bugbears? We can take them. I'll close for an attack!"*
*Lyssa: "I'll throw a sleep spell."*
*Dain: "There might be more of 'em around. I'll cover the hallway with my crossbow."*

Everyone has declared an action, so it's time to roll initiative. The DM rolls a 5, but the players beat him with a roll of 3. Now, the DM begins with very fast actions and starts working through the round.

*DM: "Okay, nobody's very fast this round. You guys won initiative, so who's fast?"*
*Lyssa: "My sleep spell's fast."*
*Pascal: "I start moving."*
*DM: "Where do you want to center your spell, Lyssa?"*
*Damiar: "Don't catch us with it!"*
*Lyssa: "I'll center it on the bugbear in the middle of the room." (Rolls effect) "My spell affects 5 Hit Dice of bugbears."*

*DM: "Sorry, that's only one. He's out."*
*Pascal: "I'm moving! I'll jump on the table in front of them."*
*DM: "No problem. You threaten the bugbear, and he threatens you. Don't forget to mark a fatigue point off. That's it for fast. Let's go on to average actions."*

The bugbear's base initiative is average, but the players won initiative and get to resolve their average actions first. Pascal is wielding an average-speed long sword.

*Damiar: "My first bowshot is average. I rolled a 20! Is that a critical hit?"*

Damiar's adjusted THAC0 with his longbow is a 16, so he hit an AC –4 with his roll of 20. The bugbears are only AC 5, so he easily hits the bugbear with a good enough roll to critically hit the monster. The basic critical rule is double damage dice, but the DM could use the critical hit rules in Chapter Six if he wanted to. With doubled damage, Damiar rolls 2d8 for his sheaf arrow and tags the bugbear for 15 points of damage, dropping it with one shot!

The two bugbears moving under cover begin their moves now. The last bugbear meets Pascal. Pascal gets her attack first, but even with a +1 bonus for height advantage, she misses. Her opponent misses her as well. Damiar uses his second bow shot and fires at a bugbear using cover, missing by a mile.

At the end of the round, Pascal and Damiar have each used two points of fatigue, while Dain and Lyssa have used none. The two bugbears that took cover have each used one, while the one locked in combat has used two. There are no retreats, but the DM decides that a morale check is in order since the bugbears have seen two of their fellows knocked out of action. The bugbears pass the check, and the round is over.

## Round Two

The DM decides that the two bugbears on the flanks remain under cover this round and guard. The bugbear engaging Pascal decides to take a half-move and attack, looking to open the range and take advantage of its longer reach. The last bugbear will move up to join the fight and engage Pascal. The players state their actions:

*Pascal: "I'll stand my ground and attack."*
*Lyssa: "I'm going to move into the room to find a place to cast my next spell."*
*Damiar: "I'll try and shoot at the bugbear hiding around the corner. Maybe I'll get lucky."*
*Dain: "You guys are doing okay without me. I'll keep covering this hallway."*
*DM: "Roll initiative, everybody."*

The players win initiative again, rolling a 1. This accelerates their actions by a phase. In the very fast phase, Lyssa moves into the room. This time, Pascal's average sword attack becomes a fast action, as does Damiar's bow shot. Pascal misses her bugbear, but Damiar rolls another 20!

This time, Damiar's 20 is not a critical hit. The DM rules that the bugbear is under 75% cover, so it has a 7-point bonus to its Armor Class, making it effectively AC –2. Since Damiar's adjusted THAC0 is a 16, he only hit by 2, and he needed to hit by 5 to get

another critical hit. The bugbear is wounded but still has some fight left in it.

In the average phase, Damiar fires his second arrow but misses. Finally, the bugbears can begin to move. The bugbear that is threatened by Pascal backs away, provoking an attack of opportunity. Pascal rolls her free attack but misses. The last bugbear closes to within two spaces. Since the bugbears are Large creatures armed with weapons, they can still reach Pascal.

*DM: "We're up to slow actions, and the two bugbears fighting Pascal get to make their attacks." (Rolls two attacks.) "You're lucky, they both missed. At the end of the round, nobody has to retreat. Everybody keep track of how many fatigue points you've used. Pascal, you used up two again this turn, due to your attack of opportunity."*

*Pascal: "Don't the bugbears have to make another morale check?"*

*DM: "No, nothing's changed since the last one."*

At this point, Pascal has 6 fatigue points left, Damiar 2, and Lyssa 3, while Dain is still at his full amount, since he hasn't moved or fought. The bugbears attacking Pascal have 7 and 9, respectively, while the two taking cover still have 10 each.

## Round Three

The DM smiles to himself—the bugbears have maneuvered the heroes right where they want them. The two bugbears fighting Pascal can guard, getting the first attack against the paladin because of their longer range. The two bugbears hiding behind the room's corners will move forward to engage Pascal's flank and Lyssa. The DM asks the players to state their actions for the round:

*Pascal: "I'll move up and attack again."*
*Lyssa: "Cast acid arrow at the bugbear hiding in the corner there."*
*Damiar: "Keep firing!"*
*Dain: "I'll move and take a shot at a bugbear. Nothing's coming down this hallway."*

The initiative roll is won by the players again, beating the bugbears with a 2. There are no very fast actions this round.

In the fast phase, Pascal moves up to threaten the bugbears facing her, but they both get attacks since they were guarding and out-ranged her. One bugbear misses, but the other hits for 5 points of damage and a roll for a knockdown. A morningstar is rated as a d10 for knockdowns, and since the bugbear is a Large creature, that is stepped up to a d12. It takes a 7 to knock down a Man-sized creature, and the Bugbear rolls a 9. Success! Pascal rolls a saving throw vs. paralyzation and fails. She is on the ground and has to use this round to stand up again.

Lyssa's spell is again fast. She throws Melf's acid arrow at the bugbear previously wounded by Damiar and hits it for 8 points of damage. Dain takes a half-move and steps into the doorway beside Damiar.

On the average phase, Damiar fires his first arrow of the round and misses. Pascal would have attacked this round, but decides to stand up again. The bugbears hiding around the corners move up to threaten Pascal and Lyssa.

*Pascal: "Sure, now they break cover since I got knocked down."*
*DM: "You didn't think those two bugbears were going to stay out of the way forever, did you?"*
*Lyssa: "We're in trouble."*
*DM: "We're up to slow actions now. Dain and Damiar have shots, if they want to take them. You'll be shooting into a melee now, since there aren't any bugbears clear of the fight."*
*Damiar: "I'll take my chances."*
*Dain: "Me, too!"*
*Lyssa: "Hey, you could hit us!"*
*Dain (shrugging): "So? You can take it."*

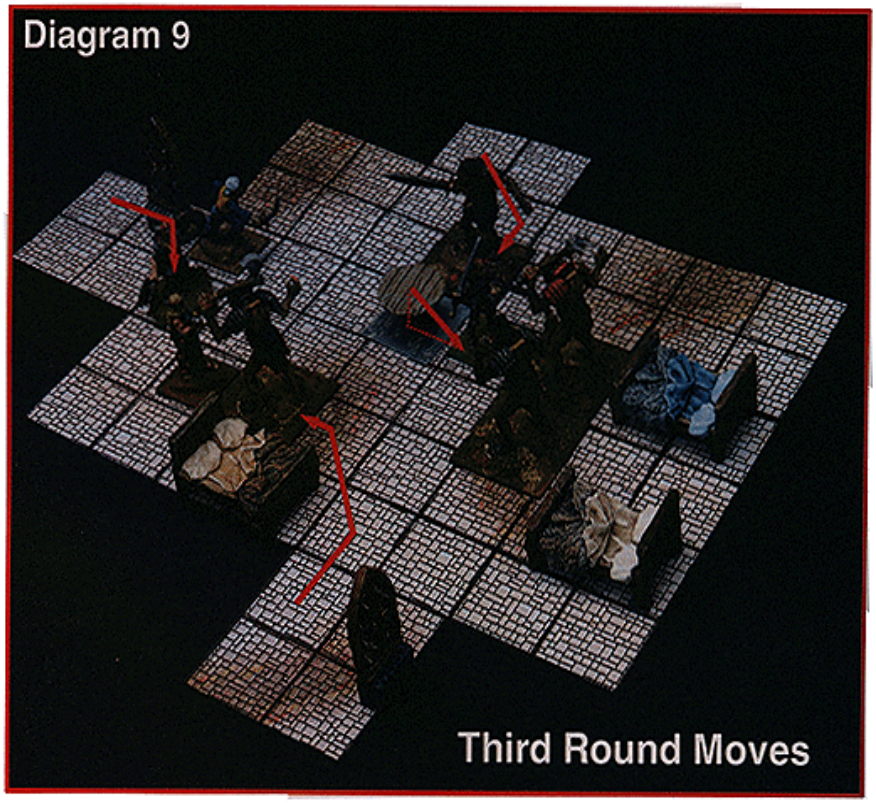
There are three bugbears who are threatening Pascal. Using the Firing into a Melee rules, the DM determines that a d8 roll should be used to resolve who becomes the target. (The three bugbears are Large and count for 2 each, and Pascal counts for 1 target. An 8 result will be rerolled.) Damiar and Dain are lucky—the target rolls end up being bugbears. Unfortunately, both characters miss with their attacks.

The two bugbears who moved in this round get to attack in their half of the slow phase. One attacks Pascal, and the other attacks Lyssa. Pascal is hit again for 5 more points of damage, but this time she isn't knocked down. Lyssa gets clobbered for 6 points of damage and begins to consider a strategic withdrawal.

At the end of the round, everyone marks off their fatigue points. Pascal loses two more, as do Dain and Damiar, but Lyssa cast a spell and loses none. The bugbears who broke cover and attacked Lyssa and Pascal lose two, but the others who were already

engaged only lose one each.

Since Pascal was hit without hitting her opponents, the bugbears can force her to retreat. She is driven back one square, but the bugbears hold their ground to keep their reach advantage. The continuing damage from the Melf's acid arrow spell doesn't begin until next round, since Lyssa just cast the spell this round.



### Round Four

In the next round, the heroes get a little lucky. Pascal downs one of her attackers with a critical hit, and Dain covers Lyssa's withdrawal and inflicts serious damage against the bugbear who had injured the mage. Another bugbear falls when the Melf's acid arrow finishes it off at the end of the round. With two more down, the DM rules that the survivors choose a fighting withdrawal, and the heroes let the bugbears retreat.

## Chapter Two: Combat Options

Even the greenest recruits have more options in combat than to stand in one place and swing at opponents over and over again. This chapter covers tactics, options, and styles of fighting that are available to anyone on a battlefield. Battles aren't just a matter of who gets the lucky rolls now; smart characters can make their own luck by using sound tactics and common sense in the thick of the fight.

There are five parts to this chapter. The first is *Battle Tactics*; it covers common tactics

for fighting a battle, including *shield walls*, *pike hedges*, and *mounted charges*. *Attack Options* discusses different ways to use a character's attack to achieve specific results. *Fighting Styles*, *Dueling*, and *Heroic Frays* discuss the various tactics of personal combat and how characters can employ them to their advantage.

## Does This Belong in My Campaign?

Battle Tactics relies heavily on the *Player's Option* combat system, presented in Chapter One. Although the basic concepts are still sound, you won't see much game benefit to these strategies unless you are resolving battles with the combat system.

The other four parts of this chapter—Attack Options, Fighting Styles, Dueling, and Brawling—can all be incorporated into existing campaigns together or independently. They do not require the combat system to be used in your campaign. The information in this chapter replaces the related topics in *The Complete Fighter's Handbook*.

## Battle Tactics

Over thousands of years, the tactics of battle have changed many times. Innovations of equipment and maneuver often gave armies domination of their world. Alexander's phalanxes of spearmen were nearly unstoppable. Pikes and bows brought about the end of the knight's battlefield supremacy long before firearms were effective weapons.

Some of these same tactics can be used to good effect by player characters and their opponents. Even the most foolhardy barbarian should think twice before charging a band of orcs who have formed a spear-hedge to receive his attack.

### Shield Wall

In Chapter One, we described how figures can crowd together in close order, placing two Man-sized creatures in a single space. If the creatures stay along an even line in close order, they can form a shield wall by overlapping their shields. The shields must be medium or kite shields. Fighting with a shield wall has several benefits.

#### Versus Missiles

All members of the shield wall and any *allies* behind it are considered to be behind 50% cover (–4 AC bonus) versus missile fire. Shield walls block lines of fire indoors or underground, so in dungeon settings any allies behind the wall can't be targeted by hostile missile fire. The creatures actually *forming* the shield wall can still be struck, however.

#### Versus Melee

Since the members of the wall are in close order, shield walls allow them to concentrate their fighting power. They are also good for controling enemy movement, especially in narrow areas such as dungeon corridors. Because the shields overlap, all members of the wall gain a –1 bonus to their Armor Class.

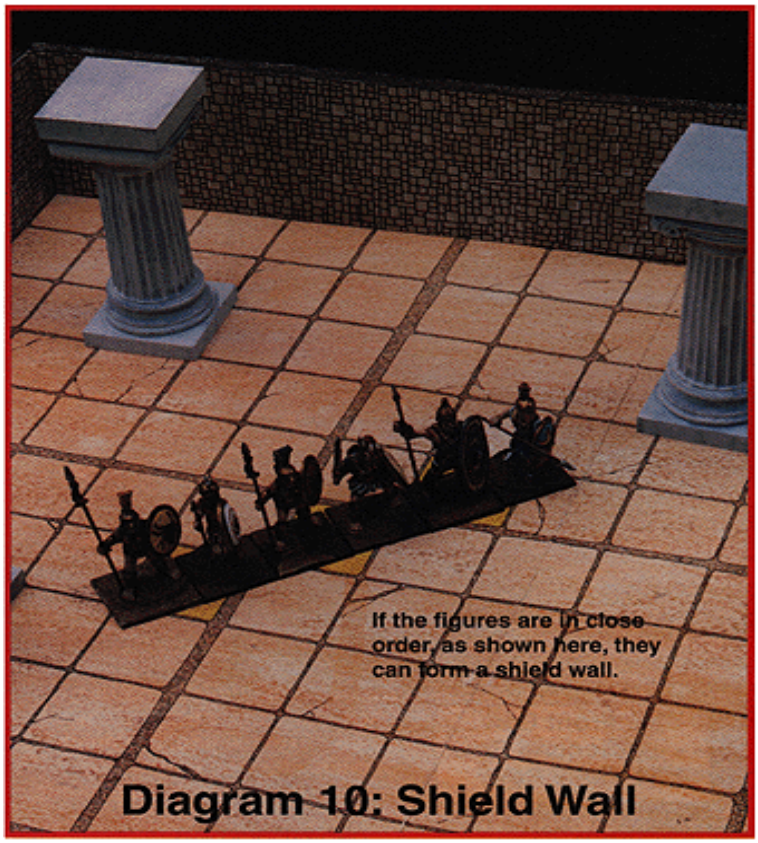
Creatures forming a shield wall must be of the same size or the wall won't work. In addition, they have to move together if they want to stay linked. A shield wall can only take a half-move without breaking apart.

Creatures in a shield wall are slightly limited in their choice of armament. They can fight only with one-handed weapons since they're using a shield in the other hand. If they

use a slashing or bludgeoning (Type S or B) weapon, they suffer a –2 penalty to attack rolls unless the weapon is a smaller size category than they are, because the close order interferes with the weapon's swing. Piercing (Type P) weapons aren't affected by close order.

*As an example, a human barbarian (size M) forms a shield wall with his companions. He can use his short sword (Type S, size S) or spear (Type P, size M) without penalty, but if he fights with his battle axe (Type S, size M) he suffers a –2 penalty to his attack rolls because he's so close to his allies.*

Another excellent tactic for shield walls is to place long-range polearm wielders immediately behind the shield wall. Since the polearms can reach over the shield line, enemies can be exposed to several attacks at once when they close to melee range. Using a polearm over a friend creates a –2 penalty to attack rolls, however.



## Spear Hedges

Spear or pike hedges are extremely effective against creatures trying to close in for melee. Swiss pike formations could defeat the most powerful mounted charges and could cut through many foot troops as well. Hedges don't have to be formed in close order, but they're more effective if they are. Hedges can be made doubly dangerous by adding an extra rank of spearmen or pikemen to create a defense in depth against an enemy's approach.

To form a spear hedge, characters need to stand side-by-side in an even line. A second

rank can form up behind the first rank and attack over the front rank with a –2 penalty to attack rolls. If the polearm is a range-only weapon, such as a pike, then the penalty does not apply. If the troops are equipped with range 3 weapons, a third rank can be added behind the second rank.

Spear hedges are most effective when all characters choose the guard action, since any foe foolish enough to approach could be subjected to as many as 6 attacks before he could strike back. Spear hedges can only make half-moves and still remain together.

Like shield walls, spear hedges can be extremely effective in limited areas where opponents can't flank them.

## Mounted Charge

One of the most spectacular battle maneuvers is a cavalry charge. There are no special considerations or formations necessary for a mounted charge; a single knight on horseback can use this tactic.

The mounted charge against foot troops gives the charging character a +2 bonus on his attack for charging and a +1 bonus for being mounted. If he's armed with a lance, he inflicts double damage if he hits. In addition, the lance's superior range may allow him to strike before the defender has a chance to attack.

The charging character can also use his mount to move through enemy figures, possibly knocking them down or trampling them. A line of armored knights can literally ride down infantrymen, although they'll provoke attacks of opportunity once they get into the press. Still, the initial shock of such a charge can decimate most infantry formations.

A great defense against the mounted charge is missile fire at the mounts. Usually, the

horses are easier to hit than the riders. Any time a mount is injured, the rider must make a riding check (or roll a successful saving throw vs. paralyzation) to keep control of the animal. The riders of any animals following the injured mount must also make riding checks or be stopped by the downed animal.

## Archery from Horseback

Archers on horseback are very effective against foot troops without missile weapons. (If the character on foot has a weapon to reply to the horse archer's fire, it's a different story.) Weapons suitable for use while mounted include short bows, composite short bows, hand crossbows, light crossbows, and size S firearms.

If the archer remains still (takes a no-move action), his rate of fire and range modifiers are unaffected by his mount. If he rides a half-move, his rate of fire is reduced by one category and he suffers a –2 penalty to his attack rolls. If his mount takes a full move, his rate of fire is reduced as above, and he suffers a –4 penalty to his attack rolls. These penalties can be reduced by expertise in mounted archery; refer to Chapter Four for more information.

The best way to exploit the archer's mobility is to gallop in for a round of fire and then retreat when the foot troops try to respond. This tactical system was one of the most successful ever devised, and for a time rendered infantry nearly obsolete.

## Attack Options

Heroic swordsmen don't just stand still and hack at their opponents; they dash back and forth, trading parries and ripostes with skill and agility. A great way to add excitement and flavor to your battles is to allow PCs the chance to try flashy maneuvers or special tactics against their dastardly foes.

In a melee, characters can choose any number of tactics instead of a simple strike or thrust. The following attack options are available to any character proficient with the weapon he is using:

| | |
|---|---|
| Block | Pull/trip |
| Called shot | Sap |
| Disarm | Shield-punch |
| Grab | Shield-rush |
| Overbear | Unarmed attack |
| Pin | Unhorse |

Special weapon maneuver

### The Opposed Roll

Many of the attack options described below use a game mechanic known as an opposed roll. In an opposed roll, whoever comes closest to their success number without going past it wins the contest.

*For example, two characters wrestling for control of one sword could be required to make opposed Strength checks to see who gets the weapon. The character with the highest d20 roll that doesn't exceed his Strength score wins the contest.*

Because the goal of an opposed roll is to come as close to missing as possible without

doing it, attack rolls are won by the character with the lowest roll that doesn't go under their required to-hit number, and ability checks are won by the character with the highest roll that doesn't exceed his ability score. Ties extend the contest one round, unless stated otherwise.

### Block

A character can declare that she is using one of her attacks to block an opponent's strike. Blocking is a hard parry with a weapon that deflects an opponent's attack. Any weapon except rope-like things such as nets, lassoes, or slings can be used to block.

When a character tries to block an attack, she makes a normal attack roll against AC 4. Her opponent makes a normal attack roll against her Armor Class. The strike is blocked if the character succeeds with a lower roll than her enemy succeeded with. If the attacker failed anyway, it's a miss no matter what the blocking character rolled. If the blocking character failed but her attacker succeeded, it's a hit despite the block attempt.

*For example, Arweth is a 5th-level fighter with an adjusted THAC0 of 14 with her long sword. She is fighting a hill giant with a THAC0 of 9. Arweth decides to use an attack to block the hill giant's next strike. She rolls a 15 and succeeds with her roll. The hill giant rolls a 12; Arweth is AC 1, so the giant succeeds, too. His roll of 12 is lower than her 15, so Arweth's block fails.*

If the character announces her block before initiative is rolled, she can block an attack even if it beats her action phase. If she decides to wait, she can only block attacks in her action phase or later.

Blocking is an excellent tactic for characters with multiple attacks to use against characters or monsters with only one attack. A rapier specialist with a main-gauche in her off hand can use her off-hand weapon or one of the rapier attacks to block while using the rest of her attacks offensively.

## Called Shot

A called shot is an attack at a specific location on the target. For example, a called shot can be used to attack the head of an enemy who isn't wearing a helm, the unarmored legs of a character wearing only a breastplate, or the special weakness of a monster with an Achilles' heel.

Called shots have to be announced before the attack roll is made. When the called shot is announced, the character's action phase is delayed by one category; a bowshot that would normally be in the average phase becomes a slow action if the archer decides to make a called shot. If you're not playing with the initiative system described in Chapter One, assume called shots receive a +1 initiative penalty.

Called shots normally present the attacker with a –4 penalty on his attack roll, but the DM can modify this for the circumstances. If the target is surprised or not expecting the attack, the called shot modifier may not apply at all. On the other hand, a particularly difficult called shot (stabbing an enemy through the eyeslit of his visor, for example) may inflict a –6 or even a –8 penalty to the attack roll. Called shots are disrupted if the character attempting it suffers a knockdown.

Although called shots are normally most useful for special combat effects, like

breaking a beaker of acid in an evil wizard's hand, they can also be useful against partially unarmored opponents. An enemy in full plate mail with no helmet has an AC 10 head; it's easier to make the called shot with a –4 penalty against that AC 10 than to swing at the enemy's normal AC of 1. If a called shot is used to strike a specific body area and results in a critical hit, ignore the location die of the critical hit roll and just roll the effect for the area struck. (See Chapter Six for more information on critical hits.)

Called shots can also be used to fire missile weapons into a melee without the risk of hitting an ally. If the called shot misses, no one else is in danger of being hit by the missile.

As an optional rule, the DM may allow called shots to be used to force an automatic retreat or knockdown effect, rather than inflict damage.

## Disarm

There are two types of disarming maneuvers, offensive and defensive, and they both work essentially the same way. A character who wishes to use either type of disarm must allocate one of his attacks for the round to the feat. If the disarm is a defensive one, it is resolved before the attacker rolls to hit. A disarm works very much like a block, but the character attempting the disarm must roll against AC 0, while the intended victim of the disarm still rolls against an AC 4.

Anyone involved in a disarm that is using a two-handed weapon receives a 4-point bonus to the target Armor Class for the purposes of the opposed roll. It's impossible to disarm a weapon two sizes larger than your own, so a fighter with a dagger can't try to disarm a mage with a quarterstaff. Disarming can occur using a missile weapon, but the missile's size is the factor used to determine whether or not the attempt can succeed, not the weapon firing the missile.

*For example, Dain the dwarf warrior is fighting a human sellsword named Torath. Dain announces before initiative that he will use one of his attacks for a defensive disarm on Torath's attack that round. Before Torath attacks, he makes an opposed roll against AC 4 while Dain rolls against AC 0. Torath's THAC0 is 17 and Dain's is 13. Torath rolls a 15, good enough to hit AC 4, while Dain rolls a 12, not quite enough to hit AC 0. Torath avoids Dain's disarm attempt and proceeds normally with his attack roll.*

*If Dain had been wielding a two-handed axe, his roll would also have been against AC 4 (the 4-point bonus to AC 0), and his 12 would have been good enough to hit. Since his 12 was lower than Torath's 15, Dain would have won the opposed roll and disarmed Torath.*

Defensive disarms work just like blocks for initiative; if announced before the roll, they can be attempted against attacks that beat the character's action phase. Otherwise, they can only be used on the character's action phase or later in the round. Offensive disarms work like called shots; when announced, they delay the character's action phase by one step. The intent to disarm has to be announced before any rolls are made.

When a weapon is disarmed, it falls 1–10 feet away (1d3–1 squares) in a random direction. Recovering a disarmed weapon requires a half-move. A disarmed character can be immediately covered if the attacker has an attack remaining in the round.

Disarms work best against low-level opponents who don't have good THAC0s, since

it's difficult for them to make their opposed rolls.

## Grab

Characters can grab weapons or important items away from their opponents. If the character wants to grab his opponent directly, he should consider it a wrestling attack and resolve it as unarmed combat; see Chapter Five. A character has to have a hand free to grab; if both hands are full, he's got to drop something in order to attempt the grab. (Two-handed weapons can be held in just one hand, but the character can't attack this way.) The attacker must announce the grab attempt before he makes his attack roll.

Trying to grab an enemy's possessions while he threatens you is a bad idea; the defender receives an immediate attack of opportunity against the grabber.

Generally, the grab attempt works the same way a disarm attempt does. The character attempting to grab an item must make an opposed roll against AC 0 while the intended victim rolls against AC 4. The DM may assign certain penalties to the character attempting the grab, depending on circumstances; grabbing a tiny ring on someone's finger might incur a –8 penalty to the target Armor Class for the grabbing character. If the opposed roll results in a tie, the item may be dropped or broken at the DM's discretion.

*For example, Euserio the Bold is behind the evil wizard Warjo and decides to grab Warjo's wand of lightning. There's no attack of opportunity, since the hero wasn't threatened by Warjo. The DM rules that there is no penalty to Euserio's attempt, since Warjo has the wand in his hand and isn't paying Euserio any attention. Euserio and Warjo make the opposed roll, Euserio against AC 0, Warjo against AC 4. Euserio's THAC0 is a 16, while poor Warjo's is still a 20. Euserio scores a hit with a roll of 18, while Warjo rolls a 12 and misses, so Euserio gets his hands on the wand.*

Once the grabbing character succeeds in grasping the item, the opponents must wrestle for control of it using opposed Strength checks. If a character only grabs (or was originally holding) the item with one hand, then his Strength is reduced by 3 points.

*Continuing our example, Euserio and Warjo now struggle for control of the wand, making opposing Strength checks. Euserio's 17 Strength is reduced to an effective 14 because he only got one hand on the wand, and Warjo's 13 becomes a 10. Euserio makes his Strength check with a 6, but Warjo rolls a 9 and wins, jerking the wand away! Wonder what he'll do with it next round?*

## Overbear

The best attack against a warrior of heroic prowess is often a simple rush. Overbearing is a common tactic when several creatures are confronting a lone enemy who can cut them to pieces one at a time. Overbearing attackers throw themselves at their opponent, using whatever holds they can find to get him on the ground and restrain him.

Overbearing is hazardous; the defender gets an attack of opportunity against any attacker he threatens (up to the limits imposed in Chapter One). It can take a concerted rush of a dozen or more to get through a high-level fighter's guard. Overbearing is treated as an unarmed attack, and is resolved on the base initiative of the slowest attacker in the

pile.

The overbearing force resolves the attack by making a single attack roll at the THAC0 of their best member. The attackers get a +1 bonus to hit for each additional attacker. The attack is made against the defender's natural Armor Class (AC 10 for most PCs), only counting magical and Dexterity adjustments—a man in plate mail is just as vulnerable to being pulled down as a man in leather armor.

If the attackers hit, they must make an opposed Strength check against the defender to see if they drag him down or not. Use the Strength of the largest attacker, and apply the following modifiers:

- 4-point bonus or penalty per size difference of the largest attacker versus the defender;
- +1 per additional attacker;
- –4 if defender has more than two legs.

Monsters can be assumed to have a Strength of 31/2 points per size category (3 for Tiny, 7 for Small, 10 for Man-sized, 14 for Large, etc.) plus their Hit Dice. If the defender wins the Strength check, he keeps his feet and shrugs off the attack. If the attackers win, the defender is knocked down. The defender can be pinned and restrained if he is successfully overborne again in the next round.

*For example, six kobolds are fighting Alvoth, a human knight. The monsters decide to use their numbers against Alvoth and overbear him. Alvoth kills one of the kobolds in an attack of opportunity as the monsters close, but the other five try to overbear anyway. Alvoth is normally AC 0, but his chain mail and shield don't help him here, only his Dexterity of 18. The kobolds attack against an AC of 6, with a +1 bonus to hit since they outnumber him.*

*The kobolds score a hit, so Alvoth engages in a Strength contest to keep his feet. Kobolds should have a Strength score of 7 based on the formula above (31/2¥2 for Small). However, their effective Strength is increased to an 11 due to their numbers (4 extra kobolds). Alvoth has a Strength of 17 and rolls a 9, making his Strength check. The kobolds roll an 11, just making their check with a higher roll and winning the contest. Alvoth goes down beneath the brutes' rush.*

As an option, a saving throw vs. paralyzation can be substituted for the opposed Strength checks. This works a little faster, but it's not as accurate as the system described above.

## Pull/Trip

A good tactic against moving enemies or characters who aren't paying attention is a trip or tangling maneuver. To pull or trip an opponent, the character must be armed with a weapon that has the ability to snare someone's legs. The following weapons all qualify: bill, bola, bow, light or heavy crossbow, horseman's flail, harpoon, javelin, khopesh, lasso, mancatcher, net, footman's or horseman's pick, any polearm, quarterstaff, scourge, spear, staff sling, and whip. These weapons feature long, staff-like pieces, chains or ropes, or heads that can catch and pull an enemy's legs out from under him.

To pull or trip an enemy, the character makes a normal attack roll. If he hits, he makes an opposed roll of his Strength against the defender's Dexterity or Strength, whichever is better. If the attacker wins, the defender is knocked down. If the defender wins or if both fail, the attack fails. If the roll is a tie, they both fall down.

For purposes of this maneuver, a monster's normal movement rate can be considered its Dexterity score. Its Strength is equal to 31/2 points per size plus its Hit Dice. There are several modifiers that apply to the attacker's Strength, however:

- 4-point bonus or penalty per size difference of the attacker versus the defender;
- –2 to attacker's Strength if the target has four legs or more;
- +3 if the defender was unaware of the pull or trip attack;
- –6 if the defender was stationary.

*For example, Alvoth is waiting in ambush for the king's messenger to come galloping down a wooded lane. He decides to use his halberd to trip the horse when it comes by. If he hits, he'll use his Strength against the horse's move of 18. Alvoth's Strength is modified by –4 for the size difference and –2 for the horse's extra legs, but +3 because he is hiding, so his 17 Strength is an effective 14 for purposes of tripping the horse.*

Optionally, the opposed roll can be replaced by a simple saving throw vs. paralyzation. It's not as accurate, but it may be more convenient for the DM and players to remember.

*Sap*

Sapping is an attempt to knock out an opponent by striking with the flat of the blade or slugging him from behind with a sturdy sword-hilt. It doesn't work very well against characters or monsters that are expecting it; any character attempting to sap a creature that threatens her provokes an attack of opportunity for the defender. Hand-held weapons and thrown weapons may be used in sap attempts.

A sap is a type of called shot; it has a one-phase initiative penalty, and the attacker has a –4 penalty to hit. The penalty increases to –8 if the defender is wearing some kind of helmet. Only Small or Medium creatures can be sapped; Large monsters can't be knocked out like this.

If the attacker scores a hit, she may knock out her opponent. There is a 5% chance per point of damage of knocking out the victim, up to a maximum of 40%. Thus, if the sapper inflicts 5 points of damage, she has a 25% chance of knocking out her opponent. Sapping damage is like unarmed combat damage; 25% is real and the rest is temporary. Naturally, if her damage roll exceeds the victim's hit points, he's knocked out anyway.

The knockout chance increases to 10% per point of damage (max 80%) if the victim is surprised, asleep, restrained, or magically held in some way. Sapped characters remain unconcious for 3d10 full rounds.

## Shield-Punch

Any character equipped with a shield can choose to forego its protection and gain an extra attack known as a shield-punch. The shield-punch is treated as a normal, secondary weapon attack; the primary weapon suffers a –2 penalty to attack rolls that round and the shield-punch attack is rolled with a –4 penalty. A character may use his reaction

adjustment due to a high Dexterity score to offset these penalties. Alternatively, the character can *substitute* his normal attack for a shield punch, with no penalties.

The exact characteristics (i.e., damage and speed) of each type of shield are noted on page 51. If the character is trying a shield-punch, he must announce his intention while declaring his combat action and forfeits the defensive benefit of the shield for the round. The character moves into the square of his opponent on his base initiative, then executes the shield punch and backs out into his own square again on the following initiative phase.

## Shield-Rush

The shield-rush is an attempt to knock someone down by running into them with your shield. The character must have 10 feet (2 spaces) of running room to make an effective shield-rush. Making a shield-rush is treated as a charge attack for purposes of guarding characters with set spears.

When the character makes a shield-rush, he makes a normal attack against his enemy's AC. Some shields may provide modifiers or bonuses to the rush; refer to Chapter Seven. After a shield has been used for a rush, it provides no AC bonus for the rest of the round for its bearer. Making a shield-rush also costs the character a normal attack, but it isn't considered an off-hand weapon like a shield-punch.

If the shield-bearer hits with his attack, he makes an opposed Strength roll against his opponent to see if he knocks him down. The loser of the opposed roll falls down; if both characters fail their Strength rolls, they both fall down. The following modifiers apply to the attacker's Strength score:

- 4-point bonus or penalty for each size difference of the attacker versus the defender;
- +3 if the defender was unaware of the shield-rush;
- –2 if the defender has four legs or more.

As noted before, monsters can be assumed to have a Strength of 31/2 per size category plus their Hit Dice. Instead of an opposed roll, the DM can substitute a saving throw vs. paralyzation for the defender to save time.

If the shield-rusher misses with his attack roll, he must roll a successful Dexterity check to stay on his feet as he rushes past his target. If he fails, he falls down.

### Shield Punch

| Shield Type | Size | Speed | Reach | Damage | Knockdown |
|---|---|---|---|---|---|
| Small | S | Fa (2) | 1 | 1d3 | d6 |
| Medium | M | Av (6) | 1 | 1d4 | d8 |
| Large | L | Sl (8) | 1 | 1d6 | d10 |

### Shield Rush

| Shield Type | Size | Speed | Reach | Damage | Knockdown** |
|---|---|---|---|---|---|
| Small | S | Base* | 1 | 1d3 | 0 |
| Medium | M | Base* | 1 | 1d4 | +1 |
| Large | L | Base* | 1 | 1d6 | +3 |

* A Shield Rush is performed in the attacker's base initiative phase.
** The knockdown bonus is used during the opposed Strength check that takes place if the attack hits (see Chapter Two, page 46). If the character's Strength check succeeds, add the listed number to the roll before the two rolls are compared.

## Special Weapon Maneuver

Several weapons have special properties that can be used to great effect by a skilled wielder. The bolas, chain, harpoon, lasso, mancatcher, and net all have special effects that can be used against opponents. The exact nature of each weapon's special maneuver is discussed in Chapter Seven.

Generally, using a special weapon maneuver requires a called shot that delays the wielder's action phase by one step and gives him a –4 penalty on his attack roll.

## Trap

It's possible to use your weapon or shield to pin your enemy's weapon against his body or to trap the weapon on your own sword-hilt or weapon haft. This maneuver is known as a trap. Traps are much like blocks; the character can get a chance to trap an attack that comes before his action phase by declaring the trap before initiative is rolled, or he can trap any attack that comes in his action phase or later without declaring his action beforehand.

Like with a disarm, the trap is resolved before the normal attack roll is made. A character attempts to trap an enemy's attack by rolling an opposed attack roll versus AC 0 while his opponent rolls against AC 4. If the trapping character wins the opposed roll, the weapon is successfully pinned. Otherwise, the pin fails and the normal attack roll is made.

Once an enemy's weapon is trapped, he loses any additional attacks he could have made with that weapon in the current round. At the end of the round, the trapping character and his victim make opposed Strength rolls to see if the victim can free his weapon. In each subsequent round, one Strength check is made on the fastest character's base initiative, and a second one at the end of the round.

A character with a trapped weapon can always attack with a secondary weapon or simply abandon the weapon that's been caught. The character who performs the trap cannot use the weapon or shield he's pinning the opponent's weapon with.

Trapping is an excellent tactic to use against an opponent with fewer attacks. It is also a good tactic for a two-weapon fighter to use against a single-weapon fighter; by sacrificing one weapon's attacks, he completely stops his opponent's offense. Another sneaky trick is to have an ally trap a tough opponent's weapon to free up unanswered flank or rear attacks for a second character. Trapping is tougher than a simple block, but worth the effort.

## Trap and Break

Some weapons, such as the sai or the swordbreaker, are suited for breaking a trapped enemy weapon. When a weapon of this type is used to trap an enemy weapon, the trapping character can declare an attempt to break the weapon. The trapped character must roll a successful item saving throw vs. crushing blow for his weapon or it breaks;

for metal weapons, this is a 7 or better on 1d20. The weapon's magical bonus applies.

If the break attempt fails, the trapped blade is automatically freed. Otherwise, the weapon is broken. Only swords, knives, or weapons with sword-like components (such as a halberd's spike or a glaive) can be broken.

## Unarmed Attack

Throwing a punch or trying to get a wrestling hold on the enemy is always a legitimate attack. As noted in Chapter One, trying to engage an armed opponent in unarmed combat is risky; if the armed character threatens the attacker, he gets an immediate attack of opportunity.

There are several types of unarmed attacks that can be employed by a character, including punching, wrestling, martial arts, and overbearing. The various types of unarmed combat are described in great detail in Chapter Five. Note that a character has to have a hand free to punch or wrestle someone.

## Unhorse

A mounted enemy can be knocked off his steed by a number of methods. Whenever a character is in danger of falling off his horse, he must roll a successful riding proficiency check (or a saving throw vs. paralyzation if he doesn't have the riding proficiency) to remain in the saddle. If he fails, he's considered to be knocked down and is lying prone on the ground.

Some ways to unhorse a mounted character include:

- **Knockdown:** Striking a mounted character or the mount hard enough to create a knockdown chance;
- **Damage:** Striking a mounted character for 10 or more hit points of damage;
- **Pull/Trip:** Hitting a mounted character or the mount itself with a pull/trip attack;
- **Overbearing:** Successfully grappling a mounted character with an overbearing attack (he may also be pulled down by losing the opposed Strength check to fight off the overbearing attempt);
- **Damage to the Mount:** Wounding a mount during the battle (killing the steed always unhorses a character, no questions asked).

## Fighting Styles

There are almost as many different ways of fighting as there are fights. Every character and monster has his or her favorite weapon and preferred means of attack. Fighting styles are general ways in which a character can equip himself for a fight and execute his attacks during the battle.

If a character doesn't know a fighting style, he can learn it at the cost of a proficiency slot. Warriors can actually specialize in fighting styles to gain bonus attacks or defenses; this is covered in Chapter Four.

## Single Weapon

In single-weapon style, the character wields a one-handed weapon and leaves his off-hand empty. There are some disadvantages to this style, in that the character is shorting himself the protection of a shield or the extra offense of a secondary weapon. However,

single-weapon style *does* leave the character with a hand free for using magical items, grabbing, or punching an opponent.

If the single-weapon character makes an off-hand attack, such as a punch or grab, he's considered to be fighting with two weapons. His primary weapon suffers a –2 penalty to attack rolls and his secondary attacks suffer a –4 penalty to hit. These penalties are offset by the character's reaction adjustment for his Dexterity score.

All player characters, regardless of class, know the single-weapon fighting style.

## Two-handed Weapon

The largest and most damaging weapons available to PCs are usually two-handed weapons. Obviously, a character with a two-handed weapon is not going to be able to use a shield or a secondary weapon, but he does have a lot of offensive capability.

Many two-handed weapons are polearms and extended-range weapons that provide the wielder with special tactical benefits in addition to their raw damage potential. Note that a character doesn't have to use both hands just to hold a two-handed weapon; he can hang on to it with one hand to free up the other for another activity, but he can't attack until he gets both hands on the weapon again.

### Size and Two-handed Weapons

Generally, a character can use a weapon equal to his own size in one hand, and a weapon one size larger in two hands. For example, a halfling (size S) can use a short sword or hand axe in one hand, since they're size S weapons, but if he used a broadsword (size M) he'd have to use it two-handed, and there's no way he could use a longbow or halberd.

### One- or Two-handed Weapons

Several weapons can be used as one-handed or two-handed weapons. These include the bastard sword, harpoon, javelin, spear, long spear, and trident. These weapons' characteristics change when used two-handed; refer to Chapter Seven.

### One-handed Weapons used Two-handed

Several other weapons are normally one-handed weapons that can be used two-handed if the wielder so desires. There's no particular reason to do this, unless the character's too small to wield the weapon any other way. These weapons include the battleaxe, club, footman's flail, horseman's flail, long sword, footman's mace, horseman's mace, morning star, footman's pick, horseman's pick, and warhammer.

Warriors, priests, and mages normally know the two-handed weapon fighting style.

## Weapon and Shield

One of the most common fighting styles in the AD&D game, this style provides the character with the defensive benefits of a shield and still allows a decent offense. In addition to the AC benefit of the shield, this style also gives the character the attack options of shield-punch and shield-rush.

There are two disadvantages to this style: first, the character is limited to using a single one-handed weapon, since his other hand has the shield; secondly, if he wants to quickly empty a hand, he has to drop his weapon. Most shields are strapped to the character's arm and take a full round to remove.

Warriors and priests normally know the weapon and shield fighting style.

## Two Weapon

Not to be confused with the two-handed weapon style, two weapon style uses a weapon in each of the character's hands. The advantage of this is clear: the character either has more attack power or can use the secondary weapon defensively to block incoming blows. Another benefit lies in the fact that even if the character loses a weapon, he's still armed.

The character can use any one-handed weapon in his primary hand, but his secondary weapon must be a size smaller than his primary weapon. Knives and daggers can always be used, regardless of the primary weapon's size. The character suffers a –2 penalty to attacks with the primary weapon, and a –4 to attacks with the secondary weapon. This penalty is offset by the character's reaction adjustment for high Dexterity.

*Important Note:* While the character receives his normal number of attacks for class, level, and specialization with his primary weapon, he only receives one additional attack with his secondary weapon.

Warriors and rogues know two weapon fighting style.

## Unarmed

Some characters prefer to fight with their fists and feet instead of weapons and shields. Generally, a character can make one wrestling or overbearing attack or two punching attacks per round. If a character is using a weapon in one hand, he can use his second hand for an additional attack, just like fighting in two-weapon style. However, the bare-handed attack creates an attack of opportunity for the defender if he threatens the attacker.

All characters can punch or wrestle; it doesn't even require a weapon proficiency. It's possible to specialize in unarmed combat and become better at hand-to-hand fighting—refer to Chapter Five for more information.

## Missile or Thrown Weapon

Fighting with missiles or thrown weapons is an excellent option, as long as you can keep your target at a range where you can hit him without being hit. Once an enemy threatens an archer or slinger, it's a good idea to either withdraw or change weapons.

Regardless of a character's size, using a bow, crossbow, sling, blowgun, or firearm at its normal rate of fire requires both hands. Crossbows and firearms can be loaded with both hands and then aimed and fired in one hand, if the attacker's size is equal to the weapon's size or larger. However, heavy crossbows, arquebuses, calivers, and muskets suffer a –2 penalty to the attack roll if aimed one-handed.

### Multiple Loaded Weapons

If a character is able to cock and load several crossbows or ready several firearms for firing, he can get several shots off very quickly. As long as the character has loaded weapons close at hand, he can triple his normal rate of fire. When he runs out of loaded weapons, he'll have to resume firing at the normal rate.

### Thrown Weapons

Most thrown weapons only require one hand to use; there's no reason why a character couldn't carry a shield or a second weapon in his off-hand. A character can't throw weapons and make a melee attack in the same round—he has to choose one or the other.

Size M or larger thrown weapons can be used in conjunction with a charge attack. The character performs his charge as normal, but he pulls up short of his target by 10 to 20 feet and uses his momentum to add to the javelin or axe throw. This attack confers the movement and +2 attack bonus of a charge, but the attacker suffers the charge penalties, too.

## Weapon-Specific Styles

Many specialized fighting styles and weapon combinations have developed over the history of personal combat. Some examples of these special cases include the net and trident, matched sai, nunchaku or fighting sticks, and the rapier and main-gauche.

The exact benefits of each weapon-specific style are described in Chapter Four. Generally, these efficient weapon pairings tend to offset the penalties of fighting in two-weapon style or provide extra defense when used together.

## Dueling

When two skilled fighters meet in personal combat, their contest runs far deeper than simple attacks, blocks, or traps. If a boxer dodges to his left when his opponent throws a right jab, or ducks when his opponent throws a body punch, he's at a distinct disadvantage. The same thing can happen in a melee between two armed combatants.

The subtle patterns of attack and defense create temporary advantages or disadvantages for characters involved in a duel. Leaping over a low axe sweep is a great way to avoid getting hit . . . but what if you guessed wrong and your opponent aimed high? This section presents an optional set of rules for resolving duels between skilled warriors.

## What's A Duel?

For our purposes, a duel is any fight that takes place between a PC and one humanoid enemy armed with a weapon of some kind. It doesn't begin, though, until the two combatants have actually engaged in melee. Don't begin using these rules, including the special initiative system below, until this happens.

Generally, it's not worth the extra time and effort to use the dueling rules unless the enemy is close to the PC's own skill level; if the hero can clean the villain's clock within a round or two, don't bother to use these rules.

Duels are best saved for confrontations with major NPC villains. If more than one character or creature is engaged on either side, the fight doesn't count as a duel anymore; the subtleties of attack and defense are quickly lost when several combatants become involved. The DM has the authority to declare that a duel has turned into a normal melee whenever he sees fit.

## Initiative

In a duel, initiative works differently than it does in a normal melee. Roll initiative normally at the beginning of the fight, but disregard any critical events—this is a contest of skill, not luck. The character that wins initiative is called the attacker, and his opponent

becomes the defender.

After the first round, duels don't have initiative rolls. Instead, the attacker retains the initiative until one of the following events occurs:

- He chooses a combat action that does not require an attack roll in a round;
- The defender disarms or traps the attacker's primary weapon;
- The attacker is knocked down or forced to retreat by the defender;
- The defender overbears, trips, or otherwise grapples the attacker.

When the initiative shifts, the effects are immediate—if an attacker loses the initiative in the fast phase, his opponent is considered to have the iniative in the average, slow, and very slow phases of that same round, as well as the following round (or at least until the new attacker loses the initiative.)

## The Dueling Plot

Before a duel begins, both of the participants should have a copy of the dueling plot (provided on the opposite page for you to photocopy). There are two basic parts to the diagram: the positioning symbols and the attack and defense lists.

At the beginning of each round of a duel, the attacker and defender both secretly choose their strategies of attack, defense, and position. The attack and defense forms are represented by numbers on a concealed die; the attack form uses a d12 and the defense a d6. The lists on the dueling plot indicate which forms are available and what effects and adjustments apply. The position symbols are used to indicate how the duelist moves *defensively* in the round.

To set up a maneuver, each player first takes the defensive die (the d6) and chooses a defense form, then positions it in the space desired. Next, an attack form is selected on the attack die (the d12). Note that not all attack forms are allowed with every defensive maneuver. The numbers in the position spaces indicate which attack choices are valid with that kind of defensive movement. After all, it's pretty hard to perform a close attack on someone when you're leaping back. Finally, the attack die is positioned where the duelist anticipates his opponent will go.

## Attacking in the Right Spot

Anticipating where your opponent will go is an important part of the duel. If you apply your attack to the exact point that your opponent is moving defensively, your duelist gains a +2 bonus to the attack roll. For every direction (stationary, forward or backward, left or right) and every level (low, middle, high) that you are off, a 2-point penalty is

applied.

*For example, Eusebio is involved in a duel with his archnemesis, Darius the Dastardly. Eusebio's player secretly chooses to step to the left and perform a defensive block maneuver. At the same time, Eusebio will perform a normal attack, anticipating that Darius will leap back.*

*Darius, however, decides to tumble forward, making a normal defense and a normal attack. Since Eusebio guessed incorrectly two direction places (from back to stationary, stationary to forward) and two levels (high to medium, medium to low), he will suffer a –6 penalty to his attack roll (he starts with a +2 bonus, but loses four 2-point penalties for the four displacements).*

## Reading an Opponent's Move

After both characters have set their attack pattern, but before they are revealed, one duelist can attempt to "read" the other's moves. The duelists make an opposed Intelligence check. Whichever duelist wins has picked up on some telegraphed move by his opponent. If neither duelist makes a successful check, no pattern reading occurs. Alternatively, the duelist who holds initiative automatically gets to make a "read."

In either case, the winner gets to ask about one aspect of his opponent's pattern. He may choose to ask what kind of attack is coming, what kind of defense is being used, or the position of his opponent's defense. Once this is done, the duelist who has made the read may adjust one aspect of his own pattern accordingly. If he chooses to change the position of his attack, then he may only adjust it by one space, either directionally or by one level.

*Continuing our example, Eusebio wins an opposed Intelligence check and questions Darius's player on the direction Darius intends to move defensively. Upon seeing how badly he miscalculated, Eusebio decides to adjust his attack from a leap back to a backpedal, reducing his penalty from a –6 to a –4. Alternatively, he could have chosen to change his attack style to a wild swing, gaining a +1 bonus to hit, but his final penalty would have been at –5.*

## Moving the Figures

After the patterns are established and read, combat is conducted as per the combat system in Chapter One. If a figure must close to make an attack, the figures are moved accordingly. At the end of the round, the players must move their figures on the board one space in the direction they chose as their defensive positioning. In other words, if a duelist tumbled forward, that figure moves forward one space.

If for some reason the two figures end up in the same square, an opposed Strength check is made to see who gains the square and who is pushed back a square. The combatant who wins the square always pushes his foe in the opposite direction from where the winner came in.

## Choice of Defense

There are six different defenses that a dueling character can choose from when building his attack pattern for the round. The defenses are:

1 **None:** The character chooses to use a standard defense, not utilizing any unusual maneuvers.
2 **Weapon Block:** The character allocates an attack for the block maneuver, using a weapon to catch one of his opponent's attacks.
3 **Defensive Trap:** The character allocates an attack to perform the trap maneuver. The trap itself can be performed with a primary or secondary weapon or even a shield.
4 **Defensive Disarm:** The character allocates an attack to perform a defensive disarm.
5 **Shield Block:** The character allocates an attack for the block maneuver, using a shield to catch one of his opponent's attacks.
6 **Parry:** The character chooses the combat action parry, making no attacks this round. Parrying provides the character with a bonus to his AC equal to 1/2 his level, or 1/2 his level plus one if he is a warrior.

## Choice of Attack

Duelists can also choose one of twelve types of attack:

**1** **Normal Attack:** The duelist uses no unusual maneuvers, simply attempting to land a normal blow with her weapon.
**2** **Shield Punch:** The duelist allocates one of her attacks to performing a shield punch.
**3** **Sap:** The duelist attempts to use her attack to knock her opponent unconscious.
**4** **Pull/trip:** The duelist tries to use her weapon to hook or snare her opponent's legs and pull him off his feet. She must allocate an attack for this option.
**6** **Offensive Disarm:** The character allocates an attack to the offensive disarm option.
**7** **Feint:** The character tries to draw out her opponent by faking an attack in one location and then attacking somewhere else. The feint is particularly effective against ripostes and disarms, and therefore provides a +1 bonus against those types of attacks.
**8** **Outside Attack:** The character tries to attack around her opponent's guard, striking to the side of a shield or at a sliding opponent. This maneuver offers a +1 bonus against a shield block or a slide position. Flails are also very good for this and get a +1 attack bonus above and beyond any other bonuses for this maneuver.
**9** **Riposte:** The character waits for her opponent to launch an attack and expose a weakness, and then she strikes in return. A character who ripostes must wait until after her opponent has attacked before she can make her own attack in that round. However, the riposte maneuver offers a +1 bonus to hit against smashes, wild swings, and outside attacks.
**10** **Smash:** It's not elegant, but beating down a weaker character's defenses is a legitimate tactic in a fight. This type of maneuver offers a +1 bonus to hit versus blocks and parrys.
**11** **Close Attack:** The duelist tries to get inside her opponent's guard and attack at close range. This maneuver provides a +1 bonus against opponents with larger

weapons, but it cannot be used if the character's own weapon size is larger than her opponent's.

12 **Wild Swing:** Foregoing all thought of defense, the character tries to make as many attacks as possible by raining a fusillade of blows on her opponent. Wild swings gain a +1 bonus to attacks against normal defenses.

## Ending a Duel

Duels don't have to be fought to the death; in fact, there are lots of villains and monsters that would rather not get killed if it's possible to surrender and live. Some other common conditions for duels include fighting to first blood, fighting until someone is wounded (usually 25% or 50% loss of hit points), fighting until disarmed or knocked down, and any number of other alternatives. In social confrontations, the area's culture may have dueling traditions that define the normal forms of combat and victory.

For example, in Norse cultures, duels might be resolved in a *holmgang*, or island-going; the two parties involved meet on a small island, with no seconds or bystanders, and only one is permitted to return. Other duels may be considered over when the blood of one of the fighters stains a white sheet on which they fight, or when an impartial judge rules that one character or the other has been defeated.

### Heroic Frays

The most heroic and inspirational stories of battle are about the stand of the few against the many. The legend of Roland holding the pass of Roncesvalles, or Davy Crockett at the Alamo, or Tolkien's tale of the Fellowship standing against the orcs of Moria in Balin's tomb—these stories live forever in the imaginations of people everywhere.

In a heroic fray, the PCs are fighting against hordes of individually weak monsters such as goblins, kobolds, or giant rats. Warriors facing adversaries far less skillful than themselves can double their normal rate of attack. This only applies to their primary weapon; if the character is fighting with a weapon in each hand, the secondary weapon still adds only one additional attack per round. Any attacks of opportunity the heroic warrior receives must be counted off against these additional attacks, however.

In addition, warriors gain one extra attack per round which may be used to perform a shield-punch, shield-rush, unarmed punch or kick, or grab maneuver against any opponent that they threaten when they begin resolving their attacks for the round. The normal penalties for these attacks don't apply, so the shield maneuvers don't cost the warrior his AC bonus, and the unarmed maneuvers don't provoke attacks of opportunity.

Characters can only engage in a heroic fray against creatures of 1–1 Hit Dice or less, or creatures whose Hit Dice or levels are 10 less than the hero's. A 12th-level fighter can declare a heroic fray against monsters of up to 2 HD, a 13th-level fighter can stand against 3-HD monsters, and so on.

The other requirement of a heroic fray is numbers. The hero's side must be outnumbered by the enemy for the warrior to gain his extra attacks. If there are fewer monsters left than attacks available, the excess attacks are lost.

# Chapter Three:

# The Battlefield

For thousands of years, climate and terrain have played critical roles in the development of military tactics and the evolution of the battle. In flat, open lands, cavalry became the dominant force on the battlefield because the terrain favored mobility. But even the best horsemen lose most of their mobility in heavy forest, swamp, or rugged mountains. The commander who learns to use the terrain to his advantage becomes a formidable enemy.

In many AD&D games, the battlefield itself is often ignored or portrayed in a colorless, abstract manner. This chapter explores the various types of battlefields and their characteristics, with two goals in mind: creating more scenic and visual sites for your PCs' heroic encounters, and providing players and Dungeon Masters with another level of battlefield detail to reward quick thinking and sound tactics.

The first section of this chapter, *Battlefields*, discusses sites common to adventurers in role-playing situations and defines battlefield characteristics and terrain. Settings ranging from ice plains to tropical jungles are all included. The second part of this chapter, the *Battlefield Generation System*, provides the DM with an easy way to quickly create a complete battlefield for any encounter. The last part of this chapter is *Combat Under Unusual Conditions* and deals with a variety of strange situations.

### Does This Belong in My Campaign?

Even if you are not using the *Player's Option* combat system presented in Chapter One, you'll still find that most of the material in this chapter can be useful in any AD&D campaign. The information on movement, cover, and encounter ranges can go a long way toward making your battles more visual and exciting. Your players will also enjoy the new tactical opportunities (and problems) this chapter presents.

### Battlefields

Every fight the player characters participate in has to happen somewhere. Defining the setting for an encounter may provide players with ideas for ways to use the terrain against their enemies, or present the DM with an opportunity to make an encounter tougher by giving the monsters the same opportunities.

## The Four Basic Battlefields

In most fantasy role-playing games, battles tend to take place in one of four environments: a dungeon or cave, a town or building, a castle or fortification, or outside. There are exceptions, of course, but most battles occur in one of these environments.

The DM can prepare four basic battle maps to represent each one of these areas, and then modify the map for the particular details of each new battle. For example, TSR's *Dragon Strike*® game includes maps of a town, a meadow, a dungeon, and a cave—with a little work, the DM could use these generic maps to handle almost any fight.

### Dungeons or Caves

There are three basic problems with fighting in a dungeon or cave: first, the fight usually takes place in a confined area; second, lighting may be a critical issue for characters who don't have infravision; and last but not least, the monsters usually know their own homes well. Unfortunately, most PCs end up going into dungeons or caves to confront monsters

in their lairs.

Overall, dungeons or caves may be the most dangerous places to have a fight. The lighting is poor, the footing is questionable, and there are all kinds of possibilities for traps and ambushes. The cramped quarters eliminate all but the most rudimentary choices of tactics and strategy.

When preparing a dungeon battle for the PCs, the DM should note the characteristics of the area in advance. Just about anything can live in a dungeon, and almost any kind of furniture or obstacles can be found there.

### Town or Building

Fighting inside buildings or in the streets of a town is almost as risky as fighting inside a dungeon. Ambush lurks around every corner, and at times it may be hard to distinguish between enemies and bystanders. Many town fights involve thieves or cutthroats who know their turf far better than the PCs, who are often visitors.

The biggest consideration in a fight in a civilized area is the possibility of help or interference from the local watch or nosy bystanders. Unless the PCs are willing to accept a price on their heads, they'll want to cooperate with the local constabulary. The DM should make a point of preparing for the arrival of the watch, since it's likely that someone will call for help before too long.

### Outside

Battlefields in the great outdoors range from featureless to impassable, depending on the terrain and ground cover. From the DM's point of view, an outside battle is a difficult one to run, since there aren't many maps of forests or hillsides around. A second consideration is the possibility of long-range combat that becomes a melee, forcing a change of scale.

The battlefield generation system in the next section of this chapter deals with battlefields in all kinds of terrain. Using this system, the DM can randomly create a detailed battlefield in no time at all.

### Castles or Fortifications

It doesn't take a genius to realize that storming a castle or fort of some kind is dangerous and bloody work. The defenders have the advantage of full cover and deadly traps or devices to make short work of attackers. Even high-level characters should think twice before entering the killing zones of a well-designed gatehouse or keep.

As with dungeons or buildings, the DM should prepare accurate and detailed maps, with notes about cover and trap locations, before the gaming session. This will save a lot of time during the game and eliminate the half-hour pauses in the game while the DM sets up the fight.

## Battlefield Characteristics

The characteristics of a battlefield can often change the nature of an encounter by limiting movement, visibility, or missile fire. For example, charging is impossible in waist-deep water, and archery is ineffective in dense forest. Battlefields are described with six general characteristics: encounter range, lines of fire, cover, footing, obstacles, and materials or hazards that can be found there.

## Encounter Range

This is the distance at which one group sights another group. The encounter range is governed by the ground cover and terrain; obviously, it's much harder to sneak up on someone on a flat plain than it is in heavy forest. Tactical encounter ranges are found in Chapter One under *Opening the Battle*.

These ranges may seem very short, but keep in mind the fact that these distances assume that both parties are trying to avoid being spotted. If one side or the other doesn't care about being seen, it's fair to double or triple the listed encounter ranges.

Note that encounter range is always the shortest of two ranges: the visibility from the surrounding terrain, and the visibility from the ambient light. A character may be able to see for miles on an open plain in daylight, but on a moonless night that open land is fairly well hidden. On a dark night in the forest, people can pass within five feet of a patient enemy without knowing that he's there.

## Lines of Fire

This is related to encounter range, since terrain types that limit visibility also restrict missile fire. A battlefield's lines of fire are described as *clear, impaired*, or *severely impaired*. Clear lines of fire are easy: the battlefield has no effects on missile fire.

Impaired lines of fire have no effect on missile fire within the terrain's minimum encounter distance; for example, light forest has an encounter range of 4d6 squares, so the first 4 squares of any missile fire are unaffected. After this minimum distance, targets are treated as if they had one step of hard cover more than they actually do; a target in the open actually has 25% cover, 25% covered targets are bumped up to 50%, and so on. This is because low branches or trees are obscuring the line of fire.

Severely impaired lines of fire have no effect on fire within the terrain's minimum encounter range, similar to impaired lines of fire, above. In severely impaired lines of fire, the maximum range of any missile fire is reduced to three times the minimum encounter range, and all targets in this area gain two levels of cover.

## Cover and Concealment

Most battlefields offer a fair amount of cover or concealment. This tends to be related to encounter range and lines of fire. Cover is simply described as available or unavailable; if there is cover present, its range from the character looking for cover is noted.

## Footing

The ground's movement characteristics can have a drastic effect on the course of a battle. This is referred to as footing. Footing is briefly described in Chapter One; the terrain descriptions that follow this section go into more detail on the footing for each type of battlefield.

The principal effect of poor footing is to limit movement to a fraction of normal. A character with a normal movement rate of 9 who is in heavy brush is limited to a MV of 3. The character's full-move and half-move combat actions are all affected by this limitation.

## Obstacles

Assuming that the basic battlefield is a flat, barren plain, obstacles are anything that interrupt a character's movement or provide cover against missile fire. They include streams, ponds, bogs, trees, thickets, dunes or drifts, slopes or bluffs, boulders, buildings, or walls.

As noted above, obstacles have two basic effects: limiting movement and providing cover. For example, most characters have to go around a tree trunk and can stand behind it to use it for cover. If an obstacle just limits movement instead of blocking it completely, it can usually be crossed or climbed at the cost of a half-move for the character.

### Unusual Materials or Hazards

This last category is a catch-all for items that just can't be described above. Some battlefields may have the makings for spears, lassoes, or slings just lying around. Other battlefields may have special hazards such as fires, quicksand, or water deep enough to drown in.

## Terrain Types

The following list of terrain types is not meant to be exhaustive; a book this size could be filled with descriptions of topography and ground cover for every conceivable battlefield. If you don't see something to match what you want, pick something close and approximate.

## Badlands

Badlands are rocky wastes or broken terrain with jagged escarpments, deep gulches, and little plant cover. The Black Hills of South Dakota and parts of the western United States fall into this category. Rugged, knife-edged hills tend to limit vision and confine the fight to a small area.

**Encounter Range:** 10d8 squares (50–400 feet)
**Lines of Fire:** Clear
**Cover:** Random hard cover available within 1d6 squares of any character.
**Footing:** Rocky slopes reduce movement by 2/3; characters can move normally if they avoid climbing or descending hills.
**Obstacles:** Deep gulches and boulders.
**Unusual:** Rocks for slings are handy everywhere. Falling down a rocky slope is dangerous—if a character slips, is knocked down, or fails a Dexterity check while descending a slope, he rolls 10–40 feet (1d4¥10) and suffers 1d4 damage per 10 feet fallen.

## Caves

Adventurers seem to find fights in caves all the time. A typical cave is small, twisted, and dark, with uneven floors and hanging stalactites and sharp stalagmites. If the battle is taking place in a colossal cavern, it's better to consider it an open field or hillside under total darkness.

**Encounter Range:** By range of visibility.
**Lines of fire:** Impaired.
**Cover:** Hard cover is available within 1d3 spaces of any character.
**Footing:** Some cave floors may be muddy or slick, but generally footing is okay.

**Obstacles:** Rock formations and crevasses.
**Unusual:** If the lights go out, caves are pitch black. Fighting in total darkness gives the attacker a –4 penalty on attack rolls and a random chance of attacking anyone engaged with him, including friends.

Stalagmites can skewer an unfortunate character who falls on one; any character who is tripped or knocked down has a 1 in 10 chance of falling on a stalagmite. The stalagmite "attacks" with a THAC0 of 15 and inflicts 2d10 points of damage if it hits. A successful saving throw vs. paralyzation for half damage applies.

## Desert

This is the classic sandy desert of motion picture fame. Most deserts are actually dry, rocky areas that are more like badlands or plains. The great dunes of a sandy desert tend to restrict vision and slow movement.
**Encounter Range:** Longest missile range.
**Lines of Fire:** Clear.
**Cover:** Available by lying behind a dune crest, but none otherwise.
**Footing:** Climbing a dune face reduces a character to 1/3 movement.
**Obstacles:** Dunes block lines of sight and may shorten the encounter range. Dunes range from a couple of feet to several hundred feet in height and may stretch for miles.
**Unusual:** Nothing of note.

## Fields or Farmland

Vast areas of civilized nations are farmland. Usually, cultivated fields indicate a settlement, homestead or village within a mile or two. In late summer and autumn, full-grown crops such as corn or wheat may be taller than a human and provide excellent concealment.
**Encounter Range:** Winter/spring: long missile range. Summer or wild fields: 10d6 squares (50–300 feet); autumn: 5d6 squares (25–150 feet).
**Lines of Fire:** Clear.
**Cover:** None. Concealment is available in summer or fall by lying down.
**Footing:** Excellent, no penalties.
**Obstacles:** None.
**Unusual:** Nothing of note.

## Forest, Heavy or Jungle

This is dark, dense forest with heavy undergrowth and closely spaced trees. The thick growth severely limits visibility and it is very easy to blunder into an enemy without ever knowing he was there. The Appalachian forests and the Pacific Northwest are good examples of heavy forest.
**Encounter Range:** 2d6 squares (10–60 feet)
**Lines of Fire:** Severely impaired.
**Cover:** Hard cover within 1d3 squares of any character; concealment within 1d3–1 squares of any character.
**Footing:** Heavy undergrowth and close-set trees reduce all movement by 1/3.
**Obstacles:** Trees and thickets.
**Unusual:** A ready supply of branches can provide clubs or sharpened stakes in no time at

all. In some forests, heavy vines can be used for snares or lassoes.

It's dangerous to ride at high speed in a forest; the rider of any mount moving at a run or gallop has a 1 in 6 chance per turn of being struck by a branch. The rider must roll a successful saving throw vs. paralyzation or be unhorsed, suffering 1d6 points of damage in the process.

Dense forests severely restrict flying creatures of Size L or bigger. Such monsters must land in a clear area and approach their prey on the ground, since there is not enough space between the trees to unfurl their wings.

## Forest, Light

The principal difference between heavy forest and light forest is the amount of underbrush. Light forests have much less brush to obstruct movement on the ground, and tend to be much airier and brighter. Small stands of trees, copses, or orchards can all be considered light forest.

The ground level of a true rain forest can also be considered light forest, since there is little underbrush and the trees are spaced a fair distance apart. The canopy levels might be considered thickets or dense forest.

**Encounter Range:** 4d6 squares (20–120 feet)
**Lines of Fire:** Impaired.
**Cover:** Hard cover available within 1d6 squares of any character; concealment available within 1d4 squares.
**Footing:** Normal.
**Obstacles:** Trees.
**Unusual:** See heavy forest.

## Hills

Most hills are considered to be part of another terrain. For example, gentle rolling hills are plains, forests, or farmlands—their ground cover is their most important characteristic. This category actually refers to rugged foothills or highlands with light or no forestation. Large areas of the Appalachian mountains, the Scottish Highlands, and the foothills of the Alps fall into this category.

**Encounter Range:** Determined by the level of forestation (heavy, light, or none.)
**Lines of Fire:** Determined by the level of forestation.
**Cover:** Determined by the forestation, but in hills with no trees, hard cover is still available within 2d10 spaces of any character.
**Footing:** Characters moving uphill are slowed to 2/3 or 1/3 movement, depending on the severity of the grade. The forestation may limit movement even if the grade isn't too bad. Characters who slip or fall while moving downhill must roll a successful saving throw vs. death or roll 10–40 feet (1d4x10), suffering 1d4 damage per 10 feet fallen.
**Obstacles:** Boulders, escarpments, and ravines or gulches.
**Unusual:** Characters fighting with a height advantage (i.e., attacking from uphill) gain a +1 bonus to their attack rolls. Most hills are good places to find rocks for slingstones.

## Marsh

Marshes aren't swamps; marshes are bogs or wetlands without trees. The ground is treacherous, and careless adventurers can easily become lost or mired in mud. Marshes

may be flat, but tall stands of reeds can serve as excellent concealment, and characters who don't mind getting wet can always go to ground to stay out of sight.
**Encounter Range:** 4d12 squares (20–240 feet)
**Lines of Fire:** Clear.
**Cover:** None. A character can find concealment within 2d6 squares behind reeds or in shallow ponds or creeks.
**Footing:** In knee-deep water, characters move at 2/3 their normal rate. In waist-deep water, they move at 1/2 their normal rate. In shoulder-deep water, movement is reduced to 1/3 normal.
**Obstacles:** Ponds, creeks, and streams.
**Unusual:** Characters grappling in water waist-deep or deeper can try to drown their opponent if they achieve a hold on him. The victim is considered to begin holding his breath on the round in which his attacker got his wrestling hold, and may begin to drown as described in the *Player's Handbook*, Chapter 14: Time and Movement, under Holding Your Breath.

Note that characters rendered unconscious by an attack may also be in danger of drowning if they fall into water of any depth.

## Mountains

Battles on actual mountainsides are rare. This type of terrain represents high passes, canyon-walls, deep valleys, high snowfields, and windswept peaks. If the fight takes place below the treeline, consider the terrain to be hills, forest, or fields.
**Encounter Range:** Long missile range.
**Lines of Fire:** Clear.
**Cover:** Hard cover is usually available within 3d10 squares of a character, but it may take mountaineering skills to get to it.
**Footing:** Characters moving uphill or downhill are reduced to 1/3 normal movement or possibly stopped altogether, depending on the grade. If no normal movement is possible, characters may decide to climb instead.
**Obstacles:** Boulders, ice or snow, cliffs, dangerous slopes.
**Unusual:** Characters who slip or fall while climbing or moving downhill must roll a succcessful saving throw vs. death or fall 10–60 feet (1d6x10), suffering 1d6 points of damage per 10 feet fallen. Mountainsides usually have a plentiful supply of rocks of all sizes.

## Plains

Open plains are a tactician's greatest challenge. Without any clear advantage to be gained from controling a terrain feature, battles become contests of maneuver and skill. Any commander can stand off a superior enemy force in rough terrain, but it takes a genius to defeat the same force on open ground. Plains include savannahs, dry steppes, and some grassy deserts as well as American Midwest-style prairie.
**Encounter Range:** Long missile range. A Man-sized creature can be spotted as far as 1,000 yards away on level plains.
**Lines of Fire:** Clear.
**Cover:** None.
**Footing:** Normal.

**Obstacles:** The random stream, gulch, or stand of trees.
**Unusual:** Nothing of note.

## Ships

In many AD&D campaigns, ships and boats are the fastest way to travel long distances. Many kingdoms rely extensively on sea trade and are plagued by pirates or privateers. Naturally, adventurers tend to get involved in problems like this. Fighting on a ship first assumes that the attacker can catch and board his prey.
**Encounter Range:** Belowdecks, encounter range is limited by the range of vision. Abovedecks, everything is in range for an encounter. Ships can spot other ships as far as 10–15 miles away, depending on their size and the prevailing visibility.
**Lines of Fire:** Impaired.
**Cover:** Masts, deckhouses, water-kegs, and gunwhales can all function as hard cover. Abovedecks, any character is within 1d4 squares of hard cover.
**Footing:** Normal. Climbing around in rigging is a different matter, though.
**Obstacles:** Masts, sails, deck cargo, and open hatches can obstruct movement.
**Unusual:** The sails and masts of a ship are known as its rigging. Moving around in the rigging is treated like climbing, but there are always ropes or ladders handy. If a character in the rigging slips or is knocked down, he may fall to the deck or the sea.

## Swamp

Swamps are like marshes, but have trees and thickets. Most of a swamp's trees can be found on islands of solid ground, but many others (such as cypresses) can thrive in the water. The Louisiana bayou, the Great Dismal Swamp of Virginia, and portions of the Everglades are good examples of swamps.
**Encounter Range:** 2d6 squares (10–60 feet)
**Lines of Fire:** Impaired.
**Cover:** Hard cover is available within 1d6 squares of any character. Concealment is available anywhere, by going to ground.
**Footing:** In knee-deep water, characters move at 2/3 their normal rate. In waist-deep water, they move at 1/2 their normal rate. In shoulder-deep water, movement is reduced to 1/3 normal.
**Obstacles:** Trees, thickets, bogs, creeks, ponds, quicksand.
**Unusual:** See Marshes. In addition, swamps usually have wood or vines handy, which can be used to make improvised weapons.

## Taverns

It seems to be the fate of adventurers everywhere to get into brawls and scrapes of the nastiest sort in alehouses and common rooms. The typical indoors fight is a dangerous and bloody affair, complicated by the presence of bystanders and the possible intervention of the town watch.
**Encounter Range:** By limit of visibility. Naturally, you can't fight with someone who isn't in the room.
**Lines of Fire:** Usually impaired.
**Cover:** Tables, benches, and furniture can all be used for hard cover.
**Footing:** Normal.

**Obstacles:** Furniture.
**Unusual:** Chairs, mugs, bottles, and other tavern accessories can all be used as clubs or other weapons.

## Town Streets

If the PCs aren't getting into barroom brawls, they're probably fighting in the alleys or streets right outside. Most medieval towns had very close-spaced buildings with dark, winding streets.
**Encounter Range:** 2d6 squares (10–60 feet)
**Lines of Fire:** Usually clear.
**Cover:** Hard cover is available within 1d6 squares of any character.
**Footing:** Normal.
**Obstacles:** Carts, wagons, vendor's stalls, passers-by, buildings.
**Unusual:** Walls and gatehouses often limited movement between sections of a town. These areas could be used as strongpoints by a defending force. Almost any kind of weapon materials may be close at hand in a typical town street.

## Generating a Battlefield

Since the *Player's Option* combat system relies on a figure's positioning and facing, any battlefield the DM creates should show obstacles and terrain features in the exact squares they occupy. The following section describes a quick battlefield generation system that the DM can use when he doesn't have the time or forewarning to prepare a detailed battlefield before the player characters get into a fight.

This system should not replace old-fashioned preparation for an adventure. If you know that the players are likely to encounter a troll ambush in a mountain pass, make some notes about the setting of the battle before the adventure begins. Any staged encounters in buildings should be described, too. If you take the time to draw a good dungeon map, the map can be copied to a larger size for use with the *Player's Option* combat system without too much trouble.

The only times you should have to create a battlefield from scratch are when you don't expect a fight to occur, such as when the PCs run into a random encounter while traveling cross-country or pick a fight with someone they were just supposed to talk to. Save yourself the trouble of creating a battlefield if it is fairly obvious that the encounter won't lead to a fight or if it seems likely that the actual fight will be very short.

## Step One: Scale

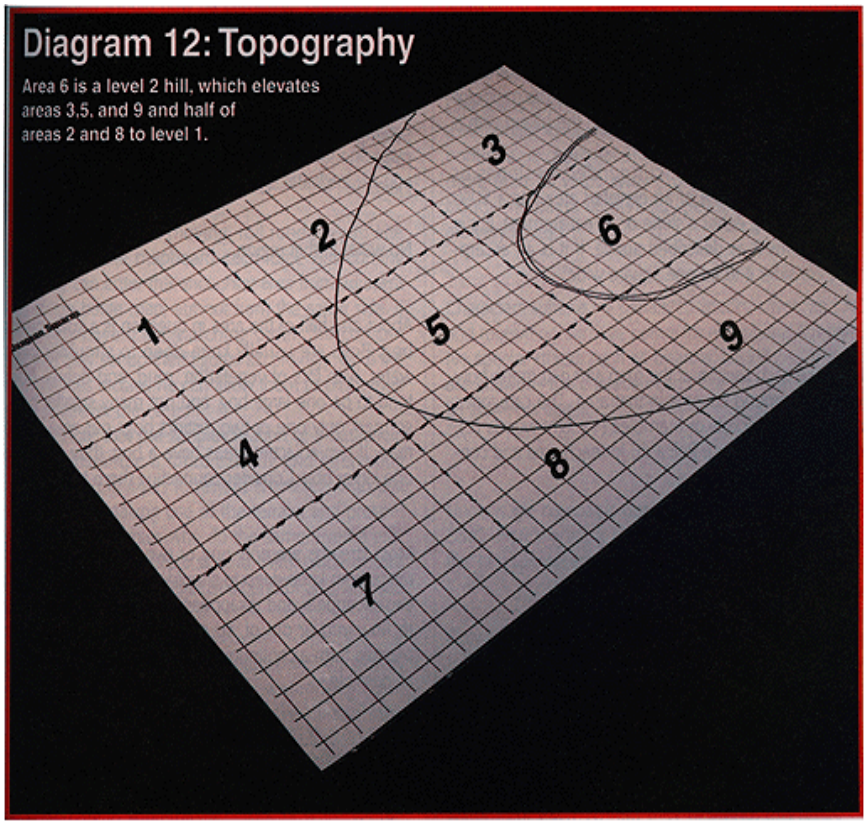
Here's a tip for saving time: don't make a battlefield bigger than it has to be. There's no point in mapping every street of a town if you're confident that you can contain the battle in one dark alleyway. Refer to the encounter ranges listed for the various terrain types in the previous section; you probably don't need to make the battlefield bigger than about 125% to 150% of the maximum encounter range. For example, in light forest, the encounter range is 4d6 squares. The maximum encounter range is 24 squares, so you'll want a battlefield about 30 to 35 squares across. If the encounter is taking place indoors, it's not necessary to map out more than the room the PCs are fighting in.

## Step Two: Topography

Take your battlefield and divide it into nine sections, like a tic-tac-toe board. The lay of

the land may place some parts of the battlefield higher than the other parts. Each of these nine sections is assigned a height relative to the others; from these different heights, you'll derive the slopes of your battlefield. (If this is an indoors fight, ignore this step.)

First, determine the base topography for your battlefield: flat, hilly, or broken. Marshes, swamps, plains, and some fields and forests are flat; hills, deserts, and most other fields and forests are hilly; and badlands, caves, some deserts, and mountains are broken.



**Flat**

No slopes or elevations worth noting. You're done with this step.

**Hilly**

Roll a d6 for each section of the battlefield; on a 1, that section is elevated 20 feet above the rest of the battlefield, and all adjacent sections are elevated 10 feet above the base height. On a roll of 2, that section is elevated 10 feet above the base height.

**Broken**

Roll a d6 for each section of the battlefield; on a 1, that section is elevated 20 feet, but adjacent areas aren't elevated as they are in hilly terrain. On a 2 or 3, that section is elevated 10 feet.

## Slopes and Escarpments

Hills are surrounded by slopes. Each 10 feet of elevation requires a slope of two to four

squares to surround it. Draw a hilltop of three to ten squares at the midpoint of each elevated area, and then circle the hilltop with a ring of sloping squares.

Broken areas may be surrounded by slopes or escarpments. Any side of an elevated area has a 50% chance of being either a slope or an escarpment. If it is a slope, draw it as described above. If it is an escarpment, consider it to be one square wide.

## Step Three: Ground Cover and Water

Now, take each section of the map and determine how dense the ground cover is in that area. The categories are clear (C), thickets or brambles (T), light woods (L), and heavy woods (H). Roll a d6 for each area and consult the chart below:

| | **1** | **2** | **3** | **4** | **5** | **6** |
|---|---|---|---|---|---|---|
| Light Woods | C | C | T | L | L | H |
| Heavy Woods | C | T | L | H | H | H |
| Swamp | C | C | T | T | L | L |
| Hills | C | C | C | C | T | L |
| Plains | C | C | C | C | C | T |

### Clear

No ground cover in that section of the battlefield.

### Thickets

Brambles or thickets cover that section of the battlefield. Thickets tend to be in clumps; take about two-thirds of the squares in that area and mark a couple of bramble patches.

### Light Woods

Light forest is prevalent in that area of the battlefield. Trees are about three squares away from each other; mark trees in about one-quarter of the squares in that section.

### Heavy Woods

Heavy woods are like light woods, but the trees are closer together. Mark trees in about one-third to one-half of the squares in that area, about one to two squares away from each other.

Standing water or bogs can be handled in much the same way as ground cover. Each section of a marsh, swamp, field, or plain may be clear (C), or it may have a pond (P), bog (B), or stream (S) in it. Roll 1d6 for each ninth of the map:

| | **1** | **2** | **3** | **4** | **5** | **6** |
|---|---|---|---|---|---|---|
| Marsh | C | S | B | B | P | P |
| Swamp | C | S | B | B | B | P |
| Field | C | C | C | C | S | P |
| Plain | C | C | C | C | C | S |

### Clear

No water in that region.

### Bog
About one-half of the area in question is a soft, muddy bog. Bogs are usually knee-deep to shoulder-deep water, with lots of vegetation, mud, and debris. Bogs tend to be one large bog, and not many smaller bogs, so mark only one or two distinct bogs per area of the map. If two adjacent areas have a bog, they might be one larger bog. Consider connecting them together.

### Stream
Most streams are only one or two squares wide, and range from knee-deep to shoulder-deep. Streams don't usually appear and disappear without a body of water to flow into or out of, so make sure that the stream squares form a continuous line and go somewhere if at all possible.

### Pond
About three-quarters to all of the area is under water. Ponds are usually knee-deep or waist-deep near the edges, but can be 10 or 15 feet deep in the middle.

## Step Four: Obstacles
Battlefields are often littered with obstacles and obstructions. They provide cover, limit movement, and occasionally endanger the people fighting around them. The DM should arbitrarily scatter a handful of obstacles of his choice over the map. Obstacles include:

- Gulches, ravines, or ditches (any terrain except marsh or swamp)
- Boulders (hills, mountains, badlands)
- Rockfalls (hills, mountains, badlands)
- Deadfalls (forests, swamp)
- Fences, earthworks, or buildings (any civilized area)

## Step Five: Putting It All Together
Your battlefield should now be complete. Chances are, you have some defensible terrain and some open areas that invite attack. Now, the DM should decide where each force starts. If one side surprises the other, the surprised fellows have to set up first, and the surprising force gets to set up around them. If one side was stationary or defending, they set up along one randomly-determined map edge, and the attackers set up opposite them.

If both forces were moving, roll randomly to see which edge of the mapboard each force was coming from. They can enter the encounter area from adjacent sides of the battle map, but not from the same side. If the players have a set marching order, the DM can insist that they set up their figures accordingly. Or, if the circumstances dictate, he can allow them to place their figures wherever they see fit.

Please note that the simple creation of a battlefield does not guarantee a more exciting and interesting encounter—the DM has to reward characters who use their heads by making use of the terrain, and present the party with enemies who do the same. Even a grizzled party of adventurers should think twice before going up a rocky hillside against a band of orcs who can see them coming.

## Fighting in Unusual Conditions

Since adventures are notoriously unpredictable, a surprising number of battles take place in the most inconvenient places. Player characters tend to get into fights while hanging on the side of a cliff, swimming in subterranean lakes, or while venturing into fantastic planes of existence. Last but not least, many magical spells can create strange effects. This next section addresses the most common of these unusual conditions.

## Limited Visibility

Fighting at night or in dark settings is difficult—especially if your foe can see better than you can. As noted in the *DMG*, characters fighting in darkness or heavy fog suffer penalties to their attack rolls, damage bonuses, and Armor Classes.

### Moonlight or Moderate Fog or Rain

Characters suffer a –1 penalty to attack rolls and saving throws. Since nothing can be seen more than 100 yards (60 squares) away, spell and missile ranges are limited; no missile scale combat can take place in an encounter.

### Starlight or Dense Fog or Heavy Rain

Characters suffer a –3 to attack rolls and saving throws, a –2 penalty to AC, and only get 1/2 their normal damage bonus for exceptional Strength. Nothing can be seen more than 50 yards away (10 yards for dense fog or cloudy moonless nights), so spell and missile ranges are very limited.

### Total Darkness

Characters suffer a –4 penalty to attacks, saves, and AC and receive no damage bonus for exceptional strength. No special attacks such as disarms, backstabs, or traps are allowed—the character can't see his own weapon, let alone his target.

## Water

Underwater combat is described in some detail in the *DMG*. Here's a quick reminder of some of the difficulties of underwater combat.

### Weapon Restrictions

Only type P weapons can be used effectively underwater; the water offers too much resistance to use any other kind of weapon except nets.

### Vision

Under the best of circumstances, characters can see no more than 100 feet underwater (50 feet in fresh water.) For each 10 feet they descend, this range of vision is reduced by 10 feet; if a character is 30 feet underneath the surface of a lake, he can only see 20 feet. If it is dark outside or the water is muddy, this could be reduced even more.

### Movement

Characters moving about underwater have to swim. See Swimming under Chapter 14: Time and Movement in the *Player's Handbook*.

Characters who are only wading are much less affected. Wading in knee-deep water

reduces movement by 1/3. Wading in waist-deep water reduces movement by 1/2 and adds a one-phase initiative penalty to any action the character takes. Wading in shoulder-deep water reduces movement by 2/3, adds a two-phase penalty, and causes the character to lose any Dexterity adjustment to his Armor Class (although it does provide cover against someone firing missiles at the character).

### Fighting Underwater Monsters From the Surface

It's always great fun when a wading character gets attacked by some aquatic horror. When a character fights against something that uses water for cover, slashing and bludgeoning weapons are useless. Only type P weapons can be used to attack underwater creatures, and there is a –2 penalty to hit. The wading character also loses any Dexterity adjustment to AC when attacked from beneath the surface.

## Climbing

Cliffs and mountaintops are another awkward place for a fight. Adventurers seem to be drawn to the worst locations imaginable for their heroic battles and often find themselves under attack while they're clinging to a vertical wall of rock.

### Movement

Climbing characters normally move 1 foot per round for each point of normal movement. A dwarf with an adjusted movement rate of 5 can climb 5 feet per round in good conditions. Refer to Climbing under Chapter 14: Time and Movement in the *Player's Handbook*.

### Fighting

Climbing characters lose all AC bonuses for Dexterity and shield, and may have rear attack modifiers applied against them. They have a –2 penalty to attack, damage, and saving throw rolls. If a character is above his enemy, he gains a +2 bonus on his attack rolls; if he is beneath his enemy, he suffers an additional –2 penalty.

Any time a character is struck while climbing, she must make a climbing check, detailed in Chapter 14: Time and Movement in the *PHB*. Note: you can use a default check of 30% in good conditions.

### Fighting Flying Creatures

Encountering angry giant eagles while clinging to a cliff is usually no fun at all. Unless they can hover, flying monsters can only make one pass every other round to attack climbing characters. If the PCs are facing the cliff (most climbers have to), the flying creatures get the benefit of rear attacks. Intelligent flyers may try to use their talons to drag a climber off the cliff; treat this as a grab attack. This forces a climbing check, and even if the character succeeds, he still must win the Strength contest to stay on the cliff side.

## Aerial Combat

Aerial combat is described at length in Chapter 9: Combat under the optional rule Aerial Combat in the *Dungeon Master Guide*. Here's the gist of how these rules work in the *Player's Option* combat system.

### Initiative

The more maneuverable flyer gains a –1 bonus to its initiative roll for each level of difference in Maneuverability Class between itself and its opponent. Creatures at home in the air have an easier time fighting while airborne.

### Threatening

No aerial combatant threatens any adjacent creatures. Combat in the air just doesn't work that way; battles tend to take the form of joust-like passes at each other.

### Movement

All fliers with a MC of B or worse must declare a half-move action every round just to stay in the air. Class B fliers can hover in position, but fliers with a MC of C or worse must move forward in this half-move to stay aloft. This requirement to keep moving means that a class C flier can make an attack against a stationary target once per two rounds, a class D flier once per three rounds, and a class E flier once per six rounds.

Gaining a point of altitude costs an additional movement point; a flier with a move of 18 could move 9 squares forward and 9 squares up with a full-move action. Diving allows the flier to add one point of free movement for each point of altitude it drops, so the flier with the 18 movement could move 36 squares in a full-move dive. Of course, it also has to drop 18 points of altitude (90 feet) to do this.

### Attacks from Below

Creatures attacking from beneath an opponent cannot charge, but they may be in a blind spot. The defender can reply with an attack only if it has natural weapons or its rider is equipped with a size L weapon, such as a lance.

### Attacks from Above

Creatures attacking from above may declare a charge by diving at their victims. Lances, spears, and a flier's natural talons or claws inflict double damage in a dive attack. In addition, the defender may not be able to reply to the attack if its only natural weapons are talons or hooves.

### Unseating a Rider

Characters riding a flying mount can be "unhorsed," just like characters on the ground. If the character is strapped into his saddle (a wise precaution), he is simply knocked off-balance in his seat and suffers the same penalties as if he had actually been knocked down on the ground—he is easier to hit and has to spend an action getting back in his seat.

Naturally, if a character is not strapped in, he risks the damage of a fall if he is unseated by any means.

## Combat on Other Planes

Almost any conditions imaginable may be encountered in the various planes of existence. The Planescape™ campaign setting describes the general conditions of the various Outer and Inner Planes, but fights are also likely to occur in two other settings: the Astral and

the Ethereal Planes.

### Astral Combat

On the Astral Plane, a creature's tactical movement is based on its Intelligence score. Its move becomes 30 feet (6 squares) per point of Intelligence. In addition, Intelligence replaces Stength for purposes of determining attack and damage adjustments, and Wisdom replaces Dexterity for AC adjustments and missile fire. All missile ranges are doubled, but non-native characters suffer a –2 penalty to hit with missile attacks.

There are very few obstructions in the Astral Plane, and the encounter range is normally twice the longest missile range. Since this is most likely a great distance, astral combat should be run in missile scale. Fighting in the Astral is like aerial combat; creatures do not threaten each other, and can move in three dimensions.

If a character's astral self is killed, she immediately returns to her physical body with only 1 hit point. If the character is killed while physically on the plane, she is dead.

### Ethereal Combat

Ethereal creatures move at their normal unencumbered rate, regardless of their equipment and armor. Unlike the Astral Plane, the Ethereal is a swirling mass of misty proto-matter that obscures vision; the Encounter Range is 10–40 squares (50–200 feet). Missiles tend to be slowed by the misty matter, and shots of medium range or longer just stop and hang in the air.

If a character is in the Border Ethereal, she can still perceive the shadowy outlines of the plane she just left. She can move through any objects or creatures without impediment. Of course, she is unable to affect things on the plane she is viewing, but she can only be affected by the magical gazes of a very limited number of monsters.

## The Effects of Magic on the Battlefield

Needless to say, the one thing that breaks all the rules on a battlefield is magic. Spells and magical items can create almost any condition imaginable, ranging from the merely annoying to the truly catastrophic. We could spend most of this book describing the exact effect of each and every spell and magical item in the game system, but this wouldn't be very practical. Instead, we'll discuss the most common effects that may give DMs trouble.

## Wizard Spells

The most powerful and effective spells in the AD&D game are found in the hands of wizards. In fantasy role-playing, wizards often dominate battlefields like heavy artillery or airstrikes in modern warfare. Entire battles often hinge on one character's choice of spells and the enemy's attempts to down the wizard before he wreaks havoc on them.

### *Blink*

The spell *blink* works slightly differently in the *Player's Option* combat system. Roll 1d6; on a 1, the wizard blinks in the very fast phase, on a 2, fast, on a 3 or 4, average, on a 5, slow, and on a 6, very slow. The wizard's blink always occurs first in the phase, before any other actions are resolved.

### *Darkness, 15' Radius*

Creatures outside the area of darkness cannot trace a line of fire through the darkness to a target on the other side. Creatures moving in total darkness are reduced to 1/3 their normal move unless they wish to risk stumbling

***Enlarge***
A character who grows to eight feet in height becomes size Large; a character who grows to 12 feet in height becomes size Huge. This affects reach, threatening, and moving through smaller figures; see Chapter One. Very large monsters can be made smaller by applying the reverse of this spell.

***Fog Cloud***
As with *darkness*, magical fog blocks any lines of fire. Creatures blundering through the fog can easily be ambushed by enemies waiting for them to come into the open; the DM can insist on surprise checks if he deems it appropriate.

***Hallucinatory Terrain***
This spell is very dangerous when used to conceal hazardous areas. If the victims do not perceive the illusion, they fall prey to whatever hazards the terrain holds. For example, creatures who run down a hillside believing it to be level ground receive no Dexterity check or saving throw to keep their balance; they automatically fall and roll or slide to the bottom of the hill.

***Haste***
Creatures under the influence of a *haste* spell increase their base initiative and weapon speeds by two phases and always win initiative. Their movement rates are doubled, and they gain a second set of attacks in the very slow phase.

***Invisibility***
The best thing to do with an invisble character or monster in a fight is to secretly note its location each round and physically remove the figure from the board. Do yourself a favor and don't run combats with invisble figures on both sides.

***Jump***
The creature empowered by this spell can actually leap over Man-sized targets without provoking an attack of opportunity. In addition, if the jumper wins initiative, he can make a half-move action to leap away after he attacks an adjacent figure, whether or not he is threatened by his enemy.

***Pyrotechnics***
The smoke effect of this spell blocks lines of sight and hinders missile fire just like magical mists or fogs.

***Shocking Grasp***
At the DM's option, creatures in metal armor may be considered AC 10 versus the wizard's touch. Only Dexterity and magical adjustments apply.

### *Slow*
Creatures affected by a *slow* spell automatically lose initiative and reduce their base initiative and weapon speeds by two phases. As noted in the spell description, their movement rates and attack rates are halved.

## Priest Spells
Few priest spells in the *Player's Handbook* that do not duplicate wizard's spells actually affect the battlefield to any significant degree. However, the Tome of Magic includes a number of priest spells in the sphere of war designed for the battlefield.

### *Air Walk*
Creatures affected by an *air walk* spell move and fight as if they were on solid ground as opposed to engaging in true aerial combat. They threaten squares in front of them and can guard against the attacks of other flying creatures, gaining the advantages of that combat action.

### *Obscurement*
Like magical fog, obscurement blocks lines of sight through the affected area, screening creatures in or behind the mists from most missile attacks.

## Magical Items
There are hundreds of magical items that can create various effects on the battlefield. The exact results of a magical item's use are left to the DM's discretion, but here are some general guidelines on some specific items. In cases where a magical item duplicates a spell effect, refer the spell sections.

### *Potion of Growth*
Characters may easily change size by imbibing a *potion of growth*; they gain the advantages of extended reach and size bonuses in overbearing or overruns as normal for monsters of that size.

### *Potion of Invulnerability*
The imbiber can still be knocked down, grappled, or overborne by creatures he is otherwise immune to.

### *Apparatus of Kwalish*
The mechanical claw attacks of the apparatus act in the slow phase of initiative.

### *Boots of Speed*
The Armor Class bonus applies when the character chooses a half-move or full-move combat action. Going toe-to-toe in a melee doesn't allow the wearer of the boots to take advantage of their defensive properties, although he can always use the extra movement.

### *Boots of Striding and Springing*
If the wearer strikes before his enemy because of a better action speed or because he won initiative, he may spring away as described in the *DMG* without provoking an attack of

opportunity. The +1 AC bonus applies all the time, even when the user is mired in a stationary slugging match.

***Crossbow of Accuracy***
Although the weapon treats all shots as short range, it still has medium and long ranges for purposes of armor penetration. See crossbows in Chapter Seven: Weapons and Armor.

***Scimitar of Speed***
The *scimitar of speed* is very fast, and its wielder always wins initiative if he declares a combat action that involves an attack with the weapon.

***Short Sword of Quickness***
See *scimitar of speed*, above. If two such weapons are involved in a single battle, their strikes are considered to be simultaneous.

***Sword of Sharpness***
The magical properties of *sharpness* override the normal critical hit procedure. It is still possible to achieve a normal critical hit by rolling an 18 or 19, even if it doesn't quite activate the *sharpness* properties. If a limb is severed, consider the injury to be a critical one of the appropriate sort—Chapter Six details the unpleasant effects of losing limbs.

***Vorpal Sword***
As with the *sword of sharpness*, the properties of a *vorpal blade* override the critical hit procedure. If the wielder rolls an 18 or higher that meets the criteria for a critical hit without invoking the vorpal power, a normal critical hit results.

# Chapter Four:
# Weapon Specialization & Mastery

In a desperate battle, the only thing that stands between a brave hero and a grisly end is his skill with blade or shield. Skill at personal combat is a valuable commodity in a fantasy setting; it's hard to imagine Conan meeting his better at swordplay, or the Gray Mouser encountering a foe swifter and more agile than himself.

This chapter describes a revised weapon proficiency system that includes several grades of specialization as well as new uses for a weapon proficiency. This material is completely compatible with the character point proficiency system described in the *Skills & Powers* book; the point system allows characters to purchase proficiency, expertise, specialization, or mastery in the same way that an AD&D character can spend proficiency slots to gain these benefits.

A number of new uses for weapon proficiencies are also included in this chapter. Weapon groups, fighting styles, attack maneuvers, shield use, armor use, special talents, and dirty tricks can all be learned by spending weapon proficiency slots.

## Weapon Proficiencies

Anybody can pick up a sword and swing it in a menacing manner, but without proper training and technique it's impossible to use a weapon correctly. A character's weapon proficiencies represent weapons in which he has some degree of training. Usually, he can wield them without embarrassing himself.

## Intelligence and Proficiencies

Fighters, paladins, and rangers may apply their bonus language slots for high Intelligence scores to any kind of weapon proficiency. Characters of any other type can only use these extra proficiency slots to learn nonweapon proficiencies. This rewards fighters who chose brains over brawn by allowing them to compensate for shortcomings in physical attributes with the benefits of skill and training.

Under this rule, the character's number of allowed languages simply represents the most languages she can ever learn. The character isn't assumed to begin play knowing any extra languages; instead, she must use nonweapon proficiency slots to learn any extra languages she wants to speak. Characters can always speak their native tongue without spending any proficiency slots.

Demihuman characters who are allowed to learn extra languages still have to spend slots learning these tongues. Their advantage lies in the fact that they can begin play with knowledge of these languages, because they had access to people who spoke them when they were growing up.

## Proficiencies and the *Skills & Powers* Book

The *Player's Option* character point system replaces the normal acquisition of proficiency slots. Characters may decide to learn a lot of skills by devoting their character points to a variety of proficiencies, or they may choose to specialize in a few areas. Regardless of how they elect to spend their character points, the end results are the same: either they have a proficiency in something or they don't.

## Weapon Groups

Many weapons are very similar in construction and techniques of use; for example, using a bastard sword with one hand is not too much different from using a long sword. Both weapons are heavy, two-edged blades that rely on slashing or chopping strokes to cut through armor. All weapons are categorized in *tight groups*, which are further organized into *broad groups*. The particular group a weapon belongs to is noted under the weapon characteristics in Chapter Seven.

Tight groups serve two functions in game play. First of all, all weapons in a tight group are considered to be related to each other. A character who is proficient in one weapon belonging to a tight group is automatically familiar with the other weapons of that tight group and has a reduced penalty for nonproficiency when using them.

Second, characters can learn to use all weapons in a tight group with a *weapon group proficiency*. Weapon group proficiencies cost two slots, but may include a number of weapons. For example, a character could use a weapon group proficiency to gain proficiency in crossbows; by spending two slots, he actually gains proficiency in six different weapons.

Some tight weapon groups are further organized into broad groups. For example, the tight groups of axes, picks, hammers, and maces are all part of the hafted weapon broad group. Proficiency in all of the weapons of a broad weapon group can be learned for three proficiency slots.

A number of weapons are completely unrelated to anything else. For example, lassoes just don't work like any other type of weapon. The same applies for nets, whips, bolas, and mancatchers. These weapons must be learned one at a time.

### Specialization and Weapon Groups

Having a weapon group proficiency counts as the first slot of specialization for one weapon in that group. When the character chooses to specialize, he need only spend one additional proficiency slot and select any weapon of that group as his specialty. For example, a character with the crossbow tight group proficiency could spend one additional slot to specialize in the medium crossbow. He's spent a total of three slots but has proficiency with six types of crossbows and specialization with his preferred weapon, the medium crossbow.

## Character Classes and Weapon Proficiencies

Most character classes are limited in their selection of weapons. However, in the *Skills & Powers* book, a character may choose to be proficient in a weapon she normally would not be allowed to use. This is reflected by requiring the character to spend more character points than normal to become proficient.

As an optional rule, characters may learn to use barred weapons by paying extra proficiency slots. A rogue or priest may learn a weapon normally reserved for warriors by suffering a one-slot penalty, and wizards may learn weapons normally reserved for priests or rogues with a one-slot penalty. If a wizard wishes to learn the use of a weapon normally reserved for warriors only, she must pay a two-slot penalty. For example, a wizard who wants to use a long sword could do so by paying two weapon proficiencies for it, since long swords are available for rogues—but she would have to pay three slots to become proficienct in the two-handed sword.

Note that the limited number of weapon proficiencies available for nonwarrior characters will tend to control character abuse of this rule. Priests may be *capable* of learning any weapons under these rules, but priests who use barred weapons do so at the risk of angering their superiors or deity.

### Kits and Barred Weapons

Some kits may allow characters to use barred weapons; for example, militant wizards may select a sword as one of their weapon proficiencies. Generally, the bonuses and perks of a kit are considered to negate any out-of-class penalties. However, priests may still be limited by their priesthood weapon restrictions.

### New Weapons

A number of new weapons are introduced in Chapter Seven: Weapons and Armor. Many of these are similar to weapons that were restricted in the *Player's Handbook*. The Weapon Table in Chapter Seven lists any classes that cannot use a particular weapon

under normal circumstances.

## Shield Proficiency

By spending a weapon proficiency, characters can become more skilled in the use of their shield. Modern re-enactments of medieval tournaments have demonstrated that the shield is a very important part of a warrior's protection. The extra protection conferred by the shield varies by the exact type the character becomes proficient in:

| Shield Type | Normal AC bonus | Proficient AC bonus | Number of Attackers |
|---|---|---|---|
| Buckler | +1 | +1 | 1 |
| Small | +1 | +2 | 2 |
| Medium | +1 | +3 | 3 |
| Body | +1/+2 vs. missiles | +3/+4 vs. missiles | 4 |

The number of attackers is the maximum number of times the shield bonus can be used in a single round by the character. Normally, shields can only be used against enemies in the character's front spaces or in the flank spaces on the character's shield side.

## Armor Proficiency

Similarly, characters can spend time and effort learning how to use their armor more efficiently. While this doesn't provide a bonus to Armor Class, it can help to offset the hefty encumbrance penalties of heavy armor. A character who spends a weapon proficiency slot becoming acquainted with a type of armor gains the special benefit of only suffering one-half the normal encumbrance of that armor.

For example, chain mail normally weighs 40 pounds, but a character with a proficiency in chain mail only has to count 20 of this towards his encumbrance level. This represents the character's training in wearing the armor just the right way and his practice in moving around while wearing 30 or 40 pounds of ironmongery.

## Weapon Mastery

It's fairly obvious that there is a huge difference in the attack potential of an unskilled novice and a trained swordsman. The level of skill with which a character fights is divided into six general categories: nonproficiency, familiarity, proficiency, expertise, specialization, and mastery.

*Skills & Powers* uses character points to acquire each level of mastery, but this system is also compatible with AD&D weapon proficiencies. Nonproficiency and familiarity have no cost in proficiency slots, normal proficiency costs one slot, expertise and specialization cost two slots, and mastery costs three or more slots.

## Nonproficiency

If a character has never had any training or practice with a weapon, he is nonproficient. He can only guess at the proper way to hold the weapon or attack his opponent. Anything fancier than a simple hack, slash, or bash is beyond his abilities—the character cannot attempt any attack options such as disarming, blocking, or sapping.

In addition to his inability to make special attacks, the character also suffers an attack roll penalty based on his character class. Warriors tend to figure out weapons of any kind relatively quickly and have a small penalty for attacking with weapons they're not familiar with. Other characters don't have the warrior's affinity for weapons and are more severely penalized. These penalties are:

| **Class** | **Nonprof.** | **Familiarity** |
|---|---|---|
| Warrior | –2 | –1 |
| Wizard | –5 | –3 |
| Priest | –3 | –2 |
| Rogue | –3 | –2 |
| Psionicist | –4 | –2 |
| Nonclassed NPCs | –4 | –2 |

Any weapon wielded by a nonproficient character is considered one initiative phase slower than it really is, and missile weapons have their rate of fire halved. An untrained character wielding a long sword has an initiative phase of slow, not average, and an unskilled character wielding a long bow would only fire once per round instead of twice.

## Familiarity

All characters are automatically *familiar* with any weapon that is related to a weapon they are proficient in. Weapons are considered to be related if they are part of the same tight group. For example, a character who is proficient in the use of the light crossbow is automatically familiar with all other types of crossbow because they're part of the same tight weapon group.

Familiarity is not as good as proficiency, but it beats not knowing anything about a weapon at all. Characters only suffer one-half the normal nonproficiency penalty when attacking with weapons they are familiar with. They may attempt any normal attack maneuvers possible (the familiarity penalty still applies, of course), and suffer no initiative or rate of fire penalties.

Familiarity does *not* allow the user to make use of any special weapon attack modes that require proficiency in the weapon.

## Proficiency

This is the basic level of competence most characters achieve with their weapons training. Proficiency allows the character to use a weapon with no penalties and employ all attack options and special weapon properties to their fullest extent.

As noted previously, warriors can spend two proficiency slots to become proficient in a tight weapon group, or three slots to become proficient in a broad group. Otherwise, characters have to spend one slot per weapon they wish to be proficient with.

## Expertise

Weapon expertise is a form of specialization that is available to nonfighters. Regular weapon specialization (described below) is only available to single-classed fighters, but weapon expertise can be learned by paladins, rangers, and multi-classed fighters. There's

no reason a single-classed fighter *couldn't* learn expertise instead of specialization, but expertise is just as expensive as specialization and isn't as good.

Weapon expertise allows a character to gain extra attacks as if he or she were a weapon specialist. At 1st level, an expert with the long sword gets to attack three times per two rounds. Weapon expertise also allows the use of any unusual weapon properties reserved for specialist use. Weapon expertise does not grant the character extra attack or damage bonuses, as weapon specialization does.

Note that *Skills & Powers* allows a character to "customize" his class and receive abilities he normally could not attain. Under these rules, paladins, rangers, and multi-classed fighters can specialize at the cost of sacrificing other abilities or advantages. Similarly, priests and rogues may be able to gain weapon expertise. If you aren't using the *Skills & Powers* book, we recommend that you limit specialization and mastery to single-class fighters only, and limit expertise to paladins, rangers, and multi-class fighters.

## Specialization

By spending an extra proficiency slot on a weapon, a single-class fighter character can become a *specialist*. A fighter may only specialize in one weapon at a time. If she wishes to change her specialization to a different weapon, she must spend two extra proficiency slots to become a specialist in the new weapon, and loses all benefits of specializing in the previous one (although she is still proficient with it and always will be). Any more changes cost three slots each, so it's a good idea to pick one weapon and stick with it.

The exact benefits of weapon specialization vary with the particular weapon involved. Generally, the types of benefits fall into one of five categories: melee weapons, missile weapons, bows, crossbows, and firearms.

### Melee Weapons

Specializing in a melee weapon provides a character with two main benefits: first of all, he gains a +1 bonus to attack rolls and a +2 bonus to damage rolls with that weapon; secondly, he gains an extra attack once per two rounds. A 1st-level fighter normally attacks once per round, but a 1st-level long sword specialist attacks three times per two rounds.

### Missile Weapons

This category includes slings and thrown weapons. Generally, specialists gain an increased rate of fire with these weapons and a +1 bonus to attack rolls. If a character specializes in a weapon that can be used either for melee or as a missile weapon (spears, daggers, hand axes, etc.), he gains the melee benefit described above when using the weapon for hand-to-hand combat and the increased rate of fire for using the weapon for ranged attacks.

Refer to the table below for the exact number of attacks available to the specialist for the various types of missile weapons.

### Bows

Characters who specialize in the bow gain a +1 bonus to hit at any range (normal range penalties still apply, of course), an increased rate of fire, and a new range category: point-blank. Point-blank is any shot of 30 feet or less. At point-blank range, the character gains

a +2 to damage. In addition, bow specialists can automatically fire first as a very fast action if they have their target covered. This supercedes the specialization rules found in the *Player's Handbook*.

### Crossbows

Specialists with crossbows gain a +1 bonus to hit at any range, an increased rate of fire, and a point-blank range category, just like archers. For crossbows, point-blank range extends out to 60 feet. Crossbow specialists have a +2 bonus to damage rolls against any target at point-blank range. In addition, they share the archer's quick-shot benefit when covering an enemy.

### Firearms

Firearms specialists are often referred to as marksmen or *sharpshooters*. Specializing in a firearm provides a character with three benefits: first of all, he has a better rate of fire than a nonspecialist; second, he gains a +1 bonus to hit at any range; and last, there is a 50% chance that any misfire he rolls while attacking with the firearm is simply a miss instead.

### Specialist Attacks per Round

| | **Level of Specialist** | | |
|---|---|---|---|
| **Weapon** | **1–6** | **7–12** | **13+** |
| Melee Weapons | 3/2 | 2/1 | 5/2 |
| Blowgun | 2/1 | 5/2 | 3/1 |
| Bolas | 1/1 | 3/2 | 2/1 |
| Bows | 2/1 | 3/1 | 4/1 |
| Hand Crossbow | 1/1 | 3/2 | 2/1 |
| Light Crossbow | 1/1 | 3/2 | 2/1 |
| Heavy Crossbow | 1/2 | 1/1 | 3/2 |
| Stonebow | 1/1 | 3/2 | 2/1 |
| Repeating Crossbow | 2/1 | 5/2 | 3/1 |
| Thrown Dagger/Knife | 3/1 | 4/1 | 5/1 |
| Thrown Dart | 4/1 | 5/1 | 6/1 |
| Firearms | | | |
| Arquebus | 1/3 | 1/2 | 1/1 |
| Matchlocks | 1/2 | 1/1 | 3/2 |
| Snaplocks | 1/1 | 3/2 | 2/1 |
| Wheelock Belt Pistol | 1/1 | 3/2 | 2/1 |
| Wheelock Horse Pistol | 1/2 | 1/1 | 3/2 |
| Javelin | 3/2 | 2/1 | 5/2 |
| Sling | 3/2 | 2/1 | 5/2 |
| Staff Sling | 1/1 | 3/2 | 2/1 |
| Shuriken | 3/1 | 4/1 | 5/1 |
| Other Thrown Weapons | 1/1 | 3/2 | 2/1 |

## Weapon Mastery

There are swordsmen, and then there are swordsmen. A warrior who devotes his life to the study of martial combat and the characteristics of a single type of weapon can become a weapon master—a fighter whose precision, quickness, and skill are virtually unequaled anywhere.

Weapon masters are rare characters. Only single-classed fighters can ever achieve weapon mastery, and even then they do so with time, study, and sacrifice. To achieve mastery in a weapon, a character must first specialize in the use of that weapon. Then, at any time after he reaches 5th level, he can spend another proficiency slot to become a weapon master. He can continue to devote proficiency slots to the study of his chosen weapon, but can't progress faster than the rate at which he gains new weapon proficiency slots. So, a character who becomes a master at 5th level couldn't acquire his second slot of mastery until 6th level, his third until 9th level, and so on.

Generally, only weapons that require some skill to handle or that have a history of cultural identification are chosen by weapon masters. Swords of any kind are the most common weapons mastered, followed by bows and then axes or spears. Polearms, crossbows, and firearms are the subject of weapon mastery only in rare cases. The DM can decide that a weapon isn't appropriate for mastery at his discretion, but he should do so before a character chooses to specialize in it.

### Effects of Mastery

If a fighter spends another proficiency slot on a melee weapon he already specializes in, his attack and damage bonuses increase to +3 and +3, respectively. For bows and crossbows, his point-blank bonuses increase to +3/+3 as with melee weapons, and he gains an additional +1 to hit at all other range categories, for a total of +2. (Remember, this bonus doesn't take range modifiers into account, so the archer has a total of +2 at short, +0 at medium, and –3 at long range, if the penalties are factored in.)

A marksman who chooses to master a firearm gains an additional +1 bonus to hit, cumulative with the effects of specialization for a total bonus of +2 to hit. As with bows and crossbows, this is still reduced by range penalties. In addition, the marksman ignores heavy armor at all ranges as if he were firing at a short-range target. See Firearms in Chapter Seven for more information.

### High Mastery

By spending a second slot on mastery, a character can become a *high master*. By this time, the character has spent four slots on a single weapon and is at least 6th level. High masters increase the speed factor of their chosen weapon by one category; for example, a slow weapon in the hands of a high master is automatically considered to be of average speed. High masters also score critical hits on rolls of 16 or higher rather than 18 (if the optional critical hit system is used) that hit their opponent by a margin of 5 or more.

High masters who specialize in bows, crossbows, slings, or firearms gain a new range category: extreme range. For all weapons, extreme range is 1/3 farther than long range. For example, if a weapon has a normal maximum range of 18 squares, in the hands of a master it can shoot 24 (1/3x18=6, 18+6=24) squares. Extreme range shots have a –10 penalty to hit before adjustments are made for the effects of mastery.

### Grand Mastery

High masters who spend one more slot on learning their weapon of choice can become *grand masters*. Grand masters are capable of feats of swordplay that border on the fantastic. Grand masters gain one additional attack per round above and beyond a specialist's rate of attacks for their level, so a 12th-level melee weapon grand master would attack 3 times per round with his weapon of choice.

Grand masters also increase the amount of damage and the chance of a knockdown when they employ their chosen weapon. The weapon's base damage die and knockdown die are increased to the next greater die size against all opponents. A long sword thus inflicts 1d10/1d20 points of damage in the hands of a grand master, and its knockdown die is increased to a d10. If the weapon causes multiple dice of damage, all of them are increased. Thus, a two-handed sword in the hands of a grand master inflicts 3d8 points of damage on large targets. Needless to say, grand masters are extremely dangerous opponents.

**Special DM Note**

Weapon mastery is hard to come by, and even harder to perfect. It's not too rare for a character to become a master, but the quest to become a high master or grand master could take years. Unlike the previous levels of specialization, which can simply be selected as an advancement choice, high mastery and grand mastery should require a great deal of time and personal sacrifice on the part of the character. It's not unreasonable to require the candidate to locate someone who can teach her and spend several months of campaign time in training—possibly "sitting out" an adventure or two while she hones her skills.

While the higher levels of weapon mastery are a great goal for a character to set her eyes on, they can unbalance a game very quickly. Exercise tight control over the acquisition of weapon mastery in your campaign, and make certain that the players realize just how rare and special their weapon master characters really are.

### Fighting Style Specialization

Knowing how to use a particular fighting style is almost as important as being proficient with a weapon. The various fighting styles are introduced in Chapter Two; warriors automatically know every style, while the other character types are limited in their knowledge of fighting styles. If a nonwarrior wishes to learn a style he doesn't know, he can do so at the cost of a weapon proficiency.

In addition to simply knowing a style, warriors, priests, and rogues can specialize in that method of fighting by spending a weapon proficiency slot. The exact effects of style specialization vary from style to style. Note that warriors can specialize in a weapon, and then specialize in an appropriate style. In fact, warriors can specialize in as many styles as they like, as long as they have the proficiency slots (or character points) available. Priests and rogues can only specialize in one style.

### Weapon and Shield Style

Normally, a character employing a shield in his off hand can shield-rush, shield-punch, block, or trap as if it were a secondary weapon, with the normal penalties for attacking with two weapons. The disadvantage is that the shield's AC bonus is forfeited for any round in which it is used this way.

However, characters who specialize in weapon and shield style can choose to make

one of these secondary attacks every round without losing the AC benefit for carrying a shield. If the heroic fray rules from Chapter Two are in use, the character only gets one secondary attack, not two, but his primary weapon attacks are still doubled, of course.

## One-handed Weapon Style

The character is always free to treat his empty hand as a "secondary weapon" and punch, grab, or otherwise annoy anyone he is fighting. The normal penalties for using two weapons apply. If the character is also familiar with the two-handed weapon style and his weapon can be used either one- or two-handed, he can switch back and forth between the two styles at the beginning of every round of combat.

Characters who specialize in this style gain a special AC bonus of +1 while fighting with a one-handed weapon and no shield or off-hand weapon. By spending an additional proficiency slot, the character can increase his AC bonus to +2, but that's the maximum benefit for style specialization.

## Two-handed Weapon Style

Many weapons are so large that a character is required to use both hands to wield them. The rule of thumb is simple: a character can use a weapon with a size equal to or less than her own in one hand and can use a weapon one size larger than herself if she wields it two-handed.

If a character specializes in two-handed weapon style, she increases the speed of her weapon by one category (slow to average, average to fast) when she fights using a two-handed weapon. If you're not using the new initiative rules presented in Chapter One, the weapon's speed factor drops by 3.

There are a few weapons that can normally be employed one-handed or two-handed; these are noted in the weapons list of Chapter Seven. There are also a variety of weapons that are normally used one-handed but that can be used two-handed. This would allow a specialist in this style to gain the speed benefit mentioned above. In addition, the two-handed style specialist gains a +1 to damage rolls when using a one-handed weapon in two hands.

## Two-Weapon Style

This is a difficult style to master, since it requires exceptional coordination and skill. Normally, characters who fight with a weapon in each hand suffer a –2 penalty to attacks with their primary hand and a –4 penalty to attacks with the off-hand weapon. This can be partially or completely negated by the character's reaction adjustment for Dexterity (or Dex/Aim if you're also using *Skills & Powers*). Characters who specialize in this style reduce their penalty to 0 and –2, respectively. Ambidextrous characters who specialize in this style suffer no penalty with either attack.

The character's secondary weapon must be one size smaller than his primary weapon—but knives and daggers can always be used as secondary weapons, regardless of the size of the primary weapon. Note that this means that for Man-sized characters, the secondary weapon has to be size S. However, if a character spends a second proficiency slot on two-weapon style specialization, he gains the ability to use two weapons of equal size, as long as he can use each one as a one-handed weapon. Rangers are considered to have the first slot of this style specialization for free as a character ability.

## Missile or Thrown Weapon Style

Some heroes specialize in fighting with ranged weapons; Robin Hood and William Tell spring to mind as good examples. Characters who choose to specialize in missile or thrown weapon style gain two benefits. First, they can move up to half their normal movement rate and still attack with their full rate of fire, or make a full move and attack at half their rate of fire. Second, they gain a bonus of –1 to their AC against enemy missile fire while attacking with a ranged weapon.

### Horse Archers

A proficient archer and rider who specializes in missile style gains a special benefit when mounted: any penalties he suffers for shooting while riding are reduced by 2. Normally, a character suffers a –2 penalty to missile attacks if his mount is moving at up to half its normal speed, and a –4 penalty if his mount is moving at full speed. Horse archers suffer no penalty for half-speed firing, and only a –2 penalty for firing at full speed.

Horse archers are rare in a typical Western European fantasy setting. Historically, most horse archers came from central Asia. At the DM's discretion, a character may not qualify for this special benefit unless he has a suitable origin or makes an effort to locate someone from that culture who can teach him.

## Local Fighting Styles

Many specialized forms of combat evolved throughout the world in various locations. Some Roman gladiators were trained to fight with net and trident; Western Europe developed the joust; and martial arts evolved throughout southern and eastern Asia. If a character comes from an area where a unique form of combat has evolved, she may spend a weapon proficiency slot to specialize in that form of fighting.

Some examples of specialized fighting styles include: rapier and main-gauche, sabre, fighting sticks or nunchuks, katana and wakizashi, and so on. If a character spends a proficiency slot to specialize in one of these local styles, she can choose one of the following benefits:

- A –1 bonus to Armor Class;
- A +1 bonus to attack rolls;
- The ability to make a free block or trap maneuver without spending an attack to do so;
- The negation of penalties for fighting with two weapons;
- A free unarmed punch or kick.

For example, specialization in fighting with matched sticks or nunchuks may confer the negation of the normal –2/–4 attack penalty for fighting with two weapons. Rapier and main-gauche specialization may provide the character with an extra block or trap maneuver with his main-gauche. The DM is the final judge of what bonus a particular style provides and whether or not a character can specialize in it.

## Special Talents

Weapon proficiencies can also be used to acquire a variety of special perks, traits, and

characteristics useful for a fighter. Some of these talents were originally presented as nonweapon proficiencies and are noted with an asterisk; they can be purchased with either type of proficiency slot.

As always, the DM is the final arbiter of whether or not a particular option or ability is permitted in his campaign. If he decides that an ability doesn't fit, he can require the players to choose another talent.

**Alertness*** (1 slot/6 CP) Wisdom/Intuition, +1
Groups: All

Some characters are unnaturally alert and instinctively note signs of trouble that other characters may miss. A character with this proficiency reduces his chance of being surprised by 1 in 10 if he makes a successful proficiency check. In situations where surprise is automatic, the character may still attempt a proficiency check. If he passes, he is surprised at the normal chance instead of automatically.

**Ambidexterity** (1 slot/4 CP) Dexterity/Aim
Groups: Warrior, Rogue

Ambidextrous characters are able to use either hand with equal coordination and skill. They are neither right-handed nor left-handed. When fighting in two-weapon style, an ambidextrous character has two "primary" hands, and suffers a –2 penalty to hit with either weapon. If the ambidextrous character spends a slot to specialize in two-weapon fighting style, he suffers no penalty to attacks with either weapon.

**Ambush** (1 slot/4 CP) Intelligence/Reason
Groups: Warrior, Rogue Initial rating: 5

A character with this proficiency is skilled at laying ambushes and setting up surprise attacks. Most characters can set up an adequate ambush when the terrain favors it and they know the enemy is coming, but a character who spends a slot on this skill is able to create ambushes where ambushes wouldn't normally be possible.

Ambushes are impossible if the attackers have already been spotted by the victims; there's no point in hiding then. If the ambushing party knows their quarry is coming to them, they can lay an ambush. If the attack is going to take place in difficult or unusual circumstances, a proficiency check may be called for; failure indicates that the victims have spotted the ambush before they walk into it. Otherwise, the ambush is guaranteed to achieve surprise.

**Camouflage** (1 slot/4 CP) Intelligence/Knowledge
Groups: Warrior, Rogue Initial rating: 5

Characters skilled in camouflage understand how to stay out of sight in natural surroundings. Unlike hiding in shadows, camouflage requires one of two things: good cover nearby or a lot of preparation. It's possible for a character to hide himself on a flat, rocky desert, but he'd need to have special clothes and time to ready a hiding spot. On the other hand, almost anyone can duck behind a tree on short notice.

If the character passes his camouflage check, he is considered to be effectively *invisible* as long as he doesn't move. He can avoid encounters if he chooses, or gain a –1 bonus on his chance to surprise someone who doesn't spot him. The character's check is

modified as noted below:

- **Ground Cover:** –4 penalty if no vegetation is nearby;
- **Terrain:** +1 bonus if terrain is rocky, hilly, or broken, +2 if very rocky;
- **Preparation Time:** –2 if character has only one round of warning, –4 if character has no warning.

Rangers and thieves gain a +40% to their chance to hide in shadows if they pass a camouflage check in conjunction with their attempt to hide in shadows.

**Dirty Fighting** (1 slot/3 CP) Intelligence/Knowledge
Group: Warriors, Rogues Initial rating: 5

Veteran brawlers and soldiers acquire a repertoire of feints, ruses, and various unsportsmanlike tactics that can come in handy in a fight. A character with this "skill" can attempt to use a dirty trick once per fight; if he succeeds, he gains a +1 bonus to his next attack roll. If there's some reason the enemy believes the character will fight honorably (hardly a wise assumption!) the bonus is +2.

Once a particular enemy has fallen prey to the character's dirty trick, he can never be caught off-guard again. In addition, if the character's opponent is skilled in dirty fighting himself, the attempt automatically fails.

**Endurance*** (2 slots/4 CP) Con/Fitness
Group: Warrior Initial rating: 3

This proficiency allows a character to perform strenuous physical activity twice as long as a normal character before fatigue and exhaustion set in. If the fatigue rules from Chapter One are in play, a character with this proficiency increases his fatigue points by 50%.

**Fine Balance** (2 slots/5 CP) Dex/Balance
Group: Warrior, Rogue Initial rating: 7

Characters with this talent are blessed with an innate sense of balance and have an uncanny knack for keeping their feet under them. With a successful proficiency check, the character gains a +2 bonus on any climbing checks, saving throws, or ability checks to avoid slipping or falling. In addition, the character reduces any penalties for fighting in off-balance or awkward situations by 2 points.

The fine balance talent is also very useful for tightrope walking, tumbling, and climbing walls. If the DM determines that a particular feat would be influenced by the character's exceptional balance, the character gains a +2 (on d20 rolls) or +10% (on d100 rolls) bonus to his rolls to resolve the action.

**Iron Will** (2 slots/6 CP) Wisdom/Willpower, –2
Group: Warrior, Priest Initial rating: 3

Some people are possessed of an amazing ability to drive themselves on despite injuries or exhaustion that would stop another person in his tracks. A character with the iron will talent gains a +1 bonus to saving throws vs. mind-affecting spells or effects, including *charms, holds, hypnotism, fascination, suggestion,* and other such spells.

In addition, characters with iron will have the unqiue ability to keep fighting even after being reduced to negative hit points. Each round that the character wishes to remain conscious, he must roll a successful saving throw vs. death with his negative hit point total as a modifier to the roll. For example, a character reduced to –5 hit points can try to stay on his feet and keep moving and fighting by succeeding on a saving throw roll with a –5 penalty. As long as the character remains conscious, his condition does not worsen—in other words, he doesn't begin to lose 1 additional hit point per round until he actually passes out.

**Leadership** (1 slot/3 CP) Charisma/Leadership, –1
Group: Warrior Initial rating: 5

Characters with the leadership talent understand how to motivate troops and get the most out of their men. In battlefield situations, a military unit led by the hero gains a +2 bonus to any morale checks they have to make. If you are playing with the mass combat rules in Chapter Eight, the character is treated as if he were three levels higher than he really is, so a 4th-level fighter can command troops as a 7th-level fighter if he possesses this talent.

**Quickness** (2 slots/6 CP) Dexterity/Aim
Group: Warrior, Rogue Initial rating: 3

A character with this talent is unusually fast. Her hand-eye coordination is excellent, and she can often get past her opponent's defenses before they realize how quick she really is. In combat, she gains a special –2 bonus to her initiative roll if she makes a proficiency check. She can use this bonus if she moves or makes an attack with a weapon of average speed or quicker, but her special bonus does not apply to attacks with slow weapons or stationary actions such as guarding or parrying.

**Steady Hand** (1 slot/5 CP) Dexterity/Aim
Group: Warrior, Rogue

Characters with this talent are excellent shots with bows or crossbows. They have an unusually good eye for distance, a knack for judging a tricky shot, and a smooth and easy aim and release. If the character takes a full round to aim his shot (i.e., voluntarily holds his action until last in the round) he suffers no penalty for a medium-range shot and only a –2 penalty for a long-range shot. If the character would normally receive multiple attacks with his weapon, he has to forfeit them in order to use this talent—he can make only one shot per round.

**Trouble Sense** (1 slot/4 CP) Wis./Int.
Group: General Initial rating: 3

Sometimes known as a danger sense, this talent gives the character a chance to detect otherwise undetectable threats by instinct. The character's trouble sense comes into play when the character is threatened by a danger he hasn't noticed yet.

The DM should make trouble sense checks in secret. If the character succeeds, he is only surprised on a roll of 1 by a sneak attack and treats any rear attacks as flank attacks instead. The DM can modify the proficiency check if the character is taking extra precautions or if the attacker would be particularly hard to notice before striking.

# Chapter Five:
# Unarmed Combat

Characters all too frequently find themselves weaponless while embroiled in a fight. Experienced players often prefer to have their characters voluntarily lay aside their weapons to engage in nonlethal combat, especially when attempting to capture an opponent who is more valuable to them alive than dead.

There are three parts to this chapter. The first is *Brawling*; it covers *pummeling*, *wrestling*, and *overbearing*, the three basic types of unarmed combat (though improvised weapons can be used in pummeling). Subduing is a type of armed combat that employs weapons in nonlethal ways. *Martial Arts* is a set of skills that can make an unarmed character as formidable and unpredictable as a swordsman.

### Does This Beliong in My Campaign?

The material in this chapter is an extension of the combat options in Chapter Two, and it is intended for use with the *Player's Option* combat system presented in Chapter One. This chapter can be used by itself, however.

Brawling, subduing, and martial arts can all be incorporated into a campaign separately or together.

### Brawling

No character is entirely helpless while still conscious and free to move. Improvised weapons such as iron spikes and chairs often lie within easy reach, and a blow from a fist often can be as telling as a dagger thrust.

Brawling is generally less deadly to the defender than armed combat, but it does, however, carry its own risks.

## Brawling Attacks Against Armed Opponents

Any brawling attack provokes an attack of opportunity from any and all opponents who are armed and threatening the assailant. The defender gets a +4 bonus to attack and damage rolls. If an attack of opportunity slays the attacker, there is no brawling attack. If an attack of opportunity creates a knockdown chance, the brawling attack automatically fails and is wasted, even if the attacker's saving throw succeeds and he is not knocked down—the defender's weapon keeps the attacker at bay. If an attack of opportunity results in a critical hit, the character who scored the hit can choose to roll for the critical hit (see Chapter Six) or force the brawling attack to automatically fail.

## Temporary Damage

Only one quarter of any damage inflicted in brawling combat is normal. Divide the damage from each attack by four and round down. The result is the normal damage from the attack; all remaining damage is temporary. If a single attack inflicts less than four points of damage it is all temporary damage. (Two humans with average Strength scores pummeling each other with bare knuckles can inflict only temporary damage.)

Temporary damage automatically heals at the rate of one point per combat round (or standard round if the *Player's Option* combat system is not in use) no matter what the injured character does. It is helpful to keep track of temporary damage separately.

Characters reduced to –10 hit points by temporary damage (or a combination of temporary and normal damage) are still dead. Characters reduced to between 0 to –9 hit points recover one temporary damage point each combat round (instead of losing a point each round), but remain unconscious for 2d6 full turns or until healed. Normal damage takes precedence over temporary damage. If a character has suffered enough normal damage to reduce his hit points below zero, he loses one hit point each round (as described in Chapter One under Damage and Dying) and regains no temporary damage.

The attacker in an unarmed combat can opt not to inflict damage—this is called pulling the punch, though it applies to all forms of unarmed combat. The attack may still generate special effects such as knockouts, knockdowns, holds, locks, and pins, but it inflicts no damage at all.

## Opposed Rolls

The brawling procedures make extensive use of opposed rolls. See Chapter Two for a discussion of how to use opposed rolls in combat. Note that in an opposed ability check a die roll of 20 is always a failure, even if the effective score is 20 or more. In an opposed attack roll, a die roll of 1 is always a failure, even if adjustments to the roll would allow for success.

### Pummeling

Pummeling includes most attacks made with hands, fists, elbows, and the like. Humanoid and partially humanoid creatures with racial intelligence of at least low can make pummeling attacks. Nonhumanoid creatures with racial intelligence of at least average and with manipulative appendages at least as large and strong as human hands and arms also can pummel. Humans, demihumans, orcs, ogres, giants, centaurs, and similar creatures can make pummeling attacks. Great cats, octopi, oozes, horses, and other creatures who lack intelligence or prehensile appendages cannot. Common sense must apply. For example, the DM might allow androsphinxes to make pummeling attacks if they retract their claws. Generally, however, creatures with natural attacks use them in preference to pummeling attacks.

Pummeling requires at least one free hand, although the attacker may wear a metal gauntlet or similar item. A character may also use a weapon pommel or an improvised weapon, such as a mug or bottle, in a pummeling attack. Attacks with improvised weapons provoke attacks of opportunity just as other brawling attacks do.

The target of a pummeling attack must be alive, non-vegetable, organic, and non-fluid. Undead, shambling mounds, golems, and jellies are among the many creatures that cannot be pummeled.

Pummeling is ineffective against creatures who can be harmed only by special or magical weapons unless the attacker functions as a magical weapon powerful enough to hurt the creature (see *DMG*, Table 46; note that character levels never apply to the table). Elementals, fiends, and most extraplanar creatures are immune to pummeling unless attacked by similar creatures or by characters using magical weapons.

Creatures immune to blunt (type B) weapons are immune to pummeling attacks.

No creature can pummel an opponent more than one size larger than itself unless the

target is not standing up (prone, kneeling, or sitting) or the attacker has a height advantage or can fly. For example, a halfling usually cannot pummel a hill giant.

## Pummeling Procedures

Most characters can make a single pummeling attack each round. Any character can gain an extra pummeling attack each round by punching with both hands (provided both hands are free). However, the character suffers the penalties for attacking with two weapons (see Chapter Two).

To make a pummeling attack, the character makes an attack roll vs. the defender's Armor Class. Pummeling damage and speed varies with the type of implement used to pummel:

- Small, soft objects (bare hands) inflict 1d2 points of damage; base speed is fast.
- Small, hard objects (mailed fists, mugs, weapon pommels) inflict 1d3 points of damage; base speed is fast.
- Large, soft objects (saddles, unconscious characters) inflict 1d4 points of damage; base speed is slow.
- Large, hard objects (chairs, small tables, sacks of coins) inflict 1d6 points of damage; base speed is slow.

To be used as an improvised weapon, an object must weigh no more than one third of the attacker's maximum press score (from *PHB*, Table 1) and its greatest dimension can be no larger than half the attacker's height. For example, a Man-sized creature could wield a tall stool in a pummeling attack, but not a stepladder or banquet table; common sense must apply.

A cestus (see Chapter Seven) is a special case. A character employing a cestus uses the pummeling procedure but inflicts normal damage.

Strength bonuses to attack and damage rolls apply to all pummeling attacks.

There is no knockdown die for pummeling attacks. Instead, there is an opposed Strength roll to see if the defender is knocked down. Modify the opposing Strength scores as follows:

- 2-point bonus or penalty per size difference of the attacker versus the defender;
- +1 for attacking with a large object;
- +1, +2, or +3 for a specialized, master, or grand master attacker.

The defender is knocked down if the attacker wins the opposed Strength roll. If both Strength rolls succeed, the character who succeeds with the highest roll is the winner. If the attacker fails her Strength roll, there is no knockdown no matter what the defender rolls. If the defender fails her Strength roll, there is no knockdown unless the attacker's roll succeeds.

If a pummeling attack scores a critical hit, do not use the procedures in Chapter Six. Instead, the defender must save vs. death or be knocked unconscious for 3d10 combat rounds. The attacker's hit probability adjustment (from Table 1 in the *PHB*) for Strength applies as a bonus or penalty to the saving throw. If the attacker does not have a Strength score, determine the attacker's effective Strength using the formula found in Chapter Two

and apply the appropriate modifier from the *PHB*.

## Pummeling Skill Levels

- **Nonproficient:** Most characters have had some experience with pummeling since early childhood, and nonproficient characters are very rare. If the optional character point system from the *Skills & Powers* book is in use, a character who is nonproficient in pummeling may claim 3 extra character points. Such characters are very rare, however, and the DM and the player should agree on a reason why the character is nonproficient; perhaps the character had an isolated and nonviolent childhood, or comes from a culture where fistfighting is unknown. A nonproficient pummeler suffers the attack penalty listed for his class in Table 34 from the *PHB* and cannot score a knockdown or knockout with a pummeling attack.
- **Familiar:** The vast majority of characters are assumed to be familiar with pummeling, and need not spend any character points or proficiency slots on the skill. Such characters can make one pummeling attack each combat round with no penalty.
- **Proficient:** Any character can spend character points (or a weapon proficiency) to become proficient at pummeling. Nonwarriors gain no benefit from pummeling proficiency. Proficient warriors gain their full allotment of melee attacks when pummeling.
- **Expert:** Any character can spend character points (or weapon proficiencies) to become expert at pummeling. Expert warriors who are entitled to more than one melee attack each round can make the same number of pummeling attacks each round, but gain no other benefits. Expert nonwarriors can make multiple pummeling attacks at the same rate as a nonspecialized warrior of the same level.
- **Specialized:** Generally, only single-classed fighters can become pummeling specialists, though there are optional rules in the *Skills & Powers* book that allow other characters to specialize. Pummeling specialists gain the normal specialist attack and damage bonuses and extra attacks. Specialists' attack bonuses apply to their Strength scores when rolling for knockdowns.
- **Master:** Only single-classed warriors can attain mastery in pummeling. Pummeling masters gain the normal master attack and damage bonuses and extra attacks. Masters' attack bonuses apply to their Strength scores when rolling for knockdowns, and apply as penalties to saving throws vs. knockouts. Grand master pummelers can use critical augmentation to score knockouts on attack rolls of 16 or better.

## An Example of Pummeling

Anada, an 8th-level elf warrior, has just escaped from a cell inside a bugbear lair. He has no weapons but still wears his suit of *chain mail +1*. Anada surprises a pair of unwary bugbear guards and moves in to attack them from behind. The bugbears are Large creatures, but Anada is Man-sized, so his pummeling attacks can effect them. Anada is familiar with pummeling, and can make only one pummeling attack each round despite his warrior level (though he could make a second attack with his other fist and suffer the penalties for a two-handed attack).

Because he is not in a threatened square, his first punch does not provoke an attack of opportunity. Anada's attack roll must be good enough to hit AC 5, a bugbear's normal Armor Class. He hits with a roll of 18, good enough to score a critical hit. Anada's

Strength is 17, so the bugbear suffers 2d2+1 points of damage from Anada's bare fists (the damage is doubled due to the critical hit). The blow inflicts 3 points of damage, all temporary. Next, Anada and the bugbear must make opposed Strength rolls. Anada receives a –2 penalty to his Strength score because he is one size class smaller than his opponent. The bugbear's effective Strength is 17, with a +2 bonus because it is larger than Anada. Anada rolls another 18 and the bugbear rolls a 10. The bugbear is not knocked down. (Because Anada failed his Strength roll, the bugbear would not be knocked down in any case.)

The critical hit makes the bugbear roll a saving throw vs. death at –1 (because of Anada's 17 Strength) to avoid being knocked out. It fails the roll and falls unconscious for 3d10 combat turns. The second bugbear takes no action, because Anada has surprise.

The next round, Anada wins initiative and moves in to pummel the second bugbear, who turns to face him. Anada's punch provokes an attack of opportunity, because the bugbear threatens him. The bugbear has +4 attack and damage bonuses and its racial damage bonus of +2. It hits Anada for 9 points of normal damage and scores a knockdown chance. Anada's pummeling attack automatically fails, but his saving throw is successful and he is not knocked down. The bugbear decides to use its regular attack to punch Anada with its free hand, in hopes of recapturing him alive. It must hit AC 3 (Anada has a 15 Dexterity in addition to his magical armor) and misses.

During the next round Anada tries to pick up the fallen bugbear's weapon. The second bugbear wins initiative, however, and tries to punch Anada again. Anada is not yet armed, so there is no attack of opportunity. This time the bugbear hits, inflicting 1d3+2 points of damage with its mailed fist. It scores 5 points of damage, 1 normal and 4 temporary. Anada has now suffered 14 points of damage, 10 normal and 4 temporary. Unfortunately, Anada only had 12 hit points at the start of this battle, having been wounded earlier. Because his current hit point total is –2, he falls unconscious for 2d6 full turns. The bugbears drag him back to his cell, and watch him more carefully this time.

## Special Pummeling Maneuvers

The following are special attacks that can be attempted as a pummeling attack. They are typically attempted to cause a special situation, such as a knockout.

### Sapping

The basic rules for sapping are found in Chapter Two. However, a character may attempt to make a ranged sap attempt with a thrown abject, subject to range, Strength, and Dexterity modifiers. Damage is determined by the object's size and hardness, as given above. There is a one-phase delay when making a ranged pummeling attack; small objects become average, large objects become very slow. Small objects have a maximum range of 15 yards. Short range is 5 yards or less, medium range is 5–10 yards, and long range is 10–15 yards. Large objects cannot be thrown unless they can be wielded as improvised weapons as described above; they have a maximum range of 5 yards and are always considered to be at medium range. Size Large and larger creatures might be able to hurl some large objects, such as sacks of coins, as though they were small objects.

### Kicking

Characters attacking with a height advantage (or attacking a prone, kneeling, or sitting opponent) can pummel by kicking instead of punching. Humanoid characters tend to have stronger legs than arms, and inflict extra damage:

- **Bare feet:** 1d3 points of damage;
- **Shoes, boots:** 1d4 points of damage;
- **Heavy boots:** 1d6 points of damage;
- **Iron-shod or hobnailed boots:** 1d8 points of damage.

Wrestling Wrestling includes all attacks aimed at grasping and holding an opponent. Any creature with racial intelligence of at least semi- can make wrestling attacks if it also has grasping appendages that it could use to restrain an opponent. Incorporeal and amorphous creatures cannot make wrestling attacks and cannot be wrestled. Limbless creatures, such as worms, snakes, and the like, generally cannot wrestle, though constrictor snakes can be assumed to be using a form of wrestling.

Wormlike and snakelike creatures are resistant to wrestling damage, but can be held or locked so they cannot attack until they win free of the hold. Creatures immune to normal weapons have a natural resistance to wrestling attacks, so they can be grappled or pinned but take no damage from a hold unless the attacker functions as a magical weapon. Immunity to normal weapons, however, does not protect a creature from the effects of a lock, including damage.

Wrestling requires both hands free. Shields, which are normally worn strapped to the forearm, interfere with the character's grip and prevent wrestling.

Wrestling combat always takes place between two opponents; multiple attackers cannot make a wrestling attack as a group. Damage from wrestling holds and locks is mostly temporary, just like other types of brawling damage.

## Wrestling Procedures

Most characters can make one wrestling attack each round. Wrestling attacks take place on the attacker's base initiative phase.

A wrestler makes an attack roll vs. Armor Class 10, regardless of the defender's actual Armor Class. Bonuses for the defender's Dexterity and magical protections apply. Effects that provide a flat Armor Class, such as magical bracers or shield spells, count as a +1 bonus regardless of how strong their enchantments are. If the attacker misses, his action phase ends. If the attacker scores a critical hit, the defender is automatically held. The attacker enters the defender's square and inflicts 1d2 points of damage. The attacker can immediately try for a lock (see Previously Established Holds, below). If there is no critical hit, the attacker enters the defender's square and immediately checks for a hold.

### Holds

To check for a hold, the combatants make an opposed attack roll vs. AC 10 (Dexterity and magical bonuses apply). Strength bonuses apply, along with the following modifiers:

- 4-point bonus or penalty per size difference of the attacker versus the defender;
- –1 for a defender normally immune to the attack;
- –2 for defenders with unusually supple bodies (snakes, eels, worms, etc.).

The attacker must win the opposed roll to achieve a hold. If the defender wins, if there is a tie, or if both rolls fail, the attacker is driven back to his original square and the grapple is broken. Both characters retain their original facings.

If the attacker wins the opposed roll, the attacker achieves a hold. The defender suffers 1d2 points of damage unless immune to the attack, and the attacker can try for a lock during his next attack. A hold lasts until the attacker frees the defender, or the defender breaks free. Grappled characters cannot move until they free themselves, and they cannot make attacks of opportunity. Checking for a hold ends the attacker's action phase; the character cannot attack again until he would normally be eligible for a melee attack (usually the next combat round); however, the character can counter the defender's attempts to get free (by making opposed rolls).

Strength bonuses to attack and damage rolls apply to all wrestling attacks, holds, and locks.

### Previously Established Holds and Locks

When a character is eligible to make an attack and begins the action phase with a character in his grasp, the attacker can release the opponent, try to improve his grip, or just hold on.

If the attacker releases his opponent he can immediately attempt another unarmed attack, draw a weapon and attack (this counts as a half-move action), or attempt some other action normally available to the character, such as movement.

If the attacker tries to improve his grip, make another opposed attack roll as described above. If both attack rolls fail, there is no change in the combatants' status—they remain grappled and no damage is inflicted. If the defender wins, the attacker suffers 1d2 points of damage (plus Strength bonus) and the defender's position improves one place. Locked defenders become held, held defenders break free. If the defender wins with a roll good enough to score a critical hit, the defender immediately scores a lock on the attacker, and can choose a lock result from the table below. The defender now controls the wrestling sequence and is treated as the attacker in subsequent action phases. If the attacker wins the opposed roll, the defender suffers 1d2 points of damage and the attacker's position improves one place; held characters become locked.

If the attacker just tries to hold on, conduct another opposed roll. Unless the defender wins, his status does not change; held characters remain held and suffer 1d2 points of damage, and locked characters remain locked and suffer a lock result of the attacker's choice. If the defender wins, his status improves one place, as noted above. There is no chance for the defender to roll a critical hit and achieve a lock on the attacker. If both attacks fail, or if there is a tie, the defender's status remains unchanged, but the defender takes no damage and cannot suffer a lock result (though an established lock is not broken). The advantage of holding on is that there is also no chance for a critical hit to reverse the attacker's fortunes.

A character who decides to hold on after he has achieved a lock can only repeat the previous lock effect. If the character wishes to change effects, he must win another opposed roll.

### Breaking Free

A defender who begins an action phase in another character's grasp cannot move. The only combat actions he can take is an attack with a size S or natural weapon, pummeling, or wrestling. These attacks must be directed at the opponent grappling the character. Attacks with size S weapons and pummeling attacks suffer a –2 attack penalty. Natural and armed attacks are not possible if the character's original facing would not allow them. For example, a fighter who makes a wrestling attack from one of a lion's rear squares could not be subjected to the lion's claw attacks, though the lion could turn its head to bite.

If the defender scores a critical hit with a weapon or natural attack, he can opt to inflict double damage (and perhaps roll for a special effect according to the rules presented in Chapter Six) or force the attacker to release him. If the defender scores a knockdown with a pummeling or weapon attack, he breaks free.

If the defender makes a wrestling attack, conduct an opposed attack roll as described above. If both attacks fail, there is no change in the combatants' status—they remain grappled or locked and no damage is inflicted. If the defender wins, the attacker suffers 1d2 points of damage (plus Strength bonus) and the defender's position improves one place. Locked defenders become grappled, and grappled characters break free. If the defender wins with a roll good enough to score a critical hit, the defender immediately scores a lock on the attacker and can choose a lock result from the table below. The defender now controls the wrestling sequence and is treated as the attacker in subsequent action phases. If the attacker wins the opposed roll, there is no change in the defender's status. If the attacker wins with a roll good enough to score a critical hit, the attacker automatically achieves a lock.

## Assistance

Wrestling involves seizing and controling the defender's body; multiple attackers tend to hinder each other more than the defender. Even Very Large creatures that occupy more than one space on the map cannot be wrestled *en masse* because it is impossible to coordinate their actions as the defender thrashes about. The attacker's companions, however, can make melee, pummeling, and overbearing attacks against the defender. (A character involved in wrestling combat does not count as part of the pile if his companions try to overbear the defender).

It is equally difficult to involve multiple defenders in wrestling combat. A single character can try to grapple the attacking wrestler and pry him loose from the defender. If the rescuer achieves a hold (or a lock) on the attacker, the original defender breaks free and the original attacker is pulled into the rescuer's square.

A hold or lock also can be broken by scoring a knockdown or critical hit with a weapon or pummeling attack, as described above, or by overbearing the attacker. Additional defenders who threaten the attacker can make attacks of opportunity every time the attacker initiates an opposed roll.

Missile attacks directed at wrestlers have a chance to hit either characters as described in Chapter One.

## Locks

Characters who become locked suffer one of the following effects, chosen by the character who achieved the lock:

- **Throw:** The attacker literally throws the defender through the air. The defender lands, prone, 1 or 2 squares away in any direction the attacker chooses. The defender suffers 1d4 points of damage unless he lands on a soft, yielding surface, but is freed from the attacker's grasp. Defenders thrown onto particularly hard and unyielding surfaces, such as solid stone floors or walls, take 1d4+1 points of damage. If the defender is thrown into another creature, immediately conduct an overbearing attack against the creature struck using the attacker's Strength score and the thrown creature's size. If the defender is thrown into a hazardous area, such as a pool of burning oil or a set of sharp spikes, he takes additional damage from the hazard, just as though he has stepped or fallen into it. Hazards usually inflict normal (not temporary) damage. Defenders at least two size classes larger than their attackers cannot be thrown. Treat the throw as a takedown. If the defender is the same size or smaller than the attacker, the attacker can make a half move before throwing his opponent.
- **Takedown:** The attacker makes the defender fall to the ground in the combat square. The defender suffers 1d3 points of damage and remains in the attacker's grasp.
- **Slam:** The attacker hurls the defender violently to the ground in the combat square. The lock automatically becomes a hold and the victim breaks free if he rolls a successful saving throw vs. breath weapon. The defender suffers 1d8 points of damage in any case. The defender suffers 1d8+1 points of damage if slammed into solid ground, and the appropriate amount of damage is inflicted if the defender is slammed into hazardous ground. Defenders at least two size classes larger than their attackers cannot be slammed. Treat the slam as a takedown.
- **Press:** The attacker squeezes or twists some part of the victim's body, inflicting damage. The victim remains in the attacker's grasp and suffers 1d6+1 points of damage. If the attacker repeats the press on his next action phase, the damage bonus increase to +2 and continues to increase if the attacker can repeat the press without interruption. A press repeated through five consecutive attacks would inflict 1d6+5 points of damage during the fifth attack.
- **Hammer:** The attacker pummels the defender or pounds his body against something. The defender suffers 1d2 points of damage and must roll a successful saving throw vs. death or be knocked unconscious for 3d10 combat rounds. There is no adjustment to the roll as there is in a pummeling attack and no damage adjustment for items the attacker holds or wears on his hands.
- **Manipulate:** The attacker takes control over the defender's body. The attacker can pry items out of the defender's grasp, remove exposed equipment from the defender's body, bind the defender's limbs, negate one of the defender's natural attacks, or inhibit the defender's actions in other ways at the DM's discretion. The defender suffers 1d2 points of damage from the attacker's manhandling.

The attacker can remove one item or bind one limb with a manacle in one attack phase. It takes two attack phases to tie a limb with rope. If in doubt about the attacker's ability to remove an item, allow the attacker to make an open doors or bend bars roll to perform the action. For example, removing a helmet from a struggling hobgoblin would require an open doors roll. Removing a helmet from a struggling storm giant would require a bend bars roll.

It is often possible to maintain a manipulation while performing a press or takedown. If the defender wins an opposed roll while multiple locks are established, all of them are broken.

- **Carry:** The attacker lifts the defender into the air and makes a normal move. The defender's weight (and the weight of the defender's equipment) is added to the attacker's encumbrance rating. The attacker cannot choose this lock if the defender's total weight (with equipment) equals or exceeds the attacker's maximum press values (see *PHB*, Chapter 1).

### Wrestler Versus Wrestler

If two characters have declared wrestling attacks against each other, they automatically grasp each other. Skip the initial attack roll and make an opposed roll on the fastest character's action phase to see who has the advantage. The winner establishes a hold, or a lock if his roll was good enough to score a critical hit.

## Wrestling Skill Levels

- **Nonproficient:** All characters have had some experience with wrestling since early childhood; the only nonproficient wrestlers are creatures that cannot make wrestling attacks at all. In most cases, creatures that cannot make wrestling attacks also cannot be wrestled. If a nonproficient creature can be wrestled, it can make opposed rolls with no penalties, but it cannot score critical hits or achieve holds or locks; the creature can merely wiggle out of the attacker's grasp (or make natural attacks). A character cannot choose to be nonproficient in wrestling and gain extra character points under the optional character point system from the *Skills & Powers* book.
- **Familiar:** Creatures that can make wrestling attacks are automatically familiar with wrestling, and need not spend any character points or proficiency slots on the skill. Such characters can make one wrestling attack each combat round with no penalty.
- **Proficient:** Any character can spend character points (or a weapon proficiency) to become proficient at wrestling. Nonwarriors gain no benefit from wrestling proficiency. Proficient warriors gain their full allotment of melee attacks when wresting. High-level warriors can initiate multiple wrestling attacks each round and can try to improve holds or switch locks in any action phase when they are eligible to make attacks.
- **Expert:** Any character can spend character points (or weapon proficiencies) to become expert at wrestling. Expert warriors who are entitled to more than one melee attack each round can make the same number of wrestling attacks each round, but gain no other benefits. Expert nonwarriors can make multiple wrestling attacks at the same rate as a nonspecialized warrior of the same level.
- **Specialized:** Generally, only single-classed fighters can become wrestling specialists, though there are optional rules in the *Skills & Powers* book that allow other characters to specialize. Wrestling specialists gain the normal specialist attack and damage bonuses and extra attacks.
- **Master:** Only single-classed warriors can attain mastery in wrestling. Wrestling masters gain the normal master attack and damage bonuses and extra attacks. Grand master wrestlers can use critical augmentation to score quick locks on attack rolls of 16 or better.

## An Example of Wrestling

Anada, the elf warrior from the previous example, lures one of his bugbear guards into his cell in another bid to escape. The guard is wary of trouble, so the DM rules there is no chance for surprise, but also gives Anada the first attack as he lunges from behind the door and grapples with the bugbear.

The bugbear is armed, and turns toward Anada as he attacks. Because Anada is threatened, the bugbear gets an attack of opportunity before Anada makes his wrestling attack. Anada gets lucky and the bugbear misses. Anada makes an attack roll vs. Armor Class 10 and rolls a 7, good enough to hit.

Now Anada checks to see if he achieves a hold. Anada and the bugbear make opposed attack rolls. Anada is attacking Armor Class 10 because the bugbear has no magical or Dexterity bonuses; Anada suffers a –4 penalty for being a size class smaller than the bugbear but gains a +1 bonus from his Strength. The bugbear is attacking Armor Class 8 because of Anada's *chain mail* +1 and 15 Dexterity. Anada rolls a 10, good enough to hit. The bugbear rolls an 18, also good enough to hit; however, Anada wins the opposed attack roll because he succeeded with a lower number. Anada has a hold on the bugbear and inflicts 1d2+1 points of damage (because of a successful hold and Anada's 17 Strength). Anada inflicts 2 points of damage, both temporary.

During its attack phase, the bugbear drops its weapon, which is too big to use while grappled, and tries to break free. Anada and the bugbear conduct another opposed attack roll, this time with the bugbear gaining a +4 bonus to its roll for the size difference, since it is the attacker. The bugbear rolls a 20, normally good enough to score a critical hit against Anada's effective Armor Class of 8. Anada, however, rolls an 11, good enough to hit the bugbear's effective Armor Class of 10 and win the opposed roll (because it is successful and lower than the bugbear's roll). Because the bugbear didn't win the opposed roll, the critical roll is disregarded; the bugbear does not achieve a lock on Anada.

Now that both combatants have taken an attack phase, the combat proceeds to the next combat round. Anada wins initiative and tries to achieve a lock on the bugbear. There is another opposed roll, and Anada wins with a roll of 12 versus the bugbear's 2 (the bugbear lost because its attack failed and Anada's succeeded). Anada achieves a lock and decides to hold the bugbear's mouth shut to keep it from calling for help. The DM decides this is a manipulation, and the bugbear suffers another 1d2+1 points of damage. Anada inflicts 3 points of damage, all temporary.

The bugbear tries to free itself once again during its attack phase, but loses the opposed roll. The combat round ends.

During the next round, the bugbear wins initiative, but loses the opposed roll again. Now that the bugbear's mouth is clamped shut, Anada decides to twist the bugbear's head a little, which qualifies as a press. The DM decides Anada can keep hold of the bugbear's mouth while wrenching at its head, but Anada still must make another opposed roll to establish the press. Anada wins again and inflicts 1d6+2 points of damage (1d6+1 for the press, plus one for Anada's Strength). Anada rolls a 4 and inflicts 6 points of damage, 1 normal and 5 temporary. The bugbear has now suffered 9 points of damage, 8 temporary and one normal. The bugbear started with 14 hit points, is now at 5, and struggles on.

Anada loses initiative the next round and the bugbear tries to free itself again. There is another opposed roll, which the bugbear loses. If the bugbear had won, both the press

(head twist) and manipulation (mouth clamp) would have been broken and Anada would only have had a simple hold.

Anada decides to press again on his attack phase. There is another opposed roll, which Anada wins; because Anada was just holding on, the bugbear could not have achieved a lock by winning the roll with a critical hit. Anada has maintained his press through two attack phases, so he inflicts an extra point of damage, for a total of 1d6+3 points. Anada inflicts 7 more points of damage, 1 normal and 6 temporary. The bugbear's hit point total is now below zero, and it falls unconscious for 2d6 full turns. Anada picks up the bugbear's weapon and slips out of the cell.

## Overbearing

This version of overbearing is an expanded version of the one appearing in Chapter Two, but it also assumes that no combatants involved are fighting with weapons. Overbearing includes most attacks aimed at simply overpowering the target. If the attackers are seeking to overwhelm the defender through brute strength or sheer weight of numbers, it's an overbearing attack. Overbearing is a tactic available to any creature and can be used against almost any other creature. Creatures with multiple legs are difficult to overbear. Creatures with no legs at all are nearly impossible to overbear (because they can't be knocked down) but attackers with sufficient strength sometimes can pin them in place. Creatures with no solid form (immaterial, gaseous, or liquid) cannot be overborne.

Characters need not have their hands free to make overbearing attacks, but they might not be able to take full advantage of pins if they do not (see below).

## Overbearing Procedures

Virtually all creatures can make one overbearing attack each round. As explained in Chapter Two, overbearing requires an attack roll vs. Armor Class 10. Adjustments for Dexterity and magic apply to the defender's Armor Class.

If the attack hits, there is an opposed Strength roll to determine if the defender keeps her feet. A list of modifiers (expanded from Chapter Two) is included below:

- 4-point bonus or penalty per size difference of the largest attacker versus the defender;
- +1 bonus per additional attacker;
- –4 penalty if defender has more than two legs;
- –4 penalty if the defender is legless (snake, worm, slug);
- –4 penalty if the defender is generally amorphous (ooze, slime, jelly).*

*Creatures that qualify for this modifier also get the modifier for having no legs, for a total penalty of –8.

If the defender wins the opposed Strength roll, she stays on her feet and the attackers remain in their squares. The defender remains clear and can finish the round normally. If the attackers win, they (or as many as will fit) enter the defender's square and everyone falls in a heap with the attackers on top. The overborne character takes no damage. Note that attackers in squares adjacent to the defender can contribute to overbearing attacks even if they can't enter the defender's square.

If defender is overborne, she loses all actions for the remainder of the round and her actions are severely limited the next round; the character is grappled and cannot move or make any attacks (including attacks of opportunity) until she gets free.

A defender who has been knocked down by an overbearing attack can be pinned if she is successfully overborne again in the following round. Overborne defenders can do nothing until the pin is resolved.

## Pins

Attackers who have made successful overbearing attacks have an advantage over the defender in the following round. The attackers can release the opponent or try for a pin.

If the attackers release the opponent, they can immediately attempt another unarmed attack, draw a weapon and attack (this counts as a half-move action), or attempt some other action normally available to characters, such as movement.

If the attackers try for a pin, conduct another opposed Strength roll. If the attackers win, the opponent is pinned (see below). If the defender wins, the attackers must leave the defender's square and the defender can spend a half move or an attack to stand up, just as if she had suffered a knockdown.

### Effects of Pins

A pin lasts for an entire combat round. A pinned character is considered prone and grappled. The attackers can immobilize a pinned character's limbs if their hands are free. If the attackers are the same size or larger than the defender, one of the defender's limbs is immobilized and useless for every attacker with free hands in the pile. If the attackers are smaller, it takes one extra creature per size class difference to immobilize a limb. For example, it takes one human to hold down an orc's arm, two humans to hold down an ogre's arm, and three humans to hold down a hill giant's arm. If the attackers are larger, they can pin two limbs for every two size classes difference. For example, a single ogre can pin one limb of a dwarf or two of a halfling's limbs.

If all the defender's limbs are immobilized for two consecutive rounds, the attackers have the upper hand and can choose any wrestling lock effect. (Damage from locks achieved through an overbearing pin is mostly temporary, as in all other forms of brawling combat.) A group that achieves a lock inflicts damage only once per round, but uses its effective group Strength score when determining damage.

### Maintaining and Breaking Pins

A pinned creature can make unarmed or natural attacks with its free limbs or can attack with a size S weapon. The pinned character's original facing does not affect these attacks; all the characters involved are entangled in a random dogpile and the defender is assumed to be facing all the attackers simultaneously—this is one disadvantage to overbearing attacks. If the defender inflicts a critical hit with a weapon or natural attack, he can opt to inflict double damage (or roll for a special effect according to the rules presented in Chapter Six) or force the attacker who is struck to release her. If the defender scores a knockdown with a pummeling or weapon attack, the attacker who is struck must release the defender.

The attacker cannot directly counter the pin, she must wait until the attackers try to maintain the pin.

Attackers who have pinned a defender must make an opposed Strength roll each round to maintain the pin. If a pinned defender wins the opposed Strength roll, she breaks the pin and can spend a half move or an attack to stand up. She is still grappled, however. If the defender wins the next opposed Strength roll, she breaks free. If the defender wins initiative, she can force the roll herself on her attack phase; this is the only time a defender can initiate the opposed roll, which can be either an attack or a Strength roll, at the defender's option. If the defender loses or there is a tie, the defender remains grappled and the attackers can skip the attack roll and go directly to the opposed Strength roll on their next action phase. If the defender wins, she breaks free and can finish the round normally.

### Assistance

Overbearing involves brute force and is the natural attack form for groups of creatures confronting a lone target. In the case of multiple defenders, the attackers can divide themselves among their opponents or concentrate on a single defender, provided that the attackers occupy squares adjacent to the defender.

The defender's allies, if clear, can remove attackers from the pile by making overbearing or wrestling attacks against them. An ally who threatens the attackers can make attacks of opportunity each time the attackers initiate an opposed roll—the arrival of an armed ally usually breaks up a massed overbearing attack. A critical hit or knockdown can force an attacker to release a defender, as described above.

Missile attacks directed at a pile have a chance to hit any character in the pile as described in Chapter One.

## Overbearing Skill Levels

Any creature or character who can be overborne is automatically familiar with overbearing combat. A character cannot choose to be nonproficient in overbearing and gain extra character points under the optional character point system from the *Skills & Powers* book.

Overbearing is a crude form of combat that emphasizes brute force over finesse. It is not possible to develop overbearing expertise, specialization, or mastery.

## An Example of Overbearing

Anada, the elf warrior from the two previous examples, is sneaking through the bugbear lair with a morning star in hand. He still wears his *chain mail +1*. The bugbears are quick to note escape and three of them corner him in an unused chamber. The trio decides to rush Anada and take his weapon away.

The three bugbears make a combined overbearing attack against Anada. Because he is armed, Anada can make attacks of opportunity against the bugbears. As an 8th-level fighter, Anada is entitled to up to four attacks of opportunity, but he only gets three since there are only three bugbears. Anada gets lucky and hits all three times. No hits kill any bugbears, but he scores a knockdown chance against one of them. The bugbear fails its saving throw roll vs. death and is knocked down. It cannot participate in the overbearing attack. Even if the save was successful, the bugbear could not participate in the attack because it suffered a knockdown chance.

The two remaining bugbears must hit AC 8 (because of Anada's magical chain mail

and 15 Dexterity). They hit, and there is an opposed Strength roll to see if Anada is overborne. The bugbears receive a +4 bonus because they are larger than Anada and an additional +1 because there are two of them; their effective Strength score for this attack is 19. Anada rolls a 16, higher than his adjusted Strength score. The bugbears roll a 13, easily a success. Anada goes down, with the bugbears on top, in the square where he stood. Anada can do nothing except await the bugbears' pin attempt.

The next round, the bugbears attempt a pin. The third bugbear jumps on the pile, increasing the bugbears' bonus to +6. Anada rolls a 15, exactly what he needs to succeed with his Strength score. The bugbears roll a 10, a success, but Anada succeeded with a higher roll, so he wins. Because he was not pinned Anada can spend a half move regaining his feet and attack with his morning star. His blows do not slay any bugbears, and another bugbear enters the chamber and joins the fray.

All four bugbears attempt to overbear Anada during the next round. Anada gets an attack of opportunity against each of them and slays one. The three survivors make a combined attack and hit AC 8, forcing another opposed Strength roll. The bugbears win, and Anada goes down again. Once again, Anada can do nothing but await the pin attempt.

The three bugbears win the next opposed roll, pinning Anada. Both of Anada's arms and one of his legs are pinned. The DM decides that the bugbear holding Anada's leg is prone, and allows the elf to kick (pummel) that bugbear. Anada hits and scores a knockdown against the bugbear, making it let go of his leg.

The two remaining bugbears try to maintain the pin during the next round, and the bugbear who was knocked loose joins the pile. Anada wins the opposed roll. Because he was pinned, Anada can only regain his feet, he cannot break free or launch any other attacks.

Anada wins initiative, however, and can attack before the bugbears can do anything. His morning star is too large to use while grappled, so Anada decides to break free with an opposed attack roll (taking advantage of his superior THAC0). Unfortunately, he rolls a 1 and fails. He will remain grappled no matter what the bugbears roll.

The bugbears try to overbear again; because Anada is grappled, he gets no attacks of opportunity and the bugbears do not have to make an attack roll. The bugbears win the opposed Strength roll, knocking Anada to the floor again.

By this time, two more bugbears arrive on the scene. The bugbears attempt to pin Anada during the next round and the new bugbears join the pile. They have a +8 bonus and handily win the opposed Strength roll. All of Anada's limbs are pinned.

The next round, they attempt to maintain the pin and succeed again. All of Anada's limbs have been pinned for two consecutive rounds, and the bugbears have him under control. Four bugbears pull Anada's arms and lock them behind his back while the fifth bugbear ties them together (a manipulation). Anada suffers 1d2+10 points of damage from the manhandling (because the bugbears' effective Strength score is 22).

The five bugbears quickly haul their bound captive back to his cell, where they bind him even more securely.

## Attack Options and Unarmed Attacks

Several attack options from Chapter Two are also available to unarmed characters, as follows:

- **Block:** A character can allocate one pummeling attack to block an incoming attack. Blocks vs. other unarmed attacks are resolved normally. Unarmed blocks against weapons, including creatures with natural weapons, receive a –4 penalty.
- **Called Shot:** A called shot to an opponent's head during unarmed combat is a sap attack and should be resolved according to the rules given in Chapter Two. Sapping requires a small, hard object. Bare-handed sapping attacks are treated as normal pummeling attacks.

Most other called shots made during unarmed combat should be resolved as special attacks. Attempts to knock items out of opponents' hands, for example, should be treated as an offensive disarms.

- **Disarm:** An unarmed character can attempt both offensive and defensive disarms at a –4 penalty to his attack roll if he is eligible to make pummeling attacks. If an unarmed character attempts to disarm a two-handed weapon the attack penalty is –8. An unarmed offensive disarm always provokes an attack of opportunity.
- **Pull/Trip:** Most unarmed pull/trip attacks should be resolved as wrestling attacks. An unarmed pull/trip can be resolved as a pummeling attack if directed at an opponent who is moving and unaware of the attack. Use the pull/trip rules from Chapter Two to resolve this maneuver.
- **Unhorse:** Treat unarmed unhorse attempts as overbearing attacks if the attacker could conceivably get her body onto the mount while attacking (as might be the case if the attacker were jumping down on the mounted character from a height); otherwise, resolve them as wrestling attacks.
- **Duels:** Two unarmed characters can conduct a duel if they are not involved in a wrestling sequence (the opposed rolls in a wrestling combat already reflect a contest of skill). If a successful grapple during any duel results in a hold, the duel is suspended until the resulting wrestling sequence ends. See Dueling in Chapter Two for procedures.

### Subdual Attacks

It is possible to employ most common weapons in a generally nonlethal manner by striking only with the haft or flat of the blade. For some weapons, it is possible for the attacker to reverse his grip and use the weapon's butt or pommel as a club.

To make a subdual attack, a character makes an attack roll vs. the opponent's normal Armor Class. There is –4 attack penalty and the weapon's damage is reduced by half; round fractions up. Subdual attacks are treated as armed melee attacks in all other ways.

Characters who are entitled to multiple melee attacks can make multiple subdual attacks. All bonuses for Strength, expertise, specialization, and mastery apply to subdual attacks. Any damage inflicted is three quarters temporary, just as in brawling attacks. Creatures reduced to zero hit points or less fall unconscious just as in brawling combat. If you don't want to bother with dividing subdual damage in half, then dividing by four, roll a smaller die for damage instead. For example, roll 1d4 for a long sword, 1d3+1 for a footman's mace, and 1d4 for a morning star. A critical hit with a subdual attack causes a blunt critical effect (see Chapter Six) or forces the target to roll a successful saving throw vs. death to avoid being knocked out for 3d10 combat rounds. There is no saving throw adjustment for the attacker's Strength as there is in pummeling attacks.

## An Example of Subduing

The hapless Anada finds himself forced into a gladiatorial combat by his bugbear captors. His opponent is Barzun, a 7th-level dwarf fighter. Anada decides he doesn't wish to kill his fellow prisoner and decides to attack to subdue instead. Barzun wears plate mail and carries a shield, giving her an Armor Class of 2. Anada wins initiative and rolls a 12. Anada's THAC0 is 13, so his roll is good enough to hit even before adding the +1 attack bonus Anada gets for his 17 Strength, but not good enough for a critical hit. The DM decides Anada should roll 1d4 to determine the morning star's subdual damage (but the DM could have decided to roll 2d4 and divide the result by two). Anada rolls a 3; Barzun suffers 4 points of damage (+1 for Anada's Strength). Three points are temporary and 1 point is normal.

Barzun decides to reply with a subdual attack as well. Anada's Dexterity and *chain mail +1* give him an Armor Class of 3. Barzun rolls a 10. Her THAC0 is 14, making her roll barely good enough to hit after adding the +1 attack bonus from her 18/21 Strength. Barzun rolls a 2 for damage; she adds +3 for her Strength and inflicts 5 points on Anada, 4 temporary and 1 normal.

Anada wins initiative again and declares a no-move attack. He attacks once with his morning star in the average phase and again in the slow phase (because he is 8th level and entitled to an extra melee attack this round). Barzun also declares a no move attack and gets attacks in the average and slow phases. Because she lost initiative, Barzun strikes last in each phase. Anada's first attack hits with a 15. There is no chance for a critical hit, and he inflicts 4 points of damage again (3 temporary and 1 normal). Barzun misses her attack, and combat proceeds to the next phase.

Anada hits again and inflicts 5 points of damage. Barzun has now suffered 13 points of damage (10 temporary and 3 normal). Barzun's final attack hits with a 20. She only needed to roll a 10, so the 20 is good enough for a critical hit. Anada suffers 2d4+3 points of damage (the morning star's 1d4 subdual damage is doubled to 2d4 and Barzun's +3 damage bonus is added). Barzun rolls a 6, inflicting 9 points of damage, 7 of which are temporary and two that are normal. Anada has now suffered 14 points of damage, 11 temporary and 3 normal. Barzun opts to knock out Anada rather than rolling for a critical hit. Anada rolls a 2, failing his saving throw vs. death; he will be unconscious for 3d10 combat rounds and the gladiatorial fight ends, much to the bugbears' disappointment.

## Martial Arts

Martial arts is a specialized form of pummeling that uses the body as a weapon. A creature must be able to make pummeling attacks to employ a martial art. Martial arts are difficult to learn and not commonly known. Generally, only creatures with at least average intelligence and from mediative, nonmaterialistic cultures can learn martial arts.

Martial arts requires at least one free hand. Unlike a character making normal pummeling attacks, a martial artist must be bare-handed or wearing only normal gloves and shoes. A martial art is a discipline of the mind and body and most implements are avoided. Improvised weapons cannot be used in martial arts attacks.

Martial arts attacks inflict mostly temporary damage, just as normal pummeling attacks do. Marital arts attacks are ineffective against creatures normally immune to pummeling attacks.

## Martial Arts Procedures

Except where noted below, martial arts attacks are resolved as pummeling attacks. A martial artist enjoys some advantages while pummeling, depending on the style of martial arts he is using:

- **Style A:** The style emphasizes striking with the hands or fists. The character's bare or gloved hands are treated as small, hard objects (1d3 points of damage), and the character can strike and damage creatures of any size. If the character is unarmed and unarmored, he can make an extra attack each round with his other hand (provided that it is free) without the usual penalties for attacking with two weapons.
- **Style B:** The style emphasizes striking with the feet. The character's bare or shod feet are treated as large, hard objects (1d6 points of damage), and the character can kick opponents even when they are not prone, sitting, or kneeling. If unarmed and unarmored, the character can make an extra attack each round with one of his free hands. Note that the ability to pummel creatures of any size is not part of this style.
- **Style C:** The style emphasizes throws and escapes. The character can choose the pull/trip combat option when making pummeling attacks. If the attack hits, the martial artist can use either his Strength or Dexterity score for the opposed roll. The martial artist also can make an opposed attack roll to escape any hold, grapple, lock, or pin. The escape roll counts as an attack, but if it succeeds the martial artist is considered clear and can finish the round normally.
- **Style D:** The style emphasizes dodges and blocks. The character can make one free block each round in addition to any attacks he makes. If unarmed and unarmored, the character receives a –2 Armor Class bonus.

## Martial Arts Skill Levels

- **Nonproficient:** Any character who has not been trained in one of the four martial arts styles automatically falls into this category. Nonproficient martial artists can make normal pummeling attacks, but cannot claim any martial arts benefits.
- **Familiar:** Familiarity has no effect on the martial arts; a character is proficient in a martial art or he is not.
- **Proficient:** Martial arts styles are unknown in most AD&D game lands. To spend character points (or a weapon proficiency) to become proficient in a martial arts style, a character must be native to (or have paid an extended visit to) a culture where martial arts has developed. Such cultures are usually nonwestern, philosophical, and nonmaterialistic. They usually stress the power of nature or of the inner self over the power of tools, weapons, and technology. Such cultures often do not allow commoners to own weapons or armor.

Proficient nonwarriors can make one martial arts attack each round. Proficient warriors gain their full allotment of melee attacks when making martial arts attacks. If a character has sufficient character points (or proficiency slots) available, he can become proficient in more than one martial arts style. All benefits are cumulative; for example, a character proficient in styles A and B could kick or punch creatures of any size, inflicting 1d3 points of damage with a punch and 1d6 points of damage with a kick. If unarmored, the character could make one extra punch each round with no penalties. Note that the four martial arts styles do not constitute a weapon group; each much be learned separately.

- **Expert:** Any character who knows a martial arts style can spend character points (or

weapon proficiencies) to become expert in the style. (Characters proficient in multiple martial arts styles can become experts in only one style.) Expert warriors who are entitled to more than one melee attack each round can make the same number of martial arts attacks each round, but gain no other benefits. Expert nonwarriors can make multiple martial arts attacks at the same rate as a nonspecialized warrior of the same level.

- **Specialized:** Generally, only single-classed fighters can become martial arts specialists, though there are optional rules in the *Skills & Powers* book that allow other characters to specialize. Martial arts specialists gain the normal specialist attack and damage bonuses and extra attacks. Specialists' attack bonuses apply to their Strength scores when rolling for knockdowns. Characters proficient in multiple martial arts styles can become specialists in only one style. Martial arts specialists can make martial arts attacks against armed opponents without provoking attacks of opportunity. Specialists can attempt blocks and disarms against armed opponents without the –4 penalty to the opposed roll; martial arts disarms against two-handed weapons receive a –4 penalty instead of the normal –8 penalty for unarmed disarms.
- **Master:** Only single-classed fighters can attain mastery in martial arts. Martial arts masters gain the normal master attack and damage bonuses and extra attacks. Masters' attack bonuses due to their Strength scores apply when rolling for knockdowns, and apply to opponents as penalties to saving throw rolls vs. knockouts. Grand master martial artists can use critical augmentation to score knockouts on attack rolls of 16 or better.

A martial arts master threatens his front squares and is entitled to make attacks of opportunity just as if he were armed with a weapon. A martial arts master can choose to inflict normal damage instead of mostly temporary damage. If the master rolls a critical hit while inflicting normal damage, he scores a bludgeoning critical instead of a knockout chance. When determining severity, compare the master's size class with the target's. Reduce the master's size class by one category if the attack is a punch.

## Martial Arts Weapons

There are a few weapons specifically designed for use in the martial arts. Most of these weapons were originally improvised from common tools, but have been refined to function as extensions of a martial artist's body. Chapter Seven includes a list of these weapons.

A martial arts weapon functions normally in most respects. A character chooses it and learns to use it as he would any other weapon. A martial artist armed with a martial arts weapon can use his style's special abilities even if they normally require him to be unarmed. The martial artist can employ the weapon in combat to avoid provoking attacks of opportunity and other penalties associated with being unarmed. For example, a character proficient in style A martial arts could use a nunchaku in each hand, inflict 1d6 points of normal damage with each hit, and avoid attacks of opportunity. A character proficient in style B could use a nunchaku and still claim his Armor Class bonus if he is unarmored; the character could use the nunchaku to perform his free block without the –4 penalty for being unarmed.

Martial artists are still subject to the normal nonproficiency penalties when using martial arts weapons. Nonspecialist martial artists still provoke attacks of opportunity if

they make unarmed attacks while armed with a weapon, even a martial arts weapon. For example, a kick from a character proficient in style B could provoke an attack of opportunity even if the martial artist was holding a nunchaku at the time.

## An Example of Martial Arts Combat

Anada, the elf fighter from previous examples in this chapter, is finally rescued from the clutches of his bugbear captors. His next adventure takes him to a distant land he has never visited before. Anada returns to his campsite one morning to discover a motley trio of humans helping themselves to his rations. He shouts and charges, waving his sword high. To Anada's surprise, the unarmed brigands stand their ground.

Anada wins initiative and attacks first; he rolls a 15 and easily hits his unarmored opponent (though there is no critical hit). The brigands are proficient in type B martial arts. They are hungry and decide to kick and punch. The kicks provoke attacks of opportunity from Anada, but the punches do not because a single character can make only one attack of opportunity against a given opponent in one combat round. All of Anada's attacks hit. The brigand wounded earlier by Anada drops to the ground, reduced to less than 0 hit points. Anada rolls an 18 against the second brigand, more than enough for a critical hit. Anada inflicts 2d8+1 points of damage and decides to foil the brigand's attack rather than rolling for a slashing critical. Anada merely wounds the third brigand, who can complete his attack. The brigands are 2nd-level fighters (THAC0 19). The brigand rolls a 17, good enough to hit Anada's Armor Class of 4. (Anada still has his 15 Dexterity and *chain mail +1*, and he has picked up a shield, which improves his Armor Class to 2. However, he suffers a +2 Armor Class penalty for charging.) The kick inflicts 4 points of damage, 3 temporary and 1 normal. To see if there is a knockdown, Anada and the brigand must make an opposed Strength check. The brigand's Strength is 14 and he gets a +1 for attacking with a large object (his foot is treated as one because he is using style B). Anada's Strength of 17 is unmodified. Anada wins the opposed roll and is not knocked down. Now the two brigands make their punching attacks, and both miss.

The next round, the wounded brigand retreats, leaving his comrade to face Anada alone. The brigand decides to block and Anada declares an attack. Anada wins initiative, but the brigand still can block because the block was declared before the initiative roll. The brigand announces that he's blocking the sword with his arm. There is an opposed roll; the brigand makes an attack vs. Armor Class 4, with a –4 penalty for an unarmed block vs. a weapon. Anada makes an attack roll vs. the brigand's Armor Class of 10. The brigand rolls a 19 and Anada rolls a 20. The brigand succeeds in spite of the penalty. Anada has succeeded, too, but the attack is blocked because the brigand succeeded with a lower roll (just Anada's luck). Because the brigand is entitled to two attacks (a kick and a punch), he could attack with a kick now (because he's already used his punch to block Anada's sword). The brigand decides he doesn't want to suffer another attack of opportunity and doesn't attack.

Anada is entitled to two attacks as well (because he is an 8th-level fighter), and he swings his sword on the next action phase. The brigand decides to allocate his second attack as another block. The DM considers the situation for a moment, since he's not sure it's possible to block a sword with a kick. The DM decides to allow the block because the brigand is trained in a martial art. There is another opposed roll, which the brigand loses. The damage is enough to put the brigand under 0 hit points. The brigand who retreated

earlier flees, and Anada has won the confrontation.

## Martial Arts Talents

Once a character is proficient in at least one martial arts style, she can acquire, with the DM's approval, a variety of additional skills that reflect her advanced mental and physical training. Only a martial artist can learn the skills presented here. They can be purchased with either weapon or nonweapon proficiency slots.

**Flying Kick** (1 slot/3 CP) Strength/Muscle
Groups: Warrior Initial rating: 5
The character can leap high into the air, leading with a powerful kick that can strike opponents up to three squares away. The character can land in any square adjacent to the target, as long as it is within two squares of the attacker's starting position. If the character is not proficient in style B, this maneuver is the only attack she can make in the round, and the kick inflicts 2d4 points of damage. Strength bonuses to the attack and damage rolls apply, but specialization and mastery bonuses from another marital arts style do not.

If the character is proficient in style B, this maneuver can replace one kick attack each round, and the kick inflicts 2d6 points of damage. Strength bonuses apply to the attack and damage rolls. If the character is a style B specialist or master, the appropriate bonuses also apply.

If the character has at least one square of running room and declares a half move action, no ability check is required. If the character has no running room or declares a no move action, a Strength/Muscle check is required. If the ability check fails, the attack automatically misses as the character falls down in her landing square.

**Backward Kick** (1 slot/ 3 CP) N/A
Groups: Warrior, Priest, Rogue
The character can attack an opponent standing in one of her rear squares either by lashing backward or kicking over her own head. This maneuver does not provoke attacks of opportunity (but deliberately turning one's back on an opponent does). This maneuver works best for characters proficient in style B, similar to the flying kick described above.

**Spring** (1 slot/3 CP) Dexterity/Balance
Groups: Warrior, Rogue Initial rating: 5
The character can make astonishing jumps and leaps with blinding speed. At the cost of a half move or an attack, the character can spring into the air, attaining a height of five feet and landing up to two squares away in any direction. The character can flip and twist while airborne to achieve any facing when he lands. If the character has a 2-square running start, he can double his springing distance, landing up to four squares away and leaping 10 feet in the air, but the running start is a half-move action. For every additional slot spent on this skill, the character can add five feet and one square to the distance achieved.

For example, a character who as spent two slots on this skill could leap 10 feet into the air and land up to three squares away from a standing start. If the character's Dexterity/Balance roll fails, the character falls down in his landing square; he can get up

during his next action phase, but can take no other actions until the following round. If the ability check succeeds, the character can finish the round normally after landing.

**Crushing Blow** (1 slot/3 CP) N/A
Groups: Warrior, Priest, Rogue
The character can break hard objects with her hands (or feet if she uses style B). Under ideal conditions, the character can break a wooden board 1/2" thick per level or 1/4" slab of stone or brick per level. Objects that are exceptionally strong, reinforced, supported by other objects (such as bricks in a wall), or not shaped like boards receive a saving throw roll vs. crushing blow to avoid breakage. When used against a creature, the crushing blow does normal damage plus 1 point per level. A crushing blow requires intense concentration. It is a no-move action, and the character can take no other actions during the round when she uses the crushing blow.

**Instant Stand** (1 slot/3 CP) Dexterity/Balance
Groups: Warrior, Priest, Rogue Initial rating: 7
The character can instantly regain his feet after falling down. If the ability check succeeds, the character can ignore the effects of knockdowns or failed spring attempts. If the ability check fails, the character can get up during his next action phase, but cannot take any further actions until the next round. Characters cannot use this skill while pinned, locked, held, or grappled.

**Missile Deflection** (1 slot/3 CP) N/A
Groups: Warrior, Priest, Rogue
The character can perform block maneuvers (see Chapter Two) against normal missiles fired at her from the front. The character can use her free change of facing (see Chapter One) to turn toward an attacker firing missiles from her flank or rear, but this counts as her change of facing for the round.

Normal missiles include mundane and enchanted arrows, axes, bolts, javelins, small stones, and spears. Large or magical missiles, such as ballista bolts, hurled boulders, and magic missile spells, cannot be deflected.

# Chapter Six: Critical Hits

Fantasy literature is full of mighty blows and grievous wounds that change the course of a battle. Characters such as Robert E. Howard's Conan, Beowulf, or any of the heroes of the Arthurian legends wreaked havoc among their enemies—cleaving skulls, severing limbs, and otherwise smashing their foes into red ruin. Every fan of heroic fiction is a little fascinated (and sometimes horrified) by blood and gore. You only have to go out to the movies to see that this is true.

However, the purpose of this chapter is not to overwhelm AD&D players with sickening displays of pointless violence. The purpose of this chapter is to provide the

AD&D game with a more realistic system for simulating telling blows and specific injuries. At its most basic level, the AD&D combat system is a contest of attrition that all boils down to who runs out of hit points first. Critical hits can change that.

This chapter presents two critical hit systems. The first is extremely simple: if you score a critical hit, you get to roll double damage. The second system is more involved and takes into account the location of the injury, the severity of the wound, and the power of the attacker. Last (but certainly not least!) this chapter concludes with a few notes on the effects of specific injuries and how they can be healed.

### Does This Belong in My Campaign?

While the rest of this book assumes that you'll be playing with the full critical hit tables and rules, you'll find that this chapter can be completely disregarded with no ill effects. More than anything else in this book, critical hits are optional; if the DM and players don't want them, the AD&D game works fine without them.

However, there is one thing worth mentioning: if monsters have to suffer critical hits, so do player characters. Otherwise, game balance quickly goes out the window.

## Critical Hits: System I

Critical hits occur when a character rolls a natural 18 or higher *and* hits the target by a margin of 5 or more after all adjustments. If the character scores a critical hit, he inflicts double damage dice, calculated before adjustments for Strength, magic, or special circumstances. In a situation where the damage is doubled for another reason, do not double the multiplied damage; add it instead, then add other adjustments. For example, a light lance inflicts 1d6 damage, or 2d6 in a charge. But if a charging lancer scores a critical hit, the lance inflicts 3d6 damage, not 4d6.

*For example, Liera is a 4th-level elven warrior fighting a gnoll. Liera's base THAC0 is a 17, but she has a 17 Strength (+1 to hit), she's an elf using a long sword (+1 to hit), and she has a magical long sword +2. Her total adjusted THAC0 is 13, and the gnoll's Armor Class is 5. She will hit the gnoll on a roll of 8 or better, and can achieve a critical hit with a natural 18 or higher. On one combat round, she rolls a 19, which is a critical hit. She rolls 1d8 for damage, doubles that, then adds +1 for her Strength and +2 for her magical long sword, for a total of 15 ((6x2=12)+1+2).*

*After dispatching the gnoll, Liera finds herself facing a horrible tanar'ri with an AC of –3! She scores a hit on a roll of 16 or better. She cannot score a critical hit because it's impossible for her to hit with 5 points to spare; even if she rolls a 20, she only hits by 4. If the tanar'ri charged, its AC would drop by one point to –2, and then Liera could score a critical hit with that roll of 20.*

There are no specific injuries using this critical hit system. Instead, it only provides characters and monsters the chance to dish out extra damage when they make a great attack roll. Limiting the critical hits to attacks that hit by a margin of 5 or more solves one other problem. Consider the 1st-level fighter. He only hits on a 20 against an opponent with very good Armor Class (0 or lower). Under other critical hit systems, the few times he *does* hit, the fighter *automatically* inflicts a critical hit. Under this system,

that can't happen.

## Critical Hits: System II

The second, and more detailed, system for critical hits uses the same attack mechanic as the previous one. As above, the attacker must roll a natural 18 or higher and hit his opponent by a margin of 5 or more. Then, if the victim fails a saving throw vs. death, a specific injury occurs. However, the effects are determined by four factors: the attacker's weapon size compared to the defender's size, the type of weapon compared to the type of target, the location of the hit, and a roll for the injury's severity.

## Critical Hit Charts

There are three types of weapons: slashing, piercing, and bludgeoning. Every weapon in the AD&D game system is assigned a type, with only a couple of exceptions such as lassoes and nets. If a weapon does not have a type, it cannot roll on a critical hit chart, although it can still inflict double damage on a critical attack roll.

These three weapon types are compared to three target types, for a total of nine different critical hit charts. The target types are humanoids, animals, and monsters. In the following pages, you'll find a chart for Bludgeoning vs. Humanoids, Bludgeoning vs. Animals, Bludgeoning vs. Monsters, Slashing vs. Humanoids, and so on. In most cases the correct critical hit chart to use should be relatively obvious.

**Humanoids** include anything that is generally shaped like a human, ranging from pixies to giants. If it has two arms and two legs, it's probably humanoid.

**Animals** include anything that is a normal or giant-sized version of a normal animal. Mammals, reptiles, birds, and amphibians all fall into this category—but not insects or fish. It also includes monsters that are animal-like in form, such as blink dogs, winter wolves, moon dogs, hell hounds, nightmares, osquips, or fire toads.

**Monsters** include anything that doesn't fit into the previous two categories. Giant insects of any kind, fish-like monsters, composite creatures such as manticores or dragons, and weird things like xorn or leucrottas would all be considered monsters. If in doubt over whether something is a monster or not, call it a monster; this is the default category for things that defy classification.

## Location

The critical hit charts require two die rolls: one to determine the location of the hit, and the other to determine the severity. Note that these can be rolled simultaneously. The location die is usually a single d10, but there are some exceptions.

**Called Shots.** If a character hits with a called shot and scores a critical hit, the location die is ignored. The location is automatically determined to be wherever the character had been aiming.

**Low Attacks.** If the attacker is fighting a creature two sizes larger or a defender with a distinct height advantage, use a single d6 for location. Head and upper torso shots become extremely unusual in these cases.

**High Attacks.** If the attacker is two sizes larger than the defender, or has a significant height advantage, roll 1d6+4. Giants fighting halflings don't often strike them low.

## Severity

The second roll on the critical hit charts is for severity. The severity of a hit is determined by the relative size of the attacker's weapon and the defender.

| **Weapon vs. Target Size** | **Effect** | **Di(c)e** |
|---|---|---|
| Weapon size is < target size | Minor | 1d6 |
| Weapon size is = target size | Major | 2d4 |
| Weapon size is > target size | Severe | 2d6 |
| Weapon is two sizes larger | Mortal | 2d8 |

The di(c)e indicated is the type rolled for that severity. For example, if a human armed with a long sword (size M) is fighting a gnoll (size L), he rolls 1d6 for the critical hit's severity because the long sword's size is smaller than the gnoll's size.

If the weapon is two sizes larger than the target, it is possible to reach the 13+ column of the chart. These hits inflict *triple* damage dice, even if the victim passes his saving throw to avoid the effects of the critical hit.

The arrows and bolts fired from bows and crossbows are considered size M weapons, even though the missiles themselves are Small. Heavy crossbow bolts are considered size L.

## Resistance

Critical hits automatically inflict double damage dice, or triple damage dice if the weapon is two sizes larger than the target (see above.) However, any effects beyond this can be avoided by a successful saving throw vs. death. For example, the critical roll may indicate an arm injury with minor bleeding, but if the victim makes his saving throw, no arm injury actually takes place. The character only suffers double damage from the hit. Obviously, this could be sufficient to mortally wound or kill a character anyway.

Some monsters are naturally resistant to the effects of certain critical injuries. Creatures such as golems, undead, or elementals don't bleed and therefore ignore any such effects. A monster like a hydra can lose a head without being instantly slain. However, these injuries can still be important because it might affect the way a monster moves or attacks. A skeleton that's had a leg knocked off can't move at its full rate, even if it is less troubled by the injury than a living person would be. Slimes and jellies have no parts that are more specialized or important than the rest of the body, and are therefore immune to the effects of most critical hits. Use common sense to handle these situations as they arise.

## Reading the Critical Hit Tables

First, find the appropriate table for the weapon type (slashing, piercing, or bludgeoning) and the target type (humanoid, animal, or monster.) Then roll for hit location (d10) and severity (variable dice.) Refer to the entry indicated on the chart. Remember, critical hits inflict double (or triple) damage dice, but any other effects can be avoided by a successful saving throw vs. death.

The specific types of injuries are described in the section following the charts.

## Specific Injuries

The critical hit charts include a number of specific injuries that go beyond a simple loss

of hit points. Wounds are divided into five degrees of severity: *grazed, struck, injured, broken,* and finally *shattered, severed, or crushed.*

Wounds should be recorded on the character sheet. Attack and movement penalties remain until the injury that created the penalty has healed. Wounds are always accompanied by some loss of hit points, but a specific injury isn't damage *per se*; consider it a temporary penalty that the character has to put up with until it is restored.

*For example, Feodor the Bold is fighting an ogre armed with a club. The ogre scores a critical hit, rolling a 6 for location and a 7 for severity. Feodor's torso has been struck, a wound that reduces him to 1/2 his normal move and gives him a –2 penalty to any attack rolls he makes. (It also puts a healthy dent in his nice plate mail.) Feodor's penalties remain until he recovers from his "torso struck" specific injury.*

*Let's say that Feodor had 16 hit points, and the ogre's blow inflicted 12 points of damage. The missing 12 hit points can eventually be recovered, but Feodor's penalties remain until the "torso struck" specific injury heals.*

Severe injuries can temporarily reduce a character's maximum allowable hit points. In other words, a fighter with a broken leg will not be allowed to enjoy his full allotment of hit points until his broken leg is repaired. If the character has more hit points than he is currently allowed, he is reduced to the injured value when the current battle is over. This represents the increased vulnerability of badly wounded characters.

For example, if a fighter with 30 hit points receives 10 points of damage and an "arm destroyed" injury that reduces him to 50% of his normal hit points, he drops from 20 to 15 when the battle is concluded and remains at 15 until his ruined arm is somehow healed. Remember, though, that specific injuries are only inflicted if the victim fails a saving throw vs. death.

**Grazed:** Grazes are minor injuries that may prove troublesome if they bleed. A *cure light wounds* spell or other healing magic capable of restoring 4 hp will heal a graze. (The *cure light wounds* spell doesn't have to actually restore that many points; it just must be capable of doing so.) Grazes also heal naturally as if they were a loss of 1d6 hp. In other words, if a graze is the equivalent of a 3-hp wound, two days of rest heal it completely, since characters normally recover 2 hp per full day of rest. Note that the graze isn't tied to the character's actual loss of hit points in any way. If a grazed character receives healing magic, the graze is healed *and* he gets to recover hit points.

**Struck:** A body part that has been struck is often penalized in a small way for the effects of the wound. For example, a critical hit that reads, "weapon hand struck, –2 penalty to attacks," means that the character has a –2 attack penalty with his weapon hand until the wound is healed. Injuries of this type can be healed by a *cure light wounds* spell or other healing magic capable of restoring 5 hp of damage. Struck areas heal naturally as if they were a loss of 2d6 hp.

**Injured:** Wounds of this severity can trouble a character for weeks; they heal naturally as if they were a loss of 10d6 hp. A *cure serious wounds* spell or other healing magic capable of restoring 10 hit points can also repair the injury. Injuries almost always entail serious combat penalties for the wounded character.

Injured arms, legs, or tails reduce a character to 75% of his normal hit points. An

injury to the abdomen, torso, or head reduces a character to 50% of his normal hit points. A 25-hp character with a chest injury can have no more than 13 hit points until his injury is healed (and could have a lot less than that if he continues to suffer damage!)

**Broken:** Broken bones run the gamut from minor fractures that don't hinder a character at all to life-threatening compound fractures. Generally, the previous two injury categories are considered to include minor breaks or cracks; this category is reserved for severe fractures. Broken bones can be mended by a *cure serious wounds* spell that is devoted just to knitting the bone; unlike *grazed, struck,* or *injured,* the character regains no hit points from a spell used in this way. Broken bones heal naturally as if they were 20d6 lost hit points, so bed rest in the care of a proficient healer is a really good idea if the injured character is planning on resuming his adventuring career anytime soon.

Broken arms reduce a character to 75% of his normal hit points. Broken ribs or legs reduce a character to 50% of his normal hit points. Any other broken bones reduce a character to 25% of his normal hit points.

**Crushed, Shattered, or Destroyed:** Limbs that suffer this kind of catastrophic injury may never be usable again; hits to the torso, abdomen or head of this magnitude are often lethal. If the victim survives, he will never naturally recover to his normal self. A limb damaged this way will be useless for the rest of his life, and hits anywhere else will leave the victim incapacitated. The victim will be bedridden for at least one to eight months before he can even regain a semblance of mobility.

A *cure critical wounds* spell or other healing magic capable of restoring 20 hp of damage can repair the damage of this kind of injury. In addition, the bones of the affected area (if any) are assumed to be broken and may require another application of healing magic to repair.

Destroyed shoulders, hips, or limbs reduce the victim to 50% of his normal maximum hit points. Any other wounds of this magnitude reduce the victim to 25% of his normal total.

**Severed:** Obviously, a creature that has a limb severed can no longer engage in activities that require the use of that member. A human with a severed leg can't walk or run and is reduced to crawling until he gets a crutch. A character with a severed shield-arm can't use a shield anymore, and so on. The only way to undo this kind of damage is by means of a *regeneration* spell.

The shock of losing a limb will prevent a character from moving independently or attacking for 2d10 weeks. At the DM's discretion, a character who "only" loses a hand or a foot may actually be able to perform limited activities after being stunned 1d6 rounds, but only by passing a System Shock roll. However, characters who sustain such massive injuries are best off abandoning the field to their enemies.

The loss of a limb will reduce a character's maximum normal hit points by 25% for a partial loss, or 50% for a more catastrophic loss. If the character can compensate with a wooden leg or hook, the hit point loss may be reduced by one step.

## Critical Hit Effects

There are several possible effects of injuries caused by critical hits: bleeding, attack penalties, movement penalties, knockdowns, dropped weapons or shields, and possible armor or shield damage. Some of these conditions are temporary—a dropped weapon can be picked up—while others remain until the injury that created the effect is healed. Any

damage or other types of effects are marked off during the End-of-Round step if the *Player's Option* combat system is also used.

**Bleeding:** A character with minor bleeding loses an additional 1d2 hp per full turn until the wound is magically healed or bound. In addition, there is a chance that minor bleeding will stop on its own. The character may roll a saving throw vs. death each time he suffers damage from minor bleeding; if he is successful, the bleeding stops.

Anybody can stop minor bleeding by applying a bandage or otherwise addressing the injury. This takes 1d6 combat rounds or a single one-minute round.

Major bleeding results in a loss of 1d2 hp per combat round until the wound is magically healed or bound. Left untreated, major bleeding can easily cause a character's death. In effect, the –10 rule represents major bleeding; the character loses 1 hp per round when reduced to negative hit points.

Major bleeding can be stopped by a *cure light wounds* spell (the victim recovers hit points, too), the healing of 5 hp of damage by any other magical means, or by a successful use of the healing proficiency. If the wound is bound by an untrained character, make an Intelligence check for the would-be medic. If he fails, he is unable to help. If he makes the check, the bleeding is reduced to minor.

Severe bleeding causes the victim to lose 10–60% (1d6x10%) of his original hit point total every combat round. For example, if a fighter normally has 43 hit points but receives a severe bleeding result, he loses 4 hp (10%) to 24 hp (60%) in each round of severe bleeding. Needless to say, this is extremely lethal.

A *cure light wounds* spell (or 5 hp of healing) will reduce severe bleeding to major bleeding; a *cure serious wounds* spell (or 10 hp of healing) reduces it to minor bleeding; and a *cure critical wounds* or heal spell stops it altogether. An untrained character has no chance to bind a torso, abdomen, or head wound with severe bleeding, but a successful use of the healing proficiency with a –4 penalty reduces severe bleeding to major bleeding.

Note that once a character drops below 0 hit points, regardless of the number and combination of wounds she is suffering from, she only suffers the effects of major bleeding (i.e., only 1 hit point is deducted per round).

**Attack Penalties:** Many critical hits hamper the victim's ability to fight, resulting in an attack penalty. This is noted as applying to all attacks or to attacks with the particular limb that was injured. Other critical hits may prevent the victim from making attacks at all. If a critical hit prevents a character from making attacks, it also prevents him from casting spells or exercising any other combat action except moving or using magical items.

**Movement Penalties:** Hits to the legs and body may penalize a character's ability to move. Usually, this is expressed as "1/2 move", "1/3 move", and so on. If the character's movement is limited, he may not charge, run, or sprint; he can only move by using the reduced rate. A character with no movement at all can still ride a mount with difficulty, or drag himself on the ground with an effective movement rate of 1.

**Knockdowns:** If a critical hit calls for a knockdown, the victim is still entitled to a saving throw to avoid falling down. See Knockdowns in Chapter One.

**Armor and Shield Damage:** Some critical hits call for possible damage to a creature's armor or shield. If the victim of the hit has no armor at that location, the blow is usually assumed to have more severe effects than if the character was protected. The armor

descriptions in Chapter Seven deal with the coverage of each type of armor.

If the creature struck does have a shield or armor to deflect the blow, it may be damaged if the chart calls for it. First of all, the victim gets his normal saving throw roll to avoid the effects of the critical hit; if the roll is successful, there is no special effect for the hit. If the roll fails, his armor or shield must roll an item saving throw vs. normal blow with the number of points of damage (before doubling) used as a negative modifier for the save. If the attacker's weapon is larger than the defender (for example, a Size L halberd striking a Size M human), the save is rolled against a crushing blow, instead.

*For example, remember the ogre's critical hit on poor Feodor? That result also called for possible armor damage. The ogre's club is Size L, so the item saving throw is against a crushing, not a normal, blow. Feodor is in metal plate mail, which has a saving throw of 7 vs. crushing blow. The ogre did 6 points of damage before doubling for the critical hit, so Feodor's armor is safe on a roll of 13 or more on a d20.*

A damaged shield is useless. If armor is damaged, only the location struck is useless, and it no longer contributes to the overall AC of the suit. Refer to the rules for Partial Armor in Chapter Seven. In the example above, Feodor was struck on the torso. If his armor failed its item saving throw, only his breastplate would be ruined. A plate mail breastplate contributes 3 points to his AC, so Feodor's AC worsens from AC 3 to AC 6. Damaged equipment can be repaired by a skilled armorer or by magical means.

## Bludgeoning vs. Humanoids

**Hit Location Chart**

| d10 roll | Location |
|---|---|
| 1–2 | Right leg |
| 3–4 | Left leg |
| 5 | Abdomen |
| 6–7 | Torso |
| 8 | Right arm |
| 9 | Left arm |
| 10 | Head |

**Location: Legs (Right 1–2, Left 3–4)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim knocked down |
| 5 | Knee struck, knockdown, 1/2 move |
| 6 | Foot broken, 1/2 move |
| 7 | Armor damaged, leg injured if target has no armor to cover legs, 1/4 move |
| 8 | Hip broken, minor bleeding, no move |
| 9 | Armor damaged, leg broken if target has no armor to cover legs, no move |
| 10 | Knee shattered, no move, –2 penalty to attacks |
| 11 | Hip shattered, minor bleeding, no move or attack |
| 12 | Leg shattered, no move or attack, major bleeding from compound fractures |

| | |
|---|---|
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (5)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 1/2 move |
| 6 | Armor damaged, victim stunned 1d6 rounds, triple damage if no armor |
| 7 | Abdomen injured, 1/2 move, –2 penalty to attacks |
| 8 | Abdomen injured, minor internal bleeding, 1/2 move and –2 penalty to attacks |
| 9 | Armor damage, abdomen injured, minor bleeding, 1/2 move and –2 penalty to attacks |
| 10 | Abdomen injured, no move or attack, minor internal bleeding |
| 11 | Abdomen crushed, no move or attack, major internal bleeding |
| 12 | Abdomen crushed, victim reduced to 0 hit points with severe internal bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (6–7)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Knockdown, stunned 1d4 rounds |
| 5 | Torso struck, victim stunned 1 round and reduced to 1/2 move |
| 6 | Shield damage, torso struck, 1/2 move |
| 7 | Armor damage, torso struck, 1/2 move, –2 penalty to attacks |
| 8 | Torso injured, minor internal bleeding, no move or attack |
| 9 | Ribs broken, minor internal bleeding, 1/2 move, –2 penalty to attacks |
| 10 | Ribs broken, major internal bleeding, no move or attack |
| 11 | Torso crushed, victim reduced to 0 hit points with severe internal bleeding |
| 12 | Torso crushed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Arms (Left 8, Right 9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand struck, weapon/shield dropped |
| 5 | Arm struck, shield damage/weapon dropped |
| 6 | Hand broken, –2 penalty to attacks/shield dropped |
| 7 | Armor damage, arm broken if victim has no armor to cover limb |
| 8 | Shield damage, arm broken, stunned 1 round |
| 9 | Weapon dropped, arm broken, stunned 1d4 rounds |
| 10 | Shoulder injured, no attacks, minor bleeding |
| 11 | Arm shattered, 1/2 move, no attacks, minor bleeding |
| 12 | Shoulder shattered, no move or attacks, major bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Head struck, helm removed, victim stunned 1 round; –2 penalty to attack rolls if victim had no helm |
| 6 | Head struck, –2 penalty to attacks |
| 7 | Helm damaged, face injured, stunned 1d6 rounds, 1/2 move, –4 penalty to attacks |
| 8 | Skull broken, helm damaged, victim reduced to 0 hit points and unconscious 1d4 hours |
| 9 | Face crushed, minor bleeding, no move or attack, Cha drops by 2 points permanently |
| 10 | Head injured, unconscious 1d6 days, lose 1 point each of Int/Wis/Cha permanently |
| 11 | Skull crushed, reduced to 0 hit points, major bleeding, Int, Wis, Cha all drop by 1/2 permanently |
| 12 | Skull crushed, immediate death |
| 13+ | As 12 above with tripled damage dice |

## Bludgeoning vs. Animals

**Hit Location Chart**

| d10 roll | Location |
|---|---|
| 1 | Right foreleg/wing |
| 2 | Left foreleg/wing |
| 3 | Right hind leg |
| 4 | Left hind leg |
| 5 | Tail (for snakes or fish, 1–5 is tail hit) |
| 6–7 | Abdomen |
| 8–9 | Torso/chest |
| 10 | Head |

**Location: Legs/Wings (1–4)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim knocked down |
| 5 | Knee struck, victim reduced to 2/3 move |
| 6 | Foot/wrist broken, 2/3 move |
| 7 | Leg injured, 2/3 move, –2 penalty to attacks |
| 8 | Hip broken, minor bleeding, no movement, –2 penalty to attacks; wing hit forces crash landing |
| 9 | Leg broken, 2/3 move, minor bleeding; wing hit forces immediate landing |
| 10 | Knee shattered, 1/3 move, –2 penalty to attacks |

| | |
|---|---|
| 11 | Hip/shoulder shattered, minor bleeding, no move or attack; wing hit forces crash landing |
| 12 | Leg/wing shattered, no move or attack, major bleeding from compound fractures |
| 13+ | As 12 above with tripled damage dice |

**Location: Tail (5)**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, –2 penalty to tail attacks due to pain |
| 7–8 | Tail injured, normal animals must save vs. death or retreat in pain; lose any tail attacks |
| 9–10 | Tail broken, lose any tail attacks, 1/2 move if animal uses tail for movement |
| 11 | Tail crushed, victim stunned 1–3 rounds, lose any tail attacks, no movement or attacks if animal uses tail for movement |
| 12 | Tail crushed, pain reduces creature to 1/2 move and –2 penalty on any attack, minor bleeding; no move or attack if animal uses tail for movement |
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (6–7)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 1/2 move |
| 6 | Abdomen struck, victim stunned 1d6 rounds, reduced to 1/2 move |
| 7 | Abdomen injured, 1/2 move, –2 penalty to attacks |
| 8 | Spine broken, no move, –4 penalty to attacks |
| 9 | Abdomen injured, minor bleeding, 1/2 move and –2 penalty to attacks |
| 10 | Abdomen injured, no move or attack, minor internal bleeding |
| 11 | Spine crushed, no move or attack, major internal bleeding |
| 12 | Abdomen crushed, victim reduced to 0 hit points with severe internal bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (8–9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Knockdown, stunned 1d4 rounds |
| 5 | Torso struck, victim stunned 1 round and reduced to 1/2 move |
| 6 | Torso struck, stunned 1d6 rounds, 1/2 move |
| 7 | Spine struck, 1/2 move, –2 penalty to attacks |
| 8 | Torso injured, minor internal bleeding, no move or attack |
| 9 | Ribs broken, minor internal bleeding, 1/2 move, –2 penalty to attacks |
| 10 | Ribs broken, major internal bleeding, no move or attack |

| | |
|---|---|
| 11 | Spine crushed, victim reduced to 0 hit points with severe internal bleeding |
| 12 | Torso crushed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d6 rounds |
| 5 | Snout struck, animal must save vs. death or retreat in pain for 1d10 rounds |
| 6 | Head struck, –2 penalty to attacks |
| 7 | Jaw injured, stunned 1d6 rounds, 2/3 move, –4 penalty to all attacks |
| 8 | Skull broken, animal reduced to 0 hit points and unconscious 1d4 hours |
| 9 | Snout/face crushed, minor bleeding, 1/3 move, no bite attacks, –4 penalty to all other attacks |
| 10 | Head injured, unconscious 2d4 hours, reduced to 1/2 move and –4 penalty to all attacks for 1d3 months |
| 11 | Skull crushed, reduced to 0 hit points, major bleeding, Int, Wis, Cha all drop by 1/2 permanently |
| 12 | Skull crushed, immediate death |
| 13+ | As 12 above with tripled damage dice |

## Bludgeoning vs. Monsters

**Hit Location Chart**

| d10 Roll | Location |
|---|---|
| 1 | Right foreleg/claw/wing |
| 2 | Left foreleg/claw/wing |
| 3 | Right hind leg |
| 4 | Left hind leg |
| 5 | Tail (for snakelike or fishlike monsters, 1–5 is tail hit) |
| 6–7 | Abdomen |
| 8–9 | Torso/chest |
| 10 | Head |

**Location: Legs/Wings (1–4)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim knocked down |
| 5 | Knee struck, victim reduced to 2/3 move, –2 penalty to attacks with that appendage |
| 6 | Foot/wrist broken, 2/3 move, –4 penalty to attacks with that appendage |
| 7 | Limb injured, 2/3 move, –2 penalty to all attacks |
| 8 | Hip broken, minor bleeding, 1/3 move, no attacks with limb; wing hit forces crash landing |
| 9 | Limb broken, 2/3 move, minor bleeding; wing hit forces immediate |

| | |
|---|---|
| | landing |
| 10 | Knee shattered, 1/3 move, –2 penalty to all attacks |
| 11 | Hip/shoulder shattered, minor bleeding, 1/3 move, –4 penalty to all attacks; wing hit forces crash |
| 12 | Leg/wing shattered, no move, –4 penalty to all attacks, major bleeding from compound fractures |
| 13+ | As 12 above with tripled damage dice |

**Location: Tail (5)**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, –2 penalty to tail attacks due to pain |
| 7–8 | Tail injured, lose any tail attacks |
| 9–10 | Tail broken, lose any tail attacks, if creature uses tail for movement reduced to 1/2 move |
| 11 | Tail crushed, victim stunned 1–3 rounds, lose any tail attacks, no movement if monster uses tail for movement and –4 penalty to all attacks |
| 12 | Tail crushed, pain reduces creature to 1/2 move and –2 penalty on any attack, minor bleeding; if animal uses tail for movement, no move or attack |
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (6–7)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d4 rounds |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 2/3 move |
| 6 | Abdomen struck, victim stunned 1d6 rounds, reduced to 2/3 move |
| 7 | Abdomen injured, 1/2 move, –2 penalty to attacks |
| 8 | Spine injured, 1/3 move, –4 penalty to attacks |
| 9 | Abdomen injured, victim stunned 1d3 rounds, minor bleeding, 1/3 move and –2 penalty to attacks |
| 10 | Abdomen injured, no move or attack, minor internal bleeding |
| 11 | Spine crushed, no move or attack, major internal bleeding |
| 12 | Abdomen crushed, victim reduced to 0 hit points with severe internal bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (8–9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Knockdown, stunned 1d4 rounds |
| 5 | Torso struck, victim stunned 1 round and reduced to 2/3 move |
| 6 | Torso struck, stunned 1d6 rounds, 2/3 move |
| 7 | Spine struck, 1/2 move, –2 penalty to attacks |

| | |
|---|---|
| 8 | Torso injured, minor internal bleeding, 1/3 move, –4 penalty to all attacks |
| 9 | Ribs broken, minor internal bleeding, 1/2 move, –2 penalty to attacks |
| 10 | Ribs broken, major internal bleeding, no move or attack |
| 11 | Spine crushed, victim reduced to 0 hit points with severe internal bleeding |
| 12 | Torso crushed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Victim stunned 1d4 rounds |
| 5 | Jaw struck, –2 penalty to any bite attacks |
| 6 | Head struck, stunned 1 round, –2 penalty to attacks |
| 7 | Jaw injured, stunned 1d4 rounds, 2/3 move, no bite attacks |
| 8 | Skull broken, monster reduced to 1/4 normal hit points and unconscious 2d10 turns |
| 9 | Snout/face crushed, minor bleeding, 1/3 move, no bite attacks, –4 penalty to all other attacks |
| 10 | Head injured, unconscious 1d10 turns, reduced to 1/2 move and –4 penalty to all attacks for 3d6 days |
| 11 | Skull crushed, reduced to 0 hit points, major bleeding, Int, Wis, Cha all drop by 1/2 permanently |
| 12 | Skull crushed, immediate death |
| 13+ | As 12 above with tripled damage dice |

## Slashing vs. Humanoids

**Hit Location Chart**

| d10 Roll | Location |
|---|---|
| 1–2 | Right leg |
| 3–4 | Left leg |
| 5 | Abdomen |
| 6–7 | Torso |
| 8 | Right arm |
| 9 | Left arm |
| 10 | Head |

**Location: Legs (Right 1–2, Left 3–4)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Leg struck, minor bleeding |
| 5 | Leg struck, minor bleeding; 1/2 move |
| 6 | Leg injured, major bleeding, 1/2 move |
| 7 | Armor damaged; leg injured if target has no leg armor, 1/2 move, major bleeding |

| | |
|---|---|
| 8 | Knee shattered, major bleeding, no move, –4 penalty to any attacks |
| 9 | Armor damaged, leg struck, minor bleeding, 1/2 move; if target has no leg armor, leg severed at knee, severe bleeding, no move or attack |
| 10 | Hip shattered, no move or attack, severe bleeding |
| 11 | Leg severed, severe bleeding, no move or attack |
| 12 | Leg severed at thigh, no move or attack, victim reduced to 0 hit points with severe bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (5)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Abdomen grazed, minor bleeding |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 1/2 move with minor bleeding |
| 6 | Armor damaged; victim stunned 1d6 rounds, major bleeding, 1/2 move if no armor |
| 7 | Abdomen injured, major bleeding, 1/2 move, –2 penalty to attacks |
| 8 | Abdomen injured, severe bleeding, 1/2 move, –4 penalty to attacks |
| 9 | Armor damage, abdomen injured, minor bleeding, 1/2 move and –2 penalty to attacks; if no armor, victim at 0 hit points, major bleeding |
| 10 | Abdomen injured, no move or attack, severe bleeding |
| 11 | Abdomen injured, victim at 0 hp, severe bleeding |
| 12 | Abdomen destroyed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (6–7)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Torso grazed, minor bleeding |
| 5 | Torso struck, victim stunned 1 round, reduced to 1/2 move with minor bleeding |
| 6 | Shield damage, torso struck, 1/2 move & minor bleeding |
| 7 | Armor damage, torso struck, 1/2 move, –2 penalty to attacks; if no armor, torso injured, no move or attack, severe bleeding |
| 8 | Torso injured, major bleeding, 1/2 move, –4 penalty to attacks |
| 9 | Shield damage; torso struck, –2 penalty to attacks; if no shield, torso injured, severe bleeding, no move or attack |
| 10 | Torso injured, severe bleeding, no move or attack |
| 11 | Torso destroyed, victim reduced to 0 hit points with severe bleeding |
| 12 | Torso destroyed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Arms (Left 8, Right 9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |

| | |
|---|---|
| 4 | Hand struck, weapon dropped, minor bleeding; no effect on shield arm |
| 5 | Arm struck, shield damage/weapon dropped, minor bleeding |
| 6 | Hand injured, –2 penalty to attacks/shield dropped |
| 7 | Armor damage, arm struck, minor bleeding; if no armor, arm injured, major bleeding |
| 8 | Hand severed, stunned 1 round, major bleeding, shield or weapon dropped |
| 9 | Armor damage, arm broken; if no armor, arm severed, stunned 1d6 rounds, major bleeding |
| 10 | Shoulder injured, no attacks, major bleeding |
| 11 | Arm severed, severe bleeding, 1/2 move |
| 12 | Arm severed, no move or attacks, severe bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Head grazed, stunned 1d3 rounds, minor bleeding |
| 5 | Head struck, helm removed, victim stunned 1 round; –2 penalty to attack rolls, minor bleeding if victim had no helm |
| 6 | Head struck, minor bleeding, victim blinded for 2d4 rounds by blood in eyes |
| 7 | Helm damaged, face injured, stunned 1d6 rounds, minor bleeding, 1/2 move, –4 penalty to attacks |
| 8 | Skull broken, helm damaged, victim reduced to 0 hit points, major bleeding |
| 9 | Throat injured, severe bleeding |
| 10 | Skull destroyed, victim reduced to 0 hp, severe bleeding, Int, Wis, Cha all drop by 1/2 permanently |
| 11 | Throat destroyed, victim killed |
| 12 | Head severed, immediate death |
| 13+ | As 12 above with tripled damage dice |

## Slashing vs. Animals

**Hit Location Chart**

| d10 Roll | Location |
|---|---|
| 1 | Right foreleg/wing |
| 2 | Left foreleg/wing |
| 3 | Right hind leg |
| 4 | Left hind leg |
| 5 | Tail (for snakes or fish, 1–5 is tail hit) |
| 6–7 | Abdomen |
| 8–9 | Torso/chest |
| 10 | Head |

**Location: Legs/Wings (1–4)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Leg struck, minor bleeding |
| 5 | Knee struck, 2/3 move, minor bleeding |
| 6 | Leg injured, major bleeding, 2/3 move |
| 7 | Foot/claw injured, 2/3 move, minor bleeding, –2 penalty to attacks with that limb |
| 8 | Hip injured, major bleeding, 1/3 movement, –2 penalty to attacks; wing hit forces crash landing |
| 9 | Leg/wing severed at midpoint, 1/3 move, major bleeding; wing hit forces uncontrolled fall |
| 10 | Knee destroyed, major bleeding, 1/3 move, –2 penalty to all attacks |
| 11 | Hip/shoulder destroyed, severe bleeding, no move or attack; wing hit forces crash landing |
| 12 | Leg/wing severed at mid-thigh, no move or attack, severe bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Tail (5)**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, minor bleeding, –2 penalty to tail attacks |
| 7–8 | Tail injured, minor bleeding, normal animals must save vs. death or retreat; no tail attacks |
| 9–10 | Tail severed near end, major bleeding, lose tail attacks, move reduced by 1/3 if creature uses tail for movement |
| 11 | Tail severed, victim stunned 1–3 rounds, lose tail attacks, major bleeding, no movement or attacks if animal uses tail for movement |
| 12 | Tail severed, stunned 1–3 rounds, major bleeding, 1/2 move and –2 penalty on any attack; if animal uses tail for movement, no move or attack |
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (6–7)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Abdomen grazed, minor bleeding |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 2/3 move, minor bleeding |
| 6 | Abdomen struck, victim stunned 1d6 rounds, reduced to 2/3 move, minor bleeding |
| 7 | Abdomen injured, 1/3 move, minor bleeding, –2 penalty to all attacks |
| 8 | Spine injured, no move, minor bleeding, –4 penalty to attacks |
| 9 | Abdomen injured, major bleeding, 1/3 move and –2 penalty to attacks |
| 10 | Abdomen injured, no move or attack, major bleeding |
| 11 | Spine destroyed, no move or attack, major bleeding, victim paralyzed |

| | |
|---|---|
| 12 | Abdomen destroyed, victim reduced to 0 hit points with severe bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (8–9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Torso grazed, minor bleeding |
| 5 | Torso struck, victim stunned 1 round and reduced to 2/3 move, minor bleeding |
| 6 | Torso struck, stunned 1d6 rounds, minor bleeding |
| 7 | Spine struck, major bleeding, 2/3 move, –2 penalty to attacks |
| 8 | Torso injured, severe bleeding, no move or attack |
| 9 | Ribs broken, major bleeding, 1/3 move, –4 penalty to attacks |
| 10 | Ribs broken, severe bleeding, no move or attack |
| 11 | Spine destroyed, victim reduced to 0 hit points with severe bleeding |
| 12 | Torso destroyed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Head grazed, stunned 1 round, minor bleeding |
| 5 | Snout struck, minor bleeding, animal must save vs. death or retreat for 1d10 rounds |
| 6 | Head struck, minor bleeding, –2 penalty to attacks |
| 7 | Throat injured, major bleeding, 2/3 move, –4 penalty to all attacks |
| 8 | Skull broken, animal reduced to 0 hit points, major bleeding |
| 9 | Snout/face destroyed, major bleeding, 1/3 move, no bite attacks, –4 penalty to all other attacks |
| 10 | Head injured, reduced to 0 hp, severe bleeding; 1/3 move and –4 penalty to all attacks for 1d3 months |
| 11 | Throat destroyed, severe bleeding |
| 12 | Head severed, immediate death |
| 13+ | As 12 above with tripled damage dice |

## Slashing vs. Monsters

**Hit Location Chart**

| d10 Roll | Location |
|---|---|
| 1 | Right foreleg/claw/wing |
| 2 | Left foreleg/claw/wing |
| 3 | Right hind leg |
| 4 | Left hind leg |
| 5 | Tail (for snakelike or fishlike monsters, 1–5 is tail hit) |
| 6–7 | Abdomen |

| | |
|---|---|
| 8–9 | Torso/chest |
| 10 | Head |

**Location: Legs/Wings (1–4)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Leg grazed, minor bleeding |
| 5 | Knee struck, 2/3 move, minor bleeding |
| 6 | Leg struck, minor bleeding, 2/3 move |
| 7 | Foot/claw injured, 2/3 move, minor bleeding, –2 penalty to attacks with that limb |
| 8 | Hip injured, major bleeding, 1/3 movement; wing hit forces crash landing |
| 9 | Leg/wing severed at midpoint, 1/3 move, major bleeding; wing hit forces uncontrolled fall |
| 10 | Knee destroyed, major bleeding, 1/3 move, –2 penalty to attacks with affected limb |
| 11 | Hip/shoulder destroyed, major bleeding, no move, –4 penalty to attacks; wing hit forces crash landing |
| 12 | Leg/wing severed at mid-thigh, no move or attack, severe bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Tail (5)**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, minor bleeding, –2 penalty to tail attacks |
| 7–8 | Tail injured, minor bleeding, monster suffers –2 penalty to all attacks due to pain; no tail attacks |
| 9–10 | Tail severed, major bleeding, no tail attacks; if creature uses tail for movement, 1/3 move |
| 11 | Tail severed, victim stunned 1 round, lose tail attacks, major bleeding; 1/3 movement, –4 penalty to attacks if monster uses tail for movement |
| 12 | Tail severed, stunned 1 round, major bleeding, 1/2 move and –2 penalty on any attack; if animal uses tail for movement, no move or attack |
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (6–7)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Abdomen grazed, minor bleeding |
| 5 | Abdomen struck, victim stunned 1 round, minor bleeding |
| 6 | Abdomen struck, victim stunned 1d3 rounds, reduced to 2/3 move, minor bleeding |
| 7 | Abdomen injured, 1/2 move, minor bleeding, –2 penalty to all attacks |
| 8 | Spine injured, 1/3 move, minor bleeding, –4 penalty to all attacks |

| | |
|---|---|
| 9 | Abdomen injured, major bleeding, 1/3 move and –2 penalty to attacks |
| 10 | Abdomen injured, 1/3 move, –4 penalty to attacks, major bleeding |
| 11 | Spine injured, no move or attack, major bleeding, victim stunned 1d6 rounds |
| 12 | Abdomen destroyed, victim reduced to 0 hit points with severe bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (8–9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Torso grazed, minor bleeding |
| 5 | Torso struck, victim stunned 1 round, minor bleeding |
| 6 | Torso struck, stunned 1d3 rounds, minor bleeding |
| 7 | Spine struck, minor bleeding, 2/3 move, –2 penalty to attacks |
| 8 | Torso injured, major bleeding, 1/3 move, –4 penalty to attacks |
| 9 | Ribs injured, major bleeding, 1/3 move, –4 penalty to attacks |
| 10 | Ribs broken, severe bleeding, 1/3 move, no attack |
| 11 | Spine broken, major bleeding, no move or attack |
| 12 | Torso destroyed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Head grazed, minor bleeding |
| 5 | Snout struck, minor bleeding, monster must save vs. death or retreat for 1 round |
| 6 | Head struck, minor bleeding, –2 penalty to attacks |
| 7 | Throat injured, major bleeding, 2/3 move, –2 penalty to all attacks |
| 8 | Skull injured, monster reduced to 2/3 move, major bleeding, –2 penalty to all attacks |
| 9 | Snout/face injured, major bleeding, 1/3 move, no bite attacks, –2 penalty to all other attacks |
| 10 | Head injured, reduced to 0 hp, major bleeding; 1/3 move and –4 penalty to all attacks for 1d3 weeks |
| 11 | Throat destroyed, severe bleeding |
| 12 | Head severed, immediate death |
| 13+ | As 12 above with tripled damage dice |

## Piercing vs. Humanoids

**Hit Location Chart**

| d10 Roll | Location |
|---|---|
| 1–2 | Right leg |
| 3–4 | Left leg |

| | |
|---|---|
| 5 | Abdomen |
| 6–7 | Torso |
| 8 | Right arm |
| 9 | Left arm |
| 10 | Head |

**Location: Legs (Right 1–2, Left 3–4)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Leg grazed, victim knocked down |
| 5 | Leg struck, minor bleeding |
| 6 | Leg injured, minor bleeding, 2/3 move |
| 7 | Armor damaged; leg injured if target has no leg armor, 1/2 move, major bleeding |
| 8 | Knee broken, minor bleeding, 1/3 move, –4 penalty to any attacks |
| 9 | Armor damaged, leg struck, minor bleeding, 2/3 move; if target has no leg armor, leg broken, major bleeding, 1/3 move, –4 penalty to attacks |
| 10 | Hip broken, no move or attack, major bleeding |
| 11 | Leg broken, severe bleeding, no move or attack |
| 12 | Leg destroyed, no move or attack, severe bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (5)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Abdomen grazed, minor bleeding |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 2/3 move with minor bleeding |
| 6 | Armor damaged; victim stunned 1d4 rounds, minor bleeding, 2/3 move if no armor |
| 7 | Abdomen injured, major bleeding, 1/2 move, –2 penalty to attacks |
| 8 | Abdomen injured, severe bleeding, 1/2 move, –4 penalty to attacks |
| 9 | Armor damage, abdomen injured, minor bleeding, 1/2 move and –2 penalty to attacks; if no armor, victim at 0 hit points, major bleeding |
| 10 | Abdomen injured, 1/3 move, no attack, severe bleeding |
| 11 | Abdomen injured, victim at 0 hp, severe bleeding |
| 12 | Abdomen destroyed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (6–7)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Torso grazed, minor bleeding |
| 5 | Torso struck, 2/3 move with minor bleeding |
| 6 | Shield damage, torso struck, 2/3 move & minor bleeding |
| 7 | Armor damage, torso struck, 2/3 move, –2 penalty to attacks; if no armor, |

| | |
|---|---|
| | torso injured, no move or attack, severe bleeding |
| 8 | Torso injured, major bleeding, 1/2 move, –4 penalty to attacks |
| 9 | Shield damage; torso struck, –2 penalty to attacks; if no shield, ribs broken, severe bleeding, no move or attack |
| 10 | Ribs broken, severe bleeding, no move or attack |
| 11 | Torso destroyed, victim reduced to 0 hit points with severe bleeding |
| 12 | Torso destroyed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Arms (Left 8, Right 9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Hand struck, weapon dropped, minor bleeding; no effect on shield arm |
| 5 | Arm struck, shield damage/weapon dropped, minor bleeding |
| 6 | Hand injured, –2 penalty to attacks/shield dropped |
| 7 | Armor damage, arm struck, minor bleeding; if no armor, arm injured, minor bleeding |
| 8 | Arm broken, victim stunned 1 round, minor bleeding, shield or weapon dropped |
| 9 | Armor damage, arm injured, –2 penalty to attacks or shield dropped; if no armor, arm broken, stunned 1d6 rounds, major bleeding |
| 10 | Shoulder injured, no attacks, major bleeding |
| 11 | Arm destroyed, major bleeding, 2/3 move |
| 12 | Arm destroyed, no move/attack, major bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Head grazed, stunned 1d3 rounds, minor bleeding |
| 5 | Head struck, helm removed, victim stunned 1 round; –2 penalty to attack rolls, minor bleeding if victim had no helm |
| 6 | Eye injured, –4 penalty to all attacks; if helmed, victim is only stunned 1 round instead |
| 7 | Helm damaged, face injured, stunned 1d6 rounds, minor bleeding, 2/3 move, –4 penalty to attacks |
| 8 | Skull broken, helm damaged, victim reduced to 0 hit points, major bleeding |
| 9 | Throat injured, severe bleeding |
| 10 | Skull broken, victim reduced to 0 hp, major bleeding, Int, Wis, Cha all drop by 1/2 permanently |
| 11 | Throat destroyed, victim killed |
| 12 | Head destroyed, immediate death |
| 13+ | As 12 above with tripled damage dice |

## Piercing vs. Animals

| 8 | Hip injured, minor bleeding, 2/3 movement, –2 penalty to all attacks; wing hit forces crash landing |
| 9 | Leg/wing broken, 1/3 move, minor bleeding; wing hit forces crash landing |
| 10 | Knee broken, minor bleeding, 1/3 move, –2 penalty to all attacks |
| 11 | Hip/shoulder destroyed, major bleeding, no move or attack; wing hit forces crash landing |
| 12 | Leg/wing destroyed, no move or attack, major bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Tail (5)**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, minor bleeding, –2 penalty to tail attacks |
| 7–8 | Tail injured, minor bleeding, normal animals must save vs. death or retreat; no tail attacks |
| 9–10 | Tail injured, minor bleeding, lose tail attacks; if creature uses tail for movement, 1/3 move |
| 11 | Tail destroyed, victim stunned 1–3 rounds, lose tail attacks, major bleeding, no movement or attacks if animal uses tail for movement |
| 12 | Tail destroyed, stunned 1d2 rounds, major bleeding, 1/2 move and –2 penalty on attacks; if animal uses tail for movement, no move or attack |
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (6–7)**

| Severity | Effect |
|---|---|

| | |
|---|---|
| 1–3 | No unusual effect |
| 4 | Abdomen grazed, minor bleeding |
| 5 | Abdomen struck, victim stunned 1 round and reduced to 2/3 move, minor bleeding |
| 6 | Abdomen struck, victim stunned 1d4 rounds, reduced to 2/3 move, minor bleeding |
| 7 | Abdomen injured, 2/3 move, major bleeding, –2 penalty to all attacks |
| 8 | Spine injured, 1/3 move, minor bleeding, –4 penalty to all attacks |
| 9 | Abdomen injured, major bleeding, 1/3 move and –2 penalty to all attacks |
| 10 | Abdomen injured, no move or attack, major bleeding |
| 11 | Spine broken, no move or attack, major bleeding, victim paralyzed |
| 12 | Abdomen destroyed, victim reduced to 0 hit points with severe bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (8–9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Torso grazed, minor bleeding |
| 5 | Torso struck, victim stunned 1 round and reduced to 2/3 move, minor bleeding |
| 6 | Torso struck, stunned 1d4 rounds, minor bleeding |
| 7 | Spine struck, minor bleeding, 2/3 move, –2 penalty to attacks |
| 8 | Torso injured, stunned 1 round, major bleeding |
| 9 | Ribs broken, minor bleeding, 1/3 move, –4 penalty to attacks |
| 10 | Ribs broken, major bleeding, no move or attack |
| 11 | Spine destroyed, victim reduced to 0 hit points with major bleeding |
| 12 | Torso destroyed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Head grazed, stunned 1 round, minor bleeding |
| 5 | Snout struck, minor bleeding, animal must save vs. death or retreat for 1d10 rounds |
| 6 | Eye injured, stunned 1d3 rounds, –2 penalty to attacks |
| 7 | Throat injured, major bleeding, 2/3 move, –4 penalty to all attacks |
| 8 | Skull broken, animal reduced to 0 hit points, major bleeding |
| 9 | Snout/face destroyed, minor bleeding, 1/3 move, no bite attacks, –4 penalty to all other attacks |
| 10 | Head injured, reduced to 0 hp, major bleeding; 1/3 move and –4 penalty to all attacks for 1d3 months |
| 11 | Throat destroyed, severe bleeding |
| 12 | Head severed, immediate death |
| 13+ | As 12 above with tripled damage dice |

## Piercing vs. Monsters

**Hit Location Chart**

| d10 Roll | Location |
|---|---|
| 1 | Right foreleg/claw/wing |
| 2 | Left foreleg/claw/wing |
| 3 | Right hind leg |
| 4 | Left hind leg |
| 5 | Tail (for snakelike or fishlike monsters, 1–5 is tail hit) |
| 6–7 | Abdomen |
| 8–9 | Torso/chest |
| 10 | Head |

**Location: Legs/Wings (1–4)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Leg grazed, minor bleeding |
| 5 | Knee struck, 2/3 move |
| 6 | Leg struck, minor bleeding, 2/3 move |
| 7 | Foot/claw injured, minor bleeding, –2 penalty to attacks with that limb |
| 8 | Hip injured, minor bleeding, 1/3 movement; wing hit forces crash landing |
| 9 | Leg/wing broken, 1/3 move, minor bleeding; wing hit forces crash landing |
| 10 | Knee destroyed, major bleeding, 1/3 move, –2 penalty to attacks with affected limb |
| 11 | Hip/shoulder destroyed, major bleeding, no move, –4 penalty to attacks; wing hit forces crash landing |
| 12 | Leg/wing destroyed, no move or attack, major bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Tail (5)**

| Severity | Effect |
|---|---|
| 1–5 | No unusual effect |
| 6 | Tip of tail struck; if prehensile, any items carried are dropped, minor bleeding, –2 penalty to tail attacks |
| 7–8 | Tail injured, minor bleeding, monster suffers –2 penalty to all attacks due to pain; no tail attacks |
| 9–10 | Tail broken, minor bleeding, no tail attacks; if creature uses tail for movement, 1/3 move |
| 11 | Tail destroyed, victim stunned 1 round, lose tail attacks, major bleeding; 1/3 movement, –4 penalty to attacks if monster uses tail for movement |
| 12 | Tail destroyed, stunned 1d3 rounds, major bleeding, 1/2 move and –2 penalty on any attack; if monster uses tail for movement, no move/attack |
| 13+ | As 12 above with tripled damage dice |

**Location: Abdomen (6–7)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Abdomen grazed, minor bleeding |
| 5 | Abdomen struck, victim stunned 1 round, minor bleeding |
| 6 | Abdomen struck, victim stunned 1d3 rounds, minor bleeding |
| 7 | Abdomen injured, 2/3 move, minor bleeding, –2 penalty to all attacks |
| 8 | Spine injured, 1/2 move, minor bleeding, –4 penalty to all attacks |
| 9 | Abdomen injured, major bleeding, 1/3 move and –2 penalty to attacks |
| 10 | Abdomen injured, 1/3 move, –4 penalty to attacks, major bleeding |
| 11 | Spine injured, no move or attack, major bleeding, victim stunned 1d6 rounds |
| 12 | Abdomen destroyed, victim reduced to 0 hit points with major bleeding |
| 13+ | As 12 above with tripled damage dice |

**Location: Torso (8–9)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Torso grazed, minor bleeding |
| 5 | Torso struck, victim stunned 1 round, minor bleeding |
| 6 | Torso struck, stunned 1d3 rounds, minor bleeding |
| 7 | Spine struck, minor bleeding, 2/3 move, –2 penalty to attacks |
| 8 | Torso injured, minor bleeding, 1/3 move, –4 penalty to attacks |
| 9 | Ribs injured, major bleeding, 1/3 move, –4 penalty to attacks |
| 10 | Ribs broken, major bleeding, 1/3 move, no attack |
| 11 | Spine broken, major bleeding, no move or attack |
| 12 | Torso destroyed, victim killed |
| 13+ | As 12 above with tripled damage dice |

**Location: Head (10)**

| Severity | Effect |
|---|---|
| 1–3 | No unusual effect |
| 4 | Head grazed, minor bleeding |
| 5 | Snout struck, minor bleeding, monster must save vs. death or retreat for 1 round |
| 6 | Eye injured, stunned 1 round, –2 penalty to attacks |
| 7 | Throat injured, major bleeding, 2/3 move, –2 penalty to all attacks |
| 8 | Skull injured, monster reduced to 2/3 move, major bleeding, –2 penalty to all attacks |
| 9 | Snout/face injured, major bleeding, 1/3 move, no bite attacks, –2 penalty to all other attacks |
| 10 | Head injured, reduced to 0 hp, major bleeding; 1/3 move and –4 penalty to all attacks for 1d3 weeks |
| 11 | Throat destroyed, severe bleeding |
| 12 | Head destroyed, immediate death |
| 13+ | As 12 above with tripled damage dice |

# Chapter Seven:
# Weapons & Armor

Characters are defined not only by their abilities and alignment, but also by their possessions and equipment. With the proper preparation and gear, there's almost nothing a daring hero can't accomplish.

This chapter presents a comprehensive listing of just about any kind of weapon or armor a character would ever want to use. The list is divided into nine different semi-historical groupings to help preserve consistency and accuracy. For example, the most sophisticated armor available during Western Europe's Dark Ages was chain mail; plate mail hadn't been invented yet. If a particular nation or culture in your campaign has a Dark Ages flavor to it, armor heavier than chain mail shouldn't be available there.

The equipment categories are Stone Age, Bronze Age, Roman, Dark Ages, Crusades, Renaissance, English Civil War, Middle Eastern, and Oriental.

The second purpose of this chapter is to update weapon and armor statistics for the *Player's Option* combat system. In addition to the standard size, type, and damage listings, a new number has been introduced: the knockdown die. Speed factors are printed as both a number and a category, for use in a standard AD&D game or with the *Player's Option* initiative rules. Partial armor tables are included, so that players can re-create historical or fantastic styles such as back-and-breast plate with greaves, chainmail shirts, and so on.

Last but not least, a complete explanation of special weapon properties and encumbrance is included at the end of this chapter.

### Equipment Groups

As long as people have been making weapons, different cultures have produced different types of armaments. One wouldn't expect to find an English longbow in ancient Greece, or a samurai's katana in medieval Venice. Of course, many AD&D campaigns aren't very "realistic," but even in the most cosmopolitan settings there will be local standards of technology and preferred weapons and equipment.

It's always possible for rare or unusual weapons to trickle into an area from outside. For example, if a tribe of jungle savages has been trading with a more advanced culture, it's quite likely that they may have learned metalworking or at least be armed with steel spearheads and arrowheads they traded for. Despite this, players should try to equip their characters in a reasonable and consistent fashion. A Viking-like barbarian from the far north has no business beginning a campaign equipped with a blowgun, katana, or scimitar. It's far more reasonable for the character to wear chain mail and carry a throwing axe and long sword. The DM is the final judge of what a character can reasonably expect to be able to find in any particular area.

## Reading the Equipment Lists

The culture lists include the following information:

**Name:** Most weapons have been described by their common AD&D equivalent, so a *flamberge* or *zweihander* is simply referred to as a two-handed sword. There are some exceptions—for example, the gladius, which is just a short sword. The individual weapon

descriptions that follow the tables make note of any additional names by which the weapon is known.

**Cost:** Each weapon has a listed cost based on the standard AD&D monetary system. Many weapons have different costs on different tables; these are weapons that are rarer in the one setting than the other. If the weapon has a "—" for cost, it is effectively free, since it can easily be made by any character.

## Stone Age or Savage Cultures

Stone Age cultures are rare in most AD&D campaigns. Only the most isolated areas can be considered to be in the Stone Age. In our own history, most Stone Age cultures disappeared thousands of years ago—but those that did survive still live today, in the remote areas of Malaysia and South America.

Just because a culture uses Stone Age technology doesn't mean that it is primitive or barbaric. Native Americans enjoyed complex, advanced societies without metal tools or weapons. Therefore, this category can also be used to describe Aztec-like civilizations that exist as contemporaries of societies with more advanced technology.

Savage settings are found in physically remote areas where primitive societies have gained access to metalworking technology. This is a good catch-all category for equipping barbaric jungle tribes, fierce nomads, or tribes of cannibals. Historically, many African, Asian, and Malaysian nations were considered "savages" by Western European explorers as late as the early part of this century. These unique cultures suffered terribly at the hands of their supposedly more-civilized visitors.

Stone Age weapons include a variety of missiles developed from basic hunting tools. They tend to be inferior to even Bronze Age arms, which were designed as implements of war. Armor is light or nonexistent and consists of a hide-covered shield and leather, hide, or cord body armor at best.

Savage arms include improved metal-headed versions of many Stone Age weapons. Savage armor is also light, but includes copper or bronze reinforcement. In some cases, very sophisticated lamellar or scale armor of wood, bone, or leather may be available. Historically, chain mail appeared in the 18th and 19th century among Malaysian and Asian tribes, hundreds of years after Europeans abandoned its use.

**Stone Age and Savage Settings**

| | |
|---|---|
| *Adze* | 3 gp |
| Axe | |
| *Battle* | 15 gp |
| *Hand/throwing* | 6 gp |
| Stone | 5 sp |
| Blowgun | 1 gp |
| Barbed dart | 1 sp |
| Needle | 2 cp |
| Bolas | 5 sp |
| Boomerang | 5 sp |
| Bow | |
| Short | 15 gp |
| *flight arrow* | 3 sp/12 |

| | |
|---|---|
| stone arrow | 3 cp/12 |
| Club | — |
| War | 2 gp |
| *Dagger* | 2 gp |
| Bone | 1 sp |
| Stone | 2 sp |
| Dart | 5 sp |
| *Harpoon* | 20 gp |
| Bone | 1 gp |
| *Javelin* | 5 sp |
| *Stone* | 5 cp |
| Knife | 5 sp |
| Bone | 3 cp |
| Stone | 5 cp |
| *Throwing* | 5 gp |
| Lasso | 5 sp |
| *Parang or Machete* | 8 gp |
| Quarterstaff | — |
| Rock | — |
| Sling | 5 cp |
| Stone | — |
| *Spear* | 2 gp |
| Stone | 2 sp |

Italic entries are only available in metal-using Stone Age or savage settings.

## Tools/Common

This list includes anything that is commonly available as a tool or so universal that any culture would have access to it. Picks, spades, and sledge hammers can be found in any town and can make serviceable weapons if swords and bows aren't available. Regardless of the actual setting used, anything on this table can be wielded as a weapon by a character. Note that Stone Age or Savage cultures are not assumed to have access to these implements, which is why the Tools/Common list follows the Stone Age list.

The DM is free to rule that any particular tool or device is unavailable for selection as a weapon proficiency. Most people don't plan on wielding lanterns or spades as weapons on a regular basis.

**Tools and Common Materials**

| | |
|---|---|
| Adze | 3 sp |
| Belaying pin | 2 cp |
| Bottle | — |
| Club | — |
| Great | 2 gp |

| Harpoon | 20 gp |
| Holy symbol, big | 25 gp |
| Knife | 5 sp |
| Lantern | varies |
| Lasso | 5 sp |
| Machete | 8 gp |
| Oil flask | 6 cp |
| Pick | 4 gp |
| Pry bar | 2 gp |
| Quarterstaff | — |
| Sap | 5 sp |
| Scourge | 2 gp |
| Scythe | 3 gp |
| Sickle | 6 sp |
| Sledge hammer | 2 gp |
| Sling | 5 cp |
| Bullet | 5 cp |
| Stone | — |
| Spade | 1 gp |
| Torch | 1 cp |
| Vial | 8 sp |
| Whip | 1 sp |

## The Bronze Age and Ancient Cultures

The first metal weapons were made from copper. It was easy to mine and easy to work, but proved to be very soft. By adding tin to copper, a much stronger alloy known as bronze was created. The early civilizations of Egypt and Mesopotamia were manufacturing bronze weapons more than 4,000 years ago.

Unlike Stone Age or savage cultures, Bronze Age cultures are almost never found as contemporaries of more advanced civilizations. Once a nation or tribe masters the working of iron, bronze rapidly falls out of favor. This category is good for campaigns set in ancient times, or for equipping warriors who are somehow displaced in time.

At the beginning of this era, a battle consisted of two mobs of armed men meeting in a brutal melee. By the end of the Bronze Age, sophisticated phalanxes of spearmen and a firm grasp of tactics enabled the Greek city-states to dominate the ancient world. The chariot ruled the battlefield for a while, only to be replaced by more maneuverable cavalry.

Spears, bows, and slings are the most common weapons of this time period. Axes and swords are rarer. Swords evolved from primitive, sickle-shaped chopping weapons into

the Greek *xiphos*, a well-made short sword used for thrusting and slashing.

Armor runs the gamut from none at all to sturdy coats of metal lamellar or scales and bronze breastplates and greaves. The armor type known as bronze plate mail has no real historical model, but is included as a logical extension of bronze plates worn over more of the body.

**Bronze Age, Ancient Cultures**

| | |
|---|---|
| Adze | 3 sp |
| Battle axe | 5 gp |
| Bow | |
| Arrow, flight | 3 sp/12 |
| Composite short bow | 75 gp |
| Long bow | 75 gp |
| Short bow | 30 gp |
| Cestus | 1 gp |
| Dagger | 2 gp |
| Dart | 5 sp |
| Hand/throwing axe | 1 gp |
| Javelin | 5 sp |
| Lance, light | 6 gp |
| Mace, footman's | 8 gp |
| Mace, horseman's | 5 gp |
| Mace-axe | 12 gp |
| Pike | 5 gp |
| Quarterstaff | — |
| Spear | 8 sp |
| One-handed | — |
| Two-handed | — |
| Spear, long | 5 gp |
| Staff sling | 2 sp |
| Stinkpot | 1 sp |
| Stone | — |
| Sword | |
| Broadsword | 30 gp |
| Khopesh | 15 gp |
| Sapara | 10 gp |
| Short | 15 gp |
| Sword-axe | 20 gp |
| Trident | 15 gp |
| Two-handed axe | 15 gp |
| Warhammer | 2 gp |
| War club | 2 gp |

During this period, iron weapons began to appear. If an iron weapon is used against armor made of bronze, horn, wood, or any weaker material, the attacker gains a +1 bonus to hit. Similarly, if a bronze weapon is used against iron armor, the attacker suffers a –1

penalty to hit. Bronze-on-bronze or iron-on-iron match-ups provide no special bonuses or penalties.

Iron weapons and armor may be considered to be nonexistent, rare, or common in this setting. If the DM decides they're nonexistent, no character can obtain them. If iron is rare, any weapon or armor made of iron can be purchased for triple the listed cost. If iron is common, iron arms can be purchased at the listed cost. Of course, if iron is common, just about everyone else will have it, too.

## Roman

The military system of Rome conquered half the known world. At its height, the Roman Empire stretched from Spain to Palestine and England to Egypt. Roman legionaries were equipped with a cuirass and helmet of iron, a large curved shield, a type of javelin called a *pilum*, and a *gladius*, or short sword. They fought in disciplined, spaced ranks that permitted men in the rear to step forward and relieve tired men in the front line, keeping fresh men in contact with the enemy.

Later in the Roman Empire, cavalry became more and more important. In time, it replaced the infantry legions as the primary weapon of the empire. The emphasis on cavalry led to the development of longer swords and the use of heavier lances in shock charges.

Rome's civilized enemies were equipped in much the same way as her own legions. However, the empire was also confronted with barbaric Gauls, Celts, and Germans. Their warriors often fought with no armor and only a spear and shield. It wasn't until the decline of the empire that the legions could be defeated by their ill-equipped foes.

## Dark Ages

The Dark Ages are usually considered to extend from the end of the Western Roman Empire to the Norman invasion of England. While Western Europe was in turmoil, the neighboring areas were in far better shape. The Eastern Roman Empire, or Byzantium, survived and grew strong, retaining control of modern-day Turkey and Greece. Islam spread throughout the Levant and northern Africa, bringing enlightenment and civilization.

This grouping of equipment represents a barbarian or backwater kingdom in a fantasy campaign. Since no armor heavier than chain mail exists, many of the weapons that evolved to pierce or defeat armor have not been invented yet. It's good for Viking-like cultures and humanoid hordes.

The Dark Ages saw one very important innovation in Western Europe: the introduction of the stirrup. This allowed a mounted man to wield heavier weapons and deliver a stronger blow without fear of falling off his horse. This innovation signaled the beginning of the horseman's ascendancy on the battlefield. By the year a.d. 900, the most devastating weapon on the battlefield was the charge of heavy cavalry. No infantry formation could hope to withstand it, and lighter cavalry had to move aside or be crushed.

In the West, armor was generally light until late in this period. Chain mail was too expensive for anyone except chieftains and picked bodyguards. By the end of the Dark Ages, chain mail had become far more prevalent. Metal lamellar and scale were widely used in Byzantine and Muslim armies, although light infantry usually did without any armor at all.

## The Crusades

The Crusaders fought their way to the Holy Land at the end of the 11th century and founded kingdoms that would last almost 200 years. This is often referred to as the Age of Mail; chain mail was the prevalent form of personal protection throughout this period. By the time of the Crusades, the armored knight had become the heavy cavalry of Western Europe. It was said that a Crusader charge could carry "through the walls of Babylon."

The knights of the First Crusade were unruly, quarrelous, and impetuous. They had little grasp of battlefield tactics or maneuvers. The Syrians, Turks, and Fatimids who faced them were often commanded by noble warriors who displayed great skill and subtlety with their armies. But as often as not the Crusaders won the day through sheer hard fighting and weight of armor. It was not unusual for a band of Crusaders to take on a force of Turks or Syrians several times its own size and prevail.

The Crusades saw several important technological innovations. Chain mail hauberks were now augmented by chain mittens and leggings for complete protection. Crossbows first saw widespread use at this time. They proved especially useful for keeping horse archers away from a formation, since they outranged the cavalry's lighter bows. Crossbows also had excellent penetration power, punching through armor that could stop most bow shots.

At the end of this period, plate armor began to appear. At first, plates were used to increase the protection over the shoulders and chest of a mailed knight. Within a span of only 50 years, chain mail had been largely replaced.

In addition to the Crusades in the Holy Land, this era also saw the great Mongol conquests of Russia, Hungary, and Poland.

In game terms, the Crusades represent an early Middle Ages society. Without pikes and longbows to counter them, mailed knights owned the battlefield. A fair number of standard fantasy settings center on this level of technology; for example, the armies of J.R.R. Tolkien's Middle Earth are equipped with mail, shield, and long sword.

## Hundred Years' War

In 1291, the city of Acre fell. It was the last of the Crusader domains in the Levant. After eight Crusades and almost 200 years of sporadic fighting, the Holy Land remained in the hands of the Muslims. Early in the 14th century, friction between the rulers of France and England led to the beginning of the Hundred Years' War in 1337.

Edward III, the King of England, led an expedition into France in 1346. On August 26th, the French Army met the English at Crécy. Blooded by years of hard fighting against the Welsh and the Scots, the English longbowmen decimated charge after charge from their prepared positions. By the end of the fighting, the flower of French chivalry lay dead on the field, with only a few hundred English losses to weigh against it. The armored knight had met his match.

The 14th century is the default technological level of most AD&D campaigns, representing the end of the Middle Ages. Full plate armor had appeared, and with it a variety of weapons designed to pierce it. While the knight and his mount were protected by the heaviest and most complete armor ever seen, he no longer ruled the battlefield. Instead, the lowly infantryman became dominant due to the appearance of the longbow, the pike, and an assortment of polearms.

## The Renaissance

Firearms continued to improve, replacing the bow and crossbow as the primary missile weapon on the battlefield. The French Army at the end of the Hundred Years' War finally defeated the English with a coordinated army of cavalry, pike, and gunnery. At the same time, the famous Swiss pikemen were learning that their tightly-packed formations were horribly vulnerable to field artillery. Despite the best efforts of armorers, hand-held firearms proved to be capable of downing a knight with a single shot.

The Renaissance was a period of change in warfare. At the beginning of this era, equipment and tactics were not very different from the late Middle Ages. Pikes and heavy cavalry were still the most common arms on the European battlefield. By the end of the 16th century, guns had replaced lances, pikes, and bows as the weapon of choice for the armies of Europe.

The Renaissance culminated in the Thirty Years' War and the English Civil War. In both of these conflicts, firearms proved their superiority over older weapons. By 1650, the armored knight was a figure of history, and the pike and bow were vanishing as well.

An AD&D campaign in a Renaissance setting actually travels beyond the original scope of the game. Characters can no longer rely on heavy armor to protect them; most of their foes are equipped with firearms that can penetrate the finest plate armor. The power of a PC party's massed musket fire makes even 1st-level characters the equal of an ogre or troll. And the existence of high magic becomes hard to justify in an Age of Reason.

The military systems developed by the Europeans in this time period would prove to be invincible to less advanced cultures as European explorers began the conquest of the world around them. Many neighboring peoples, such as the Turks or the Cossacks, began to fall behind the European powers during this era. By the time the Turks had matchlocks, the Europeans had flintlocks; by the time the Turks had flintlocks, the Europeans had very good flintlocks. The upshot of this is that a kingdom with Renaissance-level technology is capable of defeating and dominating larger but less advanced societies.

Needless to say, this represents the most advanced technology available in a standard AD&D campaign.

## Middle Eastern

Unlike the previous categories, which trace a semi-historical progression of armaments, this grouping represents a generic Arabian or Moorish culture. Weapons such as scimitars and jambiyas aren't normally available in any kind of European setting, but they're common in lands with a Middle Eastern flavor.

No Middle Eastern cultures ever developed heavy plate armor, but excellent varieties of chain mail and reinforced chain mail were available for heavy cavalry. Foot troops were usually unarmored. Both straight and curved sword blades were common throughout the Arab world. Bows were also greatly favored, and the composite bow of the Turks was the most powerful in the world.

Many of the weapons on this list aren't true contemporaries of each other, or come from widely scattered areas. For example, the chakram, tulwar, and bagh nakh are Indian weapons, and couldn't be found in a Turkish or Bedouin venue. If there is any question about which weapons are available, the DM can decide if a particular weapon belongs in his campaign or not. Although there is no historical relaton, this equipment grouping also covers Central Asian nomads such as Tartars or Mongols.

## Oriental

As with the Middle Eastern grouping, the Oriental grouping is meant to provide a variety of weapons for flavor. It wouldn't feel right for a samurai warrior to equip himself with a pole axe or a pilum. Once again, the weapons list covers a lot of time and territory; the DM is free to rule out any weapon she doesn't feel is appropriate for her campaign.

Oriental armors were almost always varieties of lamellar, brigandine, or scale, even though they were known by different names. The characteristic armor of the samurai was usually a fine suit of metal lamellar armor.

## Firearms

This listing sums up all firearms available from the other groupings. It was separated from the main equipment listings because the use of firearms in an AD&D campaign is purely optional. Firearms require an explosive powder to propel their missiles; this can be either *smoke powder* or *gunpowder*.

Gunpowder is a mixture of saltpeter, sulfur, and charcoal. Generally, it is available only in low-magic campaigns. If gunpowder is widely available in a given setting, firearms will naturally be more common. If the DM rules that gunpowder works in his campaign, it can be purchased at the listed cost. In a realistic setting, gunpowder is cheap and easy to obtain.

Smoke powder is a magical compound that duplicates the effects of gunpowder. If the DM wishes to have firearms in his campaign but wants to limit their availability, he can decide that normal gunpowder doesn't work. Smoke powder is much scarcer and far more expensive than regular gunpowder, and player characters will usually have to find some instead of being able to buy it.

Of course, if the DM wants no guns of any kind in his campaign, he can rule that neither gunpowder nor smoke powder work on his world. Without powder, guns are useless.

**Firearms**

| Smokepowder | 25 gp |

## Armor

This list sums up the types of armor available by each time period. There are two prices listed for each piece of equipment: a common price and a rare price. Generally, armor is rare when some other type of armor is prevalent. For example, plate mail is rare in a Crusades-era campaign, and therefore more expensive than in a Hundred Years' War-era setting.

The armor table also provides information on pieces of armor used together. It was quite common for armor to be "mismatched;" the hoplite of ancient Greece wore a bronze breastplate, greaves, and helmet with a leather skirt, while the Moghul Indians used an iron breastplate sewn into a complete suit of chainmail.

### Full Suits

| Armor Type | Common Cost | Rare Cost | Torso AC | Torso Weight | Arm AC | Arm Weight | Leg AC | Leg Weight | Full AC | Full Weight |

| Hide armor | 35 gp | 50 gp | 2.0 | 15 lbs | 0.4 | 3 lbs | 0.6 | 4 lbs | 4 | 30 lbs |
| Improved mail++ | 180 gp | 300 gp | 3.0 | 25 lbs | 0.6 | 5 lbs | 0.9 | 8 lbs | 6 | 50 lbs |
| Leather armor | 5 gp | — | 1.0 | 8 lbs | 0.2 | 1 lb | 0.3 | 2 lbs | 2 | 15 lbs |
| Light scale++ | 80 gp | 120 gp | 1.5 | 13 lbs | 0.3 | 2 lbs | 0.5 | 4 lbs | 3 | 25 lbs |
| Metal lamellar | 250 gp | 330 gp | 2.5 | 17 lbs | 0.5 | 4 lbs | 0.8 | 5 lbs | 5 | 35 lbs |
| Padded armor | 4 gp | — | 1.0 | 5 lbs | 0.2 | 1 lb | 0.3 | 1 lb | 2 | 10 lbs |
| Plate mail | 600 gp | 900 gp | 3.5 | 25 lbs | 0.7 | 5 lbs | 1.0 | 8 lbs | 7 | 50 lbs |
| Ring mail | 40 gp | 40 gp | 1.5 | 15 lbs | 0.3 | 3 lbs | 0.5 | 4 lbs | 3 | 30 lbs |
| Scale armor | 60 gp | 80 gp | 2.0 | 20 lbs | 0.4 | 4 lbs | 0.6 | 6 lbs | 4 | 40 lbs |
| Splint mail | 80 gp | 600 gp | 3.0 | 20 lbs | 0.6 | 4 lbs | 0.9 | 6 lbs | 6 | 40 lbs |
| Studded leather | 20 gp | 40 gp | 1.5 | 13 lbs | 0.3 | 2 lbs | 0.5 | 4 lbs | 3 | 25 lbs |
| Wood/bone | | | | | | | | | | |

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| armor+ | 50 gp | 50 gp | 1.5 | 10 lbs | 0.3 | 2 lbs | 0.5 | 3 lbs | 3 | 20 lbs |

+ Historically, these armor types only existed as pieces and not full suits.
++ Depending on the period, these armor types may only be available as pieces.

**Composite Armors**

| Armor Type | Cost | Components | AC bonus | Weight |
|---|---|---|---|---|
| Back-and-breast | 80 gp | Plate mail breastplate | 4 | 25 lbs |
| Chain hauberk | 75 gp | Thigh-length coat of mail | 4 | 35 lbs |
| Chain-lamellar | 125 gp | Lamellar breastplate, mail for limbs | 6 | 35 lbs |
| Gallic armor | 30 gp | Leather leggings and sleeve, metal belt | 2 | 10 lbs |
| Half-plate | 300 gp | Back-and-breast, partial leg and arm plate | 6 | 40 lbs |
| Hoplite armor | 160 gp | Bronze breastplate, greaves, leather skirt | 5 | 40 lbs |
| Lamellar shirt | 100 gp | Lamellar coat, cloth skirt | 3 | 20 lbs |
| Lorica hamata | 120 gp | Chain shirt, studded leather skirt | 4 | 25 lbs |
| Lorica segmenta | 175 gp | Banded mail shirt, studded leather skirt | 5 | 20 lbs |
| Mail and plate | 150 gp | Breastplate over chainmail | 6 | 45 lbs |
| Three-quarter plate | 800 gp | Full plate torso and arms, partial legs | 7 | 45 lbs |

**Helmets**

| Type | AC | Cost | Weight | Surprise |
|---|---|---|---|---|
| Cap | 6 | 4 gp | 3 lbs | normal |
| Close-faced | 3 | 20 gp | 10 lbs | –1 penalty |
| Mail coif | 5 | 10 gp | 5 lbs | normal |
| Great helm | 1 | 80 gp | 20 lbs | –2 penalty |
| Leather helm | 8 | 1 gp | 2 lbs | normal |
| Open-faced | 4 | 12 gp | 7 lbs | –1 penalty |

**Shields**

| Type | AC Mod | # Foes | Cost | Weight |
|---|---|---|---|---|
| Buckler | +1 | 1 | 1 gp | 3 lbs |
| Small | +1 | 2 | 3 gp | 5 lbs |
| Medium | +1 | 3 | 7 gp | 7 lbs |
| Large | +2 | 4 | 10 gp | 15 lbs |

Master Weapon List The table that follows includes all of the other following weapon statistics.

**Weight:** This is the weapon's weight in pounds. Some weapons have a negligible weight, but a group of 10 weigh one pound.

**Size:** Weapons are described as Small, Medium, or Large. A character can employ a weapon equal to his own size in one hand and can employ a weapon one size larger in two hands. A size S gnome can use a dagger or short sword one-handed, but he would need two hands to use a size M battle axe.

**Type:** Weapons are divided into three categories: Bludgeoning, Piercing, and Slashing. This describes the weapon's method of creating injuries and is used to determine what kind of critical hits the weapon inflicts. In addition, some monsters may be partially resistant to the effects of certain weapon types; for example, skeletons only take 1/2 damage from slashing or piercing weapons.

**Speed:** Weapons are rated as *fast*, *average*, or *slow* for purposes of the *Player's Option* combat system. In addition, a number is included after the category to reflect the weapon's speed factor under standard AD&D rules. If the *Player's Option* combat system is not being used in a campaign, the speed factors are used instead.

**Melee Reach:** All hand-to-hand weapons are rated as having a reach of 1, 2, or 3 squares. A reach of 1 allows the user to attack any target in an adjacent square that he threatens, a range of 2 allows the user to attack targets one or two spaces away, and so on. A weapon with a range of 3 *cannot* be used to attack a target only 1 square away; it can only attack targets 2 or 3 squares away.

If a weapon has a "—" in this category, it cannot be used to make melee attacks.

**Missile ROF:** This is the number of times per combat round that a missile weapon may be used to attack. Naturally, a character can't throw two or three weapons per round if he only has one available.

**Missile Range:** Range is expressed as three numbers. The first number is the outermost limit of short range, the second is the outermost limit of medium range, and the third is the outermost limit of long range. For example, a thrown dagger has a range of 2/4/6. If it is thrown at a target one or two squares away, it's a short-range shot; a target three or four squares away is a medium-range shot; and so on.

Missile ranges are given in combat system squares. In normal melee scale, a square equals 5 feet. In missile scale (only used for outdoors or open battlefields) a square equals 5 yards.

**Damage:** Damage is divided into two categories: versus Small–Medium creatures, and versus Large or larger creatures. The target size dictates which rating to use.

**Knockdown:** The knockdown die is rolled any time the weapon scores a hit. A result of 7 or better creates a possible knockdown against a Man-sized target.

| | | | | | Melee | Missile | Range | Damage vs. Size | | |
|---|---|---|---|---|---|---|---|---|---|---|

* These weapons weigh little individually. Ten of these weigh one pound.

*b* Bone and stone weapons have a 1 in 6 chance of breaking any time maximum damage is rolled. For the bottle and the vial, any hit breaks the item unless a successful saving

throw vs. normal blow is rolled. If a bottle is broken, it can then be used as a knife.
*c* These weapons inflict double damage if firmly set to receive a charge.
*d* These weapons may inflict additional damage from burning fuel, holy water, or acid.
*h* These weapons require two hands to wield regardless of the wielder's size.
*k* If the knockdown roll for these weapons is a 7 or higher, roll an additional damage die and add it to the original damage. Roll another knockdown die, and if the result is another 7 or higher, repeat the damage.
*m* These weapons inflict double damage when wielded in a mounted charge.
*s* These weapons can be used to perform special martial arts atttacks.
*1* Poison is available for the blowgun needle only if the DM allows it.
*2* The boomerang returns only if it was thrown by a proficient user and misses its target.
*3* Flintlock firearms misfire on a natural attack roll of 1.
*4* The blunderbuss inflicts 1d4 seperate attacks on targets at short range. It cannot cause additional damage like other firearms. See the weapon description.
*5* All range penalties for hand match firearms are doubled, so medium-range shots have a –4 attack modifier and long range shots a –10 modifier. Hand match firearms misfire on a natural attack roll of 5 or less (10 or less in wet conditions).
*6* The mancatcher dismounts a rider on a successful hit.
*7* Matchlock firearms misfire on a natural attack roll of 3 or less (6 or less in wet conditions).
*8* The scourge is ineffective against opponents in metal armor (scale mail or heavier).
*9* Snaplock firearms misfire on a natural attack roll of 2 or less.
*10* The staff sling has no short range. It cannot hit targets within 5 squares of the wielder, attacks made 6 to 12 squares away are considered to be at medium range, and attacks made 13 to 18 squares away are considered long range.
*11* The wip is ineffective against opponents in any type of armor.

## Weapon Descriptions

**Adze.** Resembling an axe with a sideways blade, the adze is a common tool. Some savage tribes use a short-handled war adze as a close-combat weapon. Common adzes can be found in most woodworkers' shops.

**Ankus.** The ankus is an elephant goad. It is a three- to four-foot staff with a metal hook and point at one end. The ankus was intended to be both a tool and a weapon, and some were used as elaborate ceremonial pieces.

**Axe, stone.** This crude weapon consists of an edged piece of stone lashed to a wooden haft. Normally, it's only found in the most primitive of settings.

**Bagh nakh.** Also known as "tiger claws," a bagh nakh is a set of metal blades worn on the palm. It is used with a cat-like clawing motion. Usually, the bagh nakh is used in pairs, one on each hand. It is available only in Indian or Oriental settings.

**Battle axe.** Hundreds of variations on the battle axe exist. Generally, any heavy axe that can be used one-handed or two-handed falls into this category. (If an axe can only be used two-handed, it's a two-handed axe.) Battle axes often have a spike, hammer, or smaller blade backing the primary blade. In some cases, both blades are equal in size in weight and can be used interchangeably.

Other names for a battle axe include the *bullova, bearded axe, bipennis,* and *war axe*.

**Belaying pin.** This is a weapon of convenience for sailors of any campaign. Belaying

pins are used to secure the lines of a ship's rigging, and there's always one nearby on the deck of a ship.

**Blowgun.** Blowguns can fire two types of ammunition: a barbed dart, suitable for hunting small fowl, and a needle for carrying poison. Most blowguns are six or seven feet in length, although assassins might carry a miniature weapon two feet long that can only fire needles.

Blowgun ammunition is very light and cannot penetrate heavy armor. If a target is protected by a full suit of brigandine, mail, or plate of any kind, the attacker suffers an additional –4 to his attack roll.

**Bo stick.** This oriental staff is a tapering length of wood about four to six feet in length. The wielder of a bo stick suffers a –2 penalty to attacks against an opponent in plate armor of any kind.

**Bolas.** Bolas consist of two or three weights joined by a sturdy leather cord or rope. They have been used by hunters since the Stone Age. A character must be proficient with the bolas to throw them successfully. If the bolas hit their target, they automatically create a knockdown chance for their victim. If the victim fails his saving throw, he has to spend a full round and make a Strength check to be able to stand and move again.

Bolas can also be used for special called shots. A called shot at the target's arms will prevent the target from using his weapon or shield until he spends a round and succeeds in a Strength check. A called shot at the target's head wraps the bolas around his neck and begins to strangle him. He suffers 1d3 points of damage from strangulation each round until the bolas are removed or he dies.

A sharp knife, dagger, or similar short blade can be used to sever a bola's cords. This replaces the Strength check to get free, and is automatically successful. Of course, the victim must have an arm free to cut the bolas loose.

**Boomerang.** Another ancient hunting weapon, the boomerang is a heavy, aerodynamic club. It does not normally return to its thrower; a proficient user has to make a called shot to set up a throw that will return in the event of a miss.

**Bottle.** Bottles are found in taverns and alehouses all over the world. Each time a bottle hits, it must roll a successful saving throw vs. normal blow or break. A broken bottle can be wielded as if it were a knife.

**Bow.** One of the most common weapons throughout history is the bow. The simple self bow, or short bow, has been used for hunting and war since before the dawn of civilization. If a bow is made from a single piece of wood, it is a plain long or short bow; if it is made from laminated horn, wood, bone, or any other materials, it is a composite bow.

If a character has an unusually low Strength score, he *must* apply any attack or damage penalties to his archery. He is forced to use bows that have a lighter pull. However, for a character to gain his bonuses for a high Strength score, he must get a custom-made bow, which costs 3–5 times the normal price. A higher-Strength character can always use a lower-Strength bow, gaining bonuses up to the maximum permitted by the bow. For example, a character with a Strength of 18/35 can use a bow made for a Strength of 17, gaining a +1 to hit and +1 to damage instead of his normal full bonuses.

Short bows can be found in any setting. Even if they are not used for war, they are the weapon of choice for many hunters. Short bows fire flight arrows or stone arrows.

Long bows are simply bigger short bows. They are drawn to the cheek, instead of

being drawn to the chest as other bows are. Long bows can fire any kind of arrow. Long bows cannot be used from horseback.

Composite short bows are the favorite of horse archers everywhere. They can fire flight arrows or stone arrows.

Composite long bows are usually only found in eastern campaigns. They can be fired from horseback if they have been specially built for it, at twice the normal cost. Composite long bows fire any kind of arrow.

Flight arrows are the basic war or hunting arrow. They fly farther than sheaf arrows, which have a broader and heavier head for more damage. Pile arrows are constructed with small, dense points designed to pierce heavy armor. A pile arrow fired at short range penalizes the target's AC from armor by 2 points. This only applies to that portion of a target's armor that is derived from physical armor; Dexterity, cover, or magical bonuses are not affected.

*For example, an archer fires a pile arrow at a warrior wearing chainmail +2 and a shield with a Dexterity of 16. The chainmail is considered to be 2 points worse, so it has a base AC of 7, not 5. Overall, the warrior's AC drops from 0 to 2. If the warrior wore nothing but bracers of defense (AC 4), his AC would not be affected.*

**Brandistock.** The brandistock is an iron-shod walking staff that conceals three blades. When deployed, the blades form a small trident. In situations where the enemy isn't expecting a character to be so armed, the DM can assign a +1 surprise or initiative bonus.

**Caltrop.** A caltrop is a cluster of four or more iron spikes, designed so that one point is always facing up (they would look similar to a d4—one point is always up). They are intended to be scattered in the path of an enemy, who may step on one if he's not careful.

In order to be effective, at least 10 caltrops must be scattered in a 5'x5' square (or 100 in a 15'x15' area, one square in missile scale.) Any character entering the area must roll a successful saving throw vs. paralyzation or step on a caltrop, suffering the listed damage. The victim is reduced to 1/2 movement until he spends a round removing the caltrop from his foot. In addition, the character must make a second saving throw; if he fails, his foot is considered to be struck (see Chapter Six) and he is reduced to 1/3 movement until it heals.

A character moving at half his normal speed or slower can pick his way through the caltrops without trouble—as long as he can see them. A low ground fog or long grass may hide caltrops from even the most observant characters. If a character is running or charging when he steps on a caltrop, he must stop immediately.

**Cestus.** The cestus is an armored gauntlet equipped with spikes, blades, and other such things. It is worn over the fist and used for punching an opponent. The cestus suffers a –2 penalty to attacks against enemies in any kind of plate armor.

**Chain.** The chain is simply a weighted length of chain that is whirled rapidly. It is used to strike and tangle an opponent. If the chain is used for a pull/trip maneuver, the attacker gains a +4 bonus on his Strength check. This also applies to pull/trips against riders.

**Chakram.** The chakram is a throwing quoit or disk with a sharpened outer edge, about a foot in diameter. It is thrown frisbee-style, with a rapid spin. The chakram is not as effective against armored opponents and suffers a –2 penalty to attacks against targets in

any kind of mail, scale, or plate armor.

**Chijikiri.** This composite weapon consists of a spear with a length of chain attached to the butt. It can be wielded as an ordinary spear, or reversed and used to tangle or flail at an enemy. If the chain end is used, the chijikiri is a Type B weapon that inflicts damage as a chain. The chijikiri adds +4 to the attacker's effective Strength for pull/trip maneuvers but cannot be used to pull/trip a rider.

**Club.** Mankind's oldest weapon exists in thousands of varieties. Clubs range from something as simple as an animal's thigh bone to a well-balanced work of art. Not all clubs can be thrown, but throwing weapons are common enough that a PC can obtain one as easily as a melee-only weapon. Clubs are effectively free, but if a PC wants to get one that is recognized as a warrior's weapon it may cost anywhere from 5 sp to 10 gp.

**Club, great.** The great club is simply a two-handed version of the regular club. It is often equipped with nails, spikes, or bands of iron. Its greater size and mass gives it a better damage potential than its smaller forebear.

**Crossbow.** A crossbow is a short, powerful bow mounted on a rifle-like stock. It is aimed and fired like a rifle. Historically, crossbows were more powerful than bows and had better hitting power at a greater range, but they were also far slower. The English longbow was never decisively bested by the crossbow simply because a trained archer could fire six arrows to the crossbowman's single bolt.

Crossbows were invented sometime in the Dark Ages, but didn't come into widespread use until the Crusades. The earliest crossbows were pellet bows that fired small stones or bullets instead of quarrels. The weapon rapidly grew larger and more powerful. By the Renaissance, many crossbows couldn't be drawn by hand and had to be winched back by a hand-held cranequin.

For game purposes, crossbows are divided into five categories: the pellet bow (the lightest crossbow commonly available), the light crossbow, the heavy crossbow, the cho-ku-no or repeating crossbow, and the hand crossbow. The light crossbow can be cocked by hand, but the heavy crossbow requires the use of an attached cranequin to draw it. The cho-ku-no is similar to a light crossbow, but holds up to 10 bolts in a magazine that rests on top of the weapon. Normally, it is only available in oriental settings. The hand crossbow is derived from the Drow weapon, but could have been built in Renaissance-like settings as a weapon for personal defense or assassination.

To reflect the power of a crossbow, the damage ratings have been increased. Under the *PHB* rules, characters have little reason to ever use a crossbow when a short bow is handy. In addition, crossbows gain a special *armor penetration* ability. At medium range, light and heavy crossbows reduce the AC of an armored opponent by 2 points. (See the pile arrow description under bow.) At short range, light and heavy crossbows reduce the AC of an armored opponent by 5 points. Pellet bows, hand crossbows, and cho-ku-no do not have this special ability.

Heavy crossbows are also called *arbalests*.

**Dagger.** Mankind's second oldest weapon is probably the stone dagger. Daggers are short, stabbing blades ranging from six inches to more than a foot in length. Their size and utility have made them a very long-lived weapon used in many times and places.

In Stone Age or savage settings, metal daggers may not be available. Daggers can also be made of sharpened stone or bone. However, weapons of these inferior materials have a 1 in 6 chance of breaking on any successful hit.

Renaissance settings introduce several variations on the common dagger, including the *main-gauche, parrying dagger,* and *stiletto.* The main-gauche and parrying dagger are designed to be used in the off hand of a swordsman armed with a rapier or sabre. Their heavy guards and quillons give the user a special +2 bonus to any attempts to block with the weapon. In addition, the parrying dagger may break an enemy's sword when used in a defensive disarm maneuver. If the maneuver succeeds, the attacker must roll a successful saving throw vs. crushing blow for his sword if it is a rapier, or vs. normal blow for any other kind of sword.

The stiletto is a long, thin blade designed solely for piercing. It can punch through armor or slip between the links of chainmail. This gives the stiletto a special +2 bonus to attacks against armored opponents. (See the note under *pile arrow* or *crossbow.)*

The jambiya and katar are weapons found in eastern campaigns. The jambiya is the traditional Arab dagger, with a sharply curved blade. It is often ornately decorated. The katar is a dagger with an 'H' handle, designed to be held in a closed fist with the blade projecting out over the knuckles. It is used with a punching motion.

**Dart.** These weapons are not the tiny modern darts you may be familiar with. They're much larger and heavier than their sporting counterparts. Darts were usually as large as a typical arrow, with a weighted head. They were popular among ancient peoples and eastern cultures, and were used as small javelins by skirmishers and light cavalry.

**Firearms.** Guns are completely optional in the AD&D game. If the DM rules that they are not available in his campaign, no character may take proficiency in a firearm or purchase one. Like many weapons, firearms gradually improved over time, increasing in reliability, range, and firepower.

Firearms have several unusual characteristics. First of all, they are subject to misfires. Modern tests have shown that primitive firearms probably misfired as often as once every four shots. When a character's attack roll falls in the misfire range, the DM should roll 2d6 and consult the following table:

| **2d6** | **Misfire Result** |
|---|---|
| 2–3 | Explosion |
| 4–7 | Fouled barrel |
| 8–12 | Hangfire |

An *explosion* inflicts 2d6 points of damage on the character holding the gun, or 1d6 if a saving throw vs. death is successful. The gun is destroyed by the misfire. A *fouled barrel* ruins the shot and renders the gun useless until it is carefully cleaned—a process that will take a good 10–30 (1d3x10) minutes. A *hangfire* goes off 1d3 combat rounds later than it should. If the user keeps the gun trained on its target, he can make a normal attack.

The second unusual characteristic of firearms is their ability to ignore armor. Any firearm except a hand match weapon may ignore the portion of a target's AC that is derived from physical armor or shield. At short range, Dexterity, cover, and magical bonuses are the only factors that contribute to a target's AC. At medium range, the target's base AC is penalized by 5 (which may be as bad as ignoring it altogether), and at long range, the base AC is penalized by 2.

*For example, a renegade knight in* plate mail +3 *is fired upon by the king's musketeers. Normally, his AC is a base 0. A short-range musket shot ignores the 7-point AC reduction provided by plate mail, and only the armor's +3 enchantment is considered. The renegade knight's AC is a 7. At medium range, the armor is not completely ignored, but the base AC of 3 is reduced to an AC of 8. Magic adjusts this to AC 5. At long range, the knight is AC 2 against musket fire.*

Last but not least is the ability of a firearm to cause open-ended damage. Any time a firearm hits its target, there is a 25% chance that a second damage die is rolled and added to the first. There's a 25% chance that *that* damage roll creates additional damage, and so on. This 25% chance is part of the knockdown die roll; if the knockdown die comes up 7 or better, the damage continues.

*For example, Sir Vandegar is shot by an uncouth man-at-arms wielding a horse pistol. The damage roll comes up a 3, but the knockdown die is an 8. A second damage die is rolled, which results in 5 more points of damage. Vandegar's attacker rolls another knockdown die, which comes up 7, so he rolls a third damage die, getting a 6. Fortunately, he misses on his chance to do any more damage, but Sir Vandegar suffers a total of 14 points from a single bullet.*

The very earliest firearms were *hand match* devices that resembled a hand-held bombard. Hand match weapons include the handgunne and the arquebus. Unlike other guns, hand match weapons have no triggers or firing mechanisms. Instead, the user touches a burning slow match to a hole in the barrel, igniting the weapon's charge. The handgunne doesn't even fire a bullet, but propels a heavy iron arrow that cannot cause continuing damage like other firearms. All hand match weapons suffer *double* the normal range penalties for medium and long-range shots.

The *matchlock* was a significant improvement. It freed one of the user's hands by providing a clamp to hold the slow match, and provided a trigger mechanism that would bring the match into contact with the priming powder. The matchlock arquebus is a far more powerful and reliable weapon than the hand match version. Matchlocks were also made as calivers and muskets. The caliver was a smaller weapon that fired a lighter bullet. The matchlock musket was a long, heavy weapon that had to be fired from a forked rest or balanced on a wall.

Wheellocks were the next improvement to the firearm. Instead of a burning match, the powder was ignited by sparks provided by a spring-driven wheel of flint. It worked a lot like a modern cigarette lighter. Wheellocks were contemporaries of snaplocks, which held a single piece of flint in a hammer-like striker. The snaplock was easier to manufacture, but less reliable, so wheellocks were often the weapon of the nobility and anyone else who could afford to spend more money on a gun. The wheellock arquebus was a light but powerful weapon reserved for use by the wealthy or the privileged. Interestingly enough, wheellocks were never developed outside of Europe.

Pistols were also introduced as wheellocks but were also manufactured as snaplocks. At first, pistols were the weapon of the cavalry. The horse pistol replaced the lance as the weapon of choice for horsemen. Most cavalrymen carried two or three of these heavy pistols for dealing with pikemen and other such annoyances. In time, belt pistols were

produced as lighter versions of the horse pistol for personal defense.

Flintlocks were the direct descendants of snaplocks. They are almost indistinguishable from each other, but the later flintlocks tended to be sturdier and more reliable than their predecessors. Flintlocks saw the introduction of the carbine, or horseman's musket, which was a lighter weapon than the infantryman's gun. By the time flintlocks had been invented, muskets no longer required a rest for their barrels and could be fired from the shoulder.

The blunderbuss was the ancestor of the modern shotgun. It was a short, musket-like weapon with a bell-shaped, flaring muzzle. Just about anything could be poured into the barrel of a blunderbuss and then fired at an enemy—stones, nails, coins, or even salt or gravel. At short range, a blunderbuss actually inflicts 1d4 separate attacks on its target, but none of the projectiles are heavy enough to inflict the extra damage of other firearms. At medium range, the blunderbuss makes a single attack on 1d3 separate targets in a 3-foot radius (or one square.) At long range, the blunderbuss inflicts 0–1 (1d2–1) attacks on any targets in a 5-foot radius (four squares.) A lucky blunderbuss shot can knock down four or five attackers at once, or it may only make a big noise and miss everything.

Combined weapons are an interesting side-note in the history of firearms. When firearms were still relatively new, it was fairly common to make sure that the weapon retained its usefulness after its first shot by building a melee weapon around it. Hammers, axes, broadswords, and daggers were all made with parallel gun barrels. In some cases, the barrel actually served as the weapon's haft. The numbers listed on the table reflect the weapon's stats as a melee weapon; otherwise, it is treated as a wheellock belt pistol.

**Flail.** Developed from the farmer's threshing tool, flails were used on battlefields throughout the Middle Ages. The common grain flail can be found on the Tools list, since nearly every farm has several around. The horseman's flail is similar, but uses iron weights and replaces the linking rope with sturdy chain. The horseman's flail gains a +1 bonus on attacks against targets using shields, since it can easily strike around them. In addition, horseman's flails gain a +2 bonus on any attempts to trap or offensively disarm an opponent's weapon.

The footman's flail is a different weapon entirely. It consists of a sturdy shaft with a hinged (not chain-joined!) iron-spiked head. It is used with two hands and can deliver crushing blows of great power. The footman's flail gains a special +1 attack bonus against opponents in any kind of plate armor.

**Fork.** The common pitchfork has been adopted as a ready means of defense by farmers throughout the ages. Almost any farm or town has a plentiful supply of forks.

**Gaff/hook.** The gaff is a short, T-handled hook used to boat fish or handle heavy crates. For 5 gp, a hook can be attached in place of a missing hand, which provides a character with a weapon that cannot be disarmed.

**Grapple.** Grapples are often used at sea and in sieges. Usually, they are made from three or four iron hooks welded together and a sturdy length of rope. Grapples can be thrown 5 feet horizontally or 3 feet vertically per point of Strength. Although grapples aren't intended for personal combat, a creative character can improvise a number of pull/trip maneuvers with a grapple and length of rope.

**Gunsen.** This deceptive weapon resembles an oriental fan. It is both a parrying device and an effective bludgeon. The paper fan contained in a gunsen is used to distract and confuse an opponent, and is often decorated with beautiful designs. A character proficient

in the gunsen's use gains a special +2 bonus to any block maneuvers she makes with the fan.

**Hammer.** Used in almost any craftsman's trade, hammers can be found in shops and worksheds everywhere. Most working hammers are much smaller and lighter than any military versions.

**Hand or throwing axe.** Variations on the medium-sized axe exist in almost any setting. Not every hand axe can be thrown; the weapon must be built for balance to be thrown, although this isn't particularly rare or unusual. The Franks made excellent use of throwing axes as a shock weapon; the Frankish line would halt just short of the enemy and hurl a murderous volley of axes before closing for hand-to-hand fighting. With a called shot, an axe can be thrown at an enemy's shield, which must then roll a successful saving throw vs. normal blow or be ruined.

**Harpoon.** Rarely used on the battlefield, the harpoon is the weapon of sealers and whalers throughout the world. The head of a harpoon is hinged to lodge in a wound and fix the harpoon to its target. A roll of 5 or better on the knockdown die indicates that the harpoon is stuck in the victim, and will cause an additional 1d6 damage if it is yanked out or cut out of the wound.

Usually, a strong line is attached to the harpoon so that the hunter can keep hold of his prey after striking with the weapon. If the head is stuck, the wielder can engage in an opposed Strength contest with the target to pull him off his feet. When harpoons are used against large creatures, the cord is usually tied off to the hunter's boat, which helps the hunter's Strength check considerably.

**Hatchet.** Many smaller hand axes actually fall into this category. The hatchet's small size permits it to be used as an off-hand weapon. Hatchets are also handy tools for wilderness travelers or people who work with wood.

**Holy symbol.** Only the most impressive personal holy symbols are large enough to be wielded as bludgeons. If a creature is subject to damage from coming into contact with a holy symbol, this is in addition to the bludgeoning damage inflicted by the weight of the blow. Of course, if a creature is only hit by magical weapons, then the holy symbol must be enchanted to inflict bludgeoning damage.

**Javelin.** Light throwing spears have been used in warfare and hunting for thousands of years. By the time of the Crusades, javelins are generally found in the hands of nonWestern cultures; they lack the penetrating power to be effective against heavy Western armor.

**Jitte.** The jitte is an iron parrying bar with a short hook at one end. It isn't sharp, but can be used to strike bludgeoning blows. The jitte provides a special +2 bonus to block or defensive disarm maneuvers.

**Kama.** This weapon is a straight-bladed sickle derived from the common peasant's tool. Since it is regarded as a tool, it can be carried by a character who wishes to conceal the fact that he is armed.

**Kau sin ke.** The kau sin ke, or whipping chain, is an oriental version of the flail. It consists of four to six iron bars linked end-to-end by short lengths of chain. The kau sin ke gains a special +1 bonus to attack rolls against opponents using shields, since it can strike around the shield.

**Kawanaga.** This weapon consists of a grapple with a weighted rope attached. The hook or weight can be used to strike at opponents, and the grapple is handy for climbing

as well. The kawanaga adds +4 to the attacker's effective Strength when used to perform the pull/trip maneuver.

**Knife.** Perhaps the most common weapon is the humble knife. Almost everyone carries small knives for eating, as an all-purpose tool, or for personal defense. Knives are shorter than daggers and are used to both slash and stab. They can be easily concealed in a variety of specialty sheaths, ranging from a dandy's hat-band to spring-loaded wrist sheaths. Bone and stone knives can be manufactured in settings where iron and steel are unavailable.

**Kusari-gama.** The kusari-gama consists of a kama, or sickle, with an attached length of chain. It is extremely versatile and can be employed in a number of ways. Like several other chain weapons, it adds a +4 bonus to the attacker's Strength checks when used to perform the pull/trip attack option.

**Lance.** The lance is the horseman's spear. It has been used in warfare since the Bronze Age. Prior to the invention of the stirrup, the lance could not be couched for a charge; instead, the horseman would stab overhand with the weapon or even throw it. As a rule of thumb, a rider must be mounted on a horse appropriate for his lance, or else his weapon will be reduced in effectiveness. A heavy lance requires a heavy warhorse, a medium lance requires a medium warhorse, and so on. If the lance is too heavy for the horse, it does damage as if it were the correct type, so a heavy lance used from a light warhorse does damage as a light lance.

Generally, the heavy warhorse was a European development that appeared in the later stages of the Crusades. Before the development of heavy plate armor, it wasn't necessary to use draft horses for mounts.

Lances are an exception to the size requirement rules; a rider with stirrups can use any lance in one hand, but a rider without stirrups has to use two hands for the lance. (Stirrups appeared during the Dark Ages in Western Europe.) As noted above, a rider with stirrups can couch the lance for a mounted charge, which causes double damage.

In addition to the light, medium, and heavy lances, Late Middle Ages campaigns will also see the use of the jousting lance. This weapon is blunted to prevent its target from being severely injured during a tournament.

**Lantern.** On occasion, a character has to make do with whatever's handy. A lantern can be used as a crude club, inflicting light damage, but if it is lit it may spill burning oil over the defender. Roll an item saving throw for glass against a normal blow; if the lantern breaks, the victim is burned for an additional 1d4 points of damage and may be on fire. See oil.

**Lasso.** The lasso, or lariat, is commonly associated with nomadic cultures. Native Americans and Central Asians commonly used the lasso on animals, and it was only rarely used against an enemy. Lassoes are only effective when used in conjunction with a called shot attack; they cannot be used for normal attacks.

If the attacker succeeds with a called shot against his opponent's legs, he gets the lasso to settle low enough on his opponent's body that he can pull/trip his enemy. He gains a special +4 bonus to his opposed Strength check. If the attacker is mounted and has the lasso made fast to his saddle, he is considered to be the size of his mount—so a rider on horseback is size L for purposes of the opposed Strength check, for a total of +8 versus Man-sized targets.

If the attacker succeeds with a called shot against his opponent's arms, he can trap his

enemy's weapon, shield, or both by pinning his arms to his body. The lasso user's opposed attack roll is made against AC 10 instead of AC 2. If the attacker wins the roll, one arm (randomly determined) of the defender is trapped. If he beats him by 4 or more, both arms are trapped. In addition, if the attacker is mounted and the lasso is tied off to the saddle, he can perform a pull/trip next round without an attack roll simply by spurring his horse.

Last but not least, a lasso can unhorse a rider by succeeding in a called shot. If the rider is moving and the lasso is tied off to something solid (like a tree), he is automatically unhorsed. If the rider isn't moving or the lasso isn't tied off, an opposed Strength check is used to determine whether or not the rider is unhorsed.

**Mace, horseman's.** The mace is another ancient weapon that remained in use until the 19th century in many parts of the world. The horseman's mace is lighter and shorter than the footman's for ease of use from horseback. Most horseman's maces are constructed from four to eight iron flanges. The horseman's mace receives a +1 bonus to attacks against opponents in any kind of mail armor.

Some horseman's maces of Middle Eastern or Oriental origin feature sword-like basket hilts. The hilt provides a +1 bonus to attempts to block attacks with the weapon.

**Mace, footman's.** The footman's mace is a hafted weapon with a heavy iron or bronze head. The head can be spherical or flanged, and may feature spikes or knobs. Like its smaller cousin, the footman's mace is especially useful against flexible armors and receives a +2 bonus to attacks against enemies in mail of any kind.

**Mace-axe.** This Bronze Age weapon features a mace-like head with a single curving axe blade projecting from it. It is heavy and awkward, but delivers a formidable blow.

**Machete.** The machete is regarded as a tool by some cultures, and as a weapon of war by others. It consists of a short, heavy, slightly curved blade designed for slashing. Many varieties of tribal swords or fighting knives fall into the category of machetes, and may be elaborately decorated blades of superior construction and balance. In eastern lands, these blades are known as parangs.

**Mancatcher.** The mancatcher is a short pole-arm with two curving, fork-like prongs at the business end. The prongs are hinged so that they can be pushed tightly closed around the intended captive. The mancatcher only works against Size M creatures. Like crossbows and firearms, mancatchers ignore armor—only Dexterity and magical adjustments apply. If a hit is scored, the victim suffers the listed damage. Each round, the mancatcher's user can push and pull the victim about for an automatic 1d2 points of damage, and can try to pull/trip his victim by succeeding in an opposed Strength check.

Once caught, the victim loses all Dexterity and shield adjustments to AC. He can only escape by hacking through the weapon's haft (AC 4, 10 hp, size M type S weapon to damage) or making a bend bars/lift gates roll, which causes an additional 1d2 damage.

Mancatchers are used by town watches and gendarmes to capture armed criminals.

**Maul.** The maul is a military sledgehammer designed for two-handed use. It is about three to four feet in length with a heavy square head. It receives a +1 bonus to attacks against opponents in plate or mail armors. Traditionally, the maul was carried by lightly armored troops such as archers for use against dismounted knights.

**Morningstar.** Also known as the godentag or holy water sprinkler, the morningstar is a hafted weapon three to five feet in length with a heavy, spiked head. It is designed for two-handed use and often features a polearm-like spike at its end. Like the maul, the

morningstar was built to penetrate a knight's armor. It receives a +1 bonus to attack rolls against any type of plate armor.

**Net.** Rarely used as a weapon, the net is only found in unusual settings. A fighting net often features small barbs or weights in the weave and a trailing rope for guidance and contol over netted targets. The net's only function in hand-to-hand combat is to block, trap, or disarm an opponent; it cannot strike effectively for damage.

The net is most dangerous when it is thrown at an enemy. Only the target's Dexterity and magical adjustments to Armor Class count. If the net hits, it may trap the opponent's weapon and shield. If the victim is trapped, he can only break free by making a Strength check. In future rounds the net user has the choice of leaving the net where it is and attacking with another weapon or of trying to improve the capture.

To improve the net's capture, the netter loops the trailing rope around the target. This requires another attack roll (as before, only count Dexterity and magic.) If the netter hits, the victim's effective Strength drops by 4 for purposes of getting out of the net.

Nets must be folded properly to be effectively thrown. The first time a character throws his net in a fight, he makes a normal attack roll. After the net is unfolded, it can only by thrown with a –4 penalty to hit. It takes 2 combat rounds for a proficient user to fold a net.

**Nunchaku.** The nunchuks consist of two wooden or iron bars linked by a small length of chain. Like the western flail, they are descendants of the common grain flail. A proficient user may wield nunchaku in each hand, despite the fact that they are identical in size—but the attack penalties for attacking with two weapons still apply.

**Oil.** Burning oil can be an effective weapon in some situations. There are three basic uses for oil: igniting a puddle under an enemy's feet, throwing or splashing burning oil on him, or making a Molotov cocktail.

If an enemy can be lured into a place where oil in contact with him can be ignited, he suffers 1d4 points of damage per two flasks that have been prepared for firing. The victim must attempt a saving throw roll vs. paralyzation or *catch fire*—see below. There is no attack roll for this type of attack, but if the oil has to be ignited by a burning arrow or thrown torch, the DM can insist that an attack roll versus AC 10 be made to get the fire to the oil.

Throwing burning oil at a target is difficult. This category is reserved for things like busting a burning lantern over someone's head or dumping a bowl on the intended victim. The victim suffers 1d3 points of damage per flask thrown and must make a saving throw vs. paralyzation with a +4 bonus or catch fire. An attack roll is required for this type of attack, but only the defender's Dexterity and magical adjustments are considered for AC.

A Molotov cocktail requires a full combat round to fuse and light, so one can be thrown only once per two rounds. As above, an attack roll is required; only count the defender's Dexterity and magical adjustments. If struck, the defender gets to roll a saving throw vs. death to see if the cocktail went off or not; if it does, the victim suffers 1d8 points of damage and must roll a successful saving throw vs. paralyzation or catch fire.

Victims who catch fire suffer 1d4 points of damage in the round following their unfortunate change of status. They are allowed to roll a saving throw vs. death to extinguish the flames each round; if they fail, the base damage is increased by 1 die. Therefore, a character who is on fire suffers 1d4 points of damage the first round, 2d4 the second, 3d4 the third, and so on, to a maximum of 5d4 per round. Leaping into a lake,

extinguishing the flames magically, or rolling around on the ground may allow the character to roll his saving throw with a +2 to +8 bonus, at the DM's discretion.

**Parang.** See *machete*.

**Pick.** This common tool can be used as a weapon but is very heavy and unwieldy.

**Pick, horseman's.** The military version of the stonemason's tool features a short, beaked spike designed for punching through heavy armor. The horseman's pick has a +1 bonus to attacks against opponents in plate armor of any type. Many picks are equipped with a hammer or axe blade on the reverse side of the head, and may be P/B or P/S type weapons for a small cost increase.

**Pick, footman's.** A larger and heavier version of the horseman's pick, the footman's pick gains a +2 bonus versus plate armors.

**Pilum.** The famous javelin of the Roman legionaries, the pilum is forged with a long, soft iron head. When a thrown pilum hits a shielded opponent or misses by only one or two points, it sticks in the shield. The weapon's weight bends the soft iron head and makes the shield unusable until the pilum is removed—a process that requires 1d6 combat rounds. Magical shields have a 20% chance per plus of ignoring the pilum's effects.

**Polearm.** Polearms are long, hafted weapons designed for two-handed use. Hundreds of varieties exist, each with its own specialized function. In the Middle Ages, polearms were introduced to give the foot soldier a weapon capable of dealing with the heavily armored knight. They are more common on the battlefield than in adventuring parties.

The first type of polearm are the spearlike weapons. These are primarily thrusting weapons and are especially effective when set against charges. The pike is a very long weapon with a small iron head; the ranseur, spetum, and partisan are shorter weapons with side blades or spikes that give the user a +2 bonus on any trap or block attempts. Partisans survived into the 19th century as ceremonial weapons.

The next category of polearm are the pole axes. These are heavy weapons with axe-like heads that are designed for maximum striking power. Poleaxes include the bardiche, the halberd, and the voulge or Lochaber axe. Poleaxes gain a +2 bonus on attack rolls against any type of plate or mail armor.

*Glaives* are simple polearms that consist of a single long, curving blade used for both slashing and thrusting. They lack the cutting power or strong straight point of poleaxes or spearlike weapons, and are generally not as effective as the previous weapons. Glaives include the glaive (naturally), the fauchard, and the oriental nagimaki and naginata. As a side note, the nagimaki is actually a horseman's weapon.

*Bills* are multi-function polearms that include a cutting surface, a spearlike spike, and hooks or curved blades on the back for dismounting riders. Bills, bill-guisarmes, glaive-guisarmes, and guisarmes all fall into this category. All of these weapons provide a +2 bonus to pull/trip attempts against riders.

The last category of polearms are weapons without a true category. These specialized weapons can't be classified as one of the above types. The bec de corbin, or crow's beak, is a weapon designed to pierce heavy armor; it gains a +3 bonus to attacks versus any kind of plate armor. The Lucern hammer is similar, but uses a clawed hammer head instead of a single beak. It gains a +2 bonus to attacks versus targets in plate armor. The military fork is nothing more than a war version of the peasant's pitchfork.

Last but not least, two oriental polearms fall into this catch-all category. The lajatang

is an unusual weapon with half-moon blades at either end; a proficient user Threatens his flank spaces as well as his front squares. The tetsubo is a kind of pole-mace with a heavy, iron-bound head.
